Tiger shooting cannot here be attempted unless you can secure the use of some elephants, which is difficult. The tiger makes his lair among the high reeds and grass in some dense swamp, where he cannot be got at except on elephant back. The same applies to the rhinoceros and wild buffalo. But there is plenty of other sport without these. In fact, many of the best sportsmen do not care about shooting from elephants; there is much in it that is tedious and annoying and there is more satisfaction in doing what one can on foot. With your tent pitched on the banks of some great river where it issues from the hills you have the finest of fishing at your tent door, while around you the forest is full of the various kinds of deer, etc., above mentioned. It is hot in the middle of the day, too hot to be abroad with any comfort, and besides the deer at that time have laid up in thick covert. The great drawback to tiger hunting off elephants is that it must be done in the heat of the day, and to be jolted about under an Indian May sun all day among vast swamps of grass and reeds with only a very problematical chance of seeing a tiger is not good enough.

The sportsman who confines to himself to stalking and fishing has a better time of it. His procedure is as follows: Getting up at daybreak, he takes a light early breakfast and sallies forth. Comes in at 10 or 11 o'clock when it begins to get hot, takes a highly enjoyable bath and complete change of underclothes, and then, with a magnificent appetite, attacks a substantial breakfast; then he rests and keeps cool during the heat of the day (the tent being carefully located for shade), and at 4 P. M. again goes out for an afternoon stroll with rifle or rod, takes a light dinner at dusk, and early to bed.

Often have I in the morning landed two or three fine mahseer or taken a nice basket of trout, and in my afternoon's stroll bagged a beautiful spotted stag, or the rarer and more stately sambur stag, or mayhap one of the smaller deer or a wild boar.

A camp such as this, under good circumstances, forms an episode never to be forgotten in a sportsman's experiences.

Major G. M. Bellasis,
Bengal Staff Corps (retired).

[To be concluded.]

MAGIC AND BULLETS.

"The Grab at the Bullets" trick performed by Mr. Hermann re-echoes the motto of the wise rabbi, Ben Akiba, "nothing new under the sun." This parallel happened some years ago, 1892, in the following fashion:

In that year the desire to hunt, but not to kill, the inextinguishable love of that enjoyable mode of living, landed me again among the mountains and the lakes of the wilderness of Maine. The camp I placed on a point on Lobster Lake, from which I had a magnificent view of that picturesque sheet of water which served Mt. Spencer, like Narcissus, as a mirror. On clear days even Mt. Ktaaden looks over Mt. Spencer's shoulders to see his own image reflected. There I waited for the opening of the hunting season, also for the Indian, a renowned moose caller, whom I had engaged through the kindness of my friend Mr. Atwood, the game warden, in whose service he was until the last of September. Mr. Atwood also camped on that lake during the latter part of September, and proved to be a congenial companion. Meeting him cruising on the lake, he showed me a little brook which he had found accidentally while looking for a spring. The alder bushes had grown so close at the entrance that we had to pull our canoes along by the overhanging branches. A few rods up from the mouth of this brook he showed me fresh signs of a big moose bull. This place the bull had chosen for his feeding ground, as Mr. Atwood was satisfied by daily investigation. With sparkling eyes he told me, "I will bag this moose on the first night in October." Unfortunately he was called away on duty before that time. "But duty before pleasure," he said, and cheerfully handed that moose, so to speak, over to me. He also promised to send the Indian back in time. The last of September came and with it the Indian, who, after a good dinner, made himself at home and proceeded to make a birch bark horn for the next evening's moose call.

As nothing broke the quietness on the lake during the afternoon and evening, I felt sure my game would give us a good show the next night, and with this hope we retired. But next morning, long before sunrise, I heard two rifle reports coming from the direction where my moose's feeding ground lay. I stepped out of the tent and noticed the Indian poking his head out of his, saying: "Well, they got him."

"Who are they?" I asked in surprise.

"Two Indians who came yesterday to go up to the head of the lake to their camp.

"How do you know of that?"

"I met them on the carry at Luce's, on my way to you."

This gave me a great deal to think about, though I did not care to let him know what I thought. I made up my mind to get even with him; but how I did not know at the time. The opportunity offered itself sooner than I expected.

Shortly the two Indians paddled up the lake with part of the moose in their canoe. While watching them the Indian never said a word about it; neither did I. This was conclusive as to my suspicions. Turning to me, he said: "This will be a nice evening for calling. By the way, won't you let me take your gun along? I did not bring my rifle with me. A moose is rather a dangerous animal, and it would be better if both were armed."

I always made it a point when I engaged a guide to tell him that I would do the shooting if any shooting was to be done, and so save him lugging the rifle across the carries instead of something else. To his question I answered that buckshot would not penetrate the skin of the moose.

"Certainly not, but you can make a bullet that will fit your gun?"

After a moment's thought I consented to make a bullet, but before proceeding I interrogated him if he knew how

it had to be done, because I had my mind made up to make this a charge to fit the occasion. To my satisfaction I found out that he did not know anything about that kind of a shell.

I melted partridge shot in a tin cover and poured the lead into a small pipe whose bottom I rounded with clay, then clipped and filed it until the ball gauged. The watching Indian missed seeing me pour out over half of the powder from the shell, and to make up the deficiency I laid paper pellets between. Then I handed him that shell and told him to drop the bullet in, which he did. Then I put one wad only on top of the bullet and pressed the rim of the paper shell down with my fingers.

Taking the shell, he answered to my question, "This is all right. Our fathers had no better charges than this, and they got all the moose they wanted." But I thought, "If you can do so with that shell you are welcome to the moose you can get with it."

The night came beautiful and calm, and at 10 we left camp to call our moose. Paddling quietly along, I watched one of the most beautiful exhibitions of the Aurora Borealis I ever witnessed. While the canoe rested with the bow on the bank, I listened between the calls of the Indian to hear the electric crackling so many people imagine they can hear during the display of Northern light. They ought to go up to those lakes, where perfect silence reigns; there is such a silence that they can hear their own hearts beat, but none of that electric crackling.

After a couple of hours' calling we returned to camp without having heard a single answer, with the exception of the noise coming from humming porcupines, or musk-rats and jumping fish. We repeated calling on favorable nights during the three weeks, without receiving a single answer. Then the time came when I had to break camp and leave this glorious spot. We packed and took along in our canoes all we could carry, but had to leave a load behind us.

Early the next morning the Indian, taking my gun, left Luce's place to get the rest of the traps. In the afternoon, with a few partridges, I came to a clearing near the carry. At the same time the Indian reached the landing, showing great excitement by shouting at me, of which I only could understand at that distance, "Moose—stream—lost—no good."

After reaching him he told me that near the inlet of Lobster Lake, while paddling quietly around a bend, he had seen a big moose bull come down the bank and step into the stream to swim across. The Indian had kept quiet until the moose had reached the middle of the stream, which is at that place about three or four rods wide. The moose must have noticed him, for he began to accelerate his movements; but with a few paddle strokes the Indian got near him, dropped his paddle, and picking up the gun, covered the moose with it, waiting to drop him on the bank instead of in the stream. The moose had hardly got his forelegs planted on the bank when the Indian blazed away at him, but he said to me, "The bullet simply rolled out of the barrel and dropped between the canoe and the moose, while the moose, climbing the bank, slowly trotted behind the bushes, from where I could hear him shaking the water off."

We paddled together down the river to the spot, and sure enough it must have been a big fellow that had made such imprints in the clay.

Now this stupid moose did not know that the bullet fired at him was of the same nature as Mr. Hermann's "United States army regulation ammunition." Neither did he know that the man who had fired at him was not an expert rifleman of the National Guard. Otherwise he would have understood the situation and "grabbed at the bullet." But was I not glad that this Indian could not drop that moose?

If I had a chance I would devote my entire time to loading all the shells in this fashion to prevent the slaughter of big and small game that I have witnessed from January, 1895, to March, 1896, up in the woods of Maine.

LABRADOR SKETCHES.

VII.—An Anticosti Bear.

[Written for FOREST AND STREAM by Count H. de Puyjalon, and translated by Crawford Lindsay.]

AT the end of August we went to the island of Anticosti and set up our tent on the bank of a little stream, well sheltered from the wind. The day after our arrival I went out alone with my fowling piece to shoot something for the pot.

After walking on the beach for about an hour my attention was attracted by a cloud of gulls soaring above the fore shore. The tide was low and the birds were flying above a spot which was dry at the time. Therefore it could not be a shoal of lansing or caplin, and I soon observed at a distance of about three miles a large black mass which I knew must be a stranded whale or grampus.

I started off toward it, walking without any precaution. When I had got within thirty paces of it I halted quite stupefied. A bear had just come round from the other side of the whale's head and appeared in sight. As soon as it perceived me it swung around at once and trotted off toward the wood. When I recovered from my surprise he was 60yds. away, and as I had only my fowling piece loaded with shot it was useless to fire at him.

Disgusted with myself, I continued on my way to the whale's carcass, and had just got around its head when I again halted, quite petrified with surprise. A second bear, a huge one, was there, a few feet from me, tearing at the flesh of the whale. When it smelt me it suddenly lifted its head, opened its jaws, showing a formidably array of teeth, and after looking at me for some seconds without either of us moving, it seemed all at once to make up its mind to attack me. I did not hesitate, but raising my gun I fired both barrels at its chest. It was so close that the shot did not scatter, but made a hole into which I could have put my fist. The animal fell heavily and died.

The tide was rising, and I had barely time to flay it and to get away with the skin, which was very fine and weighed 20lbs. I tried very hard to get some more shots, but the bears were too wary to allow of my getting near them. Thomas, however, got three in dead-falls which he put up, and on Sept. 6 we started to come home.

H. DE PUYJALON.

WOLVES IN THE NIGHT.

ASHLAND, Wis., July 21.—It was pitch dark save only where the faint glow of the camp-fire—burned to the embers—penetrated the gloom for a few feet and seemed to intensify the wall of utter blackness which hedged it round. The balsam limbs extending their feathery extremities into the small circle of light seemed supported by invisible means as they swayed and vibrated in the quivering heat that rose from the hot firebrands. A rising wind swept the summits of the lofty pines, sounding sweet and soft and far as a child's lullaby. Our teams of mules and Canadian horses stood perfectly silent a rod away, where they had been secured for the night.

We were dozing, Ernest and I, soothed by the almost insensible harmonious vibrations. Ernest was curled up like a hibernating deer (and indeed that is the name the Indians gave him, or "Moqua" in their language), his head pillowed on his immense driving boots; and he seemed to be about to fall into a sound sleep, when suddenly he sat bolt upright, stared wildly at the fire, and before I had time to inquire the cause of his sudden move had leaped to the pile of wood we had prepared for the morning, and commenced heaping it with feverish haste on the nearly extinguished fire.

"What's the matter, Ernest? I say, have you the nightmare or are you crazy? It isn't time to build morning fire yet."

"I know dat," he replied, in his French-Canadian jargon, "same tam me hear wolf in de swamp; come up here pretty quick."

"Heard a wolf in the swamp?" I repeat, incredulously. "Get out. I've been awake the whole evening and everything has been still as death."

"Same tam Ah'll heard it wolf," he persisted, and in no way relaxed his efforts until the light wood was piled high and the under billets had burst into flame; then without losing a moment he sprang to the horses and began unfastening the halter straps, calling to me meanwhile to get "dem mule close up de fire." His earnestness had the effect on me he desired, and in a few moments we had the animals tethered to an overhanging limb between our fire and the wagon, which we had pulled just outside the road for the night.

"Naow, keep still you hear yourself," Ernest said as he sat down and began pulling on his boots. "Dey come leetle more near next tam howl."

We waited in silence a few moments, when sure enough away in the swamp to the east came the long, low wail, rising and falling in cadence almost imperceptible to the ear, so faint, yet suggesting something so fierce and sinister that if once heard it can never be forgotten.

"Do you think they will be ugly?" I say to Ernest.

"No, teenk not. Bes' be ready, teenk only come look, dance leetle, make beeg howl, run off."

"Let 'em come then. You get the axe and stand where you can best guard the outside; mule and I will do the same for the outside horse."

"No. No need do that. Just keep still, not move where wolf come up, that best way."

"But what about the horses? won't they try to break away?"

"No, you see they get near the fire, keep still too."

"Well, get the axe anyway; there they go."

Again, and this time we could hear the yip! yip! yip! which preceded the chorus sounding much nearer, and the horses and mules sure enough at the sound of it crowded nearer the fire, straining slightly at their fastenings, but making no violent demonstrations whatever.

I involuntarily reached for my Winchester and held it across my knees. Ernest hurriedly piled fresh wood high on the fire and with a final warning word to keep still sat like a statue. Again the yip, yip, yip and chorus and then continuous howling, increasing in volume as they drew nearer; then the concert opened in earnest, and in a few moments we were saluted from all sides. I gripped my gun tightly, but made no move. Billy, the outside horse, had backed up against a ground pine in his efforts to get near the fire, and now with pandemonium sounding on all sides stood without making a sound. I saw the little pine tremble like a leaf. Suddenly all was still. Down the road, after a moment of silence, there sounded a single howl, and with a yip, yip, the whole band seemed off in that direction.

The clouds which had caused such Egyptian darkness gradually rolled away. The stars became visible through the interlacing branches. The night wind seemed to slumber. The snapping fire intensified the stillness. The horses and mules sank one by one to repose. I looked across the again dying fire at Ernest. His rude pillow was again adjusted, the camp spread pulled up to his chin, and as I looked the silence was broken by a good old-fashioned snore. The grip on my gun relaxed. Almost unconsciously I straighten out on the blanket and pull part of it over me. Unconscious of danger, we sleep the sleep of the just.

The sun shines. The frost on the pine tops glistens as though they had been dusted over with diamonds. Billy whickers for his oats, as Ernest after much stamping gets his feet into his stiffened boots and starts for the wagon, saying, as he stops to pat the shaggy head, "He laugh and feel good because wolf no get him last night."

I went out in the road and saw plenty of wolf tracks. I paced from the fire to the tracks; it was fifteen paces.

G. W. M.

The Big Bass of the Perkiomen.

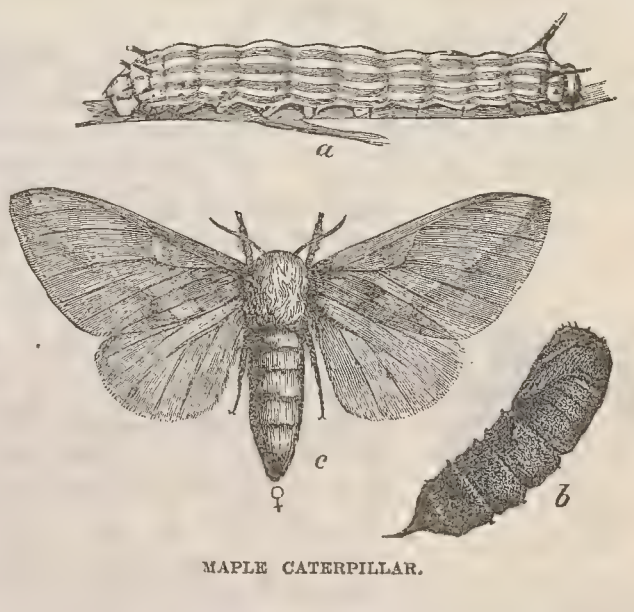
THE large black bass, the monarch of the Perkiomen, which for over two years was on exhibition in a large glass tank in one of the windows of Hoff & Bro.'s hardware store, reports the Reading (Pa.) *Times* of July 22, was found dead in the tank yesterday morning standing perpendicular with its head on the bottom. It is supposed the bad flavor of the city water killed it, but a physician, who is also well versed in fishculture, says it died of fatty degeneration of the heart from over-feeding. The fish was taken from the tank to the scales, and weighed 6¾lbs. and measured 23¾in. It was caught by Augustus W. Hoff in the Perkiomen Creek near Greater Ford, a few days after the opening of the bass season in 1894, and was brought here alive after great difficulty. The fish had several narrow escapes during its captivity, owing to low water, but was unable to cope with the present supply. His place is filled by another whopper caught by Mr. Hoff also in the Perkiomen below Schwenksville. It measures 21in. and weighs 4¾lbs.

Natural History.

HOW BIRDS AFFECT THE FARM AND GARDEN.

BY FLORENCE A. MERRIAM.

IT is said that two hundred millions of dollars, that should go to the farmer, the gardener and the fruit grower in the United States, are lost every year by the ravages of insects—that is to say, one-tenth of our agricultural products is actually destroyed by them. The ravages of the gypsy moth in three counties in Massachusetts for several years annually cost the State $100,000. Now, as rain is the natural check to drought, so birds are the natural check to insects, for what are pests to the farmer are necessities of life to the bird. It is calculated that an average insectivorous bird destroys 2,400 insects in a year; and when it is remembered that there are over 100,000 kinds of insects in the United States, the majority of which are injurious, and that in some cases a single individual in a year may become the progenitor of several billion descendants, it is seen how much good birds do ordinarily by simple prevention.



The good they do in cases of insect plagues, like that of the grasshopper scourge in Nebraska and Kansas, is still more marked. Then, as self-constituted militia, they fly to the scene of action and make away with the rioters. An interesting case of this kind was seen in an old orchard in Illinois. The cankerworm had so taken possession that the orchard looked almost as if overrun with fire. Forty different kinds of birds assembled in the place to feed upon the worms. One hundred and forty-one of the birds were shot and the contents of their stomachs examined; more than one-third of their food was found to have been cankerworms—the feathered army was simply wiping out the horde of worms. A similar case occurred in Massachusetts, and after the visit of the birds a good crop of apples was raised in the orchard which had been devastated.

It is well known that of the various groups of birds the majority live upon insects. Among the insect eaters are the flycatchers, warblers, woodpeckers, nuthatches, orioles, goatsuckers, hummingbirds, tanagers, waxwings, gnatcatchers, kinglets, vireos, thrushes, wrens, titmice, cuckoos, swallows, shrikes, thrashers, creepers and bluebirds.

It is not generally known, however, that the so called seed eaters feed their young largely upon insects, and eat a great many themselves; nor is it realized how much good they do by eating weed seed. Prof. F. E. L. Beal has calculated that the little tree sparrow in Iowa alone destroys 1,720,000lbs. of noxious weed seeds every year. Moreover, in summer seed eaters eat blueberries, huckleberries, strawberries and raspberries, and distribute their seeds unharmed over thousands of acres which would not otherwise support such growth.

These facts show how important it is that the birds should be protected and encouraged, except in the exceedingly few cases where for a few weeks they eat some one cultivated crop to such excess that the loss is not compensated by the good they do in destroying pests the rest of the year. The Department of Agriculture, realizing the losses that might result from the ignorant sacrifice of useful birds, constituted the Division of Economic Ornithology a court of appeal where accusations against the birds could be received and investigated.

The method used by the division is the final one—the examination of stomach contents to prove the actual food of the birds. A collection of 26,000 stomachs has been made by the co-operation of hunters and collectors who have shot the birds for other purposes, and a reference collection of 800 kinds of seeds and 500 beetles and many other insects has been brought together for comparison

MAPLE CATERPILLAR.

in determining the character of food remains found. Already about forty different kinds of birds have been examined and reported upon. The examinations have been made chiefly by Prof. Walter B. Barrows, Prof. Otto Lugger, Mr. E. A. Schwarz, Dr. A. K. Fisher, Prof. F. E. L. Beal and Mr. Sylvester D. Judd, with the assistance of the late Prof. C. V. Riley and Mr. L. O. Howard, now chief entomologist of the Department of Agriculture. The reports already printed or about to be issued by the Division of Ornithology are the reports of the ornithologist for the years 1886, 1887, 1888, 1889, 1890, 1891, 1892 (with notes on the Food Habits of the Cedar Bird and Horned Lark), 1893 (with notes on the Food of the Kingbird), 1894 (with articles on the Crow Blackbirds and their Food, and Hawks and Owls from the Standpoint of the Farmer); Bulletin No. 1, The English Sparrow, by Walter B. Barrows; Bulletin No. 3, Hawks and Owls, by Dr. A. K. Fisher; Bulletin No. 6, The Common Crow of the United States, by Walter B. Barrows and E. A. Schwarz (1895); Bulletin No. 7, Preliminary Report on the Food of Woodpeckers, by F. E. L. Beal (1895); Four Common Birds of the Farm and Garden, by Sylvester D. Judd; The Meadowlark and Baltimore Oriole, by F. E. L. Beal; The Food Habits of the Kingbird, by Walter B. Barrows; The Cedar Bird, by F. E. L. Beal.

After the examination of about forty birds, the only one actually sentenced to death is the English sparrow. Of all the accused hawks only three have been found

guilty of the charges made against them—the goshawk, Cooper's and the sharp-shinned—while the rest are numbered among the best friends of the fruit grower and farmer. Of the woodpeckers, the sapsucker and redhead may be beneficial or injurious, according to circumstances, but the rest of the family are highly beneficial. To most of the remaining birds tried the evidence is decidedly creditable. The crow, crow blackbird and cedar bird are acquitted as doing more good than harm; and it is proved that agriculturists owe especial protection and friendship to the phœbe, kingbird, catbird, swallow, brown thrasher, rose-breasted grosbeak, house wren, vireos, cuckoo, oriole, shore lark, loggerhead shrike and meadowlark.

Catbird.

The catbird is persecuted because it eats fruit; but, although stomach examinations show that it does eat considerable in some parts of the country, one-third of its food consists of insects which annually destroy a large part of the farmer's profits. As Mr. Judd, in speaking of the catbird, says: "By killing the birds their services as insect destroyers would be lost, so the problem is to keep both the birds and the fruit." The study of this matter has led to one of the most important discoveries made in the investigations of the Division of Ornithology. It has been demonstrated that some birds—the catbird among the number—actually prefer wild fruits to the cultivated, and that most of the complaints of depredations come

CATBIRD.

from parts of the country where there is little wild fruit, so that by planting berry-bearing bushes and trees it may be possible to prevent losses to cultivated fruits and at the same time to attract the birds and so secure their much-needed help in destroying insect pests.

The catbird is an excellent example of this. Experiments show that he prefers the red mulberry to cherries and strawberriers, and stomach examinations show that he eats twice as much wild fruit as cultivated, while one-third of his food is made up of insects. A slight idea of the good he does in destroying pests may be had from the fact that thirty grasshoppers were found in each of five stomachs. Reports show that he does much more harm in the central United States, where wild fruits are scarce, than near the coast, where they are abundant. Mr. Judd suggests that the crops of cherries and strawberries can be protected by planting the "prolific Russian mulberry, which, if planted in hen yards and pig runs, will afford excellent food for the hens and pigs besides attracting the birds away from more valuable fruit."

The verdict in the case of the catbird is, that he is already one of the farmer's best assistants, and that by a little effort the small amount of harm he does might be counteracted so that he would do unalloyed good in the farm and garden.

Kingbird.

The kingbird has been so long accused of destroying honey bees that careful examinations have been made of 218 stomachs. Insects formed about 90 per cent. of the whole food, but only fourteen of the 218 stomachs contained any trace of honey bees. Furthermore, nearly all the bees found were drones. On the other hand, the kingbird had destroyed a number of the worker bees' worst enemy, the robber fly, which has been known to kill 140 honey bees in a day; so this bird's reputation stands well cleared. More than this, the good done by this industrious flycatcher does not end with the death of the robber fly. Nearly 60 per cent. of his food consists of insects well known to be injurious. Among them are the gadfly, so terrifying to horses and cattle; the cloverleaf weevil, the destructive rosechafer, ants and grasshoppers.

ROBBER FLY.

Of the little fruit the kingbird eats only three or four kinds are cultivated, and if he were to harm one kind of fruit it would be easy to plant something that he would eat instead, as he feeds on wild red and black cherries, choke cherries, elderberries, mulberries, wild grapes, spice bush, sassafras, cornel, red and ground cedar, buckthorn, magnolia and pokeberry.

The conclusion reached from the examination of the 218 stomachs is that the kingbird is one of the best helps the farmer has in the destruction of harmful insects. One correspondent exclaims fervently, "I honor and esteem this bird for the millions of ruinous vermin he rids us of!"

Swallows.

The swallows are probably the greatest flycatchers in the eastern United States, but in addition to this they destroy great numbers of flying ants, aquatic leaf-eating beetles and weevils.

Barn Swallow.

Mr. Judd says, "The barn swallow is the most noted destroyer of flies, especially those kinds which torment tock."

Eave Swallow.

This useful bird builds under the eaves of our barns and eats enormous quantities of winged ants and also mosquitoes, injurious wheat midges, spotted squash beetles, and beetles that work under the bark of trees.

Chickadee.

In an article on "Birds as Protectors of Orchards," Mr. E. H. Forbush, of the Massachusetts Board of Agriculture, says of the chickadee: "There is no bird that can compare with it in destroying the female cankerworm moths and their eggs." He calculated that one chickadee in one day would destroy 5,550 eggs, and in the twenty-five days in which the cankerworm moths run or crawl up the trees 138,750 eggs. Mr. Forbush attracted chickadees to one orchard by feeding them in winter, and he says that in the following summer "it was noticed that while trees in neighboring orchards were seriously infested with cankerworms and to a less degree with tent caterpillars, those in the orchard which had been frequented by the chickadees during the winter and spring were not seriously infested, and that comparatively few of the worms and caterpillars were to be found there." His conclusion is that birds that eat eggs of insects are of the greatest value to the farmer, as they feed almost entirely on injurious insects and their eggs, and are present all winter, when other birds are absent.

Cedar Bird.

The cedar bird is also known as the cherry bird, but cultivated cherries have been found in only nine out of 152 stomachs examined, which, as Prof. Beal says, "hardly justifies the reputation which the bird has gained as a destroyer of cherries." He adds that this supposed cherry habit "to the careless and unobservant would condemn the bird to destruction, but the closer observer looks further." Investigation shows that more than half of the whole food of the cedar bird consists of wild fruit which has no value, and that one-eighth of its food consists of insects, among which are some of the worst pests of the country. Furthermore, since the nestlings are fed largely on insects, the greatest number of insects are eaten when fruit is most abundant. The cedar bird eats caterpillars, spiders and grasshoppers, but does most marked good in destroying the elm leaf beetle that strips our village and city trees of leaves. Mrs. Mary Treat writes of one town in which the elms had been ruined for several years before the cedar birds came, and which were afterward comparatively free from beetles. From one calculation it is shown that thirty cedar birds would destroy 9,000 worms during the month when the cut-worm caterpillar is exposed.

To prevent the cedar bird from eating cultivated fruit it would be well to plant some of the common bushes upon whose berries it feeds, such as blackberry, wild cherry, choke cherry, sour gum, flowering dogwood, rough-leaved dogwood, chokeberry, red cedar, June berry, hackberry, black haw, black elder, huckleberry, frost grape, barberry, mistletoe, or pokeberry.

Crow.

The charges against the crow are (1) that it pulls sprouting corn; (2) that it injures corn in the milk; (3) that it destroys cultivated fruit, and (4) that it feeds on the eggs and young of poultry and wild birds.

Nine hundred stomachs have been examined, but while it has been found that the crow does eat the forbidden food, it has also been seen that the quantity he eats is so small that it is more than counterbalanced by the good he does in destroying injurious insects and harmful animals. Only 3 per cent. of the total food of the crow is sprouting corn and corn in the milk; the rest that he is credited with is mostly waste grain picked up here and there mainly in winter, and so of no economic value. The injury the crow does to cultivated fruits is trivial. Moreover, the eggs and young of poultry and wild birds which he eats constitute only 1 per cent. of his food for the year. The

HOUSE WREN.

prejudice against him is based on an exaggeration of the harm he does, for in each instance it is proved to be insignificant.

Some intelligent farmers who realize the money value of the services of the crows either feed them old corn during the time when the growing corn is in the milk or else tar the corn before planting, in both cases protecting themselves from the injury the bird may do, and at the same time insuring his help in destroying the pests that will surely menace the maturing crop. Tarring must be done carefully to be successful. The best methods are given in the Crow Bulletin (No. 6), pp. 89–91.

But while protecting ourselves from the possible sins of the crow we must credit him with the good he does; 26 per cent. of his entire food consists of insects, the majority of which are grasshoppers, May beetles, cut worms and other injurious kinds. Another of the most important items of the crow's food is mice, and when rabbits and other harmful rodents are added to the list it becomes obvious that the good the bird does exceeds the bad, and that he is deserving the patient encouragement of the farmer. When we consider the work he does as a scavenger, our debt to him becomes still more apparent.

It has been well said that we do not shoot our cows and horses, although they eat our grain throughout the year; and it seems strange indeed that we should be unwilling to feed the birds during a few weeks when they spend the rest of the summer as unpaid day laborers in our farms and gardens, freeing us from pests which threaten to destroy all our profits.

Bluejay.

Like the crow, the bluejay is accused of pulling corn and eating young birds and eggs; 280 stomachs have been examined. In these remains of birds' eggs were found in only three, and of birds in two; 17 per cent. of the food of the year was found to be corn, but on the other hand 22 per cent. was made up of insects, such as grasshoppers and caterpillars, which shows that the jay does more good than harm.

In the matter of grain, the jay seems to take corn when nothing better offers, but evidently prefers mast, the large seeds of trees and shrubs, such as acorns, chestnuts, beechnuts and hazelnuts. This preference is shown by the fact that in the two months when the most corn is to be had—October and November—the bluejay stomachs show only 1 per cent. of corn against 64 per cent. of mast. Moreover, when corn is actually thrown out to the jay, as it often is on beds of chaff by New England farmers in winter, the moment the bare spots appear so that he can pick up his favorite food from the ground he deserts the corn.

The conclusion is that the bluejay has been unduly censured in the matter of eating young birds and eggs, and that, as he does not eat corn when he can obtain mast,

BALTIMORE ORIOLE.

he does less harm in eating corn than good in destroying insects.

House Wren.

The house wren is exclusively insectivorous and therefore highly beneficial. Half of its food is grasshoppers and beetles; it also destroys ants, caterpillars, crickets and spiders.

Cuckoo.

The cuckoo eats so many caterpillars that the walls of its stomach are filled with hairs, making them look like pieces of a felt hat. One cuckoo was found with forty-three caterpillars in its stomach.

Black-Billed Cuckoo.

In sixteen stomachs examined there were 328 caterpillars, fifteen grasshoppers, spiders, etc. The caterpillars were most of them hairy ones, many of them of a kind that lives in colonies and feeds on the leaves of apple and other trees.

Yellow-Billed Cuckoo.

In twenty-one stomachs there were 355 caterpillars, twenty-three grasshoppers, saw flies, potato bugs, locusts, etc. One stomach contained twelve tent caterpillars, and another had 217 fall web worms.

Oriole.

Green corn has been found in one of 113 stomachs and peas in two; but one man who reports that the bird eats grapes adds that it is worth its weight in gold as an insect destroyer. Mr. Lawrence Bruner, in his "Notes on Nebraska Birds," well says: "If we take pains to water our birds during the dry season, they will be much less apt to seek this supply from the juices of fruits that are so temptingly near at hand. Place little pans of water in the orchard and vineyard where the birds can visit them without fear of being seized by the house cat or knocked over by a missile from the alert 'small boy,' and I am sure that the injury to fruit to a great extent at least will cease." Speaking of the Baltimore oriole he adds: "As insect destroyers, both this bird and the orchard oriole have had an undisputed reputation for many years; and the kind of insects destroyed by both are of such a class as count in their favor."

Prof. Beal says: "The oriole is a most potent factor in the destruction of caterpillars, eating so many that if no other insects were taken it would still be classed as a useful bird. It does not, however, restrict its diet to caterpillars, but eats great numbers of injurious beetles and also many bugs and grasshoppers, including beetles that feed on locust and apple trees, and the wire worm, one of the most destructive insects with which the farmer has to contend. In fact the oriole is one of the most useful birds that we have."

Horned Lark; Shore Lark.

It has been complained that the lark eats newly planted wheat and oats, but the examination of fifty-nine stomachs shows that it does not do any appreciable damage to grain crops, and on the other hand it does great good by eating weed seed. As Professor Beal says, "Any bird which eats freely the seeds of such pests as pigweed, bitterweed, amaranth and sorrel should be given the most perfect protection unless it is clearly shown to have bad habits which offset the benefit thus conferred."

Butcherbird.

The butcherbird comes South into the United States in winter, and does good by destroying grasshoppers, mice and English sparrows.

[TO BE CONTINUED.]

THE SPADE-FOOT TOAD.

Editor Forest and Stream:

The story of the frogs of Wyndham, in your last issue, reminds me that no one has suggested that some few spade-feet, if that's the proper plural, might have helped in making that great alarm. Few people know this singular animal, which can raise more din than almost any other animal. It is quite rare. It is solitary and lives underground, good reasons for not being well known. About April 18 or 20 last, a few days before I moved from Long Island, there was a great row one evening up the road. A neighbor stopped to ask if we had heard it, and thought that a great fight must be going on among some people living there; perhaps tramps were murdering them!

On opening the door a babel of yells, shrieks and howls greeted us. Imagine a dozen steam calliopes each playing a different tune, while hundreds of Salvation Army bands were trying to silence them, and thousands of bagpipers were screeching to be heard, and you have a notion of the sounds that came down the hill. Two more neighbors from across the harbor came to learn what the difficulty was, and one of them, who is hard of hearing and lived nearly a mile away, said that the noise woke him up. "They're killing somebody," said the deaf man. "What can it be?" asked another. I knew, had heard it years ago, but never before on Long Island.

"Gentlemen," said I, "that music comes from a few spade-foot toads, known to the scientific duffers as *Scaphiopus holbrooki*, and there are probably six or eight of them there, and they are singing their love song in the pond above."

"Six or eight million, you mean, don't you?" asked one; "no such racket as that could be made by toads anyway."

"What did you say his name was?" asked the deaf man.

"Get a lantern and let's go up and see what the row is," said another.

We went, but when the lantern came near them all was still. The light was put out, and soon a shriek rent the air that made the deaf man stand back.

"That's no toad," he said.

"More like the devil," remarked his friend, and then we got it at close range. We could see nothing, and soon left them. Next day I went there and caught two, and was satisfied that I was right. I had not heard them in over forty years, and then only once, but did not know what they were at the time.

This animal is hardly as large as the largest common toad. It is of a brown color, with a yellowish band on each side. It has a horny spade-like attachment to its heel, and is solitary and burrowing, except when it seeks the water for breeding. The question arises: If this noisy animal lived in the hills about me for thirteen years, why did I not hear it before when it was breeding? No doubt the scientists of the Brooklyn Institute, some of whom are now at the laboratory at Cold Spring Harbor, could find the tadpoles of this toad in that pond, as it is close by and supplies the hatchery with some water.

After this description it seems possible that the Wyndham frogs might have employed a band of spade-foots to sing the wedding march in "Lohengrin," if it was at the time of year when that music would be appropriate.

FRED MATHER.

BROOKLYN, N. Y.

The Copperhead in New England.

BOSTON, Mass., Aug. 1.—*Editor Forest and Stream:* In reference to the copperhead snake in New England, the inclosed clippings, taken from this week's Sharon, Mass., *Advocate*, may throw some light on the subject. Blue Hill, Milton, has been noted for years as one of the places in Massachusetts for rattlesnakes.

ALBERT E. CRAFTS.

The *Advocate* records: "People who travel leafy woodland ways in this blithe summer time see strange things when they don't have their guns. Some of these things bite and some of them don't, but those discovered in the Blue Hill reservation of late decidedly do, if you give them a chance. Superintendent Hind has at his office near Houghton's Pond a croquet box with a glass top in which dwell three ugly customers, two rattlesnakes and a copperhead. With them is a 5ft. blacksnake, which keeps pretty quiet, and a poor little hop toad. The hop toad doesn't say much either. He seems to feel that he's got into the wrong bed. Blacksnakes and hop toads are well-known inhabitants of the reservation, even the rattlesnakes we have learned to put up with, but the copperhead is a new feature. He is about 2½ft. long, slender in build, with a slim neck and arrow-shaped head. The color is that of old copper, mottled light and dark, and the whole snake looks like a very poor thing to introduce into a Sunday-school picnic. He is an agile little chap and slips about in the box in a happy, careless way that gives the hop toad nervous prostration. He was captured by Supt. Hind himself in the part of the park over toward Quincy, and may be one of those which St. Faxon is busy driving out of Quincy boots. There are people who say that the copperhead is strictly a Southern snake and is not to be found in this section of the country, and that this is merely a harmless snake that looks something like one. When the reporter sees these unbelievers hold the copperhead on their knees and tickle his tail without getting a bicycle face on them he is prepared to believe their story; otherwise he takes the copperhead at his face value and doesn't require him certified."

"The copperhead, hardly heard from since the days of the war, seems again to be prevalent. Some years ago a Ponkapoag man declared that he had seen one and was promptly laughed at, people asking him if it came out of his boot. One has lately been captured in the park, however, and we quote the following from the Milton *News:* 'While mowing in the field the other day Peter McIntyre cut in pieces with his machine a large copperhead snake.'"

Wild Pigeons Bred in Captivity.

IN the last number of the *Auk* Mr. Ruthven Deane contributes an interesting note on some wild pigeons in captivity which are in the possession of Mr. David Whittaker, of Milwaukee, Wis. There are fifteen of these birds, six males and nine females, and the first pair of this flock was obtained by Mr. Whittaker in 1888. The pigeons breed with some regularity, laying only a single egg. The slow increase of the flock has been due to the destruction of the nest and eggs, at times by the female, oftener by others of the flock, and to the killing of young birds after they leave the nests by the old males. The period of incubation is fourteen days. Mr. Deane gives a number of interesting bits of information about the habits of these birds in captivity.

There are a number of records of the breeding of the passenger pigeon in captivity, and, if we recollect aright, Mr. Frank J. Thompson, now of Buffalo, N. Y., who formerly was in charge of the Zoölogical Gardens at Philadelphia and at Cincinnati, was quite successful in rearing these birds, and it is our impression that we published something on this point. In 1887 a note appeared in FOREST AND STREAM which told of the rearing of these birds in confinement by Mr. Ben Frost, a successful pigeon trapper residing in Michigan, not very far from Toledo, O. It would seem, therefore, that the rearing of the passenger pigeon in captivity presents no very great difficulties, and it is greatly to be desired that more extended efforts should be made looking to the breeding of these birds on a larger scale. Similar experiments might advantageously be made with the band-tail pigeon of the Northwest coast.

Game Bag and Gun.

MOOSE AND SOME NEW CAMPS.

AT various times during the past eighteen months I have received a good many letters from sportsmen in different parts of the country asking for information about good grounds for moose-hunting and also reliable guides. To one and all I wrote, describing grounds I knew and guides with whom I am personally acquainted. Many of my correspondents had never hunted moose, some had, but with no success. I have always endeavored to impress upon parties asking for information that there was a great deal of uncertainty connected with moose-hunting even on the best grounds. In calling time the weather may be unfavorable and remain so during the greater part if not the whole of the time you can spend in the woods, also in the still-hunting season a slight thaw or rain will often spoil what would otherwise prove first-rate snow.

Some four or five years ago I considered some parts of Nova Scotia fully as good if not the best moose region I knew of; since I have had reason to change. A friend, who is a resident of the Province, and who is a keen and successful sportsman, and who, although a comparatively young man, had killed twenty-two moose, and who rarely failed to get one or two bulls on every trip, wrote me some time since that his last two trips were failures and that in the future he should try New Brunswick. It was not on account of the scarcity of moose on his former hunting grounds, but for the reason of there being so many hunting parties that whenever he tried calling he would hear others doing the same. While I feel quite sure there are a good many moose now in Nova Scotia, I think it very uncertain about getting shots in calling season for the above reason. My last trip to the Province was to the region around the headwaters of Shelburne River in Shelburne county. I found moose and signs of moose scarcer there that season than I ever did in other parts of that country. Yet Mr. H. W. Hamlyn in a recent number of FOREST AND STREAM speaks of the number he found there last season, and I also know that Mr. Hamlyn was successful in the same place for two seasons in succession previous to the year I was there. Again Mr. John Bower, who is game warden in Shelburne, writes me that moose have been plenty the last season, and at the time of writing (some two weeks before the closing of the season) he knew of eighty-two being killed in that part of Nova Scotia.

In my letters to parties who have asked about guides I have given the names of several whom I considered among the best. A. J. Spearen, whose address is Maro, Aroostook county, Maine, and C. R. Peavey, of Oxbow, are two of the number. Spearen is building some camps in a part of Aroostook which he says is good moose ground, and which has not been hunted. I take it he means but little hunted, as I think it would be rather difficult to find a section of Maine which had never been hunted, although I have heard of sportsmen who imagined they had found certain tracts which were unknown to others and of whose location they are very careful never to speak. The new camps of Spearen will be ready before the next season opens. They will be fitted with blankets, canoes and provisions. So much per day will be charged, which includes sportsman's board, guide and board, and use of canoe. The charges are not as high as I have paid in similar camps in western Maine. I shall not give the location of the camps or the route to them. They cannot be reached in a few hours from the railroad, as they are quite a distance back in the wilderness. They can be reached by canoe before the lakes and streams freeze. Spearen will furnish any information required by parties wishing to go there. Last November he took in two sportsmen. On the first trip they had but two days of still-hunting owing to noisy snow; killed a bull moose and two deer in the two days. The second trip was late in the month, and they found some 2ft. of snow with a sharp crust. One day it rained, and, starting out, they got very close to an unusually large bull moose, and the sportsman missed three shots at him. A cow and a two-year-old were seen at the same time.

Now as to Peavey. C. R. Peavey is well known all over Maine as a very successful guide, whether in calling or still-hunting. He writes me that there were nine bull moose killed in his region during the past season, and he was present at the killing of seven of them. He was with a party who killed four bulls, joining them after they had killed one and helping to get the other three in six days' hunting. From Oct. 1 to Jan. 1 he saw thirty-seven moose. Saw three with large heads get away after sportsmen had had good shots. Thirteen caribou were killed around his camps. He also killed one bear and wounded and lost six more. Peavey has just sent me a number of photographs of views at and around his camps. There is one of a moose in the water and one of some caribou on a bog, but the pictures are too small to be reproduced.

Should any of the readers of FOREST AND STREAM propose to go on a hunting or fishing trip with either of the guides I have named, I have one request to make. Do not make an engagement with them unless you are sure to keep it. It is very discouraging to a guide to have a party engage him in advance for perhaps the best part of a season, and when the time draws near to suddenly give up the trip or perhaps go somewhere else. Of course there are times when owing to something unforeseen a sportsman cannot keep an engagement with a guide, and from no fault of his own, but I have known of instances where a guide got left in this manner, and when apparently there was no good and sufficient reason for it.

In writing as I have about these two guides I have no pecuniary interest in any sense. I should feel quite confident of shooting a bull moose should I go hunting with either of them, and perhaps what I have said may be of interest to parties wishing to kill their first moose during the season of '96.

C. M. STARK.

THE ALLING GAME PRESERVE.

TACOMA, Wash., July 27.—*Editor Forest and Stream:* The writer has read with delight the graphic descriptions of the "Game Preserves of America," as they have appeared in your valued paper, and has noted with approval the extensive efforts which are evidently being made to save our native game from total extinction.

The spirit which prompts these efforts cannot be too highly commended. We have some of it here, though truth compels me to state that as a rule there is a reprehensible carelessness among sportsmen about the observance of the plain rules of game protection.

This tendency to wink at violations of the game laws, and to take a shot at a "hooter" or a flock of young ducks in August, is gradually giving way to a healthier moral tone, and convictions for illegal killing will be as easy here in another decade as they are, or should be, in more advanced society. One of the most potent agencies for the furtherance of this proper and refined spirit is the constant teachings of FOREST AND STREAM, and I am sure that I have witnessed a change of heart in an inveterate "poacher" by giving him my old copies of FOREST AND STREAM, and accompanying him in reading and interpreting the meaning of the words "game protection."

One of our citizens deserves especial mention in this connection, and the earnest and persevering efforts made by Mr. Frank Alling, both to foster the native game and to introduce exotic species, are deserving of the unstinted praise of every true citizen of this State. Fox Island, about six miles long and two miles wide, lies parallel to the mainland and about five miles off shore, a little to the southwest of this city. It is an island gem, well watered and timbered, and abundantly provided with all that profusion of natural bird food which characterizes this whole region. There are a few ranches upon this island owned by farmers who are eager to see its game preserved, and who lend Mr. Alling much valuable assistance in his efforts.

Mr. Alling is rapidly stocking this island with native and imported game, entirely at private expense.

He has liberated large numbers of ring-neck, golden, silver and Reeves pheasants, mountain and valley quail, and quail brought from the north of India. Deer are rapidly multiplying under his protection, and all the birds he has liberated are doing nicely, and are now leading about large coveys of young.

In his efforts at game protection Mr. Alling has the hearty approval and practical assistance of Governor J. H. McGraw, and that also of the local rod and gun club. And he needs all the aid he can secure, for there is a small gang of utterly depraved pot-hunters, one of whom is now in jail for illegal killing, who hang upon the borders of this island and constantly await an opportunity to destroy these beautiful birds. And worse than this, there is somebody even more lost to a sense of right, whose desire to put "Chinese pheasant" upon the bill of fare places a premium upon these illegal and disgraceful practices. It will not be the fault of his excellency, the Governor, nor the neglect of the gun club to prosecute, if these deadly enemies of the game interests of the whole State are not severely punished whenever they are caught.

It should be the earnest, self-imposed duty of every citizen to second the philanthropic efforts being made by Mr. Alling in this direction, and the miserable, selfish nomads, who lurk in the shadows of the "forest primeval" only to desecrate its sacred precincts by deeds unworthy of men, should be given short shift and a long term.

J. A. BEEBE, M. D.

More about Eggs and Albumen.

SCRANTON, Pa., July 30.—*Editor Forest and Stream:* Apropos of the duck egg fake story I inclose a clipping from the mission publication of the Presbyterian Church, which explains where some of the eggs which furnish albumen for the arts really do come from.

J. H. FISHER.

The story as told by Rev. W. J. Nelson, of Tripoli, is of a Syrian egg gatherer: "A vacant room next to our church in Minyara has been made a store. One evening I saw a man come up with two donkeys, each carrying two boxes tied across his back. The owner asked some one to help him, and they very carefully lifted the boxes to the ground. Then came the owner of the store, and seating himself on an empty box removed the grass and straw from the top of one of the boxes and it proved to be full of eggs. Then began the counting and storing of all the sound eggs in other boxes ready for the city. In the four boxes there were 2,161 good eggs, besides about a dozen broken ones The price of these eggs is thirty-two cents a hundred—less than four cents a dozen. The owner of the donkeys told me that he had been away three or four days collecting the eggs, and often he travels as much as fifty miles from home, going to each village and trading for eggs, in exchange for which he gives soap. But these eggs are not to be eaten. They are sent on camels or donkeys to Tripoli, a camel load being 3,440 eggs. There they go into an egg factory. The shells are broken, the white put in large tin trays and set on shelves to dry. The yolks are put into large casks with salt. These casks are then shipped away across the Mediterranean to France, where the yolks are used in preparing dressing for leather. When the white is dry it is packed up and sent away to Europe, where it is used in photography. So the chickens of Syria are useful to the people of Europe."

THE OLD HUNTER'S RIFLE.

Now rest, old friend, the chase is done;
No more this eye, now dimmed with age,
Shall glance along thy burnished steel;
No more shall hill and valley reel,
And echo back thy furious rage;
So rest in peace, thy work is done.
How oft I've rammed the bullet down
Thy ribbed throat, and primed the charge!
Together we have spent our day,
Alas! a day now passed away.
Together now we near the verge
Of final rest, our labor's crown.
The chase at last is done,
Our course is fully run.

THEO. F. BROOKINS.

ONTARIO GAME PARKS.

Editor Forest and Stream:

I was much pleased with the report on American game parks which appeared in your issue of July 18 last, not only because it furnishes the evidence of success in the way of preserving and increasing the large game of the continent, but also because it teaches many lessons as to the foreign animals which may be introdueed into this country with success.

The report of the Blue Mountain Park is a wonderful story of the increase of the different animals when protected and given a fair chance against their many enemies. The enterprise of the late Mr. Austin Corbin cannot be too highly commended on account of the many lessons it teaches, for no doubt his example will be followed to a greater or less extent by governments and private individuals with wonderful advantage to the country.

Under the impression that some of your readers might be interested in a short account of what we are doing in the Province of Ontario, Canada, in the same line, I am induced to send you a short report of the Algonquin National Park and the Rondeau Provincial Park, which the Government has set aside, as the act says, "as public parks and forest reservations, fish and game preserves, health resorts and pleasure grounds, for the benefit, advantage and enjoyment of the people of the Province, subject to the provisions of this act, and of the regulations hereinafter mentioned."

The great object is for the propagation and preservation of the original animals belonging to the Province which, as in other parts of the continent, are fast becoming things of the past. In the northern portion of Ontario we have now probably the best natural hunting grounds for large game on the continent, if not in the world, but each year such numbers of deer are killed by the destructive methods of hunting hitherto allowed that it was felt that something had to be done to prevent the great waste and perhaps total annihilation in the near future of our game animals and birds.

To this end the Government, by act of the Legislature, set apart in 1893 an area comprising the townships of Peck, Hunter, Devine, Biggar, Wilkes, Canisbay, McLaughlin, Bishop, Osler, Pentland, Sproule, Bower, Freswick, Lister, Preston. Dickson, Auglin, Deacon, and portions of McCraney, Butt, Paxton, Ballantyne and Boyd, containing 993,489 acres of land and 115 894 acres of water, in all 1,109,383 acres, equal to 1,733 square miles. The park is thus approximately forty-four miles in length from north to south and forty miles in width from east to west, and is to be known by the name of the Algonquin National Park. It lies between 45° 20′ north latitude and 78° and 79° 8′ west longitude.

In this territory, which is in the Nipissing District, there is a varied character of country, consisting of lakes, rivers, swamps, marshes, hills and valleys, the latter all densely wooded with pine, birch, maple, hemlock, cedar and tamarack, and at present a great resort for moose and deer. All the animals, birds and fish of this section are here in their primitive abundance, such as moose, deer, bears, beaver, wolves, mink, marten, fisher, otter, muskrat. Ruffed grouse are exceedingly plentiful, and Canada grouse or spruce partridge are also found there. The waters, which comprise rivers and lakes, are well stocked with gray or lake trout, salmon, and brook trout, and it is intended that, although this fine game preserve is unfenced, it will be thoroughly guarded by an efficient force of game wardens, who will prevent any disturbance of the existing state of things by hunters and others. It is also intended by the Government to allow the Game Commission of the Province to introduce as an experiment a number of capercailzie, black grouse and ring-necked English pheasants, which it is thought should succeed there. In the waters, too, desirable forms of fish will be tried, and wild rice is being sown largely to encourage the ducks and other aquatic birds. Everything is to be kept in its primitive condition as nearly as possible, except that the streams will be cleared of all obstructions and trails will be made on land, so as to facilitate the journeys of the wardens and tourists from one point to another. A telephone system may in the near future be established for the convenience of the superintendent and his staff of protectors. The only possible drawback to the introduction of foreign game birds will possibly be the length and severity of the winters, for the snow often reaches 4ft. in depth and the thermometer ranges as low sometimes as 30° or 40° below zero. The commission is nevertheless sanguine that the birds named will live and thrive, as all the other conditions are perfect; and if the experiment is successful it will be of incalculable benefit to the country; for, while the park will be a harbor of refuge for hunted animals and birds, which they will soon appreciate, the overflow of game to the surrounding country will be great and will undoubtedly postpone almost indefinitely the time when it will become extinct, more particularly now that the amendments to the Game Act prohibit the taking of deer in the water.

Section 7 of the act of establishment of the park provides that carrying or using firearms or explosives within the said park, except as provided by the regulations for the government and maintenance of the park, hunting with or without firearms or explosives, or trapping or spearing within the limits of said park, is prohibited under a penalty for each offense not exceeding $100, except under special license for the killing of wolves, bears, wolverines, wildcats, foxes or hawks, to be issued by the Commissioner of Crown Lands upon the recommendation of the Superintendent. Fishing is also prohibited under a penalty not exceeding $100 for each offense,

The Rondeau Park is smaller, and is situated on the north shore of Lade Erie. It is the peninsula known as Pointe aux Pins, contains about 5,000 acres, and is well wooded and very suitable for stocking with such birds as wild turkeys, Mongolian pheasants, prairie chickens, quail, etc., and of these a start has been made with one or two hundred, under the care of the Superintendent, Mr. Isaac Gardiner, Morpeth, Ont. The Pointe has long been a favorite resort for summer camping parties, being admirably situated for summer residence in a cool and healthful locality.

DR. G. A. MACCALLUM,
Ontario Game and Fish Commissioner.

DUNNVILLE, Ont., July 28.

MINNESOTA ASSOCIATION.

ST. PAUL, Minn., Aug. 1.—*Editor Forest and Stream:* The first annual meeting of the Minnesota State Game and Fish Protective Association was held at the Windsor Hotel yesterday afternoon. The Association was formed one year ago, for the purpose of assisting the State game warden in the protection of the game abounding in Minnesota's forests and streams, and has at present an active membership of 200, including representatives from every county in the State. Its members are all devotees of the rod and gun, but they do not believe in the indiscriminate slaughter of game out of season in mere wantonness, and the efficiency of their Association may be judged from the following extract from the report of the State Game and Fish Commissioners for 1895:

In all its efforts the board has been ably assisted by the citizens, who are beginning to realize that it is to their advantage to have the game and fish preserved. No other agencies have done so much for the protection of game and fish as the different clubs throughout the State, which have been formed for this purpose. Perhaps none other has done so much as the State Voluntary Game and Fish Protective Association. These gentlemen have spent their money and time, with no hope of reward except to see that our game and fish were protected. The executive agent of the Commission feels personally under a deep obligation to each of the officers of this club, and the Commission as a whole take this opportunity of thanking the members and officers of the State Voluntary Game and Fish Commission for the splendid assistance rendered them. Perhaps most of the work fell on W. L. Tucker, the secretary of that Association; but the others have all worked faithfully, and reported everything that came under their notice to the executive agent. It would make this report too long to go into detail and mention all the members and officers' names; it is enough to know that they have worked faithfully and in harmony with the Commission, and had only one object in view, and that the preservation of our game and fish.

The chief subject before the meeting was a proposed amendment to the constitution providing for the admission of clubs through the State whose coöperation, it was considered, would be of vast good in furthering the objects of the Association. Heretofore there has only been provision for individual membership, and the members of clubs in the different country towns did not seem to desire an affiliation with the State organization, as their objects were the same, and a union would only increase their individual assessments. This objection was, however, done away with by the adoption of an amendment to the constitution of the State organization, which now provides for the issuance of membership certificates to clubs of more than ten members upon the payment of an annual assessment of $5; clubs admitted under the amendment will be regular members of the Association and enjoy all of the privileges heretofore extended to individual members, with the exception of having but one vote in the meetings. It is hoped by the new plan to gain an additional membership to the State Association of nearly 400.

By a unanimous vote it was decided to enlarge the executive committee from nine to fourteen members. The five additional committeemen will be appointed from St. Paul and Minneapolis, in order that, in case of the need of a special or hurried meeting, a quorum may be more readily gotten together.

With one exception the officers were all re-elected. C. S. Benson has become a member of the State Game and Fish Commission, and his place as first vice-president was filled by the selection of L. Theilman, of St. Cloud. The officers of the Association for the ensuing year, therefore, are the following: President, Uri L. Lamprey, St. Paul; First Vice-President, L Theilman, St. Cloud; Second Vice-President, F. F. Davis, Minneapolis; Third Vice-President, E. S. Palmer, Duluth; Secretary, William L. Tucker, St. Paul; Treasurer, William L. Wolford, Minneapolis; Attorney, H. P. Goodenow, St. Paul.

On motion President Lamprey was instructed to select the five additional members of the executive committee. Three will be chosen from Minneapolis and two from St. Paul.

The report of Secretary Tucker was brief, but encouraging. He cited the excellent and practically unrequited work of the volunteer wardens of the Association, and said that poachers were becoming afraid to violate the law because they did not know at what moment they might be under the watchful eye of one of the members of the Association. This, Mr. Tucker explained, was one of the benefits derived from keeping the names of members a secret. They could thus work in the dark, and were better prepared to catch poachers. With the change in the constitution, which will be taken advantage of by about seventeen rod and gun clubs in the State, Mr. Tucker said the membership of the Association would be greatly increased, and he predicted that next season it would be in a position to make its name and influence a wholesome check to evildoers.

President Lamprey commended the Association on its good work in his address, and he also spoke a good word for the State Game and Fish Commission, and said that great credit was due Executive Agent Fullerton for the promptness with which he follows up cases presented by the Association, securing convictions and promptly suppressing violations of the law. W. L. TUCKER.

[A description of the Tucker cup and report of the tournament are given in our trap columns.]

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at th est by Monday, and as much earlier as practicable.

A Roedeer Hunt in Germany.

From a private letter.

GLAUCHAU, Oct. 21, 1895.—*My Dear Elmer:* I have only time to give you a few lines of the hunting trip—when I made the double on deer.

Arrived here 2 A. M. and found my faithful friend Carl Gunther at the station. Went to bed at 2:30. Was called at 8 and donned a hunting suit furnished by the same friend, and after breakfast drove into the country about three miles. Nine gunners—fancy such a crowd. This was not all. We had ten sturdy farmers with sticks and they were the drivers. In brief: the gunners surround a patch of timber, about 75 to 100yds. apart, and the drivers go in and try to frighten the deer and hares, which we were after. They invariably run out straight and cross a field to the next timber, and in this way they are hunted. It is seldom a hare gets away from these Germans. It is seldom that deer are killed here, as they are so scarce, but we brought in three deer and eight hares as the result of four hours' hunting.

I had a 16-bore hammer gun loaded with No. 3 shot. Fancy my disgust to be armed with such a weapon. Well, after missing five good shots on hares, I became disgusted with the gun, and said I would throw it away. One man had killed a deer. I was envious and mad; said I wouldn't fire my gun if I saw game. Well, we had surrounded the last little strip of timber, and within sight of a country tavern, where we were to dine. The drivers began their noise, and behold, 20yds. in front of me not one, but two deer jumped out and started tandem fashion across the field, running as only deer can run. I think I had been asleep all the morning, but this sight opened my eyes. My gun spoke twice and two deer lay dead, 10ft. apart, and both died without a struggle.

I was surrounded by hunters and drivers, and congratulations from all. In fact, they wanted me to drink a barrel of beer at the inn, but two glasses satisfied my thirst. I am the talk of Glauchau, and they point to me and say, "The American who made a *doubletta* on *reh*" (double on deer). To shoot a deer here is not strange, but to make a double on deer is extraordinary, and to have the opportunity, even once in one's life, is more than extraordinary. JOE.

Have Sportsmen Degenerated?

Editor Forest and Stream:

I wrote you a letter which you were kind enough to publish in FOREST AND STREAM of Aug. 1, but which owing to a mistake in the heading switched the whole thing off at a foreign tangent. I put for a heading, "Have Sportsmen Degenerated?" and it comes out "How Sportsmen Originated." My penmanship has often been the subject of much sarcasm, the crow tracks and inked caterpillar comparisons doing noble service in that respect. But I feel a just pride in being able to write an article of such merit that it will fit any heading as nicely as a glove to the hand. My purpose was to show that we had no genuine sportsmen of the present day, but only flimsy imitations, and not to show their origin; for the dudish specimens we meet on their way to a day's outing for the purpose of playing hunter or fisher could not have an origin in the class of Davy Crockett, Daniel Boone, Kit Carson and others. DICK OF CONNECTICUT.

[Our correspondent must of course have formed his notion of the old-time sportsmen (if the men cited were sportsmen) from his reading; and he appears to have drawn his notion of the sportsmen of to-day from hearsay.]

A Birch Bark Woods Note.

MR. WM. W. BLIVEN sends us a birch bark letter inclosed in a birch bark envelope, sent to him from Rainbow in the Adirondacks, and telling of the deer there. "Almost any evening," writes James M. Wardner, "one may see four or five deer by paddling up the stream. One evening I went up the stream with a gentleman who wished to see a deer; we saw nine and heard many more on the way back, when it was too dark to see. During one forenoon six deer were seen just across from the house."

Camp-Fire Flickerings.

"That reminds me."

How the Lop-Eared Hound was Fooled.

Up among the green hills of Vermont two country ball nines were contending for supremacy one hot afternoon in an old pasture. Among the assembled spectators was a sad-faced lop-eared "houn' dog" which had previously been investigating the contents of a woodchuck hole. He had worked his passage in until no dog was visible, but a steady stream of dirt shooting out like the blast from the blow pipe of a sawmill proclaimed that the investigation was still on. Becoming tired of this, the hound was sitting down watching the home team getting "done up," when suddenly, without warning, he shot across the field with a trajectory as flat as a .32-40 and with nearly the same velocity. The cause was soon apparent. Several little girls were coming up through a hollow and one was just tall enough for her brown hat to show through the fringe of grass on the rising ground in front. When the hound came near enough for the supposed woodchuck to merge into a hat with a girl under it he stopped an instant with a look of horrified surprise. A yell arose from the assembled farmers who had seen the incident, and this so mortified the hound that he made straight for home and was invisible for several days. Bah-ko-ne gad.

Coon Skin Currency.

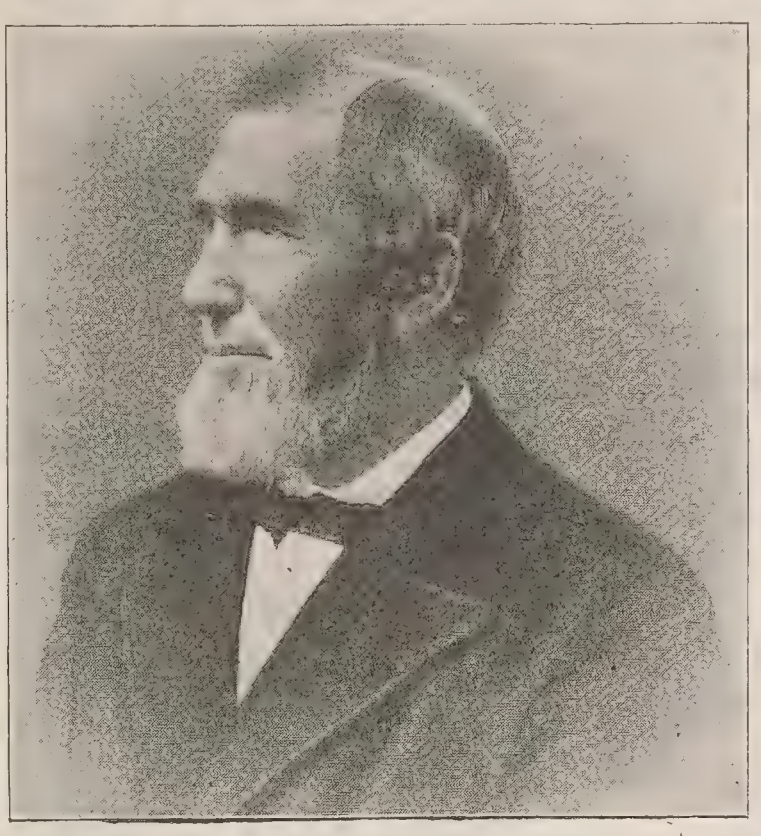
Time was when coon skins allus had their vally in trade at the store an' 'most any shoemaker shop in Bullskin township. Prob'ly old Onc Lisha also knowed their usefulness for makin' whang luther, which is the best kind for strings and mendin' gears. You bet they was a kind of circulatin' medium nobody couldn't corner, mainly because speckilaters had to ketch the coons first, which animals don't circulate in Wall street, N. Y. Since the crime of makin' better money, coon hides is demoneytized an' coons is gettin' a heap harder to ketch, which is natural.

Wampum was a fashionable kind of circulatin' money the Indians had plenty of, and it has been demoneytized too. Wampum is a little long kind of shells, about as scarce as hen's teeth, which they look a good bit like. Scratchin' gravel on the ridge huntin' wampum has gone out of fashion entirely, but most likely both wampum an' coons would be easier to get if they was recognized as money again. Maybe there are some other things besides wampum an' coon hides that would do for new kinds of money and would be easier to get, especially in bad huntin' weather an' in summer, when the fur is no good. We've long been wantin' more money on the ridge, and we jine in demandin' free coinage of everything suitable, specially coon skins and other precious hides. Then life will be wuth livin' again in Bullskin township, Fiatt county, Pennsylvany. Yours truly,

Deacon.

Sea and River Fishing.

MEN I HAVE FISHED WITH.



V.—George Dawson.

VI.—Maj. George S. Dawson.

In writing the third article of this series it was recorded that at one time John Atwood and I went trouting in a small stream back of Kinderhook Landing, on the river, a place some eighteen miles below Greenbush. This trip led to my first fishing trip with George Dawson, who was a man twenty years my senior, and it came to pass in this way. About 1850 my people moved across the river into Albany, and I was a student in the "Classical Institute" of Prof. Charles H. Anthony, on Eagle street. Among the scholars was George S. Dawson, eldest son of George Dawson, who at that time was assistant editor of the Albany *Evening Journal*. Young George heard of that trip and told his father about the catch of trout in that stream, and it led to an interview. Mr. Dawson wanted to go, and we would take an early train for Kinderhook station, on the B. & A. R. R., and if the distance was too far to the brook he would hire a horse to take the three near the stream, for George S. would go. This seemed a reckless bit of extravagance to a boy whose whole expenditures for fishing had been a few pennies for hooks and lines and of leg muscle to get to the fishing places.

The only thing that serves to fix the time of year is the memory that pond lilies were in bloom; the cat-tails were just pushing up their curious blooms, and had not burst to scatter their seeds, and the black-cap raspberries were ripe. It must have been early in July, for the swallows were skimming the meadows, and had not begun to congregate on the telegraph wires. These things are recalled by Mr. Dawson's wish to take home the pond lilies, our picking berries near the railroad station, and young Dawson's doubt of my statement that swallows could gather on wires charged with electricity. What a thing is a man's memory, and by how slight a cord is it tied to the past! The exact year is forgotten, but it was before 1854, probably three years before. Mr. Dawson carried a short hand-made rod of some kind of wood, with ring guides, the first thing of the kind I had seen, and that gave me the impression that he must be a very superior angler, especially as he said that his father had brought expensive rods for trout fishing from Scotland, but they had been lost. This was a revelation! "Expensive rods"—he called them "rods"—and the idea of paying money for such things when we could cut an alder pole and thought it expensive to buy fish hooks and lines, but, like the Irishman's owl which he had bought for a parrot, I said nothing, "but kept up a devil of a thinking." If money had been more plentiful in boyish pockets it is doubtful if its expenditure would have been in the direction of "fish poles," which could be cut anywhere and thrown away after use. This was a bit of dilettanteism in angling that hardly seemed consistent with our primitive ideas of using only those things which nature furnished, always excepting hooks and lines. His hooks were also a revelation. We used only Limericks of large size, and boys usually prefer big hooks because they look so strong, and they fear that a big fish may break a small hook. Mr. Dawson's hooks were small and the wire was slim, but they were long in the shank, something like the hook now known as the "New York trout," if not the same, and the most wonderful thing about them was that they were neatly put on gut snells, another new thing. He rigged my line with one of the smallest hooks and discarded the sinker, which before seemed to be an indispensable part of a fishing outfit, and he showed us how to fish down stream and how we must keep a good distance apart. We fished with worms, and the slim, long-shanked hooks were perfect, because they did not break a small worm, and allowed the use of a generous bait on the long wire. How I treasured a dozen of these hooks which he gave me, and how some boys looked at them with envy, and others sneered at them, saying, "A big fish would bite 'em in two," are things well remembered.

The stream was small, in places one could jump across it; then it would widen out, sometimes in deep holes and at others in shallow riffles, through meadows most of the way and often fringed with alders, which troubled the angler to use his rod. In the latter case trout would be hauled in as on a hand line. There was no landing net in the party. At this time the existence of such an implement was unknown to us boys; we hauled in a fish, unhooked it, and either strung it on a twig and carried the string or let the fish hang in the water to keep alive. This day the latter mode was not practicable. The trout in this stream did not run very large, perhaps from 4 to 6oz.; but the new kind of hooks, the absence of a sinker and the consequent ability of the fish to fight, made it the grandest event in all my fishing and one ever to be

GEORGE DAWSON.

remembered. The day was perfect: a light breeze, the sun not too bright, and the fish taking the bait freely. Crawling through the brush or skipping the places where it was too thick to get a short rod and line in the water, we worked slowly down stream. I had let my hook drift under a log in a hole on the other side of the stream when a trout struck it hard. We had not arrived at that point in fine angling when reels were used, and the strike caught me with my tip lowered, and there was a struggle which soon ended in the line being fast to some immovable thing and a strong pull parted it, and for the first time the biggest got away. This has happened to others.

Surely it is hard to tell, at this late day, whether grief over the loss of a big fish overtopped the grief of losing one of those marvelous hooks, but that grief in solid chunks was abundant in a little clump of swamp willows is certain. The gut snell was frayed and had parted in the middle as if chafed over something rough; and after bending on a new hook I came upon young George near a little foot bridge, on which most of his clothing lay in a wet state.

"What's the matter, George?"

"Fell in. How many you got?"

"Nine, nice ones; but I just lost an old whopper and one of those hooks your father gave me. How many have you got, and how did you fall in?"

"I only caught three; the fish get scared as soon as they see you and scoot away. I was after one that started down stream, and stepped on a slippery stone and just plunked in, that's all."

After pointing out to him that trout must not be chased in order to make them take the hook, he was reminded of what his father had told him about not letting the fish see him, but in his anxiety to get a worm under a trout's nose all rules had been forgotten. The morning's work had brought on a first-class appetite on my schoolmate as well as on me, and Mr. Dawson had the material to alleviate and cure that gnawing sensation if he could be found. Leaving all my traps and fish at the foot bridge, I started down stream to find Mr. Dawson. Soon he hove in sight, coming up stream, and he had a string of about twenty fine trout. "It's getting near midday and the fish are not biting well, so we might as well rest and eat a bite," said he, "and then by the time we are through and walk back to the station the freight train will be along and we will go back in the caboose, as the agent said, for if we wait here for more fishing we will not get home to-night, as the fish will not be on the feed again before an hour or two of sundown."

Capt. George S. Dawson, Second New York Artillery, stationed in the defenses of Washington, near Alexandria, in 1863, came to visit me when my regiment occupied the forts from Tennallytown on the Harper's Ferry road to Fort De Russy, near the Seventh street road, and we had a grand review of the schoolboy days and of the only fishing trip that we ever had together. Said he: "That day will ever be remembered, for in my case it filled the proverbial measure of fisherman's luck, and that lunch! Did you ever strike anything so fine?" His regiment, in June, 1864, was in the Second Brigade, First Division, Second Corps, Army of the Potomac; while mine was in the Fourth Brigade of the same division and corps. While we lay in the trenches at Cold Harbor I sent him a note asking if he was catching many trout now, and he answered, in effect, that his regiment caught something else in the charge on June 3, and to the best of his knowledge the Seventh Artillery had some of the same brimstone. The official records show that the Second lost 215 officers and men killed, wounded and missing in that terrible assault on the impregnable works at Cold Harbor, mainly in the charge on the morning of June 3, 1864. My message had the desired effect, it showed that my schoolmate had lived through the storm and was still on duty. Twelve days later our brigades were halted near each other preparatory to forming for the battle which took place next day, and he sought me out. In the few minutes' chat he ran over several incidents of school days and referred to good old Prof. Anthony and our trouting. That day's fishing was firmly fixed in his mind. I never fished with him again and do not know that he ever went fishing after that time. In later years, while fishing with his father, we often talked of the Major, and he was a favorite subject with the elder George, but no reference to his fishing, except on that one occasion, was ever made.

A bugle call broke our conference, and with a hurried grip of the hand Capt. Dawson said: "I think we will intrench here and besiege Petersburg, and then we can visit often. Good-bye."

There was a siege of Petersburg after the assault on the enemy's works on June 16, but Capt. Dawson took no part in it. A rifle shot just above the left knee, which he thought only a flesh wound and which the surgeon termed "a thirty days' scratch"—meaning a furlough for that length of time—took him off the field; and twenty-four hours later, while on his way to the Second Corps hospital at City Point, he was strong enough to hold in his lap the head of a poor fellow whose leg had been amputated. Whether the wound was more serious than was at first supposed, or because of the jolting in the ambulance, his leg was amputated shortly after reaching the hospital, and he was sent by steamer to Washington, where he remained four months before he was allowed to be taken home. Shortly after reaching Washington his commission as major was received. "That's good," said he; "when my leg gets a little better I'll be mustered in as major, and then I can join my regiment as a mounted officer; for a fellow with one leg is of no use in the line, and I want to see this war fought to the end." Poor fellow! he died on Dec. 6, nearly four months after receiving his wound, aged twenty-six and a half years. The post mortem showed that the bone was injured above the amputation, and in army parlance he is still "awaiting muster." As a schoolboy he was very bright and studious, and although several years my junior he helped me out in my studies and "exams." many times. After leaving school he entered the service of Weed, Parsons & Co., publishers, and was a member of the Tenth Regiment, N. Y. Militia, before the war. Early in the war he offered his services as a private, but was rejected because of a defect in one eye from an accident in childhood, but he was bound to go in some capacity, and after the Second Artillery left Albany there was a vacant first lieutenantcy, and he got the appointment and joined the command at Staten Island, before it left the State, and was afterward made captain. No less a poet than Alfred B. Street wrote quite a long poem on "George Seward Dawson, Major Second New York Artillery, died from wounds received before Petersburg, June 16, 1864." After his death the Governor of the State forwarded to the bereaved father a brevet commission for his son (in memoriam) of lieutenant-colonel, "for gallant and meritorious conduct before Petersburg, Va." His regimental comrades bore witness to his soldierly qualities in a set of resolutions sent to his father, and Post No. 63, Department of New York, Grand Army of the Republic, of Albany, is named "George S. Dawson," after the young soldier whose life of promised usefulness was, like so many others, brought to a sudden end, but cannot be considered wasted.

George Dawson, while a trenchant political writer, was also fond of depicting life in the woods and on the streams. With pleasure I renewed my acquaintance with him in later years, when peace reigned in the land, and by invitation accompanied him to the Adirondacks when both were familiar with the use of the fly in luring the trout. He was born in Falkirk, Scotland, in 1813, and came with his parents to America five years later. He had no early schooling, but learned the printer's trade before he was thirteen, and educated himself. Then he went to Rochester and worked for Thurlow Weed, editor of an anti-Masonic paper, and in 1836 Dawson became editor of the Rochester *Democrat*. Weed was afterward editor of the Albany *Evening Journal*, and in 1846 Dawson joined him as assistant editor. Weed retired in the stirring days of 1862 and Mr. Dawson took his place as editor and proprietor of the *Journal*, then as now one of the leading papers of the State of New York, and it soon became known that the pen of the new man was a most vigorous one. His love of nature was a most prominent trait, and fishing was his favorite means of enjoying this love. Once while on the way to the Adirondacks with him I remarked: "The woods to me is a place to loaf." If I had read Whitman then I would have added, "and invite my soul," but only added, "A couple of hours' fishing morning and evening is all I want; if the fish bite good it is well; if not, the trying for them suffices."

"My boy," he replied, "that is just exactly my own notion, and I have a dislike for the companionship of the bustling, busy angler who fishes as long as he can see to do it, morn, noon and dewy eve, in the hope of getting the last trout in the water. Such a man makes a labor of fishing; I go to the woods for rest and other attractions, purer, higher and more ennobling than the mere act of taking fish."

He put these same words down in a notebook, and while in camp wrote an account of the trip to the *Journal* and used them in its columns in June, 1873, now before me.

Once in writing of "how really garrulous are the silent men of meditative mood," and relating how, when in the woods, their faces would be illuminated by the passing thoughts while they were really communing with distant

friends, and their silence was only seeming, and musing in an abstracted way was a rare and pleasant gift, he said: "It is not so with the chronically absent-minded, who may be heavy-browed, but are vinegar-visaged and constitutionally morbid, and would no sooner think of angling than of robbing the exchequer of the realm. An editor's life is neither the best nor the worst in which to cultivate this rare gift. There are those in the profession who can so concentrate their thoughts that the pertinacious pleadings of a score of office-seekers cannot tangle the thread of their meditations. And sometimes even the least abstracted among us have to throw off sentences amid such persistent din that bedlam itself would blush at the clatter. What little of the art came to me by nature and compulsory practice has been strengthened by the opportunities for silent meditation afforded by the habit of angling." Thus spoke the weary political editor, and we read between the lines his disgust with the horde of office-seekers, who under the ante civil-service laws rendered miserable the life of every man who had "influoence" in the smallest degree; but the deduction which he draws, that the practice of angling conduces to deliberate thought, is one that should commend its practice to parents as the best of all sports for their sons. The murdering instincts of a boy are often satisfied with the death of a low form of animal life which cannot suffer as much pain as mammals or birds, under any circumstances, because their nervous organizations are lower. Shakespeare was greatly in error when he wrote, in effect, that "the smallest worm when trodden under foot feels pangs as great as when a giant dies." (Memory.) Suffering is entirely a matter of nerves. A worm which can be cut in two and go on living and perhaps grow into two worms cannot suffer much. Pull a lobster's claw from its body and a new one grows. Pull a limb from a mouse and the animal dies.

Under date of July 3, 1878, Mr. Dawson wrote me: "No pastime is so attractive to me as angling; and when not at it I greatly like to talk and write about it, ethically, not scientifically, for I have never been able to master an *ology* of any kind," and then he goes on to ask about the details of grayling fishing. Some time before this I called on him and enlarged on the pleasures of a trip to the Au Sable River, Michigan, with Mr. Daniel H. Fitzhugh, of Bay City, and of the capture of the gentle grayling. He listened awhile and then asked:

"How large do grayling grow?"

"Those we took were fish that would weigh from ¾ to 1½lbs., but some have been taken that would weigh as much as 2lbs."

"My boy," he seemed to be fond of addressing me in this way, perhaps because of the fact of the great disparity of years when we first fished together back of Kinderhook Landing, or because his son, George S., was my schoolmate, "you talk enthusiastically about this new fish, which never exceeds 2lbs. in weight; did you ever take a salmon?"

"No, but—"

"Well, I have, and the grayling may be a good little fish for those who have never hooked bigger game, but it seems rather small to one who has taken a salmon."

This was a setback from an enthusiastic angler, and after pulling myself together I ventured to suggest that his angling literature, as far as I had read it, rather placed the weight and number of fish in the background, and that, as the originator of the saying that "it is not all of fishing to fish," I had thought that the newly discovered grayling might interest him. He saw the point at once, became interested in the fish and went to Michigan to take them, an account of which can be found in his "Angling Talks," published by FOREST AND STREAM in 1883—a most interesting little work, full of flavor of the woods and waters.

Mr. Dawson died Feb. 17, 1883, after a few days' illness, aged seventy years. His life had been such an active one, and as a political leader he was so prominent, that his death produced a profound sensation. The Albany *Argus*, politically opposed to Mr. Dawson, said of him: "To journalism this man bore no undistinguished relation. He was a ready, wise, dangerous writer. He was a Greek to be feared when he came bearing presents. * * * He was very able in stating a case for a party; he was even abler in stating a case against a party. He was ablest in giving a man either a fatal defense or a fatal attack. His genius ran to combat; battle was his element. Routine tired him. Peace gave him a sense of *ennui*."

About five months before his death he retired from his editorial labors, although his well-knit frame and compact form showed no more sign of weariness than did his mind. The *Argus* said: "Pneumonia wrestled the life out of this Scot, they say. Doubtless it did. 'Twas pneumonia of which he died. But how came his constitution to take it? Through cold? Why, he had summered for years in water knee-high, or waist-high, putting up jobs on fish. Why, he had repeatedly slept on the floor of lumber cabins o' winter nights, his feet to a fire and his head under an open window, in the Michigan woods. He had the conquering will that defied wet and blasts. Did his prolonged labors undermine his constitution? Emphatically no! He was ever strongest in harness. When he went to press every day he went to bed every night to sleep the easy-breathing, refreshing sleep of a boy. Knocking off work unsettled this man's strength. Labor was a tonic to him. He would have lived through sheer love of labor had he remained a scalp taker, every day, armed with his keen pen and keener thought. None can be blamed. He quitted work because he said he wanted to quit it. He thought that lessening the tension would enable him to play in the youth of old age. And he loved to play. But work was his best play. Then he played with thunder."

Only once did Mr. Dawson hold public office. He was postmaster of Albany from 1861 to 1867, at a time when his pen was most actively engaged in the patriotic work of upholding the integrity of the Union. But he did not stop at writing editorials and equipping his eldest son for the army. He publicly announced that he would pay to the families of any six printers who would volunteer $4 per week during the time they remained in the United States service, and he did it. One of the six, Charles Van Allen, of Bethlehem, Albany county, went out with my regiment in August, 1862, and died in Andersonville prison Sept. 18, 1864. His wife received the pay for nearly a year after he died, or for the full term of his enlistment, some $624, all to one family.

George Dawson was a member of the Baptist Church, a Sunday-school teacher and lay preacher. A noble man and a most charming one to be in camp with. Entirely without ostentation, his acts of charity were known to but few, and if within his power his pencil would be drawn through most of these lines, written by one who is proud to have known him, and to have called him friend.

FRED MATHER.

THE FISH IN THE SWIM AND AFTER.

What he does and why he does it.

THE one particular fisherman is Rex L. I don't think there is any need for me to give you his name in full, is there now? And he it is who taught me all that I know about fish and fishing, at least about the scientific part of it. I adore science if the teacher only makes it interesting, but how many professors are there who have that happy faculty? I only know that if Rex, dear old fellow, had been the science professor in our school I should have known a great deal more than I do about many things.

I knew Rex ever so many years ago, when I was quite a little girl. I think I always knew him; but the longest ago that I remember clearly is one summer when I was ten years old and we were all in camp in the Adirondacks, and Rex had a camp near us and took me out in his boat fishing with him. I dearly loved the excitement of fighting with the fish, especially when it was a big fish, that rushed first to all points of the compass, then jumped into the air and dived down again, "flirting between zenith and nadir," as Rex says, which are really not points of the compass at all, although I don't see why they shouldn't be. But all the same, I used to be very sorry for the fish, and thought it very cruel, and Rex used to say that the fish didn't mind it at all and enjoyed the sport just as much as he did, at least as long as they were in the swim.

Well, the other day Rex came to challenge me to a game of lawn tennis. It was a beautiful day and I was glad of anything for distraction, so I assented gladly, and we went to the park and had a lovely game, or rather several games, until I was not exactly tired, but just in the right frame of mind for sitting down with Rex under the trees and enjoying a delightful chat; and Rex's talk is always so instructive and interesting.

I don't know how it happened. I dare say Rex could explain it to me if I were to ask him; but all at once I felt as if it were the old Adirondack times over again and Rex and I was sitting in the boat fishing, so I asked him if he were still as fond of fishing as he used to be.

At the mention of the word fishing a soft light came into his eyes—and Rex has beautiful eyes—and a far away yearning look, which made me realize the appropriateness of those charming lines of Campbell's on Arnold Winkleried:

"You might have seen with sudden grace
The very thought steal o'er his face."

And Rex leaned back against the tree in an easy, graceful attitude, with his hands clasped around his knees and began to talk.

"Yes, I love fishing," he said in a pleasant, dreamy way, "not merely for the sport itself, although that affords scope for the display of some of the finer talents; nor even for the indulgence of what may be scientifically characterized as the ultimate motive, that is the providing the fish for the pan; although the appetite engendered by a day's sport, and the admirable suitability of the fish to gratify and alleviate it at the same time, produce a sense of satisfaction with ourselves and our surroundings, which is really nothing more than an intuitive apprehension of the beautiful adaptation of means to ends which pervades all nature.

"But the real charm of fishing is in the accessories: collateral enjoyments, to which the instinctive impulse to go fishing is only an admirable provision of nature to guide us to higher pursuits. Nature allures us as we allure the fish, by holding before us an object which lures our senses, as the well-tied fly lures the senses of the fish; but having enticed us into the wilderness, away from the engrossing pursuits of city life, the scales fall from our eyes, which are opened to the calm enjoyment of the somber and stately pine forests, the sublimity of the mountain peaks, the busy hum of the omnipresent mosquito and the bright, laughing ripple on the face of the sparkling brook. The phenomena thus transmitted through the senses generate impressions upon the sensitive substance of the brain, which by reflex action upon half obliterated impressions of bygone experiences carry a man outside himself as it were, and cause his whole being to swell with mingled emotions. Yes, catching fish," he continued, "is not the whole of fishing."

There was a pause after this, during which Rex appeared to be recalling bygone scenes, while I was methodically engaged in committing his instructive lesson to memory.

"But about the fish," I asked at length, "is it not painful for them? I can't help putting myself in their place."

"That is where you err," he said; "you can only approach the problem objectively, and it is consequently impossible for me to analyze the precise state of mind in which the fish participate in the sport. Fish have brains, which, although smaller in proportion to their frames than those of the higher vertebrates, are nevertheless constructed on the same general type, and as function corresponds to organ, it is perfectly safe to conclude that they have intelligence; but no matter what the measure of their intelligence, they can reason only from the facts as they present themselves, and from their previous experiences.

"Now, what are the facts in the case of a fish taking an artificial fly? He tries to get away with it, and his first impression is doubtless one of astonishment that so small a creature should have so strong a pull, and his one dominant idea is to hold fast to him. His destructive impulse is in the ascendant. When he finds he can get no further, and that the fly is dragging him against his will, the combative impulse is aroused; he grasps the fly viciously, makes a determined plunge, and revels in the delicious sense of final triumph over his small but powerful foe, and in the pleasurable excitement springing from the healthy exercise of all his powers and the fierce ferment of his emotions. When at length he is momentarily exhausted with the struggle and finds the fly leading him whither he would not, he goes quietly, that he may recover his breath and be prepared for a renewal of the joyous struggle. His sensations as he alternately yields and triumphs presumably correspond precisely with those of the fisherman, the joyous excitement in both cases being tempered on the fisherman's part with anxiety lest the fish should ultimately get away, and on the part of the fish lest he should finally have to let go the fly."

"But surely," I objected, "the hook must give the fish great pain."

"Not at all," he replied. "In the first place, by a beautiful ordination of nature the horny plates of a fish's mouth are without any nerves of sensation, and even if a fish be hooked in some other part provided with nerves, the nervous sensibility of fish is very low, the only pain is in the momentary prick, and that is forgotten instantaneously in the excitement of the sport. No matter how much a fish's mouth may be torn, he is always ready to renew the struggle with a second fly, after he has had time to recover his wind."

"But surely," I urged again, "the poor fish must be filled with anxiety and alarm when he finds that he cannot get rid of the fly and recover his liberty."

"By no means," rejoined Rex. "You argue on the hypothetical presumption that the fish has your knowledge of the ultimate consequences to which it is all tending, providing, which is not always the case, that the fisherman triumphs; but these ultimate consequences altogether transcend the fish's experience. What can an inexperienced fish know about frying pans. No, the conclusions of science are that the fish experiences the most delicious excitement in angling which his nature is capable of, at least as long as he is in the swim."

"Yes," I retorted, "as long as he is in the swim. But what about his sensations after he is in the boat? Do not his struggles there indicate pain and anxiety amounting to terror?"

"No," rejoined Rex, "all his struggles after coming to the landing net are fairly attributable to reflex action. You know what that is?"

"Perhaps not quite clearly in the case of the fish," I replied, "please explain."

"Well, it is an activity which he is bound to engage in by the mere property of his physical constitution, irrespective of any mental effort—in fact an activity which his body must engage in whether his mind assents or not. In illustration: if you were to let me take off your boot and tickle the sole of your pretty little foot, you would draw it away immediately."

"Yes, of course," I retorted, "because I should feel it."

"No, not because you would feel it," he replied, "but because you couldn't help it. If a man's back was broken he would have no consciousness of any feeling in his feet, but if anyone were to tickle them he would draw them away precisely as if he did feel it, by what is called simple automatic reflex action, which means that one part of a sensitive substance, being touched, receives an impression which is at once communicated to other parts and sets them in motion. In your case it would be a double-actioned automatic movement, because the impression would be simultaneously transmitted to the brain, in which it would produce not only an impression, but a sensation also, and your will would give voluntary assent to a movement which under any circumstances would be made involuntarily. The struggles of a fish on a hook when he is being pulled in and finds he cannot get rid of the fly are also the result of double automatic reflex action, which impels him to reflect upon himself and upon the fly, but not to cast reflections upon the fisherman, whose character and motive and part in the programme altogether transcend the fish's experience."

Of course I wouldn't let him tickle my foot, because I know exactly what the sensation is; but I wouldn't have thought it possible that a person who couldn't feel it would act just as if she did, but Rex says so, and he knows. Apropos to this, I remember reading somewhere "that we are curiously and wonderfully made."

I adore science if it is only made interesting, as Rex knows how to make it, but although he had wrapped me up carefully when we sat down, I was getting chilly, and suggested a move homeward.

We talked very little by the way, for somehow the faster you walk the slower you think, but I was able to memorize his exact language carefully and was very particular to do so, especially that about the double-actioned automatism, which is very interesting and instructive. I don't pretend that I understand it exactly, but Rex has studied it and he knows. It is enough for me to accept the general conclusion to which the argument pointed—"that fish were created expressly for participating in the sport of angling, without sense of pain or appreciation of ultimate consequences"—those were Rex's exact words—and "that, lured by the fly precisely as man is lured by them, they engage in the struggle with as keen an appreciation of its pleasures as the fisherman himself." Rex remarked too on the way home, "that although when the fish jumps the act is due simply to conscious automatic reflex action, the fish always takes advantage of his position to effect a reconnoissance, and that having sighted the line his one idea is to snap it, which he takes a malicious and consequently intelligent pleasure in doing."

ALICE DEMAREST.

Cranberry Lake, Adirondacks.

CRANBERRY LAKE in the Adirondacks is furnishing some capital sport this year. Mr. George B. Wood, of Syracuse, writes to Mr. Fred Mather from Cranberry Inlet under date of July 26:

"Friday I caught a trout of 3½lbs. Yesterday, one 3lbs., one 2lbs, one 1½lbs. Last week three fellows caught twenty-eight trout, total weight 63lbs., including two at 4lbs. each. I supply two houses with trout for four, using only a fly, and am having great sport. This is the best all-round year trout-producing section in the Adirondacks, and the fish are larger than in any other place I know or have heard of. I calculate to leave here a week from Thursday, and to get home about Aug. 6 or 7. Two days before I shall fish for keeps; then look out. I want two or three 4 or 5-pounders. Thought sure I had one last night about 7 o'clock. A lunker took my fly (Reuben Wood) No. 4 hook, and when it struck it was like the side of a barn; he fought like a tiger. When near the surface a surge was made the size of a wash tub; in about ten minutes I had the fellow safe. If I had lost the fish he would not have weighed 1oz. less than 5lbs. He was hooked just near the pectoral fin, and I tell you he made a circus; actual weight 3lbs., length 18in. I have a copy of FOREST AND STREAM with me, which affords lots of fun and brings out a series of stories and fish lies.

GEO. B. WOOD."

LAKE TAHOE FISHING WAYS.

HAVING long been an ardent reader of FOREST AND STREAM, I think it only fair that I should endeavor to interest some of its readears, as their articles have done much to contribute to my entertainment.

I propose in this short article to give an account of the fishing to be had at Lake Tahoe and other adjoining streams and lakes. I am one of those fortunate individuals with whom it is a possibility to lay aside business cares for two or three months and go away to some charming spot in the great Sierra Nevada or Coast Range of California.

About the first week of last June I packed together my rods and tackle, rifle and shotgun, with all accessories, and left my Sacramento Valley home for an outing at Lake Tahoe. The route was by the Central Pacific R. R. to Truckee, thence by stage to Tahoe City. We have a magnificent view, ever changing, as we ride along up the cañon of the Truckee River. The road follows the Truckee the whole length to its starting point, where it flows out of the famous lake.

This river affords magnificent sport for the fly-fisher, and I must in some future article recount to you some experiences on the Truckee.

We arrived at Tahoe City after a three hours' staging over as fine a mountain road as one would desire. There we found the little steamer Tallac waiting at the wharf, ready to convey us to the Tallac House, situated almost at the extreme other end and necessitating a ride of twenty-five miles, which I anticipate with much pleasure as I look around me and observe the beautiful clear water, unruffled by wind and as smooth and shining as a mirror; and the snow-covered mountains which hem the lake in on all sides, clad in forests almost to the summit. Presently the whistle blows, and we are off. I eagerly hang over the bow watching for fish—several of which are pointed out to me by an old resident—for the bottom can be easily discerned in 100ft., so clear is the water, coming, as it does, direct from the melting snow. No wonder that innumerable trout thrive here unpolluted by drainage or factories. At length the wharf of the Tallac House comes into view; soon we land and find the genial host, Melville Lawrence, who tells us that the fishing is first-class.

The next morning I was up bright and early. On walking out onto the veranda of the little rustic hotel a sight greeted me which those who live cooped up in cities the year round never become familiar with. Here at an elevation of some 7,000ft. lay the magnificent sheet of water, surrounded by snow-covered mountains; the sun, rising in all its gorgeousness, sent its rays over the snow onto a sheet of glass, not a ripple disturbed the placid surface of the lake. Squirrels were chasing each other up among the branches of the huge pines; now and then a hummingbird flitted past me; I could hear the quack of the mallard from the marsh close by, and an occasional call from the mountain back of the hotel told of the presence of grouse and mountain quail.

Before recounting my first day's sport I will endeavor to describe the methods used at Lake Tahoe for catching fish. Trolling is almost the only means used, fish seldom if ever rising to a fly. The tackle mostly in vogue consists of a wire line made of eight or ten strands of very fine copper wire twisted together, which is very pliable and is from 100 to 200ft. in length. Attached to this are about 50 to 75ft. of heavy cotton or linen line; the whole is wound on a large hand-made wooden reel. This constitutes the hand line.

The spoon, which is attached to the wire by a ring and swivel, is very large, from 4 to 6in. long and from 2 to 3in. wide, with a dish of ⅝in. The large end of the spoon is of course attached to the line to make it revolve. To the smaller end a long-snelled No. 3 or 4 Sproat or Carlisle hook is fastened by means of another ring and swivel, the spoon having a hole punched through it at either end to admit the ring. The length of the snell on the hook varies from 8 to 16in., as sometimes the fish seem to prefer the bait further away from the spoon. Sometimes a second hook is tied on halfway up the snell when a long snell is used. On this second hook a different bait may be used; on getting a strike it is not necessary to draw in the line at once to rebait, as the second bait affords an opportunity for the fish to bite again if not hooked the first time. The spoons are generally made of copper or brass. The color varies according to the season of the year. In early spring, say in April or May, a large nickel-plated spoon is used; later on a brass spoon is good; in the middle of summer an abalone shell, or a spoon one side nickel and the other copper, is largely used, while in the fall a dull-colored spoon is most effective, such as dull brass or copper.

This is the only place in my experience of fishing where I have ever seen such fishing tackle. My fellow anglers naturally ask, "What is the use of such an outfit? Why use a wire line and such an enormous spoon?" When I tell you the nature of the fishing you may pardon the Tahoe fisherman for using such a murderous rig. The wire line does away with the use of a sinker, by its own weight sinking the bait to the required depth. The usual depth for trolling is from 50 to 100ft., and the best places for fishing are around reefs and pot-holes, just on the edge of the very deep water. Now the water is so clear that one can easily see the bottom on a calm day in 60 to 75ft. of water, so that in coming to a shallow all that is necessary to keep from catching on the rocky bottom is to increase the speed of the boat, thereby raising the spoon near the surface. This must be done probably 100 times a day. With such a piece of lead as would be necessary to sink a line to the required depth, rowing faster would not raise it sufficiently to clear the shoals, and as a result numerous spoons and hooks would remain on the rocks. The wire line, as far as I know, does not seem to scare the fish more than a cotton or linen line would. When the boat is rowed at the right speed, the spoon has been found to sink to a depth equal to one-half the length of the line in the water. A knowledge of this is invaluable when fishing with perhaps 150ft. of line. The bait, which is strung on the hook, generally consists of a minnow, wood grub or angle worm. Minnows are used mostly. The spoon only serves as an attraction to the fish to bring them within striking distance of the minnow, although I often found that fish struck at the spoon and left teeth marks on it.

The boats, of which there is a goodly number at Tallac, are built expressly for preserving the fish and minnows alive. For the most part flat-bottomed skiffs are used, with a large water tank in the center, admitting fresh water through auger holes in the bottom. This tank, which rises flush with the seats, has in it a small compartment for minnows. The fish are placed in the tank and so kept alive until the fisherman returns home, when they are transferred to fish cars and kept alive until the steamer next day carries them away to friends less fortunate than the sender. The mode of fishing which I have attempted to describe is almost the only means adopted to capture fish, outside of still-fishing with grubs and live minnows.

Why wouldn't such an outfit catch maskelonge or bass in the Eastern lakes? Some of my brother anglers might express their opinion. If any desire to try it I will be pleased to furnish particulars as to its construction.

Although I am a devoted fly-fisher myself, I was greatly interested in this style of luring the speckled beauties to an untimely end, especially as I afterward hit on a scheme which made it seem more sportsmanlike. I attached large upright guides to my heavy greenheart trolling rod, and wound 250ft. of wire line on my salmon reel, putting in a small swivel in the line about every 15ft. to prevent kinking, and used this to fish with. I found that I saved more fish than with a hand line, as a matter of course, and had much better sport. The line I used was about one-half the size of the hand line and ran through the guides very well. Undoubtedly the wire line is a good idea.

After breakfast I found Dick, the boatman, awaiting me on the wharf with a complete outfit of lines and bait, and I caught a glimpse of a frying-pan and coffee-pot.

We rowed out into the lake for about 500yds. and then Dick told me to get my lines ready. I baited the hook with a medium-sized minnow, running the barb through the mouth and bringing it out again near the tail. I tossed the spoon overboard and began to let the line run out slowly, until about 100ft. lay in the water. Dick called my attention to a perceptible line of demarcation in the water, on one side of the boat the bottom was just visible and the water had a green appearance, while on the other side the water was deep and very blue. "This is the best place to fish," said Dick, "just on the line between the blue and green water. The fish lie on that ridge, and if they are biting at all you always catch them just on the edge of these pot-holes." I took good stock of what Dick told me, as I recognized that I had no novice with me.

As we were quietly rowing along, following the edge of the deep water, I got a strike, but the fish missed it. "She'll come back," said Dick, and sure enough the next minute I felt another tug, to which I replied by a slight movement in the opposite direction, and I had hooked him fast.

After three or four good runs in his efforts to disengage the hook, I commenced to haul in my fish, allowing the line to fall in coils in the bottom of the boat. I must here admit that this seems a clumsy way of fishing, but it is the method generally adopted. Dick produced a landing net as I brought my captive alongside the boat and skillfully dipped him up, placing him beyond escape.

"A 3lb. silver trout," said Dick to the tickled angler, and sure enough he was—a perfect model of symmetry and resembling in color a fresh-run grilse.

"These fish run in shoals," said Dick. "Put out two lines and take one in each hand, so that when we cross a shoal of them you will probably hook two."

I took his advice, putting a fresh minnow on my first line, and let it out carefully to avoid any kinks in the wire. I hardly had out 50ft. when I felt a tug. I struck slightly; had him on sure enough, and pulling in slowly I landed a nice trout of 1½lbs. of the rainbow variety. This heavy tackle kills a fish very quickly and gives him no quarter.

After this we rowed on to a famous pot-hole, opposite Jimmy Walker's cabin, where the inlet from Cascade Lake flows into Lake Tahoe, bringing down lots of feed. I had both my lines out by this time and we trolled for five or ten minutes up and down this favorite lurking place for big fish without any result.

"Try a grub on one line," said Dick, and at the same time he produced a box of fine fat wood-grubs. I hauled in one line and substituted the minnow for a grub. With this new bait we tried our luck over the same ground again. Just as we were opposite a large reef of rocks at the mouth of the creek I struck something.

"I have fouled the bottom," said I.

"No fear, there is a hundred feet of water here." Presently that something commenced to move heavily and slowly away; I then realized that I was fast to a fish of no mean proportions, and began to haul in slowly, and then I moved rapidly, as the fish concluded to swim toward me, remembering the adage my father taught me: "Always keep a taut line on your fish." At last we caught sight of him about 30ft. away. He also seemed to wake up to the fact that a boat containing two determined fishermen was the cause of being jerked from his feeding ground so unceremoniously. With a twist of his tail he dashed away and began sounding, running out fully 80ft. of line without pausing. This kind of performance was kept up for several minutes, until he showed signs of exhaustion. Taking advantage of this, I slowly drew him toward the boat. As he came within sight Dick exclaimed: "I'll never be able to get him in this net!" I plainly saw that the landing net was wholly inadequate to land such a monster.

"You'll have to gaff him," said I. Dick hunted around in the boat for his gaff, but to my chagrin found that he had neglected to bring it along. All this time the fish was making frantic efforts to get a little slack line and throw his tail over it.

I soon made up my mind what to do. Tiring him completely out, I told Dick to pass his hand quietly along the side of the fish till he reached the gill cover, and then inserting his fingers underneath, he lifted this monarch of the lake into the boat.

"A 17-pounder!" said Dick. I produced a small pocket scale, and this magnificent specimen of a Mackinaw trout pulled down the spring until 16¾lbs. were registered. To say that I was elated over my capture would be putting it very mildly. Dick said that to capture a fish of this size was no rare occurrence, especially in the spring and fall of the year, and he told how some years ago a fish had been caught weighing 29¼lbs., and had been shipped as a present to Gen. Grant. Undoubtedly there are fish of enormous dimensions in this lake.

We fished on until Dick suggested lunch; then selecting a beautiful spot on the lake shore near the mouth of Emerald Bay we landed. Dick prepared two of the fish we had caught for lunch, and building a fire among the rocks cooked them to a turn. My brother anglers who have experienced eating a trout taken right out of the water know how good they taste. After lunch we took to the boat again and trolled toward home, landing on the wharf about 4 o'clock with twenty-three fine trout to my credit, which weighed just 79¼lbs. Thus terminated my first day's fishing on Lake Tahoe. I hope in a future article to tell of other experiences, both with the finny tribe and with grouse and deer. SIERRA.

CALIFORNIA.

NEW ENGLAND NOTES.

BOSTON, Aug. 1.—The salt-water fishermen are at it, and they seem to get a good deal of pleasure out of what Georges and Grand Bank fishermen consider the hardest of labor. As they make it, it is work and it is play. Mr. Mathew Luce keeps up his fishing at Cohasset and makes some big hauls in company with his boatman.

Almost every day a little steamer or two goes off from Boston to the various fishing grounds at Nahant, Cohasset, Scituate and all along the South Shore. The boats are very well patronized. They furnish bait and tackle and generally offer prizes for the largest fish for a trip. Bluefishing is also good off Hyannis and Nantucket. Something is also being done in that line in Buzzard's Bay. Mr. Walter Brown took eight good bluefish in Buzzard's Bay one day last week. He went out from Mattapoisett. Off Edgertown and Katama some good sport is mentioned. A Boston gentleman has just returned from Nantucket with a report of 300 bluefish being taken to one boat at one trip. I do not give his name for the good reason that I do not believe the story. Still it may be true, and if so, and the gentleman will explain through the FOREST AND STREAM, I will always believe him hereafter.

There are very few reports from the trout and salmon fishermen. The Messrs. Crane, of Boston, had reached Round Mountain Lake when last heard from, and the letter stated that "the lake was alive with trout." They were just joining their rods on the day of their arrival to try the evening fishing. Since that letter the record is quiet. Reports from the New Brunswick and Canadian salmon rivers say that the fishing is poor, and sportsmen who have been there and had good luck suggest that the season is about over. One noted salmon fisherman suggests that the early run of the majority of salmon rivers is all that is "worth quarreling about."

Great sport is mentioned on the Maine bass lakes and ponds. At Cobbosseecontee there are many Gardiner and Augusta fishermen. A couple of Boston gentlemen returned from that lake last week. They stayed but one day and took no bass. The weather was too hot, and there were "too many native fishermen."

Most remarkable reports of game seen continue to come from Maine. Thirty deer seen in one day at Big Spencer Lake were none too many for a guide to write me about. But he signed no name to his postal card, except A Guide. Of course he wants me to believe the story and to publish it. They have caught a little fawn at the Middle Dam, and those who have seen it declare that it is doing well, is very tame, etc. It came down to the Rapid River, where Steve Morse and a Brooklyn gentleman were fishing, and was easily caught in the brush. A cow moose and her calf have frequently been seen in the same locality. Some boys fishing in Roxbury Pond, a few miles from Andover, were startled by a large bull moose suddenly appearing in the water the other day. Report says that the boys left their tackle and ran for home. SPECIAL.

BOSTON, July 27.—Rev. W. H. Allbright and son, Manley, left Boston July 28 for club camp Big Moose, Adirondacks, on their annual vacation for the month of August. Being enthusiastic anglers in this noted region, an excellent report is expected. J. P. W.

NEW JERSEY COAST FISHING.

ASBURY PARK, N. J., Aug. 1.—The sensation of the day is the arrest of Senator James A. Bradley by Fish Warden James F. Edge for having in his possession two sturgeon in violation of the law of March 22, 1895, which is prohibitive between June 30 and Dec. 1. At the hearing the Senator secured a non-suit on grounds that the law was inoperative until the States of Pennsylvania and Delaware shall have passed corresponding laws. The warden, however, takes a different view of the case, and asserts that the exemption clause pertains only to the waters which would by affected by the passage of such a law by the sister States, and inasmuch as they were taken in waters of the State other than those so affected the law is in full force and virtue, and has appealed the case to higher authorities. The outcome of the affair is looked forward to with great interest by all parties. An amusing feature is the fact that the Senator voted for the passage of the bill and was enthusiastic in its support.

Surf-fishing continues much the same as for the past three weeks. The rivers and bays, however, give good results and are liberally patronized. Sheepshead are in Barnegat Bay now, and may be taken if the proper course is pursued. The tackle needs be good and patience liberally exercised. There is perhaps no fish more uncertain in their feeding habits than the sheepshead. The necessary equipment is a stout rod and line and a 3-0 and 4-0 Virginia hook secured to a good wire snood, with hard clam or gray mussel for bait; do not remove the meat from the shell, simply cracking and working the hook well in is all sufficient; the fish being superlatively suspicious, this method is much more certain of success than when the clear bait is offered. When the bite is felt (which is never sharp), being a peculiar drawing motion, time must be given to allow the fish to work out the bait and gorge the hook, or else all will have to be gone over with, and here is where the novice will find the trying point. To strike at once means the loss of nine out of every ten fish, and when well hooked there is work for both man and tackle, as they are capable of the most determined resistance. I have had them thrust their iron-like jaws so deeply in the mud in their endeavor to disgorge the hook that even in 10 to 12ft. of water the surface would soon take on a muddy appearance. A landing net is a necessity. If possible bait the grounds for two or three days prior to fishing, as they are attracted thereby; besides they take the bait with a greater degree of confidence. But the capture is worth all the pains taken and the fish is right royal when properly cooked and served. LEONARD HULIT.

BLACK BASS IN LAKE IDA.

St. Paul, Minn.—It is said that the anticipation is nineteen-twentieths of the sport and this in many cases is no doubt true. Perhaps it is this very anticipation that buoys up the hopes and spirits of the unlucky fisherman who sits all day, rod in hand, waiting for the bite that never comes.

Rarely does a fisherman's success exceed his anticipations and desires. It was late in the season. We were at Lake Ida, that paradise of the small-mouthed, red-eyed, gray bass, and in the boat with the writer was friend Cole, the same who performed the wonderful feat of casting a minnow, four times out of five, upon a lilypad 200ft. away.

We had fair success during the day, although we were obliged to keep shifting continually; the bass ran in pairs, we rarely taking more than two at any one anchorage.

At 5 o'clock in the afternoon it began to rain, and donning our rubber coats we braved the storm, forgetting all about the rain the moment we got a strike.

The rain ceased at 6 o'clock, the sun shone out bright and clear, tingeing the clouds with gold and converting the surface of the lake into a mass of molten copper. The distant hills were encircled by a rainbow which formed a most gorgeous natural frame for the beautiful landscape. The foliage of the trees at the water's edge wept crystal tears which glistened in the afternoon sun.

The wind had now gone down, there was not a ripple upon the surface of the lake. We allowed the boat to drift lazily where it pleased, we being for the time more interested in the beautiful scenery than in anything else. Just ahead of the boat the fin of a large bass appeared above the surface of the water, then another and another, plainly showing that a school of bass were slowly moving around us.

The anchor was dropped at once, and before it had reached the bottom two of us had a strike, the reels instantly setting up a vigorous screech, indicating that the fish were good ones.

Our oarsman, not wanting to be outdone, had thrown his line over as soon as he had relinquished the anchor rope, and he too got a strike at once. Three rods in the boat and a bass at the end of each!

Both my friend and the oarsman used heavy rods and stout lines, so, as far as the bass were concerned, it was simply a case of "Come along" the momont they were hooked. There was no fooling, no time wasted; a taut line, and before the bass had a chance to show his mettle he was in the fatal landing net and thence transferred to the boat. Without a moment's loss of time (there were hungry bass waiting for the bait to reach the water) a fresh bait was thrown out and a bass hooked and landed without ceremony.

Were it not for the large hooks, strong lines and stout rods "something would have been heard to drop" in the water, but a dextrous use of the landing net cut maters short as far as the antics of the bass were concerned.

The writer was fishing for sport, not for numbers, and used a two-jointed 7½oz. split-bamboo rod, as pliant as a coach whip, a small multiplying reel, a fine silk line, a short, slender gut leader and a single hook.

Now, when one realizes that with such tackle a strong man cannot lift a pound weight from the ground, it can be readily imagined that there was no chance of landing a bass until the fish was first thoroughly conquered.

But what sport! The bait would be cast over, either a frog or a minnow (a split shot was used to carry it beneath the surface), and slowly sinking until the line became straight, the rod would at once begin to curve gradually until a foot or more had been drawn under the water. The bass had "struck" soon after the bait reached the water. Now setting the hooks, which, with so light a rod, had to be done sharply, the "circus" forthwith commenced.

Away plunged the bass, carrying the threadlike line whizzing through the still water with the speed of a locomotive, causing the reel to whir like a dynamo and sing like a soprano.

Without the slightest warning the reel ceased to run, the music stopped, the rod straightened, the line became loose and stright up, 5ft. in the air, leaped the lordly bass, shaking his massive head, every scale on his graceful and beautiful body glistening in the sunlight like so many diamonds.

The hook is too well set to be shaken out, and with a splash the cunning fish falls squarely across the leader, which, being purposely allowed to rest loosely for the moment, is not snapped in twain.

Tightening the line upon him, off he rushes, jerking yard after yard from the reel, making a zigzag course through the water in his mad efforts to tear loose from the hook, failing in which he once more leaps into the air and, frantically shaking his body, gets the leader in some unexplained manner twisted around him. Seeing the danger, a yard or two is hastily drawn from the reel, giving the fish momentary freedom on a slack line, which results in his freeing himself from the tangle.

Cautiously plying the rod, the line is taut once more. That moment of anxiety and doubt has started beads of perspiration on my face. With a vicious tug he shapes his course for the middle of the two-mile-wide lake and starts; yard after yard of line follows him, he swerves neither to the right nor to the left, keeping straight on. In fact he acts as if it were 2:55 P. M., and, having raised the funds with which to take up his note, was hurrying to the bank across the lake with a determination to get there, at all hazards, on time.

The reel kept up its whirling and singing, and the line began to grow beautifully less upon the reel. Thinking he would tire of himself, and not wishing to unnecessarily cut short the sport, the fish was given a free reel. However, with but few yards of line now left on the reel, and no apparent abatement of speed on the part of the bass being observed, something had to be done.

Thumbing the line (the reel was below the hand), the tension becomes stronger, the rod gracefully bends, and the fish putting forth fresh exertions makes the tip of the rod vibrate as the line still runs out. Unless he is stopped, his course changed or progress in some way interfered with, he will use up the remaining line and, tearing himself loose, make a farewell leap out of the water, and waving his tail as he re-enters the lake, bid us a piscatorial adieu.

Increasing the friction in the line until firmly held between the thumb and forefinger, the butt of the rod is gradually pointed in the direction of the fish—"giving him the butt," in other words.

The strain shows plainly in the quivering of the pliant rod, the tip and butt under the ordeal forming almost a true oval. The line begins to lift out of the water, yard after yard, until there is seemingly none of it immersed, when, again finding his progress firmly checked, he once more breaks water. On disappearing beneath the surface he at once takes a diagonal course toward our boat.

When it seemed as if he wanted more line than the reel contained, and as if we would have to make up in rowing after him what was lacking in line, the anchor was lifted and the oarsman, resting on his oars, awaited orders.

Being now unrestrained, the fish sped toward the boat, working slightly to the left. He seemed to fly through the water. Instructing the oarsman to pull from the fish and working the multiplying reel, a moderately tight line was kept on him.

The strain was at last beginning to tell; his course through the water became irregular; he began a series of short leaps; he would swim toward the bottom and then near the surface, all the time coming nearer until within 20ft. of the boat. He was now allowed to make his last fight preparatory to being landed with the net. After sulking for a few moments he made a frantic effort to dive to the bottom and there seek aid of some friendly snag or sunken log, around which to twist and tear the leader asunder; but a tight line interfered with his project. Making one more leap in the air, he plunged gracefully back into the water, gave up the fight, and resting upon his side allowed himself to be gently reeled, without a protest, within the safe meshes of the landing net.

What a fine, gamy fellow! He made a fight such as to almost entitle him to his liberty. The indicator on the scales points to 4lbs. 8oz. Truly a noble fish!

During this time the other occupants of the skiff worked against time, the bottom of the boat resounding with the flopping of bass after bass yet full of life and vigor. For one hour this kept up, frequently two bass being landed at one time.

The supply of frogs giving out, minnows were used, first the live and then the dead ones, and this supply failing strips of skin taken from a rock bass proved tempting bait for those hungry bass.

At 7 P. M. the fish stopped biting: we reeled in our lines, disjointed our rods and stowed them away, while the oarsman counted and strung the fish. Seventy-five bass for that hour's fishing.

Was such fishing ever had before or will it ever be our good fortune to enjoy the like again! I have, however, one regret. Having repeatedly attempted during previous trips to take these bass with a fly, and having repeatedly failed to raise them, on this particular trip I left my flybook at home and missed what might have turned out a golden opportunity.

In closing let me say to those who have fished the lakes adjoining St. Paul, catching large-mouthed bass, pickerel, wall-eyed pike and croppies, that if they desire a new experience and a day's fishing which they will long remember let them go to Lake Ida, at Alexandria, and try conclusions with the small-mouthed bass, giving the fish a fair chance for his life, discarding all triple hooks, spring hooks, gangs and such unsportsmanlike traps, using but one hook and using such other tackle that if the fish prove himself more artful than the fisherman he can break loose.

After once landing a good-sized bass with rod and reel, drowning him by skill and careful handling and not by main force of hook, line, rod and two arms, a new book will be opened to the fisherman.

The lake is half an hour's drive by day from Alexandria, on the Great Northern R. R. A postal to Frank Kent, liveryman, a day or two ahead will insure his meeting you at the train, and a note to C. Bedman, Lake Ida, will smooth the way for bait, boat, oarsman and accommodations. C.

[Regarding the remarkable and unparalleled casting referred to, the thinking reader will at once come to one of two conclusions, viz.: that a person who could make such a cast wouldn't "yank" bass out of the water; a person who would "yank" bass out of the lake couldn't make such a cast.]

CHICAGO AND THE WEST.

The Largest Bass of the Season.

Chicago, Ill., Aug. 1.—The largest bass of this season hereabouts, so far as known, fell, or rather rose, to the rod of Mr. W. C. Beddome, the agent of the Boyce Building of this city. Mr. Beddome took this fish last Saturday at Hastings Lake, one of the many lakes of the Fox Lake system in northern Illinois, and has a right to be proud of it. Its length was 21½in. and it weighed 5lbs. 1oz. The fish was a singularly handsome one for a large-mouth, very bright, clean and shapely. It was taken on frog, on an 8oz. rod and a cheap 30-cent line. Mr. Beddome went up to the lake to get cooled off, and had no intention of taking a 5lb. bass, but the latter insisted upon it. Mr. Beddome never caught so large a bass before in all his life, and the fact that he did is probably due to the fact that the Forest and Stream office was recently moved into the building he represents. I have no doubt all the firms officing here will catch large fish now.

The Kingfishers.

The camp of the Kingfishers, of Cincinnati, is this year to be located at Presque Isle Lake, near Marinisco, Mich., and the advance agents of the aggregation, in the form of Kingfisher himself and the "Colonel," have gone on ahead to make the arrangements about ice, eggs and other necessities. These two gentlemen arrived in Chicago Sunday evening last and passed north via Chicago & Northwestern Railroad the same evening, after only a brief sojourn. The others of the noted party will be along later, after Kingfisher and the Colonel have smoothed the bumps off a little, as is the duty of all advance agents. I hope Forest and Stream may hear from the company, and trust they will play to good business.

Frogs.

The frog is the standard bait of the Chicago fisherman, and for big-mouths will usually kill more fish than any other bait. The supplying of frogs for bait was long a considerable industry in the Grossman family, who lived down near Sixty-seventh street. The staple was retailed at 35 cents a dozen, and a great many hundred dozen were sold during a season. It was not until this season, however, that I ever noticed the frog as a periodical, or perhaps more definitely speaking, as news matter. This description I presume fairly to be given to the goods handled by the train boy representing the R. R. News Co. That annoying butcher usually troubles one by offering bad cigars and worse novels, and rarely has enterprise enough to vend anything really useful. Yet on a recent train I took over the Wisconsin Central road north to the fishing lakes I was surprised to see the train boy offering bags of frogs along with Zola's novels and fresh-buttered popcorn. He had a dozen frogs in a bag, and was selling them at 50 cents a bag, not very good ones at that. And he sold a lot of them too, mostly to the out-for-a-day sort of city angler who doesn't know much about fishing, but feels he ought to have anyhow a bluff at bait. The train boy had a big basket full of the little frog bags, each of the latter being about as big as a peanut bag, and very likely he took mercantile risk with so perishable a lot of property, for you can't keep a live frog on ice successfully—not unless you hold him there.

One or two of the tackle houses here tried the experiment of keeping frogs on sale for bait, but could never get a regular supply, so gave it up. Yet this morning as I came down town I saw in a window on Madison street, in the business part of town, a sign announcing "Live frogs for Sale, 35 cts. cash a dozen." Singularly enough, this sign was displayed in the window of a building which seemed to house a saloon, a sign-painting establishment and one or two other lines of trade. I am at a loss to know whether a frog is to be properly classified as news matter or wet goods or what.

Ephemeral Flies.

I am much obliged to Mr. Cheney for setting me right upon the difference existing between the May fly and the caddis fly, or between the drake fly and the sand fly. Curiously enough, I was just on the point of asking somebody about this, for the other day the question came up in practical form. I was in the camp of the Western Canoe Association, on Mullet Lake, in the upper part of the Michigan south peninsula, and a friend and I were sitting at a camp-fire in the dusk of a warm evening. We were assailed by a heavy flight of these summer flies, and I caught some of them and examined them. I found that they had an extra set of wings, or two pairs (which sometimes are good), and that these wings were veined and membranous, instead of soft and delicate. The body was shorter and darker than that of the fly I had seen earlier in the season in Wisconsin, and the long filaments of the upright tail were absent. I saw that this fly was not the same as the one of the Wisconsin waters. It is not quite the same as the Chicago "sand fly" either. And now will Mr. Cheney or some one else tell me what is the "willow fly," whose larvæ we used to find in little gravel cylinders hanging to the rocks under water, in our New Mexican mountain streams? We used them for trout bait with great success in July and August in that country. And then again, what are the "devil-scratchers," or "crawlers," which live and have their being in much the same fashion, even in the month of March, in the Boiling River of the Yellowstone Park, and in the Yellowstone River later in the season? The trout are very fond of these fellows at any stage of their *entwickelung*, as they say in Germany, also at any stage of the game, as we say in Chicago. I would also like to ask, why is a May fly when it is born in July called a May fly, and why is a May fly a drake fly anyhow? I get all tangled up over these natural history matters sometimes. But all sorts of fish love to eat these soft-shelled dainties, who can tell a tale of two worlds, and know more about reincarnation and transmigration than any of the rest of us? Is it not thus that trout gain that weird and uncanny wisdom at which all men have betimes marveled—catching these two-lived insects both going and coming, so to speak?

Indiana and Maine.

Mr. A. H. Weed, of Anderson, Ind., is just back from a vacation trip in Maine, and says he saw more deer there than he ever did. He saw over 100 in a day, and they were so tame that he often paddled up to within 25 to 75yds. of them as they stood near the shore. Mr. Weed is good enough to give me a box full of his stove-pipe bullets to kill my grizzly with. That patient animal is still waiting for me out in the mountains, and I would not blame him for getting mad and going away.

The Passing of the Grayling.

There has of late been somewhat diverse opinion as to the numbers of the grayling in the streams of the southern peninsula of Michigan. Some have declared that that rare and beautiful fish is almost extinct to-day, while others have said that the grayling was holding its own and could be taken even yet in some numbers in certain of the streams, if one knew where to go. The cry of the extinction of the grayling dates back more than ten years, and began with the publication in one of the monthly magazines of an article on fishing in the Au Sable River. Although that was many years ago, it was then said that the grayling was doomed to early extinction in that stream, always known as the best of all the grayling streams. That report was a trifle premature, but it can probably not be criticised as essentially inaccurate. The grayling, so far as I have been able to learn through recent investigation of an all too brief and unsatisfactory nature, is not extinct, but is in process of extinction, and soon must pass away. This belief I base not upon my own experience, for I have been too unfamiliar with these lower Michigan streams to be able to speak of them, but upon the expressions of residents of the south peninsula who are experienced and observant anglers.

It has been my unfortunate experience never to have caught or to have seen a grayling, though I have set that down to be one of the accomplished things before very long. In an earlier issue of Forest and Stream (of last February, I believe) I spoke of a visit at my office of Mr. F. A. Mitchell, G. P. A. of the Manistee & N. E. Railroad, who lives at Manistee and has long been a faithful flyfisher in the streams of that region. Mr. Mitchell told me to come to his country this spring for a trip, and assured me that we should have no trouble in getting my grayling and several others in the little Manistee, or in Bear Creek or some of those streams which formerly carried this fish. Last week it chanced that I was over in that part of the world, in the upper portion of the south

peninsula, and I wrote and asked Mr. Mitchell how the situation was. He replied, "I shall be glad to see you, but I cannot promise you a grayling. Have caught none this season myself, and others are getting very few. You would be more certain of one on the upper waters of the Manistee River." This seeming not of sufficient promise and my time being short, I did not try Mr. Mitchell's country, and was not able to get upon the upper Manistee that trip.

At the little summer town of Oden-Oden, on that prince of angling railroads, the Grand Rapids & Indiana (the Fishing Line), I fell into a delightfully beautiful piece of angling country, and at once began inquiring about the grayling. The local anglers at Oden-Oden all said that in the Maple River, which empties into Burt Lake near Oden-Oden, the grayling was by no means extinct, but on the contrary very abundant and could be taken at the expense of very little pains. All one had to do was to get on the morning train and run up to Brutus, a distance of eight miles or so, and then fish down the Maple, which runs near that town. There was about twelve miles of water between Brutus and the mouth of the stream, I was told, and in that distance one could get all the trout he wanted and a few grayling at least, perhaps a good lot of them. I was crowded for time when I first struck Oden-Oden, but as I thought it would be so easy to get a grayling out of there, I resolved to go on and finish my other business and then come back there and catch my grayling. So I went on in over the beautiful Inland Route, through Crooked Lake, Crooked River, Burt Lake, Indian River and Mullet Lake—some thirty odd miles, I believe—to the camp of canoeists in search of whom I was. At this camp I met an old-time canoeist and angler, "Grandpa" Gates (T. S. Gates, of Columbus, O.), who had fished a number of those streams, and who told me that it would be no trouble at all to get a grayling on the Maple. "Four years ago," said he, "a friend and I got an Indian to take us a boat over to the Maple River from Indian Point, and we ran the river from our entry point down to its mouth in Burt Lake. We fished from the boat, letting our lines swim down stream ahead of us, and we caught all the grayling we wanted. We found the stream too swift to wade, but kedged our boat down, dropping anchor where we saw a good fishing spot ahead. I should say there were grayling in the Maple—lots of them. If you go over there you are sure to get one. I may go over myself again this year."

This looked pretty good. A little later I was down at the Topinabe Hotel, on Mullet Lake, and they told me there that the Pigeon River—which I knew was once a famous grayling stream—ran into Mullet Lake just across from the hotel. At the hotel I actually saw several preserved grayling fins (the trophy of that fish is the dried back fin), which was the nearest I had come to a grayling yet. But I was sure I was going to get nearer still.

A little later than this I was invited, in company with Mr. O. A. Woodruff and Mr. W. H. Yardley, to visit the club preserve of the Fontinalis Club for some trout fishing. Of this visit I must speak later and at length, for that blessed spot is worth extended mention, but all the way over I was asking about that grayling. We were sidetracked at the little lumber town of Wolverine, which is right on the banks of the Sturgeon River. Now the Sturgeon River, I had been told by Mr. Carter H. Harrison, Jr., of Chicago, was a good grayling stream, for he had caught them there very often. At Wolverine I asked how about it. I found one young man who was intelligent and who had fished grayling in the Manistee, the Au Sable and other grayling streams. He told me that the grayling was almost entirely gone from the Sturgeon. He said the trout very soon drove the grayling from a stream, and that the two fish couldn't long live together. "The trout are as numerous as ever in the Sturgeon, if you get away from town," said he, "but you won't get any grayling now, not one chance in a thousand for it." This same young man told me it was not worth while to try the Pigeon, for though there were perhaps a few grayling in that stream, the lumbermen were flooding on the river that week, so it was no use trying to fish there. I gave up the Pigeon and began to have doubts about the Sturgeon, although it was a noble stream and looked capable of any kind of sport. I could learn of no grayling actually caught this summer at any place on the Maple, the Pigeon or the Sturgeon. This last fact set me to thinking.

At the Fontinalis Club we were received by Mr. George L. Alexander, of Grayling, Mich., as ardent and skillful a fly-fisher as ever wet a line—and, in passing, as kindly a host. Mr. Alexander lives on the banks of the Au Sable. Why then, I asked myself, does he come a hundred miles away from home to fish here? I asked Mr. Alexander about the absorbing topic, telling him I had lost a grayling. He replied:

"If you want to get a grayling you had better not wait very long about it. That fish is passing away, and will soon be extinct in all these waters. Could I get you a grayling? Yes, if you would come with me for a few days. I could not promise it for the first day, now. It might need two days, maybe more. I should have to send you some distance away from Grayling, but you might get your fish. Get him soon. Before many years it will be too late."

My heart sank a bit at this, but I recognized in Mr. Alexander one whose opinion is very practical and valuable. He was not guessing at things at all, but spoke from experience.

At the Fontinalis Club I met a gentleman from Chicago, Mr. C. Valentine, who was for a long time the fishing companion of Mr. Harrison on his trips to the Sturgeon, the Maple and other streams of this region. Mr. Valentine told me that he would advise my going to the Maple. He had two years previously found the Maple a very good grayling stream, having then taken a number there, one very large one, whose fin he showed me, carefully preserved in his tackle box. Mr. Valentine had taken many grayling in the Sturgeon. Asked how long ago, he said it was three or four years back. He had not fished there last year. He advised me to go not to Brutus, on the Maple, but to Pellston, the next station above; then to take the river, which he said could be waded easily there. He thought I would be sure to get a grayling there. My heart bobbed up a few degrees again.

A little later I found myself at Oden-Oden again, and this time I stopped at another hotel and engaged the clerk in solemn consultation. He admitted that he had not heard of the taking of a single grayling in the Maple or any other stream of that locality this season. He said the Maple was too treacherous to wade, that I would get drowned, that there were no grayling. My heart sank again.

None the less I got upon the early morning train of the G. R. & I. bound north from Oden-Oden, and determined to get off at Pellston. On the train I found the station agent for Pellston, who fishes some. He said he had not heard of a grayling being caught in the Maple this year. "There are trout," said he, "but no grayling. The trout have driven the grayling all out in the last year or so." My heart went still lower. Here I was, all alone in a strange country, after a fish which was not going to be there.

But my spirits rose temporarily when I was accosted by a fellow traveler who had some fishing tackle along and who saw that I had some fishing tackle also. In a few minutes we were good friends and had decided to fish together that day, as he also got off at Pellston. My new friend told me his name was Mr. Cassius Drake, of Grand Rapids, and he added that he had fished the Maple for years. My next question may be imagined. He answered discouragingly. "I have no idea you can get a grayling in the Maple now," said he. "I have fished this stream for years, and for ten years have watched the trout steadily increase and the grayling as steadily disappear. I have taken none for some time. I have heard of none taken in the Maple this year. I have taken them in the Little Manistee, in the Manistee, in the Sturgeon and in the Maple. If I were in your place I would go to Hopkins Creek, on the G. R. & I. road. I have caught many fine grayling here. That is a branch of the Manistee, and I took grayling there two years ago. I can't say there are any now. It is too bad the Fish Commission ever began planting trout in these streams. Before the Maple was planted with trout it was alive with the grayling. The two fish can't get on together and the trout drive the grayling out very soon."

My heart was now very poor, and I began to think it was all up with my ambition for the time. It proved so in the end, for I saw no grayling at all during my stay on the Maple, and every angler I met on the stream—which we found fished to death near the railroad—laughed at the idea of a grayling in that water. Inquiry at the hotels and other points at Pellston proved that no grayling had been heard of there this year. Everybody said "the trout had driven the grayling out." I found Mr. Drake, my new friend, a trout fisher of good grade—a fact recognizable as soon as I saw him in the stream. And I found the Maple as lovely a stream as ever lay out of doors. It was a comfort to fish it, even had we found no fish, though we got about thirty legal fish between us. This was one of the few streams hereabout where one can wade and cast a fly and catch fish. It is all wrong about its being too wicked a water to wade, at least in the stage at which we found it, though it was quite low, I was told. It is just the prettiest, most gentlemanly river I ever got into. As we went along down it in our day's fishing, Mr. Drake broke my heart by pointing out the places where in the past he had taken baskets full of grayling. He said that when the railroad went through there first the stream was full of grayling, and he had filled his basket in an hour. He said it was a certainty that the trout meant the going of the grayling. Of trout there are an abundance in the Maple now, though, as I said, one should not fish right up against a railroad town to get them. I would advise going about six miles from Pellston for trout. Of the trout fishing in this region I shall say more next week. It is the grandest trout fishing locality I have ever personally seen in the East, this upper part of the south peninsula.

But I had not my grayling. Mr. Drake and I sat on the hotel stoop that night and talked of the past, and I was not happy. The next day was Sunday, and I concluded to go up to Mackinaw City to spend the day, as Pellston is not metropolitan in size. I found Mackinaw City the very end of the world, the jumping-off place, and the same as Pellston in metropolitan respects. In my mind was the horrible feeling of disappointed ambition. I had come after a grayling and had not gotten him. Everybody knows how that feels—at least, everybody does nowadays. I reflected that it was only 100 miles to the town of Grayling, which was named after this very fish, and that Mr. Alexander had lived there long enough to know what he was talking about, and that I could get my grayling if I would just run down there. It was a a pleasant vision, and my spirits rose at it. Against this came conscience, with sundry offsetting visions of a desk at Chicago with a lot of things in it that I ought to be knowing something about. It was hard, but I finally turned my face away from the grayling country, and came home beaten, without any grayling—without seeing one, without hearing of one, without any information which would lead a fair-minded man to suppose there is any practical supply of that fish left in the Maple, the Sturgeon, the Manistee or the Pigeon, at least for this season; and next season may be worse yet. Of the Jordan River I heard nothing more this time than I did once before, when I wired the station agent there and got the reply, "There are no trout in the Jordan; never heard of any grayling there." Yet that was once a famous grayling stream. The Boyne River was also famous. I heard nothing of it this time.

The last word I had about the grayling was just three minutes before the train pulled out south from Mackinaw City. There I met Mr. McArthur, of Cheboygan, who was just off the boat from Mackinac Island. Mr. McArthur has lived all his business life in the grayling country.

"No, you wouldn't be apt to get a grayling in the Maple," said he. "There may be a few in the Sturgeon, but it is a slim chance there. There would be a better chance in the Pigeon, if you got the water right. I presume the Au Sable is the best stream now, but I am told they are getting very scarce there now."

At Mackinaw City Mr. Drake, who accompanied me there and begged me to join him on a trip to the Carp River after trout, met a friend of his who had often fished the Au Sable at the town of Grayling. This gentleman told him that one would be almost certain not to get any grayling within twenty-five miles of that point. He said it was necessary to take a boat and go down the stream, camping out, before one could get a look at that fish now. He knew of no other stream at all where it could be found.

This is all I could learn about the grayling, and I consider it a fair review of the grayling situation, in part at least. I do not believe that one can step in there to-day and get a grayling very easily. The fish seems to have grown suddenly much scarcer within the past two or three years. Of course, fishing there for either trout or grayling at any point near the railroad, except on a preserved stream, is just what it is everywhere else. You find a path along the bank. If you are able to get away from that path, on the Au Sable, on the Upper Manistee, on Hopkins Creek, perhaps on other streams of which I did not hear, you may get your grayling. But I believe Mr. Alexander was right when he said, "You would better get him pretty quick."

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

ANGLING NOTES.

A Salmon Score.

MR. ARCHIBALD MITCHELL, of Norwich, Conn., sends me a series of photographs taken on the Restigouche River in New Brunswick during the time that he was fishing the river this season. One of the photographs is of the log that rolled over Mr. John Mowat, and it seems marvelous that the brave old man escaped with his life as one looks at the great log shown in the picture. A postal card from Mr. Mowat, written on July 11, says: "I got to the doorstep yesterday and enjoyed it. I feel now that unless some complications turn up I am going to master this accident. I may not be able to kill another fish unless my bones come together on the spot that the log struck.

"I read FOREST AND STREAM to-day on the Cascapedia. It is nothing to our river. Five of the reserve party are now here to finish off with thirty to fifty fish. Fish are still running in from sea. My son shipped 150 yesterday, and they will run more or less until Sept. 1. Is it possible that there will be too many fish in the river at spawning time? I say it is. They tear the spawning beds all to pieces, exposing the eggs."

Mr. Mitchell sends me his salmon score, to which is added the score of his son, all made with one rod from the same canoe. The fish which most interests me is the one killed on June 29, as it is the one I had. It is what may be called a very tidy score for a single rod:

SALMON FISHING ON THE RESTIGOUCHE RIVER, P. Q., CANADA, BY ARCHIBALD MITCHELL, SEASON 1896.

	Salmon.		Pounds.
May 29	2	28, 22	50
May 30	3	19½, 14, 30	63½
June 3	1	24½	24½
June 4	1	24½	24½
June 8	3	21, 23½, 24	67½
June 9	4	23, 23½, 24, 25½	96
June 10	3	23, 22, 19	64
June 11	3	21, 21½, 22	64½
June 12	8	22, 20½, 20, 26½, 22½, 26½, 24, 23	186
June 13	7	23, 21, 22, 14½, 12, 22½, 25½	140½
June 15	1	21½	21½
June 16	2	13, 19½	32½
June 18	1	21½	21½
June 19	4	20½, 20½, 19, 19	79
June 20	2	23, 22½	45½
June 22	3	24, 31½, 25	80½
June 23	3	28, 10, 22	60
June 24	1	25	25
June 25	3	25½, 23½, 24	73
June 29	1	28	28
Total	56	Average, 22⅕ lbs.	1217½

ARCHIBALD MITCHELL, JR.

June 24	1	22½	22½
June 25	3	24½, 22, 14	58½
June 27	1	22½	22½
June 29	3	13, 11, 18	42
Total	8	Average, 18½ lbs.	145½

All taken on one rod and from one canoe. The intervening days were either blank days or Sundays, and in several instances days on which I did not fish at all. In addition to this ten kelts were beached and returned to the river, making in all seventy-four fish to the one rod.

Salmon Fishing.

A friend who has killed salmon in many waters in Europe and Canada—one of the best salmon fishermen in the country to-day—writes me: "I have read your criticism in FOREST AND STREAM of the salmon fishermen in the syndicate letter and agree with your remark that it was very moderate, for I have seen and read the letter you refer to, and the writer shows plainly that in a number of instances he talks of what he knows little or nothing about. For instance he says: 'I had forgotten the rudimentary rules of fishing. My tackle would stand perhaps 15 to 18lbs. pull, and this I had evidently exceeded.' Such a statement is wrong, and for the benefit of future novices should not be allowed to pass unnoticed. Some one should tell the writer of that statement to take any compact object weighing about say 4lbs., and tie the end of his salmon line to it and then try and lift it with the rod. After he has tried the experiment he will be able to form an approximate idea of how much strain he had on the fish when his hook broke in the bend, and he will arrive at the conclusion that it was a good deal less than half of 15lbs. His rod must have been a very light one, measuring 16½ft. and weighing only 20oz. I think he or the printer must have made a mistake in the weight. It is absolutely funny to a salmon fisherman to read of using a large multiplying reel on a salmon rod and an E line for salmon casting, as it is much too light for the purpose."

Personal.

During an absence of two weeks in the Adirondacks a great many letters accumulated on my desk. I had barely time to glance at their contents when I was again called away, and to-day I am at home only for a few hours. Some of the letters require an answer in this column, but it is a physical impossibility for me to give the answers at this time. Later they will all have proper attention.

A. N. CHENEY.

Tarpon on the Florida East Coast.

DAYTONA, Fla.—Tarpon fishing in the Halifax is just now engaging the attention of our fishermen. John Gibson holds the record with a fish which weighed 108lbs. and measured 6ft. 3in. We do not have the fish here in the winter and early spring months, so tourists do not count tarpon in the list of fish here; but if some of the anglers from the North would come down here now, they would find not only good fishing, but pleasant summer surroundings.

COQUINA.

"Boys Together."

GREENSBURG, Pa., Aug. 1.—I seem to have known that man whose picture you printed last week and did not spoil by explaining. We must have been boys together.

DEACON.

Carp Fishing.

ITHACA, N. Y.—Recently FOREST AND STREAM invited information concerning carp fishing. Ithacans have for the past two or three years had ample opportunity to study the habits, edible qualities and fighting propensities of the carp.

Through some source not clearly established the Ithaca end of Cayuga Lake has become densely inhabited by this species of fish. They have wallowed well up into the larger lake tributary streams, so that at the present time it is no unusual incident in the serene and uneventful routine of the angler's life to catch carp of from 8 to 20lbs. The average weight, however, runs from 2½lbs. to 5 and 6lbs. There seem to be two distinct varieties inhabiting the local waters, the regular German or scaleless sort and what is locally termed English or the scaly variety.

The fellows who claim to know a thing or two about the edible qualities of carp, who apparently linger as blissfully over a plate of plebeian carp as over a dish of the dainty and roseate brook trout, stoutly adhere to the contention that a bit of properly served carp is a delicious morsel, the German slightly leading the English variety. Certain it is, at all events, that the people who make it a business to market these fish encounter no difficulty in disposing of the supply. Personally I am not disposed to go upon record in favor of the carp as a food fish. In an unthinking moment I exchanged 15 cents of hard-earned coin for its supposed value in a carp, scaleless, short of stature and thick set, which I joyfully conveyed home, where, according to the directions of those experienced in cooking these finny specimens that have to be seawater-logged, parboiled and otherwise reduced to a state of palatability, the fish was prepared and finally reached the table. I took a moderate section of him, and in due time succeeded in passing my plate for a second installment. But candidly, the fish was far from savory, in the way I have been used to measuring the significance of the word. Insipid, dry, vapid, the flesh of the carp is amply deserving of all the consideration implied in Shakespeare's line, "flat, stale and unprofitable." And a great many people living hereabouts so regard him.

The most alluring bait for trout, as applied to the fishing in this locality, consists of chunks of potato boiled slightly, or, in the language of the rural *chef*, "done hard."

Attach the sinker to the end of the line, according to the style of the veteran carp catcher, fasten two or three ordinary No. 3 hooks by leaders onto the line some 18 or 20in. above the sinker, slip on a big, highly colored bobber, and there you are, ready to successfully angle for carp, provided you have some sort of a pole handy to tie the line to.

Those who use fly-rods solemnly aver that the carp is a sturdy fighter. I have repeatedly witnessed some pretty sharp struggles between heavy-weight carp and an excited party using a light fly-rod. Even the party with an ordinary stiff bait rod frequently has to do a lively turn to land some of the big ones common to these waters. The general verdict is that Cayuga Lake carp are a good bit gamy, and that a fine dash of sport seasons the catching of them. As the cricket's voice grows louder and autumn draws on apace, the carp will again begin to bite freely. They appear to be taking a midsummer snooze at present.

M. CHILL.

[CHICAGO, Ill., July 28.—Can you tell me the method of catching German carp and bait used? I am expecting to visit a place where they are plenty, and my friends tell me they are unable to catch them. F. A. W.

[For carp fishing use black bass hooks, 0 to 4. Grasshoppers, maggots, larvæ of wasps are used for bait; also grains of wheat or barley, or pellets of wheat or corn bread mixed with cotton.]

Lake Cobbosseecontee Black Bass.

BOSTON, July 26.—*Editor Forest and Stream*: If any reader wishes "a week off" for black bass fishing he should not hesitate to visit Lake Cobbosseecontee, and stop with Mrs. Jackson at East Winthrop, Me. I have just returned after five days of the best bass fishing I ever experienced. Caught them every day. Friday, A. M., had five fine ones to carry away as evidence, three weighing respectively 3½, 3¾ and 4lbs. each; also caught two pickerel, each weighing over 2lbs. This was my morning catch.

Strangers should get Archie Jackson to show them where to fish the first day or so, and then you can go it alone.

The best way to get there from Boston is via Kennebec steamers Sagadahoc or Kennebec, leaving Boston daily at 6 P. M. Buy ticket via Hallowell or Augusta to Winthrop, Me., but stop over when you reach the Cobbosseecontee House, near the East Winthrop post office.

When you arrive at Gardiner the large river steamer stops, and you are transferred to the Della Collins for Hallowell or Augusta, where a stage line connects with the boat for East Winthrop and Winthrop.

At Gardiner, to relieve one, you can take the electric car for either Hallowell or Augusta, and there await the arrival of the Della Collins.

Both stage lines wait for the arrival of the boat, and your baggage can go up via boat.

I think the route via Augusta to East Winthrop is preferable.

This is one of the places where their "claims" are not greater than the sportsman will realize.

GEO. REHWALD.

Gogebic Bass.

MR. W. B. KNISKERN, of the Chicago & Northwestern Railway, sends us this report of bass at Gogebic Lake, Wisconsin:

"Fishing is much better than it has been for years during July. Since the 11th inst. twenty-seven small-mouth black bass have been brought in, weighing 3½lbs. and over; total weight, 120¾lbs.; average weight, 4.47lbs. This does not include those weighing less than 3½lbs. I want to call your special attention to the remarkable average of nearly 4½lbs. The number of boats that have been out daily during that time has been from one to three. This unusually good fishing in July is very encouraging for August and September."

Mr. Von Lengerke's Bass.

MR. J. VON LENGERKE, of New York, has taken a day or two off each week, for several weeks, devoting them to bass fishing in some of the waters in Sullivan county, New York. He reports satisfactory success, and the season has been one of his most successful. On his return from each trip he has been able to show a string of fish of enviable size and number. He reports that the small-mouth took the fly greedily up to three weeks ago. His star performance was the catching of a 4½lb. small-mouth bass on a 6½oz. rod. In his store he has an outline drawing of this fish, a true pattern taken from life, though bulbous in places and of tremulous outline in others, as if it were nervous when having its portrait taken. The said portrait bears all kinds of legends of a scoffing or doubting nature, written by several of his friends. Mr. Von Lengerke stoutly maintains that he is strictly truthful about his shooting and fishing stories, and that the fish was 19½in. in length, though as he pressed the rule a bit too close when measuring it, it was fairly 20in., and it thus was a good fish. This is worthy of the attention of those who try to make their fish larger.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 1 to 4.—Kingston Kennel Club's bench show. H. C. Bates. Cor. Sec'y, Kingston, Ont.

Sept. 7 to 10.—Binghampton Industrial Exhibition's sixth annual bench show. C. H. Barrett, Supt.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.

Sept. 15-18.—Orange County bench show, Newburgh, N. Y. Robt. Johnston, Sec'y.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee Louis Steffen, Sec'y.

Sept. 22 to 25.—Queens County Agricultural Society's bench show Mineola, L. I. J. Mortimer, Manager, Hempstead, L. I.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y, Manitou, Man.

Sept. 7.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 19.—Brunswick Fur Club's annual hound trials, Barre, Mass. Bradford S. Turpin, Sec'y.

Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 10.—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Greene County, Pa.—Central Beagle Club's trials. L. O. Seidel, Sec'y.

Nov. 16.—National Fox Hunting Association's third annual trials Bardstown, Ky. F. J. Hagan, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

COURSING.

Sept. 22.—Cheyenne Valley Coursing Club's meeting, Sheldon, S. D, Dr. J. P. Aylen, Pres.

Sept. 29.—Aberdeen Coursing Club's annual meeting, Aberdeen, S. D. Dr. F. W Haragan, Sec'y.

Oct. 6 —Mitchell Coursing Club's meeting, Mitchell, S. D.

Oct. 21.—Altcar Coursing Club's meeting, Great Bend, Kan. T. W. Bartels, Sec'y.

Oct. 28.—Kenmore Coursing Club's annual meeting, Herrington. Kan. C. A. Robinson, Sec'y.

WHAT BECAME OF FIGARO?

Editor Forest and Stream:

Everybody in St. Augustine and all the regular winter visitors for many years well knew Mr. Pierron, a French photographer, whose home was in the ancient city. For the last seven years of his life Mr. Pierron's constant companion had been his dog Figaro, which he had raised from a puppy. Figaro seemed to be a cross between a pointer and a large hound. His master lived alone in a building standing apart from others and close by the bay. Behind the studio was his bedroom and kitchen, so that Figaro grew up accustomed to French cooking and understood both French and English, although he was more attentive to the former, as it was for the most part the means of communication between him and his master.

So they lived as inseparable companions until one day Mr. Pierron was stricken with paralysis and was taken to the hospital. Even then a most unheard of concession was made, and Figaro was admitted to his master's ward and scanned every face that approached him.

After a while Mr. Pierron recovered so that he could leave the hospital, and with Figaro was once more seen about the streets, Figaro keeping close watch over his master's feeble steps. While at the house of a friend Mr. Pierron was again taken ill, and it soon became apparent that it was his last illness. He lingered several weeks, growing slowly weaker, with Figaro almost always at his side. He would lick his master's face and hands as he lay on the couch and then lick my hand, seeming to understand that I was trying to do his master some good.

As Mr. Pierron neared his end he became anxious as to what was to become of Figaro, and arrangements were made for him after he should pass away.

A few days before his death he relapsed for the greater part of the time into a state of semi-consciousness, and Figaro all at once disappeared.

He went over the Sebastian River to the house of a Frenchman—a friend of his master's—who at first thought Mr. Pierron was dead and that the dog was wandering away. So he took him in, and learning that Mr. Pierron was still alive kept him for a day or two, although he refused all food, and then at evening, coming in to see his old friend once more, brought the dog along. After he had crossed the bridge over the river, Figaro disappeared in the darkness, and the man, thinking he had merely hastened on ahead of him, thought nothing of it; but he did not appear again at his master's bedside, who lived but a day longer. Nor has he ever been seen since by any one, although inquiries and search have been made everywhere. He was a dog so well known that he could not have been seen anywhere without being recognized.

It is now some months since Mr. Pierron died, and the mystery as to the disappearance of Figaro is as great as ever.

Did he recognize that his master was dying and so went away himself to die? His utter refusal to eat at the house of his master's friend looked like it. It is only another example of that most mysterious bond which binds dogs to men.

W.

Chicken Dogs.

ST. PAUL, Minn.—*Editor Forest and Stream:* We gilt-edged sportsmen of America are not a little proud of our chicken dogs—setters and pointers—in the year 1896, and it is not strange at all that we think them the best in the world. At least we think them better than the dogs of the past. Our dogs now alive are more in evidence than the dogs which are dead and it is natural that we should think the better of the ones which are alive.

It is doubtful whether the English setters of to-day, with all their fine feather and pretty color, and pedigrees bristling with the names of famous dogs, some so by merit and others by favor, could approach in practical usefulness the old natives or cross breds of twenty-five years ago. Many of those dogs would hunt day after day and sometimes week after week. Such hunting was not deemed as especially remarkable. A dog which would work but an hour or two, after the manner of our latter-day ornament dogs, would not be considered as worth his salt. They were sensible dogs, too. They knew how to find birds by good management and were cool and free from excitement in their work.

Take for example Bismarck, owned by David Brooks, of Philadelphia. He was a dog famous from one end of the hunting country to the other as long ago as 1875. He galloped over the prairie in a steady swing without any distress, and could find chickens in a marvelous manner. And yet he was not much for breeding, being a kind of cross bred Irish with no great pretensions to beauty. In his eighth year he hunted with the same wonderful endurance which always distinguished him. His owner hunted him day after day on chickens, and claimed that he preferred to hunt at all times rather than ride in a wagon, and that he excelled all his companion dogs, finding from three-quarters to all the birds each day, regardless of what dogs were against him.

Alas! poor Bis. In his eighth year he fell a victim to the crowded express car, being suffocated with another dog while *in transitu* from State Center, Ia., to Philadelphia. So died one of the greatest of America's bird dogs, but not having the frills of fashion which so far transcend real merit, his name is unknown to a later generation.

OLD TIMER.

Queens County Agricultural Society.

Editor Forest and Stream:

All the gentlemen who were invited to judge at the first show of the Q. C. A. S. have accepted, with the exception of Mr. W. H Joeckel and Mr. C F. Leland. Mr. Robert H. Burroughs, of East Orange, N. J., secretary of the St. Bernard Club, has kindly consented to take Mr. Joeckel's place, and a judge of Boston terriers will be announced as soon as possible.

Most of the specialty clubs will contribute club specials, and among those already heard from are the following:

The American Mastiff Club offers three club cups: One for the best American-bred mastiff (competition open to all), and one each for the best dog and bitch owned by club members.

The St. Bernard Club offers a club medal for the best American-bred rough dog, one for the best American-bred rough bitch, and one each for the best American-bred smooth dog and bitch owned by members of the St. Bernard Club.

The Fox Terrier Club offers $5 for the best smooth dog and $5 for the best smooth bitch in the open classes, also $5 each for the best wire-haired dog and bitch in the open classes (open to members of the club).

The American Spaniel Club donates the usual prizes which accompany the adoption of its classification.

The Boston Terrier Club offers three silver cups, value $10 each: one each for the best Boston terrier dog and bitch and a third for the best brace.

Mr. Perry Tiffany offers $10 each for the best American-bred bull terrier dog and bitch over 30lbs.

Mr. A. C. Pickhardt offers a silver cup, value $25, for the best pointer in the open classes.

There will be many more to follow, of which I will notify you.

JAS. MORTIMER, Sec'y and Supt.

PENINSULAR F. T. CLUB'S

Breeders' Stakes.

POINTERS.

W. E. HALL'S l. and w. dog JO-HE (Plain Sam—Blondie); breeder, M. C. Ketchum.

A. Harrington's b. and tkd. bitch FLIT (Cobwebs—Diablanche); breeder, owner.

C. H. Creighton's l. and w. bitch CLIO C. (Plain Sam—Blondie); breeder, M. C. Ketchum.

Leamington Pointer Kennel and W. D. Wigle's b. and w. bitch MAUD W. (Plain Sam—Beppo's Mollie), and l. and w. dog JOE HANDY, same litter, and l. and w. bitch KATE FIELD (Count Graphic—Nellie Lansdowne); breeder, owner.

Nat Stewart's b. and w. bitch BLACKSIE (Plain Sam—Blondie); breeder, M. C. Ketchum.

James Black's l. and w. dog PAT B. (Mont—Nell); breeder, V. Bachelor.

ENGLISH SETTERS.

H. Marshall Graydon's b., w. and t. bitch HEATHER BLOOM (Dash Antonio—Bly); breeder, Stephen Lusted.

Fishback & Baughn's lem. and w. bitch GRACE DARLING (Gladstone's Boy—Gath's Belle).

T. G. Davey's lem. and w. bitch GRACE (Prince—Lady Brighton); breeder, owner; and b. and w. bitch LUCY (Brighton Tobe—Norah); breeder, owner; and b. and w. dog JOE (Plain Sam—Beppso's Mollie).

IRISH SETTERS.

Albert Drouillard's dog FRANK (Fingaln—Fawn); breeder, owner.

J. B. McKay's dog DRENAGH (Finglas—River Roe), and FOYLE, same litter; breeder, owner.

The Bicycle Dog.

A CORRESPONDENT writes us, in friendly words of disapproval, in respect to our manner of treating the bicycle dog in FOREST AND STREAM of July 25. He holds that ridicule may discourage the breeding of such dogs and thus deprive man of dog's companionship in diversions awheel which are most enjoyable; that is, in going forth for long rides through the boulevards of the great cities, or through the more pleasing roads of the country.

The companionship of the dog and the added enjoyment which his frolic and delight afforded as he galloped joyously to and fro, enhancing the charm of the picture, would, he maintains, be much of gain to this healthful form of recreation.

Our friend is laboring under a mistake as to the possibilities of a dog's speed and endurance, is inattentive to the cruelty inflicted, and undoubtedly is but one of many others in that respect. While walking along he has seen his dogs roam happily about him, and the zest of enjoyment and affection of his faithful friends added much to his own pleasure. The speed capabilities and endurance of the dogs so far exceeded his own that the possibility of limitation never entered into his mind.

When out with a bicycle rider the conditions are changed. The pedestrian's rate of speed is from three to six miles an hour, the latter being compassed only by the swiftest walkers. The bicyclist at a moderate rate of speed goes ten miles an hour, and at that rate or even less the unfortunate dog which may be with him has no time for frolicking. He must attend strictly to traveling, and if the weather be hot and the roads dusty the poor dog, being close to the ground, suffers intensely, for the closer he is to the ground the more he is in the densest dust and greatest heat, direct and reflected.

If in the city, the bicycle dog is constantly in the way of other wheelmen, if not in the way of his master, and is therefore entirely out of place.

In the country the bicycle dog's powers are taxed too much. It would be nearly as absurd to propose that there is a need of a dog to follow a passenger train so that his owner, who is riding comfortably within, may enjoy his dog's companionship. Dogs fitted especially for hard work could not maintain the pace of the average bicyclist for any long run, and if the dog be physically in the ordinary condition of the city or country dog, requiring him to follow the bicycle is the infliction of a wanton cruelty.

Of course, if the bicyclist takes his dogs out for exercise, and carefully adjusts his pace to the dogs' capabilities, taking them home when they have had work enough, such is commendable, but it is a different matter from requiring the dog to follow in long rides through heat and dust at the wheelman's pleasure.

The enthusiast, who intends no cruelty, should consider that the exalted pleasure that he himself feels from riding a wheel may not be possible to the dog afoot, extended as he is at his utmost. The happiness the dog feels, when his master goes afoot and permits him to romp freely, is not possible when he is racing at his utmost and suffering much distress. An owner is truly without any genuine affection in his heart who can enjoy his dog's companionship under such circumstances.

No doubt ignorance or lack of observation of the dog's distress when following a wheel, or inattention to the changed conditions between awheel and afoot, may be plead in extenuation of the suffering inflicted by many.

There is no need of a bicycle dog. There is enough of interest, and enough to tax the attention seriously of the bicyclist, without the added responsibility which a dog entails. And our correspondent and others who may feel any interest in the subject will grant that in the proposition of breeding a bicycle dog there is something of the ridiculous.

The Snaring of Foxes.

CHICAGO, Ill.—*Editor Forest and Stream:* In FOREST AND STREAM of July 11 I notice an article in regard to the snaring of foxes, also comment that snaring the fox is not sport. Perhaps it is not, but it puts an end to the fox just the same, and I for one believe in getting rid of the animal. I was raised within fifty miles of this city, and no more than ten years ago the prairie chicken could be found on any piece of stubble. All at once people began to talk about seeing foxes, and they became numerous. Where they came from no one seems to know, and there are still a good many throughout Kendall and Grundy counties. With the coming of the fox commenced the slaughter of the birds on the nest. The eggs were destroyed and the young also.

In my travels of the last two years I have come across localities that would be a perfect home for grouse, quail, woodcock and all other birds of like nature. I did not there see a bird or hear a single note uttered by any game bird. I asked the reason of it. No one seemed to know. I asked if there were any foxes in the country. Oh, yes; lots of them. They steal our chickens every night. I find by inquiry that about one-half dozen men in the country were in the habit of hunting the fox with hounds, but would not allow any of them killed. Now shall every one in that county give up to a few fox hunters?

I am a lover of the gun and rod, and believe in game and fish protection, but the fox will get it in the neck whenever I get the chance for a shot. L. PLATT.

Central Beagle Club.

SHARPSBURG, Pa., July 25.—*Editor Forest and Stream:* The Central Beagle Club held their July meeting and elected Dr. W. E. Johnston, of Etna, Pa., and Harry Louis, of McKeesport, Pa., as their judges for their trials, which begin on Nov. 10.

Greene county, Pa., has been selected as the place to hold the trials, which will be at Waynesburg or Carmichaels. The field committee expect about Sept. 1 to take several braces of beagles, draw the grounds and decide which of the two places will be the best, as both are very good. They thought this way the better to decide. The entry will close Oct. 20. The club is getting a very fine silver cup to be competed for as a special, and everything points to a successful trial. L. O. S., Sec'y.

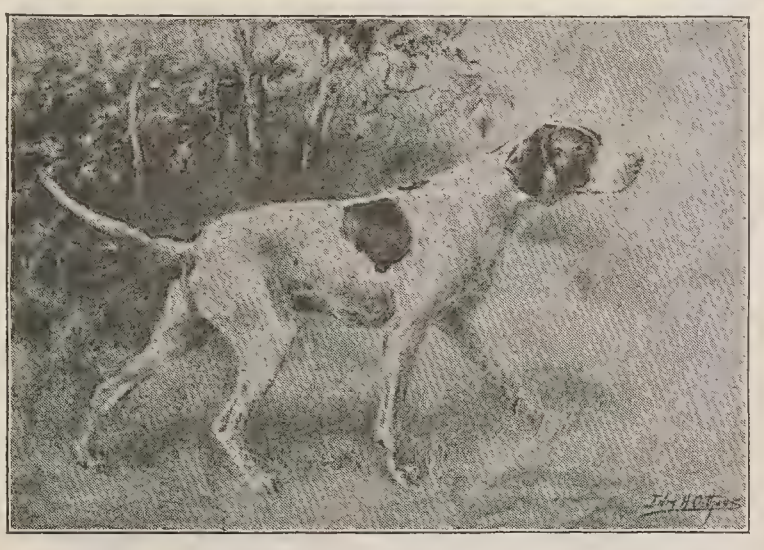
A field trial committee meeting of the National Beagle Club of America will be held at the rooms of the American Kennel Club, 55 Liberty street, New York, at 3:15 P. M., Aug. 11. George W. Rogers, Secretary, 250 West Twenty-second street.

B. M. Stephenson.

WE regret to learn of the death of Beverly M. Stephenson, of La Grange, Tenn. He was killed at Somerville, Tenn., on July 27 while resisting arrest. He was the independent candidate for sheriff of Fayette county, Tenn. Col. L. S. Gallaway is chairman of the Democratic Executive Committee of that county. There appeared to be some opposition to B. M. Stephenson's candidacy from the Democracy, and this led to a personal encounter between the two parties mentioned. They met in Somerville on July 27 and quarreled. Col. Gallaway was unarmed, and when shot at fled for safety to the shelter of a nearby drug store. Deputy Sheriff Hunter soon afterward entered the drug store and asked who did the shooting. Stephenson replied that he did. The deputy sheriff told him he was under arrest, whereupon Stephenson fired at him twice, missing each time. The deputy sheriff returned the fire, putting two bullets into Stephenson's body, either one of which would have been fatal. B. M. Stephenson was well known to all field trial patrons. He handled such well-known dogs as Bob Gates, Ollie S., Noble C., Ben Hill, Lillian, Corsair, Tribulation, Lady C., Rubicon, Lady Zeal, Galena, Tennessee Charley and others. He was in the middle years of life, of great personal beauty, but was afflicted with an ungovernable hot temper, which often resulted in trouble to himself and others.

Toronto Show.

AT the coming dog show of the Industrial Exhibition Association, to be held at Toronto Sept. 7 to 11, the following changes have been made by the American Spaniel Club with their specials: The Saybrook trophy, offered by Mr. Rowland P. Keasby for the best American field spaniel, has been substituted for the American Spaniel Club trophy for the best field spaniel at the show; and the brace challenge bowl, donated by George R. Preston, Jr., for the best brace of spaniels over 28lbs., has been substituted for the Bell cup prize. Lists are now ready and can be procured from the secretary, C. A. Stone, 82 King street, Toronto. The entry fee for all classes is $2, not $3, as published. C. A. STONE, Sec'y.



Brunswick Fur Club.

ROXBURY, Mass.—The eighth annual foxhound field trials of the Brunswick Fur Club will be held at Barre, Mass., during the week of Oct. 19. These trials are open to the world and all fox hunters are invited to be present and enter their hounds.

The secretary will be glad to send copies of the running rules upon application and to give any further information that is desired. BRADFORD S. TURPIN, Sec'y.

POINTS AND FLUSHES.

The portrait of the famous pointer dog Jingo (Mainspring—Queen), which we publish this week, is notable for its fidelity to color, expression and form, and for the admirable selection of his best attitude on point. Jingo's most famous achievement was the winning of the International Championship Stake of the Northwestern Field Trials Club at Morris, Manitoba, last year, his competitors being Minnie T., Musa, Bonny Dan of Colehill, Pitti Sing,

JINGO.

Delhi, Ightfield Mentor and Tony Boy. He also won first in the Pointer Derby of the Central Field Trials Club, 1872; second in All-Age Pointer Stake of U. S. F. T. C.; second, All-Age Stake of Continental F. T. C.; second, All-Age Stake of Manitoba F. T. C., 1895, and fourth in the U. S. F. T. Club's All-Age Pointer Stake this year, he being ill at that time. The portrait is from a photograph of a painting made by Prof. Edwin H. Osthaus, who, besides being a master of his art, is a practical sportsman, and infuses the true spirit of the woods and fields in his productions.

The premium list of the great international bench show of dogs and cats enumerates a most attractive list of prizes and specials. Address C. A. Stone, Secretary, Toronto, Can.

The premium list of the Crystal Palace bench show, Kingston, Ont., can be obtained of Mr. H. C. Bates, Secretary-Treasurer.

Sept. 15 to 18 have been claimed for the Orange county bench show, Newburgh, N. Y.

The Canadian Fox Terrier Club will accept our thanks for a copy of its rules, standards, stakes, list of members and conditions governing the competition for the club's cups. It is neatly and artistically gotten up. Mr. H. P. Thompson, Secretary-Treasurer, 31 St. Mary street, Toronto.

In our business columns this week a trained setter and pointer are offered by A. H. Carter, Lebanon, N. H. A. H. Hayes, Dexter, Me., offers coon and rabbit hounds and cur partridge dogs. F. E. Bosworth, Easthampton, Mass., offers deerhounds. H. Barnard, Jr., Rome, N. Y., wants a pointer dog. Ward M. Langdon, Copake, N. Y., offers greyhounds. Rudolph Mueller & Son, Chicago, offer a mange cure.

The following circular letter, bearing date of July 28, has been issued to the members of the American Spaniel Club by the secretary, with the approval of the executive committee: "In reference to the subject of holding spaniel field trials your executive committee begs to report as follows: In May last a circular notice was sent to all the members of the club, asking for entries and opinions on the subject. In reply thereto but six answers have been received and only four entries made—these coming from one member of the club. As nearly one month has elapsed since the date named in the notice for receiving replies, your committee does not feel authorized to keep the matter open longer, and is reluctantly forced to abandon the project, at least for the present. In view of the manner in which this subject has been discussed your committee regret that their efforts to hold trials have not received your support, and while two specials have been kindly offered, the above entries are the only ones made or suggested."

Mr. P. T. Madison, secretary of the Continental F. T. C., has received the following letter from Mr. Thomas Johnson, the true ring of sportsmanship being so self-evident that comment is unnecessary: "Please find inclosed check for $15 (with 25 cents added for collection) for three entries in your Northwestern Stake, as per annexed form. I do not think I shall be able to attend your trials, but this stake commends itself so much, viz., as an encourager to amateur sportsmen, and your club giving starters and entry fees in prizes (less a fair amount for expenses), shows an evident desire to popularize field trials. This is why I give the stake a moral support in a slight practical manner."

The programme of the U. S. F. T. C.'s winter Derby, to be run at West Point, Miss., is announced this week in our business columns. The prizes are liberal, and the club desires that special note be made of the advantages offered setters and pointers in separate stakes, the breeds running independently. Entries close Aug. 15. Full information as to forfeits, etc., can be obtained by referring to the advertisement. The judges are Messrs. J. D. King, W. B. Meares and George Eubanks. Field trial supporters should note the advantages offered for a competition in the best time of the year for good field work (January), and information on any subject pertaining to the trials can be obtained of the Sec'y-Treas., Mr. W. B. Stafford, Trenton, Tenn.

Mr. James B. Baker, New York, lost his pointer bitch Westminster Zoe (King of Kent—Westminster Ina), recently, from difficult parturition. She had been bred to Rip Rap, and much was expected from the result of the union. Zoe won first in All-Age Stake of Philadelphia Kennel Club last year, and third in the same club's Derby, 1894.

A dog described as a half-breed spaniel, mangy in exterior and miserable in circumstances, ensconced himself on the steps of the American Title Co., in the Mutual Life Building on Nassau street, New York, Saturday forenoon last. The approach of callers one after another awoke the dog, and his growling and hostile attitude drove them away. This was taken as sufficient evidence that the dog had constituted himself guardian of the building, but it is more probable that he was making himself comfortable. A policeman was called to remove the dog, a task which he presumed could be done in a moment. In response to his "good doggy" he received a growl, and in response to his jocular club poke in the ribs he received a bite on his thumb. Sucking his thumb, he held council with the managers of the office, and then he shot at the dog, and here is really the extraordinary part, he killed it and not a bystander. The "middle of the road" policy is a good one for dogs on Nassau street.

Keys, the canine employee of the Union Iron Works, met with an accident recently by which his front right leg was broken, says the San Francisco *Examiner*. Keys has been looked upon by the officers of the iron works as one of the regular workmen for about four years. He is a dog of no particular beauty, and his pedigree would not be considered by dog fanciers, but he possesses wonderful intelligence. He makes the Potrero Police Station his home and he is the pet of Lieut. Bennet, but nearly every workman in the shipbuilding concern claims the friendship of the dog. At the first tap of the gong every morning Keys has reported for duty at the gates of the Union Iron Works, and he has never left until a full day's work has been accomplished. He was particularly useful in the shipyard and in the boiler shop, and the foremen of these departments say he was more valuable to them than a man for doing certain kinds of work. He could crawl through small holes in boilers and about ships, and his particular work was to carry tools, bolts, nuts, rivets and other small articles needed by workmen who had crawled into such places, and to have them creep back and forth for which would have caused considerable loss of time. Keys thoroughly understood his work, and he was always on hand when needed. Recently a steamer was placed on the dry dock for repairs, and the dog, realizing that his services might be needed by the workmen, was climbing a ladder to the deck when he slipped and fell about 20ft. The men picked him up, and making a stretcher of some pieces of canvas carried him to the police station and sent for a physician to set the broken limb.

Under date of July 30, Mr. J. B. Stoddard, who is now staying at Thomasville, N. C., writes that the thermometer reaches the 100° mark every day. Still, that is far less than it is possible when the matter of 16 to 1 is settled.

We are informed that the outlook for birds in Manitoba this year is not favorable as compared with former years. The spring season was very wet, and in consequence it is supposed that many nests were destroyed.

"Did Mrs. Jones give up her bloomers to please her husband?"

"No, her pug dog wouldn't come near her when she had them on."—*Chicago Record.*

Mr. N. B. Nesbitt, of Mississippi, and Mr. D. E. Rose, of Tennessee, arrived in Manitoba on July 26, each with

a string of dogs, nineteen all told. They are preparing for competition in the Manitoba Field Trials Club's trials in September. Mr. Chas. Barker, after an absence from field trial affairs for several years, is due in Manitoba in a few days with the dogs of the Del Monte Kennels, of which he is now the trainer. The old grounds of last year at Glen Lea, found so satisfactory for training purposes, will be used this year by Messrs. Rose and Nesbitt.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. G. G. Williamson's Belle of Piedmont, Jr., English setter bitch, July 20, to champion Antonio.

WHELPS.

Mr. W. W. Mills, Jr.'s, Yawtacaw Dodo, fox terrier bitch, whelped, July 14, seven pups, by Halifax Revival.

SALES.

Mr. G. W. Patterson has sold
——, St. Bernard dog, to Mr. Jas. A. Howson.
——, St. Bernard dog, to Mr. C. Juel.
——, St. Bernard bitch, to Mr. Howell F. Wilson.
——, St. Bernard bitch, to Dr. Wesley Mills.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

THE CARE OF THE CHAIN.

Under the best conditions, as every wheelman knows, a large percentage of the power applied to propelling a bicycle is lost through the friction of the chain. Many devices have been invented for minimizing this friction, such as ball-bearing chains and sprockets, and the so-called chainless systems, where power is transmitted by means of a rod working on level gears at either end, but none of these devices have as yet attained any great vogue. The cyclist is obliged therefore, if he wants his wheel to run easily, to pay constant attention to his chain and see that that runs as freely as possible. It would be a good thing if the English gear guards were more common on this side of the water, for by protecting the chain from mud and dust they would save a great deal of the dirty work of cleaning and lubricating that is now necessary. Americans, however, do not take kindly to the idea at present, and this is only one example where solid comfort is sacrificed for lightness.

To give the best service a chain should be perfectly limber, and when removed from the wheel every link should bend with the utmost freedom. If there is stiffness at any point the wheel is bound to run hard and the rider to suffer. Sometimes through faulty manufacture one or more links in a new chain will refuse to bend, and as this is generally due to imperfect pivots or the fact that the rivets are too tight, the chain should be returned to the bicycle manufacturer or sent to the repair shop. At other times the stiffness comes from rust or dirt, and in this case the chain needs a thorough cleaning. It should be immersed in a can of gasoline or kerosene oil and left over night for a thorough soaking, or if the rider is in a hurry he can stir it around or put a tight cover on the can and shake it for a few minutes, occasionally renewing the oil. When cleaning a chain at night he should use kerosene, on account of the danger of explosion if the gasoline vapor reaches a light, but the latter is more satisfactory, as it is free from the corroding effects of the kerosene.

When the chain is wiped clean and attached to the wheel, it should be oiled and lubricated with graphite. It is a common mistake to believe that graphite alone will make a chain run smoothly. Graphite, unless in combination with some oil, only acts on the surface of the chain and does not help the joints at all. The oil should be applied to the joints separately, and after the wheel has been revolved several times to help it work into the crevices it should be wiped from all exposed portions, after which the graphite is applied. Chains may also be cleaned by boiling in a solution of cyanide of potassium and water, which removes dirt and rust very effectually and makes them look like new. Chains are apt to shorten under certain conditions, such as lack of lubrication, or riding in the rain and collecting sand and mud, or simply from rust. In such cases every link as it passes over the small sprocket forms an elbow, and all the slack of the chain is taken up. In severe cases the rear fork is sometimes bent by the tension, but danger from this source is very apparent and may easily be guarded against.

WORK SPENT IN PRESSING PEDALS.

In a recent communication to the Paris Académie des Sciences M. Bouny gives particulars of a series of experiments made to determine the power exerted in propelling a bicycle at different speeds. The method adopted was to take an autographic record of the total force exerted on the pedal throughout a complete revolution. To this end a disk was mounted on the bicycle crank concentric with the pedal pin. The pedal itself was mounted on stiff springs, and points fixed to it traced curves on the disk already mentioned. If no pressure was exerted on the pedal, these latter curves were simple concentric circles; when, however, the rider began to work, the springs on which the pedal was mounted yielded proportionately to the pressure applied, and the curves then drawn showed, by their deviation from the circular form, the value of the force applied at any part of a revolution. One of the pointers in question measured the force applied in a direction perpendicular to the plane of the pedal, while the other showed the pressure applied parallel to this plane. The latter is by no means an insignificant quantity, as all good riders shove their pedal forward as well as down. The angle the pedal made at any moment with the crank was also automatically recorded.

An examination of the diagrams thus obtained showed, in the first place, that there was no absolute dead point, such as occurs with an ordinary connecting-rod and crank motion, and secondly that there is always some pressure on the pedal during the rise, the negative work due to which has to be subtracted from that done during the down stroke to obtain the net amount used in propulsion. The experiments were made at speeds ranging from 10⅝ to 21¼ miles per hour, the machine being run on a wooden racing track. The results, reduced to even English measures by means of a formula of interpolation, were as follows:

Speed. Miles per hour.	Work Done per Semi-revolution. Ft. Lbs.
10	18.58
10⅝	20.96
12.5	33.98
15.0	47.50
17.5	56.75
20.0	63.62
21¼	66.08

It will be seen from the above figures that the average pressure of the foot required on the pedal increases rapidly with the speed, being at twenty miles an hour nearly three and one-half times as much as at ten miles per hour. Unfortunately the gear used is not noted by M. Bouny, and so it is impossible to deduce from the above figures the average tractive resistance of the machine at the different speeds. Probably at the higher speeds named a large proportion of the total work done was expended in overcoming atmospheric resistance, and the run of the figures might be changed considerably if the trials were conducted on a roughish road instead of on a smooth track.—*Engineering.*

POSITION AND POWER.

In the Swiss normal bicycle, illustrated in a recent issue, it will be remembered that by a peculiar arrangement of seat and pedals the rider is given a point of support at his back designed to enable him to exert a much greater power for propulsion than when he depends upon his weight solely as a basis.

This same idea is responsible for a device called a "speed producer," which has just appeared. The speed producer is intended for attachment to any ordinary bicycle, and is simply a light, strong, back support of steel, which when clamped to a tee saddle post reaches 6in. above the seat. It is said to keep the rider from "slipping back in his saddle," and appears to be intended chiefly for racing wheels, where the rider bends forward and pushes back, in exact opposite to the position assumed on the so-called normal bicycle.

While we admit that there is something to be said in favor of both these devices, we are inclined to doubt their practical utility, for two reasons, which are, first, that the rider is very rarely called upon to exert a power for propulsion greater that his own weight; and secondly, that when so called upon he already has in his handle bars a point of support which will enable him to properly utilize the great lifting power of his legs.

We print elsewhere a table showing the power required to propel a bicycle at varying rates of speed. An analysis of this table shows that while increasing the speed from 10⅝ to 12.5/10 miles per hour the average increase in work per mile per hour is nearly 7 foot pounds for each downward thrust of the pedals. When a speed of twenty miles per hour is reached the average increase per mile is less than 2 foot pounds. Between these extremes the effort required to "hit it up," as measured in foot pounds, decreases at a constant ratio, and accordingly we are justified in assuming that at speeds greater than those given in the table the force required to increase the speed for each succeeding mile per hour is less than 2 foot pounds.

Assuming that it is exactly 2 foot pounds, a speed of thirty miles per hour, or a two-minute gait, would be reached at an expenditure of force of 83.62 foot pounds, and a mile-a-minute gait would result from a push of 103.62 foot pounds, which is considerably less than the weight of the average racing man.

From these figures it will be seen that if weight were the important factor in a trial of speed most riders would be able to do a mile in a minute, point of support or no point of support. Such argument, however, is a waste of time, for every one knows that speed depends on the muscle and pluck of the rider, and that as the thrust which he exerts against the pedal is well within the limit of his weight, tieing him to the seat would not make him go the faster.

There are occasions in hill climbing, and possibly at times during races, though we doubt it, that the rider exerts a force greater than his own weight, but on these occasions his handle bars serve as the required point of support. Bracing against these, the wheelman can push to the full capacity of his leg muscles, and if he does not climb the hill it is nobody's fault but his own. He fails through lack of physical powers, and not because he is handicapped by his machine. So much for the "point of support" argument.

As regards the claim advanced by the promoters of the bicycle that owing to the position of the rider, with his legs nearly horizontal, "his forces are far more effectually utilized and with considerable less fatigue" than those of the ordinary rider, we do not believe that this is borne out by the experience of manufacturers and wheelmen in general. In the old safeties the riders were forced to assume a somewhat similar position, and that they did not find it conducive to the effectual utilization of their forces is indicated by the fact that such models were long ago discarded.

Moreover, the best modern practice, which is the result of years of experiment, is all in favor of a perpendicular position in riding, or one leaning slightly forward. The nearer one reproduces the condition of walking, the less will be the resultant fatigue. With one's legs held out at right angles to the body, the stomach and leg muscles must be taxed for purposes other than propulsion, and we fail to see how such a position can rightly be called normal.

Bicyclers and Bear.

North Conway, N. H., July 31.—I am glad to see that you have started a wheeling department. It ought to be a great success, and doubtless will be. Last fall while riding in company with a friend I had the good luck to run within 30yds. of a black bear. The fellow made off at a great clip as soon as he saw us, and we were surprised that so unwieldly an animal could get along so fast. It was fortunate for us that he ran, for we were riding down hill very fast and did not see him till we rounded a curve almost on top of him. He saved a collision by getting out of the road. Three or four times I have stolen up on foxes that were hunting along the road, and once had the fun of measuring speed with one that attempted to escape by running down the road instead of jumping into the bushes. For a quarter of a mile I did not gain or lose an inch as far as I could see and the fox was about 20yds. ahead of me. Then he took to the cover, and the chase was over.

Bradford S. Turpin.

WHEEL NOTES.

The bicycling trousers made with the so-called "golf bottoms" or "cuffs" appear not to have become popular. From the West we hear that they have never succeeded in reaching much sale among the cyclers of the large cities, such as Chicago. The objection urged against this style of finish for the knickerbockers is that the cuff of moleskin or other heavy cloth is apt to wrinkle and lose its set after short wear. Moreover, some of the fastidious claim that to wear knickers with the golf bottom argues that one can afford only one pair of short clothes for golf, tennis and the wheel, whereas each sport is entitled to its own garment. At any rate, the form of garment has not been generally adopted for the wheel.

More and more one sees the knickerbocker garb edging its way into business dress. In the Government offices at Washington hundreds of the clerical force go to their work dressed in short dress, and the "mufti" of the wheel is coming more in evidence in many large cities. Why not? No one who knows the comfort of knickerbockers ever willingly goes into long trousers. As to sightliness there is no comparison between the two. We do not pause to realize what slaves we are to fashion. If this be true, let us hope fashion shall always be as rational as in the garb of the wheel.

If one ride, he should ride fitly. To ride without the proper dress is to lose more than half the enjoyment of the wheel. The beginner is placarded by his outfit.

There are few railroads in the West which do not check bicycles free—and very gladly.

In the sandiest of the sandy pine country of upper Michigan and Wisconsin the wheel is in general use, even in little villages about which the roads are so deep in sand that the rider must perforce walk many a mile in going a few hours' journey.

The summer tour to a fishing place now is incomplete without the wheel in the outfit.

Picnic parties, with gypsy camp attachments, are a popular diversion in Chicago among wheelmen. At that city may anglers go into the country wheelback.

In southwestern Iowa the country is quite hilly, but the bicycle is used by everybody. The gear there averages about 63, and when one of these riders, who began to learn in the middle of the hills, strikes a rider who has never had any experience except on the flat, he has fun with the latter individual.

Southern Michigan has hundreds of miles of gravel roads. In Wisconsin the roads average very good, in the lower part of the State especially. Upper Indiana is gravel and sand in many sections. Illinois runs more to black dirt.

WIT OF THE WHEEL.

"Uncle Bob, what is a pedestrian?"

"Why, he is a fellow what makes a row when a bicycle runs over him."—*Exchange.*

FALLING FROM GRACE.

A young man in this city has named his bicycle Grace—not after his girl, but because he falls from it so often.—*Utica Herald.*

HAD NEVER SEEN PNEUMATICS.

Little Girl—See, mamma; the poor man must have come an awful long way! See how swollen the wheels are.—*Fliegende Blätter.*

FASTEST ON RECORD.

"You are charged," said the judge, "with riding your bicycle through the streets at a rate exceeding ten miles an hour."

"Ten miles?" said the man whose new wheel had run away with him—"ten miles? I'll bet I was going 300."—*Indianapolis Journal.*

ROAD RAMMERS.

Wheeler—This idea of taxing bicycles as vehicles is simply outrageous. A bicycle doesn't damage the roadway a bit.

Walker—It isn't the wheels that do the damage; it is the fellows who fall off.—*Indianapolis Journal.*

HONORS EASY.

Papa—So, Bobby, you're the president of your bicycle club. That's very nice. How did they happen to choose you?

Bobby—Well, you see, papa, I'm the only boy that's got a bicycle.—*Harper's Round Table.*

BOUGHT BY WEIGHT.

Dealer—I'll sell you that wheel for $50. It weighs 22lbs.

Rude Scudder (from Cearfoss Crossroads)—Why, my boy Ab bought one for $25 t'other day that weighed 90lbs. You can't soak me, by gum!—*Judge.*

HARD-HEADED, BUT——

"Hear about Barrick? Fell off his wheel last night on to his head and was unconscious for more than three hours."

"You don't say? Well, well! I never thought it would affect him that way. I have so often heard him spoken of as such a hard-headed business man.—*Cincinnati Enquirer.*

Only love makes life worth living.—*Troy Press.*

Oh, no. There are pie and bicycles, not to mention other beautiful things.—*New York Sun.*

KNEE WASN'T IN IT.

Molly—There is one thing about these bloomers of mine that I think commendable: they won't bag at the knee.

Myra—No; I notice they seem to be above it.—*Yonkers Statesman.*

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Wm. R. Huntington, Rome, N. Y.
Sec'y-Treas., Thos. H. Stryker, Rome, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. M. Dater, 307 Adelphi street, Brooklyn, N. Y.
Central Division, Geo. J. Keyes, 193 Front street, Rochester, N. Y.
Eastern Division, R. H. Hammond, Worcester, Mass.
Northern Division, Douglas H. McDougal, Toronto, Canada.
Annual dues, $1; initiation fee, $1.
Annual meet, Aug. 14-28, Grindstone Island, St. Lawrence River.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Mullet Lake vs. Ballast Island.

DAYTON, O., July 30.—I first attended the meet of the W. C. A., at Ballast Island, in 1886, and have attended every one since, with the exception of that held at Ballast in July, 1895. I have always been an advocate of alternating, in regard to location, holding the meet one summer at Ballast Island, and the next summer at some other favorable spot. We held two meets in Wisconsin, one at Lake Winnebago and one near Madison, on both of which occasions we met a very fine lot of fellows, who proved to be good canoeists, but unfortunately for the Association were not able to follow us when we returned to Ballast Island or to Mullet Lake; therefore it is a question with the Association to-day whether this policy will be successful in the future, and if not successful, it is my opinion that the old original members should rule and hold the meets where it pleases them most. In this connection, I want to speak my little piece in regard to the meet just finished at Dodge's Point, Mullet Lake. A few of us who were present are like the two remaining members of the Ruckawa Canoe Club, a sketch of which appears in the year book of the W. C. A., the end of which reads, "There are only a few of us left, but we are stayers." While the stayers are few in number, they made up everything that was lacking, in enthusiasm and a grand, good time.

In the ten meets I have attended I do not think that I ever had a better time. The place was an ideal one for a camp situated in a most beautiful grove on a point extending out into the waters of Mullet Lake. The weather could not have been more desirable if it had been ordered especially for the occasion. The accessibility of the spot by boat or rail made the journey there very delightful, while the accommodations at the Waldemere Club were something that the W. C. A. members have not been accustomed to at their meets on former occasions. Last, but not least, by any means, the hospitality shown to us by the members of the Waldemere Club and their friends.

When we arrived in Cheboygan we were taken charge of, and the question was many times asked of us, "Now what can we do for you?" and while in camp the spirit of hospitality and cordiality were so marked that it made the small attendance all the more embarrassing to those of us who were there.

The sailing winds, I am told by those who are competent to judge, were all that could be desired, although somewhat heavier than we have been accustomed to. The water was fine for swimming, and the boys who took advantage of the magnificent sand beach will long remember the fun it afforded them.

The fishing in Mullet Lake was quite good, one gentleman taking ten fine black bass in one afternoon at the mouth of the river, 2 miles distant from the camp.

Another pleasant feature of this occasion is the accessibility to the various trout streams, which you are familiar with.

The telephone, telegraph and express were all conveniently arranged for us, which is quite an item with a good many when attending a canoe meet.

Taking it all in all, I am satisfied that we have never found a place so desirable, and I feel that it is due the members of the Waldemere Club, as well as ourselves, that we go there again with a full representative crowd of canoeists, such as we have had on former occasions and in doing so we could not find a location that would give better satisfaction, everything being considered.

I still cling to Ballast Island as the home of the W. C. A., but I feel that as an alternating point Dodge's Point, on Mullet Lake, is the place for the W. C. A. W. H. CRAWFORD.

Hurrah for Grindstone.

THE seventeenth annual meet of the American Canoe Association will be held on our old camping ground on Grindstone Island, from Aug. 14 to 28.

Does not this announcement call up many pleasant recollections of the meets of 1884, '85 and '86, and do not all of the men and women who attended those meets look forward with pleasure to the opportunity of once more camping on old Grindstone, and sailing or paddling on Eel Bay? I hope to see a goodly number of those old boys whose heads must be getting gray perhaps, but whose hearts are ever young and in the right place. Can't you hear one of them now saying to another, "I'm just as young as I used to be." Then, too, I hope the younger men will turn out and show the old boys that there are just as true canoeists now as there ever have been. Come and hear the old fellows tell what they used to do in camp, and how they had faster boats than any of the modern ones, and then go out and sail all around them and capsize once in a while just to show them how easy it is to right your canoe and go on again. Let them open their eyes when they see the batswing sails, the sliding seat and self-bailing cockpit, and then let's all go up on Nob Hill and have such a rousing old campfire as was never seen before, except when we burned all the tent floors on that memorable night in August ten years ago.

Old Grindstone is still there, and Eel Bay and the islands are more beautiful than ever. Let us see if we cannot once more see the bay white with sails, as it was in 1886. Take a canoe, a tent and some blankets, and take a train that will bring you to Clayton or Gananoque on the morning of Aug. 14 next; then take the steamer for camp and spend two as happy weeks as you have ever spent, and renew your acquaintance with the best lot of fellows anywhere to be found, the members of the American Canoe Association. If you are a new member and do not know a single A. C. A. man, come just the same and see how quickly you will get acquainted with them all and find out what a good time you will have. AN OLD BOY.

Royal C. C. Challenge Cup.

The following account of the victory of W. W. Howard is from the *Field*. We are obliged to defer the *Field's* comments to next week:

FRIDAY, July 17.—Race for the Royal C. C. challenge cup, and challenge cup, value £50 (tenable for the year), and £5 prize; course, from the London Sailing Club round buoy in the Roach, twice round, 10 miles.

Start, 2:30; wind, N. to N.E., fresh. The entries were:

Canoe.	Owner.
Yankee (winner)	Mr. W. W. Howard (British Canoe Association).
Prucas III.	Mr. G. U. Laws (Northern C. C.).
Dragon	Mr. R. F. Lawson (Royal C. C.).
Vanessa	Mr. B. de Q. Quincey (Royal C. C.).
Solitaire	Mr. A. E. Wall (Midland Sailing Club).
Viper	Mr. C. C. Lyman (Royal C. C.).

Vanessa was first over the line at 2:30:05, followed by Yankee at 2:30:15, then came Prucas III., Solitaire and Dragon. Yankee soon took the lead, and, sailing very fast, she had a lead of nearly 13m. at the end of the first round, and finally won by 27m. 51s. It is, however, only fair to the holder of the cup, Mr. C. C. Lynam, to state that he was unable to start, owing to exhaustion consequent on his sailing his canoe round from Southend the day before when there was a gale of wind blowing, and the only wonder is that he arrived at all. Vanessa gave up at the end of the first round, as she was leaking. Solitaire lost her mast soon after rounding Brankiet Spit Buoy, and was towed back by the Dorothy. Although Prucas III. had been practically rebuilt since Wednesday, she was leaking badly, and was half full of water when she finished. Dragon was also leaking, and, although she was sailed right up to the last, it was a hopeless stern chase. It might here be stated that, although Mr. Howard was at Burnham during all the races, this was the only race he started in, which was thought by most, if not all those present, to be rather a strange kind of proceeding, considering how easily his canoe is fitted for racing.

Grindstone Island.

AUG. 14-28.

NEXT week being the annual pilgrimage of all good canoeists to the old camp ground last visited in 1886, everything possible has been done by the officers to make their stay a pleasant one, as were those of former years, and we hope that many will be present. The details of the arrangements are as follows:

TRANSPORTATION ARRANGEMENTS.

The Trunk Line Association, the Boston Passenger Committee (covering New England territory) and the following Canadian lines, C. P. Railway, G. T. Railway (Northern and Western Divisions), Erie & Huron Railway, Central Ontario Railway, Kingston & Pembroke Railway, Bay of Quinte Railway and Navigation Co., Michigan Central R. R. (also Buffalo, N. Y.), and also Hamilton, Ontario, have granted the customary concession, viz.: A round trip of one and one-third fare to Clayton and Gananoque. Members will pay full fare to the points named, obtaining from the selling agents certificates which, when indorsed and vised at camp, will enable the holders thereof to return to the point of starting by continuous passage at one-third of the regular rate. Tickets may be purchased three days prior to and during the camp, and certificates will be honored for return trip (without stop-over) for three days (Sunday excepted) after the close of camp, Aug. 28.

Members arriving at Clayton via R., W. & O. R. R. or by steamer (the Richelieu & Ontario Navigation Co.) from Toronto, Kingston, Montreal, Quebec and intermediate points, will find the steam yacht Pastime at the railroad dock, running on the following schedule: Leave Clayton 6:30 and 10:30 A. M., and 2:00 and 5:15 P. M.; arrive at camp 7:15 and 11:15 A. M., and 2:45 and 6 P. M. Leave camp 7:30 and 11:30 A. M., and 3:15 and 7:30 P. M.; arrive at Clayton 8:15 A. M., and 12:15, 4:00 and 8:15 P. M.

Members arriving at Gananoque can leave by steamer Valeria at 5 A. M., 3:15 and 7 P. M.; returning, leave camp for Gananoque at 11 A. M., 5:45 and 9 P. M. This steamer will connect with the principal trains on G. T. Railway via Thousand Islands Railway at Gananoque Junction.

The fare on the steamers from Clayton and Gananoque to camp will be reasonable for members and their equipment.

The free carriage of canoes and duffle on railways must be made a matter of arrangement direct with the railway agents by the members, as it is out of the jurisdiction of the railway associations. It is probable, however, that most of the roads will agree to carry canoes and duffle free, or as part of members' baggage, the limit being 150lbs., and excess baggage rates paid on overweight The N. Y. C. & H. R. R. and R., W. & O. R. R. have agreed to this, canoes being taken, however, at owner's risk. Excess rates per 100lbs. vary according to distance and can be obtained from railway agents. As a rule, a guarantee of eighteen tickets from any one locality to Clayton or Gananoque will entitle the holders to the entire use of a free baggage car. Members of clubs, or individuals, should consult together and try to arrange this, allowing time for securing the use of such a car. A baggage car, or, if necessary, two cars will be provided by the N. Y. C. & H. R. R. R. for the accommodation of members from New York and vicinity, including New Jersey and Pennsylvania. The car or cars will be at the Thirtieth street station of the N. Y. C. & H. R. R. R. about Aug. 11, and will leave in time to stop over at the Knickerbocker Canoe Club at 152d street, Yonkers and Sing Sing. Thence direct to Clayton, arriving Saturday morning, the 15th, and returning by same route. Members from points outside of New York can ship their equipment by local express, freight or truck to Thirtieth street station, care of James K. Hand, where everything will be cared for and stored in the cars. Those who desire to do so may send their canoes and duffle by water or by truck to the K. C. C. house, where they will be cared for until the arrival of the car. The exact leaving time of the car from points named will be given in the FOREST AND STREAM, and upon application to the undersigned, to whom advice should be sent regarding the quantity of duffle to be carried in the car, number of canoes, etc., as soon as possible.

A sleeping car for the exclusive use of members and their friends will be attached to the train leaving New York on the evening of Friday, Aug. 14, at 7 P. M., if a sufficient number will send their names in prior to Aug. 10. Already nearly the requisite number have responded and accommodations will be given as the names are received.

Any other particulars regarding the whole scheme for transportation will be gladly given by the undersigned, as well as advice regarding the best means of securing favorable transportation from the railroads in regard to the handling of canoes and duffle.

THE TRANSPORTATION COMMITTEE, JAMES K. HAND, Chairman,
Grand Central Station, New York City.

A. C. A. CAMP.

The 1896 meet will be held on the old A. C. A. camping ground at the foot of Grindstone Island, St. Lawrence River. The camp is about five miles distant from Clayton and the same distance from Gananoque. The main camp will be located, as formerly, in the grove along the north shore and also on the open field fronting Eel Bay.

Squaw Point will also occupy its old location on the point south of the main camp. There is an open grove, and those that prefer can camp just outside of the grove on dry and nearly level ground.

The camp mess will be located near the southerly end of the main camp and will be conducted by Mr. D. McElveny, the well-known Albany caterer, who had charge of the mess last year at Bluff Point. The usual rates of $1 per day will be charged. The mess will be in a large tent erected over a substantial floor. The walls of the tent will be arranged to lower in pleasant weather and can quickly be replaced when desired. It is thought that a tent is much more appropriate for a camp than a wooden building and quite as comfortable.

It is hoped that the members generally will avail themselves of the camp mess, as Mr. McElveny has made extensive preparations for us, and it is hoped that his efforts will be rewarded by a generous patronage.

The camp store will be located near the dock and will keep in stock the usual camp supplies, and will take orders for things not kept in stock. The store will be managed by Mr. Wm. L. Delaney.

Mails will be distributed in camp at the secretary's tent, A. C. A. headquarters. The address for mail and express matter will be A. C. A. Camp, Grindstone Island, Clayton, N. Y. Letters and express matter from Canada should be addressed A. C. A. Camp, Grindstone Island, Gananoque, Ont.

Office hours of the commodore and secretary for the transaction of business will be from 9 until 10 A. M., and 1 until 2 P. M., each day.

Carpenters and laborers have been engaged, lumber purchased, and floors, skids, etc., will be built for members at reasonable cost on application to the camp site committee. Lumber and nails will be sold to members who desire to build their own floors. Flag poles can be furnished at a reasonable price. Members desiring floors, and who can do so, are earnestly requested to send their order, stating size desired, by Aug. 7, or as soon after as possible, to John R. Robertson, Chairman of the Camp Site Committee, A. C. A. Camp, Grindstone Island, Clayton, N. Y.

Customs Regulations.—We quote from letter of F. N. Potter, Collector of Customs at Cape Vincent, regarding the introduction of camp equipage:

"We will allow the Canadian members of the A. C. A. to bring their canoes and camp equipage to Grindstone Island without formal entry, the same to be returned to Canada. Cannot grant permission for free entry of provisions and supplies, as there is no authority for so doing. Will have the deputy collector at Grindstone to look after the camp, and the wants of the A. C. A. will be attended to promptly."

Entertainment.—It is expected that many general camp-fires will be given, and in order that these may be a success it is hoped that all who play, sing or have any specialties will come prepared to do their share toward entertaining.

Illuminations.—Members are requested to bring colored lanterns or other means of illuminating the camp at night.

Signals.—The A. C. A. signal code will be used to convey all intelligence from headquarters to the entire camp, the signal station and poles being located at headquarters. Copies of the code may be obtained from the secretary. Price 10 cents.

CAMP RULES.

1. A member of the executive committee will be appointed each day as "officer of the day," who will have charge of the camp and will appoint four members as pickets to assist him. The officer of the day will wear a red badge and the pickets blue badges.

2. A member-at-large and two associate members will be appointed in charge of the ladies' camp.

3. Members will register, pay their dues and obtain badges at headquarters immediately on arrival.

4. The commodore and secretary will be at headquarters for the transaction of business from 9 until 10 A. M., and 1 until 2 P. M., on each day.

5. Flags will be raised at 8 A. M. and lowered at sunset. After 11 P. M. quiet must be maintained in camp.

6. Tents may be located by owners, subject to the approval of the camp site committee. Tents and grounds must be in order by 10 A. M. A wagon will make the rounds of the camp before that hour for the removal of all rubbish.

7. Neither guests nor members from the main camp will be expected in the ladies' camp before 10 A. M. or after 6 P. M., except by special invitation. Ladies will not be expected in the main camp before 9 A. M.

8. Visitors may be invited to the camp, but a guest's badge must be obtained for them, and their names registered at the secretary's tent. Before 10 A. M. and after 6 P. M. no guests will be expected in camp, except on invitation for occasions especially announced on the bulletin board.

These rules are few and simple, and it is requested that all members co-operate in enforcing them.

WM. R. HUNTINGTON, Commodore,
Grindstone Island Meet, 1896.

A. C. A. BY-LAWS, SECTION 2, CHAPTER 1.

Every member attending a camp shall pay for camp expenses; for general camp $1, and for Division camp such sum as may be determined upon by the executive committee of the Division, provided such sum does not exceed $1. Visitors, when accompanying members, may be admitted to the general camp at the discretion of the commodore and secretary-treasurer, and to the ladies' camp on the invitation of an associate member and at the discretion of the committee governing it; provided that if they spend more than two nights in camp the member introducing them shall pay $2 each, the same dues and camp charges as regular members. But this shall not preclude the admission of any of the immediate family of a member.

THE A. C. A REGATTA PROGRAMME, 1896.

Event No. 1. Paddling and sailing combined, ½ mile alternately; total, 3 miles; time limit, 1½ hours. Start to be made paddling.

Event No. 2. Paddling, ½ mile straightaway.

Event No. 3. Sailing, 4½ miles; time limit, 2 hours.

Note.—Events Nos. 1, 2 and 3 are record races under Rule 5 of sailing regulations.

Event No. 4. Trophy, paddling, 1 mile straightaway.

Event No. 5. Unlimited sailing, three classes, 6 miles; time limit, 2½ hours. Starters in trophy sailing race to be selected from this race according to elapsed time.

Event No. 6. Trophy sailing, 9 miles; time limit, 3½ hours. See Rule 5.

Event No. 7. Dolphin sailing trophy, 7½ miles; time limit, 3 hours. The canoe winning first place in Event No. 5 will not be allowed to compete in this event.

Event No. 8. Hotel Champlain cup, 4½ miles.

Event No. 9. Orilla cup, 7½ miles. Limited to members of Northern Division.

Event No. 10. Jabberwock trophy, 3 miles. Limited to members of the Central Division.

Note.—Events 9 and 10 are to be sailed providing a Northern and Central meet is not held. Events Nos. 7 and 8 may be contested for at the same time, in the discretion of the regatta committee.

Event No. 11. Club sailing, three classes, 4½ miles; time limit, 2 hours. First three members of any club to count. A club to be represented must enter at least three men. All men entered must have become members of the club they represent before the first day of the 1896 meet.

Event No. 12. Limited sailing, 3 miles; time limit, 1½ hours. Sail area limited to 100sq. ft., and sliding seat prohibited.

Event No. 13. Novice sailing, 3 miles; time limit, 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1895.

Event No. 14. Unclassified sailing, 4½ miles; time limit, 2 hours.

Note.—The regatta committee reserve the right to handicap in this race.

Event No. 15. Paddling; open canoes not under 50lbs. weight, ½ mile straightaway; single blades.

Event No. 16 Tandem paddling, ½ mile straightaway; decked canoe; double blade.

Event No. 17. Tandem club paddling, ½ mile straightaway; open canoes; single blade.

Event No. 18. Club four paddling, ½ mile straightaway; canoes not to be less than 28in. wide and 16ft. long.

Event No. 19. Hurry-scurry; swim, paddle, run.

Event No. 20. War canoes, 1 mile; canoes not to be over 25ft. long, nor contain more than nine persons.

Event No. 21. War canoes, 1 mile; canoes not to be over 35ft. long, nor contain to exceed sixteen persons.

Event No. 22. Ladies' paddling, open canoes; ⅛ mile.

Event No. 23. Ladies' tandem, open canoes; single blade, ¼ mile.

Event No. 24. Mixed tandem, open canoes; single blade, ¼ mile.

Event No. 25. Novice paddling, open canoes, ½ mile; open to men who have never paddled a race outside of their own club races.

Event No. 26. Open four; tug of war.

Event No. 27. Tail-end race; open canoes, single blade, paddler to kneel in bow and paddle with the wind, bow first, 200yds.

Event No. 28. Hurry-scurry, obstacle or tournament.

Note.—The committee reserve the right to call any, except the more important and older A. C. A. races, at any time during the meet when in their judgment the conditions are right.

Note.—The right is also reserved by the committee of following the system of handicapping that was used at the last meet.

All events at which less than two starters present themselves at the line will be canceled.

W. C. WITHERBEE, Chairman Regatta Committee.

OFFICERS FOR 1896.

Commodore, William R. Huntington, Rome, N. Y.; Secretary-Treasurer, Thomas H. Stryker, Rome, N. Y.; Librarian-Custodian, W. P. Stephens, Bayonne, N. J.

Board of Governors: R. J. Wilkin, Brooklyn, N. Y.; Paul Butler, Lowell, Mass.; C. V. Winne, Albany, N. Y.; E. B. Edwards, Peterboro, Canada.

DIVISION OFFICERS.

Atlantic Division: Vice-Commodore, J. K. Hand, Grand Central Station, N. Y. City; Rear-Commodore, W. C. Lawrence, Trenton, N. J.; Purser, Henry M. Dater, 307 Adelphi street, Brooklyn, N. Y.; Executive Committee, H. L. Quick, Yonkers, N. Y.; P. F. Hogan, Brooklyn, N. Y.; H. H. Smythe, New York City.

Central Division: Vice-Commodore, H. D. McVean, Rochester, N. Y.; Rear-Commodore, Albert T. Smith, Albany, N. Y.; Purser, Geo. J. Keyes, Rochester, N. Y.; Executive Committee, H. V. Backus, Rochester, N. Y.; Dr. W. J. Nellis, Albany, N. Y.

Eastern Division: Vice-Com., J. W. Cartwright, Jr., Boston, Mass.; Rear-Com., Howard Frost, Worcester, Mass.; Purser, R. H. Hammond, Worcester, Mass.; Executive Committee: Howard Gray, Dover, N. H.; L. S. Drake, Auburndale, Mass.; A. W. Todd, Hartford, Conn.

Northern Division: Vice-Com., A. H. O'Brien, Toronto, Canada; Rear-Com., D'Arcy Scott, Ottawa, Canada; Purser, Douglas H. McDougal, Toronto, Canada; Executive Committee: F. C. Johnston, Montreal, Canada.

Regatta Committee: W. C. Witherbee, Port Henry, N. Y. (Chairman); E. B. Edwards, Peterboro, Canada; Butler Ames, Lowell, Mass.

Camp Site Committee: J. R. Robertson, Auburndale, Mass. (Chairman); J. G. Frazer, Ogdensburgh, N. Y.; J. S. Wardell, Rome, N. Y.; F. F. Andrews, Rochester, N. Y.

Transportation Committee: J. K. Hand, N. Y. city (Chairman); C. V. Winne, Albany, N. Y.; F. S. Rathbun, Desoronto, Canada. Signal Officer, H. M. Stewart, Rochester, N. Y.; Fleet Sugeon, Dr. W. J. Nellis, Albany, N. Y.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

CENTRAL DIVISION.

OCTOBER.

3. Cor. Atlantic City, mosquito class, Atlantic City.

The malicious attack of the Boston *Herald* upon the 15ft. class this week takes the form of a statement which is absolutely untrue and devoid of all foundation, as follows:

"Already there is a muddle in the matter of an international challenge cup for ½-raters, for at the present time there are two cups up for international competition, and the question now to be decided is: 'Which is the preferred cup?' Is it the one raced for at Oyster Bay or the one sailed for at Ogdensburgh, where Paul Butler beat all comers, even three boats from Montreal, the Sothis being sailed by Duggan, who won with the Glencairn?

"This small boat racing for 'international challenge cups' is liable to turn out seriously funny. True, such boats should be raced on ponds or bathing tanks, but that is no reason why any and every club may not put up 'a challenge cup,' to be raced for internationally. The question as to which is the proper cup to-day will have to be settled some time, and even while this matter is in doubt rumor comes from the Boston Athletic Club that a cup is to be offered for the little ones to race for upon our own frog pond."

No such dispute as this has arisen, nor is it possible, as the announcement has been repeatedly made that the cup given by the Ogdensburgh Y. C. was to be the absolute property of the winner of the one race scheduled for it. It was offered to all comers, the Canadian as well as American yachtsmen, and though in this way an international cup, no attempt whatever has been made by the donors to exploit it as a rival to the Seawanhaka cup. A long familiarity with the methods of the Boston *Herald* has led us to be prepared for almost anything, but in spite, malice and misstatement its attacks on the 15ft. class have been a surprise to us. To cap the climax, the *Herald* has now set to work to induce one of the older, but inactive, of the Eastern clubs to come forward and offer an international challenge cup for the extinct 21ft. class of 1891, of which Alpha was the most conspicuous success.

American and British Steam Yachts.

Bath, Me., July 24.—*Editor Forest and Stream:* The correspondence published in your issue of July 11 concerning the Payne bill is certainly interesting, but some of the sweeping statements made are decidedly erroneous; therefore I embrace this opportunity of writing still another letter on the subject. In the letter of Wm. B. Collier, Jr., published in your issue of July 11, he states that the clause from the Republican platform, "Product of American labor employed in American shipyards," should read, "Product of foreign labor employed in American shipyards." This, I suppose, is sarcastic wit. It is true that a large number of foreigners are employed in our shipyards, but I guarantee that the majority of mechanics employed in our iron shipyards to-day are American born, and moreover the percentage of American as compared with foreign mechanics is steadily increasing.

There is one shipbuilding firm in this country that can claim to be thoroughly American, and that is the Bath Iron Works, of Bath, Me. This company is officered by Americans, the foremen and draftsmen are all American citizens, also at least 75 per cent. of the mechanics. About six years ago there were but few American citizens employed in this shipyard, but owing to the favorable attitude of the Bath Iron Works officials toward American labor the number has rapidly increased, with the result that the steam yachts recently constructed at these works were plated by Bath-born mechanics.

You state in your reply to Mr. Joy's letter that when a builder receives a contract for a vessel he "ignores the designer entirely and starts on a mode of procedure that is nothing short of a disgrace to the name of American shipbuilding," and you furthermore state that "if the commercial man wants to convert a small margin between profit and loss into a balance on the right side, he must look to the expert designer and not to a mere builder." Now this is a good advertisement for the professional designer; but what about the naval architect and shipyard superintendent connected with the firm? You certainly cannot mean to say that he has not the ability to design even a successful steamer? A shipbuilding firm have connected with them generally a first-class naval architect who acts as superintendent. Under him there is usually an efficient force of draftsmen. The superintendent and the chief draftsman (who is often himself an able naval architect) make the preliminary calculations and drawings, and these are placed in the hands of experienced draftsmen, who work out the complete design under the supervision of their superior officers. This certainly seems to me to be a proper mode of procedure. Because a prominent shipbuilding firm on the Delaware have built a "modern steam yacht" from plans about fifteen years old, and also used their patterns of an old compound engine which has long since gone out of date, it does not follow that this is the usual custom. No. I am glad to say that this is an exception and not the rule.

The reason that many of our vessels when built do not prove as successful as anticipated is because the naval architect seldom has the opportunity to use his own judgment as he would like. He has to cater continually to the owner, and there are but few owners in our country to-day but what think they know much about a ship and could almost design it themselves. The result is the designer is handicapped continually, and the vessel when built is usually far from being the boat he would have liked to have produced. Mr. Geo. L. Watson, of Glasgow, has much more scope to work in than has the designer in our own country, and he has an advantage that but few people understand and appreciate when he designs and has constructed in Scotland steam yachts for American gentlemen. Mr. Watson designs the boats himself, and not being bothered day by day with the owner's whims and peculiar fancies he ought certainly to turn out rapidly a very shipshape vessel. Whether he does this or no I do not care to say, but it is a well-known fact that but few of our yachtsmen who go abroad for their yachts know what they are getting until the boats are completed, and then they are not always satisfied with the result.

Some of our yachtsmen who have gone abroad for the construction of their yachts have stated that they wanted them as quickly as possible, and therefore they found it necessary to place the contract for its construction with British firms. This certainly does not excuse them for their lack of patriotism. We can build here in this country any type of pleasure craft as rapidly as can any British firm, and what is more, our workmanship will be superior. The Bath Iron Works, although severely handicapped by fire, which almost destroyed their shipbuilding plant, built Eleanor, the largest American yacht afloat, in just one year. Peregrine was also constructed by the same firm in about six and a half months, and Illawarra in five and a half months, while Josephine, recently built at Lewis Nixon's yard at Elizabethport, was completed in about nine months.

And now just a word as regards workmanship. It is surprising to see what a large number of different standards for good workmanship are placed by so-called experts. The old Semiramis and Margarita (now Narada), Sylvia, Hermione, Columbia, Thespia, etc., have been described as showing excellent workmanship, and yet it takes a millionaire's resources to keep some of these boats in anything like good order.

There is one great fault to-day in steam yacht construction, and that is, the boats are built so light that they are soon shaken to pieces. It is not surprising that some firms cannot build steam yachts as cheap as other firms can, when we consider the great difference in the standard of construction.

Eleanor circumnavigated the globe with hardly $1 spent in repairs. Does not this prove that the workmanship of her hull and fittings throughout must have been excellent? Compare the scantlings and the strength and durability of Peregrine and Illawarra's steel hull fittings and wood hull, etc., with those of any British or other American steam yacht of their size and class, and you will find a great difference. One is built for seaworthiness, service and durability, as well as beauty and gracefulness, but in the other the former qualities seem to be generally ignored, and reduction in weight substituted.

Detroit, Mich., July 20.—*Editor Forest and Stream:* I have read with interest your comments on my letter. I cannot agree with you, however, that American shipyards are entirely to blame for turning out some poor craft. I think it is rather the owner who orders a yacht direct from a shipyard instead of from a designer who makes a study of yacht designs.

If a man of sense were going to build a house he would not go to a builder and order him to construct a house. He would first go to an architect and tell him what he wanted, and then get plans and specifications and bids on those plans. That is what a man of common sense would do, but a man who just wanted a house and did not care how it looked would rather go to a builder, who would sling him up something which would keep the cold and rain out, but which might not be pleasing to the eye. I think that is what some of our yacht owners have done, judging by the appearance of some of our yachts, but is that a reason for condemning all the yacht work turned out on this side of the water?

You say that you would like to see the "art of naval design in America placed where it was fifty years ago, ahead of the world," and pray let me ask what placed it there. Was it not the system of protection by discriminating duties that encouraged American ship owners to build their ships at home? The famous American-built clippers would never have been heard of if Americans had permitted England to build their ships. One of the first acts of the first Congress of the United States was to grant American ships the benefit of discriminating duties and forbid foreign-built ships American registry. Since this system of protection has been denied American ships, our merchant marine has declined until at the present day our commerce is carried in vessels flying English colors, and how have our designers been benefited? Has such a system raised American naval designs to the highest point of perfection? I fear that our designs have degenerated simply because we are out of practice, and yet you say that the same course will raise American yacht designs above those of the whole world.

I do not believe that a government "for the people" has the right to grant any privileges to any particular class of men, and much less to those unpatriotic enough to build their yachts abroad, and I think that the American people in general think as I do.

If those who want yachts persist in going direct to the shipbuilder whose business is to construct merchant vessels, they will undoubtedly receive just such craft as you refer to. If they are willing to pay for a good design they can obtain it either on this side of the water or the other, but let the yacht be built at home and the money spent in this country.

Richard P. Joy.

Our first correspondent, W. A. F., as in his previous letters, deals with but one of many American shipyards, and that one situated at a considerable distance from the heart of the shipbuilding industry, and possibly governed by different conditions. Without disputing his statements as to the proportion of native-born mechanics there, we can only say that this is not the case in the majority of yards. Let him visit the Cramp yard, Roach's, Harlan & Hollingsworth's, Lawley's, Herreshoff's, Piepgrass' or Nixon's and look at the men; a glance will disclose the fact that the majority are not of American birth, and that much of the most highly skilled labor is in every sense of British birth. While the proportion is decreasing and is likely to do so in a more rapid ratio from year to year, it is thus far much too large on the wrong side to admit of any such boasts as to the superiority of American over British yards, as first called forth our statement.

We are quite well aware that there is a superintendent connected with each shipyard, and as this is a free country, he may write U. S. after his name if it pleases him, but the trouble is that the education of these men is too narrow and limited. This great country has thus far offered no opportunities whatever for such technical education in naval architecture as is considered absolutely essential in other similar professions, such as civil, mechanical and electrical engineering, architecture, chemistry, etc. It is generally considered that the young student in any of these branches requires the aid of the most eminent specialists as teachers, backed by a costly and elaborate plant such as the larger colleges and universities afford. It is only within the past five years that attempts have been made by Cornell University and the Massachusetts Institute of Technology to teach naval architecture in the same way that mechanical engineering, for instance, is taught, and it promises to be many years before this great country will be able to rival the foreign, especially the British, schools of naval architecture.

In too many cases the education of the men who fill the highest positions in the shipyards has been obtained solely in the one yard where they have spent their lives. With the fullest appreciation of the necessity for actual shop practice, and the hard, dirty, greasy grind of the cape and chipping hammer and ratchet drill, we consider that this is but secondary to a thorough course of study under competent instructors. The young man who grows up in the best of American shipyards has little to help him but dusty models and musty traditions; his work is so severely practical that he is completely shut off from all knowledge of what is going on outside the gates of his own yard, and especially on the other side of the water, and he naturally grows up in the belief that what he and his fellows do is the height of perfection. It would be strange if after building the ordinary passenger and freight coaster of 2,000 to 3,000 tons by the hundred, and river and sound steamboats by the mile, some good results were not evident, but at the same time the number of serious failures in well-beaten lines is far too great.

The course of training of the American naval constructor has been immeasurably improved and broadened within less than a dozen years by the Government sending young men abroad for such thorough courses of study as were not to be had at home; a still greater advance has been made in yacht designing since the proper inducements were offered to such men as Burgess, Herreshoff and A. Cary Smith to devote themselves to designing as a profession. This appreciation of the value of a technical education has not yet penetrated the private shipyards, in spite of all that our correspondent says.

It is quite true that both builder and designer are hampered by the owner, and that much of the blame for the existing state of affairs is due to the failure of private owners and large corporations alike to appreciate that the designing of a large vessel is a task demanding the highest professional skill, and that such skill is worthy of a special remuneration. The average ship-owning firm would look with horror on a proposal to pay $1,000 to a designer, even though assured that it would result in a saving of that sum in coal bills every year; and the order would as a matter of course go to some firm which nominally furnished the design for nothing.

The conditions of modern shipbuilding are radically different from those existing half a century ago; they call for a wider range of knowledge and for a high degree of skill that now at least cannot be obtained in the yard alone. At the present time the American builder has not learned that he must possess such skill in the form of a competent naval architect, whatever it may cost; and the owner has not learned that it is true economy for him to pay a reasonable price for the same skill. Under these conditions it is impossible that thoroughly satisfactory progress can be made.

The question of quality and workmanship is a difficult one to discuss, depending very much on the honesty of the builder and the willingness of the owner to pay a fair price. While it sometimes happens that men to whom the price—even of a large steam yacht—is of no consideration are victimized by builders, it is often the case that a fair bid by a reputable and responsible builder is rejected by an owner and the work turned over to one who through ignorance or dishonesty puts in a very low bid and later fails to do the work. This matter hardly figures in the present discussion, as it is the same on both sides of the Atlantic. There is to-day no reason whatever why American yards cannot turn out quite as good work as foreign ones; they have equally good material and the same skilled labor.

As regards the three yachts specially mentioned by our correspondent, we are quite ready to admit, from all that we have heard, that Eleanor is excellently constructed, and the other two are probably of the same character. As to their grace and beauty, while we have failed to discover them after an earnest effort, it may be that we are wrong, and that a spike nose and dishpan stern are indeed the beginning and end of the beautiful in steam yacht designing.

Our second correspondent, Mr. Joy, brings up the same question of the responsibility of the owner versus the builder. While the owner is undoubtedly to blame in many cases, it is also the fact that the American builder professes to design as well as to build the highest class of steam yacht, superior to anything that can be had abroad. There is nothing modest or retiring about this claim, it is made every time a new keel is laid, in the lengthy and padded accounts in the daily papers.

Mr. Joy repeats the same argument used by us in the past, substantially that a capitalist about to build a twenty-story building would, as a matter of course, put himself in communication with the leading architects in the country, men who had been successful in the same line of work; if, however, the same man proposed to build a steam yacht, it would never occur to him to consult a yacht designer, but he would go direct to a builder. This was once the case in sailing yachts, but it is so no longer; the necessity, under a "free yacht" law, of competing with such foreign designers as Watson and Fife has brought to the front a number of most successful American designers.

Mr. Joy's second point opens up a very wide question—far too wide for our columns, which are of necessity immediately devoted to yachting. In touching on this same subject, however, we have already shown some weeks since that Uncle Sam's progress in shipbuilding has been by jumps. Whenever he has felt John Bull prodding him with a little competition, whether in war ships, clippers or yachts, he has managed to hustle and to get quite a perceptible move on. For about a generation he has been protected from such competition by existing laws, so far as commercial vessels are concerned, and has quietly contented himself with sitting down and telling about how he licked all creation with his clippers. Meanwhile the quadruple expansion engine, the iron, followed by the steel, hull, the great Atlantic fleet ending with Campania and Lucania, and the British flag at the masthead of all but four steamers in the port of New York.

Really, we have been under the impression that a pretty rigid system of protection, in fact carried to the extreme point of exclusion, has existed during the past forty years in which American maritime interests have declined.

Mr. Joy has hit the nail on the head when he denies the right of a government "for the people" to grant privileges to any particular class of men; if a free American citizen is fortunate enough to possess enough money to buy a steam yacht, why should the government step in and take away a third of it from him by way of penalty for purchasing a good vessel in place of a poor one?

New York Y. C. Cruise.

RENDEZVOUS AND COMMODORE'S CUPS—GLEN COVE TO HUNTINGTON BAY.

Monday, Aug. 3.

The fleet of the New York Y. C. assembled at the rendezvous off Glen Cove on the morning of Aug. 3, a large number of steam and sailing yachts being present, though some of the latter were unable to reach the harbor owing to a calm. At a meeting of captains aboard the flagship Sylvia, Com. Brown, it was decided to start the race for the Commodore's cups, one for schooners and one for cutters, as soon as the wind permitted. The course was from Matinnicock Point to Green Ledge Buoy, 11 miles; back 5 miles on the same line, and then to a finish in Huntington Harbor, 5 miles; 21 miles in all. With the light S.W. wind that sprung up after noon, this made a run to the first mark, a beat to the second and a free reach to the finish. The course was laid off by the tug Luckenback, with Supt. Nells Olsen in charge. The newspaper men were also on the Luckenback, and consequently did not see anything more than occasional fragments of the race. The starters numbered fourteen, the schooners Colonia, Emerald, Amorita, Quisetta, Marguerite, Iroquois; the cutters Wasp, Queen Mab, Minerva, Carmita, Uvira, Olga, and the sloops Mai and Raccoon. The final times were:

	Start.	Finish.	Elapsed.	Corrected.
CUTTERS.				
Queen Mab	2 57 13	6 47 49	3 50 36	3 50 36
Wasp	2 56 01	6 44 28	3 48 27	3 42 41
Carmita	2 56 26	6 56 17	3 59 51	3 54 51
Uvira	2 57 18	7 02 17	4 04 59	3 52 22
Minerva	2 57 23	7 23 55	4 26 32	4 12 25
Olga	3 00 00	Did not finish.		
SCHOONERS				
Colonia	3 01 10	6 21 12	3 20 02	3 20 02
Emerald	3 04 24	6 23 49	3 19 25	3 18 25
Marguerite	3 02 24	6 43 10	3 40 46	3 37 05
Iroquois	3 04 06	6 49 18	3 45 12	3 40 59
Amorita	3 05 00	6 37 57	3 32 50	3 25 13
Quisetta	3 05 00	6 33 32	3 28 32	Not meas.
30FT. CLASS.				
Mai	2 50 00	7 12 54	4 22 32	.. .. ..
Raccoon	2 50 00	7 24 00	4 34 00	.. .. ..

Quisetta, the new schooner, sailed very fast, considering the weather, in this her first race. She is not measured, and it is not known whether she saves her time from Emerald. After lying at anchor over night in Huntington Bay the fleet started on Tuesday morning for the first squadron run of 64 miles to New London.

The Goelet cups will be sailed for on Aug. 7, off Newport; but this year for the first time the old courses, "Block Island" and "Sow and Pigs," will be discarded in favor of a 30-mile triangle, with one side between Brenton's Reef Lightship and Point Judith Buoy.

Oconomowoc Y. C. Open Regatta.

OCONOMOWOC, WIS.

Saturday, July 25.

The Oconomowoc Y. C. sailed a regatta on July 25 to open yachts from the neighboring lakes, the Pewaukee Lake Y. C. and the Pine Lake Y. C. both sending representatives. Races were sailed in the morning and afternoon. The times were:

	Elapsed.	Corrected.
SLOOPS.		
Tarpon, Com. F. W. Peck	1 08 45	.. .. ..
Naiad, C. I. Peck	1 16 01	1 13 01

Florence	1 22 35	1 20 31¼
Gladys	1 15 23	1 14 41¾
Arion	1 24 42	1 24 00¾

Avers and Gladys each won first prize in both races and Mynone won two second prizes. Phyllis, the old New York boat, won second prize in the morning in the cat class, and Alert won second in the afternoon.

Ogdensburgh Y. C. Regatta.

OGDENSBURGH, N. Y.—ST. LAWRENCE RIVER.

Tuesday, July 28.

THE Ogdensburgh Y. C. is a new organization, formed only this season, in Ogdensburgh, on the St. Lawrence River. In spite of the great number of pleasure seekers on the river and the many sailing and steam craft, there are few yacht clubs and few yachts fit for racing at the present time. The racing skiffs that once furnished so much sport to all the river towns, with the large fleet of closely matched boats, sailed by picked crews, both American and Canadian, involving an international issue, have all disappeared as the type developed a most useless and expensive racing machine, and no other class has taken its place. Such sailing craft as the river boats of between Cape Vincent and Ogdensburgh are of all models and sizes, within a moderate limit, a heterogenous collection of catboats, sloops, skiffs, etc., from which not one good racing class can be gathered. The object in organizing the new club was partly to make use of the prevailing popularity of the 15 footers on the river to boom racing for the time being, with a view to its permanent establishment. To this end the club offered the very handsome $300 cup illustrated in the FOREST AND STREAM of July 18, to be raced for by any yachts of the 15ft. class on July 28. Besides this there was open to competition the Bell cup, a challenge trophy twice won by the late owner of the catboat Gethar. Arrangements were also made for rowing races in four-oared shells, four crews coming down from Brookville.

It was arranged to start the Bell cup race at 10 A. M., the 15ft. class at 2 P. M. and the rowing races late in the afternoon, but on Tuesday morning there was no wind on the river. The yachts were all under way by 11 o'clock, but with barely enough wind from the north to carry them up against the current of the river with spinakers set. The steam yacht Vallima, W. H. Post, of Ogdensburgh, was used as the judges' boat, and Messrs. W H. Post and S G. Averill, of the regatta committee, with Mr W. P. Stephens as referee, went out and set the markboats for a triangle of a little over 3 miles, starting just above the shops of the Spalding-St. Lawrence Boat Co. There were present to race for the Bell cup the catboats Gethar, Pee Dee Que and Cricket, and the sloops Gloria, Okieha and Pie-de-I-Dee. The 15-footers were:

Name.	Owner.	Helmsman.	Crew.
Vesper	Paul Butler	Paul Butler	Butler Ames.
Sothis	G. H. Duggan, F. P. Shearwood	G. H. Duggan	H. K. Wicksteed.
Missie	Rev. H. Kittson	J. V. Pelletier	G. A. Kittson.
Mischief	Arthur Hamilton	Arthur Hamilton	Arthur Hamilton.
Anita	H. G. Eadie	Shirley Davidson	H. G. Eadie.
Peggy	C. A. Hayden	W. I. Zerega	C. A. Hayden.
Gold Bug	Joseph Leyare	G. S. Dorwin	J. Leyare.

Three of the yachts—Sothis, Anita and Mischief—were designed by Mr. Duggan this year, the former being built by men specially employed by Mr. Duggan, the other two by H. F. Hodson, of Toronto. Sothis is very similar to Glencairn, with less freeboard and an open cockpit, with floor boards on the timbers. She was originally fitted with two deck hatches in each side deck outside the coaming and abreast of the well, the feet of the helmsman being in the after onening and those of the crew in the forward one. These were closed up permanently, as, though very good for hiking, they admitted too much water. The mainsail is a battened leg-o'-mutton, with a mast 24ft. above deck, and the jib is carried on a bowsprit which is extended to form a jibboom for the balloon jib. The mainsail hoists on a novel railway, a single strip of sheet steel about ⅝in. wide and of No. 16 gauge, this being lightened by holes ¼in. in diameter, spaced about ¼in. apart. The slides are stamped out of phosphor bronze, and are both light and strong; they are lashed to the luff rope. The mainsail was made by an English sailmaker by the name of English. The extension tiller, double travelers, centerboard and fittings generally are the same as in Glencairn. One novelty in all the Montreal boats is the fitting of the shrouds; there are no chain plates for shrouds or preventers, but wire rope is made fast below deck to the frames, then led through the deck, and a thimble is spliced in about 10in. above the deck. The end of the shroud has a similar thimble, the two carrying a light lanyard. There is nothing but the ¼in. wire rope to drag when the deck is under water.

Mischief is a similar boat in model, rig and dimensions, but not quite as much of a scow as Sothis. She carries the plain leg-o'-mutton of the Scarecrow pattern, with the same mast slides as Sothis. Anita is much the same, but has a gaff mainsail. Missie was designed by an amateur, George A. Kittson, of the Royal St. Lawrence Y. C., and built by N. Gilbert, of Brockville. She is a powerful boat, but too heavily built, with thick oak coamings, etc., and thus handicapped in light weather.

Vesper in this race had a gaff mainsail and new jib, but the rig was of poor proportions, being made to fit the old spars and position of mast, and did not do the hull justice. She has only been under sail once since the Seawanhaka races. She had also a new steel centerboard about 18in. wide and 6ft. long, in place of the lead loaded one then used. Peggy is a duplicate of Ethelwynn in hull and rig, but of lighter construction than her or Ideal. She carried about 225sq. ft. and Vesper about 240sq. ft., as opposed to upward of 280sq. ft. on the shorter Montreal boats, and the only wonder is, in the light of recent developments, that Vesper did so well beside Sothis. It must be said for the latter that she was handicapped by a new hand forward who was not used to the quick work with light sails which these many turns called for.

None of the New York boats came up, though every preparation was made to receive and care for them, the lower shop of the S. S. Co. being placed at their service, with every convenience for storing and launching. Vesper alone availed herself of it, the others lying afloat in the basin of a local boat builder in the town.

There was no possibility of a start during the morning, but the yachts were all out after luncheon with a large gathering of spectators. The shores and wharves abreast of the starting line were crowded with people, many skiffs and rowboats were afloat with some sailing yachts, and several steamers from various points on the river carried special excursions. Beside these were numerous steam yachts, some from Montreal and others from Alexandria Bay, Clayton, Brockville, etc. The day was clear and bright, and save for the lack of wind everything was most favorable. At 2 o'clock the committee, which in addition to those already mentioned included A. R. Porte, secretary of the club, decided to start both classes, and a preliminary signal was given at 2:05 for the 15ft. class, followed by the preparatory at 2:10 and the start at 2:15. By common consent none of the boats were measured by the club, all having been accepted by their own clubs as within the class limit. Vesper was first over the line with as good a start as was possible in the light wind, Mischief being second and Sothis, Anita, Gold Bug, Peggy and Missie in order. They had a free reach across to the first mark in mid channel up the river, where the order was Sothis, Vesper, Peggy, Mischief, Missie, Anita, Gold Bug. The second leg was a close reach with the current to the mark on the Canadian shore near the old Rothesay wreck. When near this mark Vesper took a slant and ran up quickly on Sothis' weather beam, promising to blanket and pass the leader, but she stopped as suddenly as she started, failed to blanket Sothis and soon dropped clear astern. The order at the second mark was the same as at the first. They had an easy reach across the river under balloon jibs, the first round ending:

	Turn.	Elapsed.
Sothis	2 54 00	0 39 00
Vesper	2 54 20	0 39 20
Peggy	2 55 10	0 40 10
Mischief	2 55 40	0 40 40
Missie	2 56 55	0 41 55
Anita	Not timed.	
Gold Bug	Not timed.	

Spinakers and balloon jibs blossomed out quickly for the run to the mid-channel mark, the wind being more nearly up river than before, the only change in the order being that Mischief passed Peggy. On the second and third legs, with a little more wind, Sothis managed to drop Vesper, the times at the end of the second round being:

	Turn.	Elapsed.
Sothis	3 23 52	0 29 52
Vesper	3 25 06	0 30 46
Mischief	3 25 32	0 29 52
Peggy	3 26 06	0 30 56
Missie	3 27 46	0 30 51
Anita	3 28 47	.. .. ..
Gold Bug	Not timed.	

The third round was similar to the preceding ones, a run with wind abaft the beam, some carrying spinakers, a close reach and a free reach to the line, the times being:

	Turn.	Elapsed.
Sothis	3 50 08	0 26 16
Vesper	3 51 10	0 26 04
Mischief	3 51 37	0 26 05
Peggy	3 53 08	0 27 02
Missie	3 55 08	0 27 22
Anita	Not timed.	
Gold Bug	Wthdrew.	

The fourth round brought the 15-footers in close with the larger yachts, which had started 20m. later, but were on their third round. The 15ft. class was timed. Start, 2:15:

	Finish.	Fourth Round. Elapsed.	Whole Course. Elapsed.
Sothis	4 17 43	0 27 35	2 02 43
Vesper	4 19 25	0 28 15	2 04 25
Mischief	4 20 04	0 28 27	2 05 04
Peggy	4 21 34	0 28 26	2 06 34
Anita	4 25 42	.. .. ..	2 10 42
Missie	4 25 51	0 29 43	2 10 51
Gold Bug	Withdrew.		

Immediately after finishing Sothis ran up beside the judges' yacht and Mr. Duggan reported that at the end of the third round his yacht had fouled the markboat As it seems, she had rounded the bow of the markboat, a 14ft. skiff, and straightened on her course, but her helmsman removed his hand from the tiller for a moment and she swung round, touching the stern of the markboat.

The race for the Bell cup was started, also from the gun, 20 minutes after the 15-footers were off, the course being three rounds of the same triangle. The first round was timed:

Cricket	3 11 20	Gloria	3 15 00
Gethar	3 11 36	Pee Dee Que	3 17 20
Pie-de-I-Dee	3 13 00	Okieha	3 18 10

Cricket and Gethar sailed a very close race, so close in fact that they were twice in collision at marks, giving rise to protests. Gethar took the lead on the last leg of the second round, but was repassed by Cricket before the finish, the times being, start 2:35:

	Finish.	Elapsed.
Cricket	4 15 43	1 40 43
Gethar	4 15 53	1 40 53
Gloria	4 18 19	1 43 19
Pie-de-I-Dee	4 20 20	1 45 20
Okieha	4 24 52	1 49 52
Pee Dee Que	Withdrew.	

The yachts were not all measured in their present rigs, but pending a remeasurement the cup probably goes to Pie-de-I-Dee. This craft with the mellifluous name is an 18ft. Scarecrow, originally christened Gooseberry by her owner, Chas. Lyon, of Ogdensburgh. In the four years that she has been afloat she has been struck by lightning and has touched on every rock in the St. Lawrence River between Clayton and Ogdensburgh.

The wind barely lasted to the finish, but before the rowing races were called a thunder squall to the northward sent a lively breeze down the river, too late to enliven the race. The first rowing race was called at 5:30, the crews being: No. 1—Watson stroke, Loosemore 2, Ritchie 3, Rose bow. No. 2—Jones stroke, J. Ritchie 2, Cana 3, McLaren bow.

The heat was won by No. 1 crew. The second heat was rowed in quite a sea at 6:45, the squall, such as it was, being at its height. The competitors were: No. 3—McNaughton stroke, Sheriff 3, Martin 2, Clark bow. No. 4—C. Wilkinson stroke, A. Wilkinson 3, Weatherhead 2, Green bow

No. 4 won. The final heat was rowed off between crews 1 and 4 at 8 P. M., No. 1 being the victor.

In the evening a reception was given to all the yachtsmen and oarsmen at the new Century Club, a recently organized social club of Ogdensburgh, in its handsome club house. Mr. Butler, by special request, mixed the punch. A meeting of the committee was held early in the evening, and on the statements of Messrs. Duggan and Wicksteed that Sothis had actually touched a markboat, there was no course but to disqualify her and award the first prize—the cup—to Vesper, and the second—a pair of marine glasses—to Mischief. When Mr. Butler was called in and notified of the decision he said that, although he did not consider that Mr. Duggan was entitled to the cup, he himself did not want to take it in such a way, adding that he would like to sail a special match for it next day with Mr. Duggan. The latter was strongly urged by the committee and others to agree to this, but he maintained that the cup was fairly Mr. Butler's property, and that he had himself forfeited his rights to it, declining to sail again. While the whole incident was a disappointment to all parties, the absence of everything but the best of good feeling on all hands was most satisfactory. Mr. Duggan returned home the same night, paddling Sothis across to Prescott, to be shipped down by steamer. Mr. Butler remained until next day and then left Vesper at the boat shop; he will use her at the A. C. A. meet, as she is already on the river, and has left her with Mr. S. G. Averill to sail her in a regatta at Brockville on Aug. 8 It would be hard to do justice to the hospitality of the members of the home club and in fact of the whole city as displayed toward the visitors.

Indian Harbor Y. C.

GREENWICH—LONG ISLAND SOUND

Saturday, Aug. 1.

THE Indian Harbor Y. C., of Greenwich, Conn., sailed its annual regatta on Aug. 1 under very favorable conditions of fair weather and a good sailing breeze. A calm in the morning delayed the yachts coming from other points, but a light S. W. wind came along, strengthening into a fresh breeze by the time the race was well under way. The race was sailed over triangular courses on the Sound, and under the rules of the Y. R. U. A new 15-footer made her first appearance in the class, Waxy, designed and built by Hanley for Wilmer Hanan. The start was made at 1:35 for the larger yachts, the others following at the usual intervals. Both Riverside and Mai were over the line too soon, the former returning and recrossing, but Mai continued and was disqualified Sirene, sailed by Richard Outwater and a crew of three ladies, was fouled by Raccoon at the start, but still won in her class. The start was off Little Captains Island, thence to Matinnicock, Center Island and home, for all above 20ft. and under 36ft., the larger yachts continuing back to Matinnicock from Center Island and home as they came. The 15 and 20ft. classes sailed a 9-mile triangle. The official times are:

SLOOPS AND CUTTERS—60FT. CLASS.

Start, 1:35; distance, 19½ miles.

Daphne, Com. C. T. Wills	55.20	3 25 46	2 52 51

51FT. CLASS.

Start, 1:35; distance, 19½ miles.

Penguin, Geo. E. Brightson	48.94	3 25 21	2 46 34
Choctaw, J. M. Strong	46.28	3 25 47	2 45 45

43FT. CLASS.

Start, 1:35; distance, 19½ miles.

Norota, F. M. Hoyt	41.64	3 16 19	2 29 07
Iosco, Mr. Poucher	....	3 41 48	2 51 06

36FT AND SPECIAL 34FT. CLASS.

Start, 1:40; distance, 19½ miles.

Cymbria, Thos A. McIntyre	35.57	3 42 23	2 46 14
Acushla, Wilmer Hanan	34.00	3 25 41	2 26 31
Minta, Bolet Brothers	34.00	3 49 54	2 51 04
Fidelio (yawl), Robt. E. Tod	33.75	3 51 14	2 48 09

30FT. CLASS—COURSE NO 4.

Start, 1:40; distance, 15 miles.

Feydeh, E. D. Cowman	29.05	3 14 00	2 22 56
Ninita, F. A. Dingee	28.00	3 00 02	2 05 20

CABIN CATBOATS—30FT. CLASS.

Start, 1:40; distance, 15 miles.

Dosoris II., G. P. Vail *et al*	28.80	2 52 22	1 59 06
Estelle, H. M. Crosby	....	3 02 08	2 05 14
Onaway, S. C. Pirie	26.48	Did not finish.	
Oconee, C. T. Pierce	26.32	3 02 36	2 04 42

CABIN CATBOATS—25FT. CLASS

Start, 1:45; distance, 19½ miles.

Weasel, T. E Ferris	24.85	3 08 57	2 07 52
Penelope, T. V. Ketcham	24.06	Did not finish.	
Presto, F. M. Randall	23.30	3 01 53	1 57 22
Melita, O. H. Chellborg	22.25	3 33 28	2 26 21
Hornet, H. Tinque	22.00	3 30 45	2 22 59
Mary S., E. B. Hall	24.02	3 32 25	2 30 00

OPEN SLOOPS—30FT. CLASS, SHIFTABLE BALLAST—COURSE NO. 4.

Start, 1:40; distance, 15 miles.

E. Z. Sloat, Bottomly & Parks	27.18	2 55 21	1 59 06

OPEN SLOOPS—25FT. CLASS, FIXED BALLAST AND 21FT. L.W.L.

Start, 1:45; distance, 15 miles.

Titan, Russell Raymond	25.00	Did not finish.	
Celia, W. S. Gould	....	2 56 03	Not meas.
Houri, E B. Hart, Jr.	....	3 56 49	Not meas.
Vaquero, W. G. Brokaw	....	2 54 52	Not meas.
Maysie, Wm. Osborn, Jr.	....	3 26 48	Not meas.
Shrimp, C. M. Pratt	21.34	2 59 41	1 50 38

OPEN SLOOPS—20FT. CLASS, FIXED BALLAST—SPECIAL COURSE B.

Start, 1:45; distance, 9 miles.

Eos, P. T. Dodge	19.05	2 20 57	1 35 07
Teddy, P. C. Pfeiffer	....	2 58 29	2 12 46

OPEN CATBOATS—25FT. CLASS, FIXED BALLAST.

Start, 1:45; distance, 15 miles.

Sirene, R. Outwater, F. S. Doremus	25.00	3 10 46	2 10 07
Brant, J. C. Varian	21.00	3 37 45	2 27 17

OPEN CATBOATS, 25FT. CLASS—SHIFTABLE BALLAST.

Start, 1:45; distance, 15 miles.

Osprey, C. H. Holmes	25.00	Did not finish.	
Annie, W. I. Sawyer & A. V. Seymour	21.00	Did not finish.	
Bubble, A. M. Bradley	20.89	3 12 10	2 01 22

OPEN CATBOATS, 20FT. CLASS—FIXED BALLAST.

Start, 1:45; distance, 9 miles.

Dorothy, John E. Sanborn	19.47	2 49 55	2 04 54
Chippie, H. R. Hatfield	17.99	2 52 41	2 04 42
Doctor, Joseph Brush	15.09	2 51 26	1 58 36

SPECIAL 30FT. CLASS.

Start, 1:50; distance, 15 miles.

Musme, J. M. Macdonough	30.00	2 36 53	2 36 53
Departure, C. B. Seeley	30.00	2 36 15	2 36 15
Mai, O. G. Jennings	30.00	Disqualified.	
Raccoon, T. R. Hostetter	30.00	2 45 49	2 45 49

15FT. CLASS.

Start, 1:55; distance, 9 miles.

Willada, W. G Newman	15.00	Did not finish.	
Paprika, C. S. Hoyt	15.00	2 11 30	2 11 30
Glance, F. L. Downing	15.00	Did not finish.	
Riverside	15.00	2 07 00	2 07 00
Yola, C Mallory	15.00	2 12 00	2 12 00
Waxy, W. Hanan	15.00	2 11 00	2 11 00

The winners are: Daphne, Choctaw, Norota, Acushla, Ninita, Dosoris, Oconee (2d), Presto, Weasel (2d), Sloat, Eos, Sirene, Bubble, Doctor, Departure, Musme (2d), Riverside, Waxy (2d).

In the 25ft. class Shrimp and Vaquero I. were the leaders, the latter not being measured. Penguin and Cymbria each lost her topmast, Osprey sprung her mast and withdrew just after the start. Minta's balloon jibtopsail blew away and anchored her for a time. The regatta was very well managed by Messrs. Geo. E. Garland, D. W. Merritt, Judge Wm. E. Simms and Chas. E. McManus.

Measurement by Sail Area Only.

Editor Forest and Stream:

Ever since men began to race yachts they have been trying to devise rules by which the speed of yachts of different size might be fairly compared in terms of their respective sizes; in other words, rules by which yachts of different sizes might be reduced to a standard size for purposes of comparison.

This effort has been a vain one because the size of a yacht depends upon so many variable factors that it cannot be stated in simple terms which may be readily applied to another yacht. Practically, the "size" of a yacht cannot be measured. She has sundry dimensions, as length, beam and draft, that can be stated in linear units, but "size" cannot be similarly stated.

One result of imperfect and illogical measurement rules is that the designing of racing yachts, especially in the small classes, has become the art of discovering some way to get speed by evading these rules—the art of discovering speed factors which are not included in the measurement formulæ, and of selecting and emphasizing those speed factors of the formulæ which contribute least to the final "rating" or "racing length."

As might be expected, keen competition has developed the ingenuity of designers in this direction to a marvelous degree, and the victory of Glencairn seems to be a notable instance of clever "rule cheating." Whether she has a more scientific form for driving through the water than Ideal or Riverside has not been demonstrated. That Glencairn is the fastest boat under the Seawanhaka rule is the only certain conclusion to be drawn from the races.

Another result of imperfect and illogical measurement rules has been the necessity of giving them a new and distinct function, viz., that of strangling their own progeny—the necessity of adding to their original function of measuring the speed of yachts the power of influencing the type of yachts that can be profitably raced under such rules.

The chief objections to all rules of the present type are that they are based so little upon fundamental principles that they are practically temporary expedients only, and that, being effective in controlling the types of yachts built under them, they entirely interrupt the natural or scientific evolution of the yacht.

It may be assumed that no perfect measurement rules can at present be divised, and that it is wise to restrict in some way the building of yachts of undesirable type that are inevitably fostered by imperfect rules. But the necessary restrictions should be made in such manner as will least interfere with the natural development of the yacht, and the two functions of measurement rules should be distinctly kept in mind.

There is one large, constant and fundamental factor in the speed of yachts that can always be measured in simple units, viz., sail area. Let this be taken to be the "size" of yachts for the purpose of comparing their speed. This will stop all evasion of the rule, and will furnish a basis for a measurement rule that will be permanent, and therefore will promote instead of interfering with the scientific evolution of the yacht.

If this rule for measuring speed would develop the building of an undesirable canoe type, let an empirical restriction of any objectionable and easily measured dimension of a canoe, such as beam or draft, be incorporated into the rule. It should not be introduced into the measurement formula. The two functions should be kept separate.

There could be no evasion of such a rule. The evolution of other undesirable features could be discouraged from time to time by similar restrictions.

This would not interfere with the continuous development of the highest speed consistent with a desirable type. This development would be hastened by cumulative experience, instead of being retarded, as it is now, by periodically throwing overboard our accumulation of experience, and starting anew to discover ways to cheat a new rule. During the evolution of the best measurement rule the relative speed of contesting yachts would be measured by a standard readily and fairly applicable to all, viz.: sail spread or driving power.

Why is not this a fairer test of the skill of the designer in fashioning a form to be driven through the water than the rules now in use? A great advantage of a sail area rule would be that by reason of its simplicity it would be understood by every yachtsman. Amendments needed from time to time would relate only to objectionable features in yachts, about which the body of yachtsmen would be good judges, and not to intricate formulæ which almost no yachtsmen understand.

The restrictions as to objectionable features would relate to the principal dimensions of boats, such as length, beam, draft and displacement; and, being absolute, the tendency would necessarily be toward uniformity in type. Enough leeway would be left for natural selection through moderate variation; and this would eventually narrow the field of selection. As the evolution toward the highest speed proceeded, the variations of form would necessarily decrease. The sail area would at each step become a better measure of speed; and finally, when the differences of form become zero, the speed of yachts would vary directly as some function of their sail spread, and the sail area measurement rule would be the ideal rule.

The foregoing criticism of existing measurement rules is offered with considerable confidence; but, in view of the amount and quality of the thought that has been devoted to such rules, it behooves one who thinks they may be improved to be modest in estimating the worth of his amendments. He may learn something if the experts deign to notice his offerings.

The suggestion that sail area be made the sole element of a size formula, and that the matter of restricting the growth of undesirable types be left to specific provisions disconnected with the measuring formula, is offered in the hope that it may provoke discussion of this interesting and, it is believed, timely subject. SEXTANT.

Newport Races.

THE 30-footers sailed a race off Newport on July 27 in a strong S.W. wind, the course being an 18-mile triangle. Before the start Vaquero III. was in collision with a rowboat and had a hole stove in her bow, but it was patched with canvas and she started in the race. The first round was timed:

Asahi	3 33 33	Esperanza	3 34 40
Vaquero	3 33 31	Wa Wa	3 35 17
Hera	3 34 10		

The final times were:

	Finish.	Elapsed.
Vaquero	4 22 40	1 46 40
Asahi	4 24 05	1 48 05
Esperanza	4 24 52	1 48 52
Hera	4 25 15	1 49 15
Wa Wa	4 26 55	1 50 55

Another race was sailed on July 29 over the Wickford course, 18 miles, to leeward and return. The times were:

	Start.	Finish.	Elapsed.
Asahi, Bayard Thayer	2 38 00	5 35 33	2 57 33
Puck, E. D Morgan	2 38 00	5 40 24	3 02 24
Wa Wa, James Stillman	2 38 00	5 40 50	3 02 50
Dorothy, H. P. Whitney	2 38 00	5 41 50	3 03 50
Carolina, Mr. Jones	2 38 00	5 43 08	3 05 08
Hera, R. N. Ellis	Did not finish.		

A Tragic Trial Trip.

THE first actual sea trial of the new steam yacht Josephine was terminated in a most tragic manner on Aug. 1, by the death of Mrs. Anna Josephine Widener, wife of the owner, shortly after the yacht arrived at Bar Harbor from New York. Mrs. Widener, after whom the yacht was named, was about sixty years old, and had suffered from the grippe last winter. Though apparently in her usual health when she retired, she was found dead in her stateroom next morning, the cause being heart disease. The yacht returned at once to New York with the body.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Corinthian Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 25.

The Corinthian Y. C., of Marblehead, after being obliged to postpone its 98th regatta on July 4, sailed it on July 25 in a moderate S.E. wind, the times being:

	Length.	Elapsed.	Corrected.

Sphinx, A Keith	17.11	1 22 16	0 53 04
Swan, Louis Cate	17.06	1 32 40	1 02 57
Box, J. C. Gray	17.01	1 32 27	1 02 13
Nachita, G. E. Hills	16.09	Withdrew.	
FIFTH CLASS.			
Princess, Gay & Ware	14.06	1 03 28	0 41 41
Elsa, H. M. Crane	14.08	1 05 04	0 43 27
Katydid, C. B. Pear	14.00	1 06 07	0 43 49
Penguin, J. E. Robinson	14.06	1 07 58	0 46 11
Icurez, Jas. Perry	14.05	1 11 30	0 49 38
Velma, Dr. Theo. Hallett	14.09	Withdrew.	

Sphinx and Fantasy protest each other for fouling; Ida J. protests Emma C. for fouling; Jacktar protests Spinster for leaving Spectacle Island on starboard coming home.

The judges were: Com. A. W. Foster, chairman; A. M. Davis, H. T. Washburn, A. A. Swallow, W. H. Besarick, J. E. Robinson, secretary; R. K. Rice, G. A. Swallow, L. E. Noble, W. F. Scott and F. Vegelahn.

Columbia Y. C.

CHICAGO—LAKE MICHIGAN.

Saturday, July 25.

With Vincedor on the dry dock to repair a leak and Vanenna detained by bad weather at Racine, the largest class in the Columbia Y. C. regatta of July 25 was comparatively uninteresting. The race was sailed in a moderate S.W. wind, the times being:

	Start.	Finish.	Corrected.
CLASS 2.			
Siren	2 01 05	4 15 36	2 14 31
Charlotte B	2 02 20	4 34 55	2 30 58
Sadie	2 40 16	4 40 39	2 31 48
CLASS 3.			
Hattie B	2 03 21	4 46 40	2 40 45
Valiant	2 01 53	4 50 00	2 48 07

Dolphin, N. Norton	16 06	1 45 35	1 14 36

Green Lake Regatta.

On July 25 a race was sailed at Green Lake, Wis., for the challenge cup presented last year by Com. Eldridge and held by Kite. The times were:

	Elapsed.	Corrected.
Hypatia, Garnett	2 18 12	2 18 12
Frolic, Morgan	Not timed.	
St. Louis, N. D. Thompson	2 19 42	2 18 50
Hornet, G. C. Eldridge	Not timed.	
Bertha, G. L Thatcher	2 29 40	2 26 25
Pleasant Point, J. W. Ross	2 19 43	2 15 18
Tzin, W. E. Haseltine	2 22 13	2 16 42

Judges: L. M. Chipley, Edward S. Hunter and Alexander H. Revell. Timekeepers: Henry M. Curtis and C. L. Hunter.

Squantum Y. C.

The Squantum Y. C. sailed off the series in the third class on Aug. 1 in a fresh S.W. wind. The times were:

	Length.	Elapsed.	Corrected.
Loria, E. A. Merrill	18.02	1 38 05	1 09 10
Burgess, F. Burgess	19.06	1 40 02	1 12 37
Magnolia, E. Hardy	20.08	1 45 32	1 19 19

Rockport Regatta.

Rockport, Tex., July 20.—*Editor Forest and Stream:* The annual regatta took place here on July 15, 16 and 17 with the following entries: Novice and Alice, of this place; Kittie, of Galveston; Hoo Hoo, of Sabine Pass. The waterline plus one-third of the overhang was the rule of measurement, the following being the racing lengths: Novice, 30ft. 9in.; Hoo Hoo, 24ft. 6in.; Kittie, 24ft 5in.; Alice, 26ft. 6in.; the time allowance was 5 seconds per foot; the course once around a triangle, then to the windward stakeboat and straight back, 23 miles.

The first day's start was made in a stiff breeze from the southeast, the yachts crossing the line in the following order: Hoo Hoo, Alice, Novice, Kittie. Novice soon took the lead and maintained it until the finish. On the first leg of the course Alice broke the jaws of her gaff and was unable to make repairs in time to allow her to finish. The finish was made: Novice, 7:02:12; Kittie, 7:22:38; Hoo Hoo, 7:24:16. The second day's racing was nearly a repetition of the first; the breeze was strong from the same quarter, Novice started with a single reef, Hoo Hoo put one in after the start, Alice broke her gaff and withdrew. Novice beat Kittie corrected time 8m. 23s, Kittie beat Hoo Hoo 1m. 46s.

The third day's race was only once around triangle, 14 miles; all yachts started with double reefs in mainsails, Novice beat Kittie 3m. 54s. Kittie beat Hoo Hoo 1m. 46s. This is the fourth year Novice has beaten well-known flyers built by Eastern yachtsmen. Novice was built here in 1891 by two boys and has been remarkably successful.

J. W. Hoopes.

Winthrop Y. C.

BOSTON HARBOR—GREAT HEAD.

Saturday, Aug. 1.

The Winthrop Y. C. sailed a special club race on Aug. 1, the times being:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS.				
Almira	3 05 00	4 51 10	1 46 10	. .. ..
Ramona	3 05 00	Withdrew.		
SECOND CLASS.				
Satanic	3 10 00	4 38 40	1 28 40	1 02 30
Clara	3 10 00	4 39 42	1 29 42	1 05 10
Erycina	3 10 00	4 40 27	1 30 29	1 05 59
Alma	3 10 00	4 42 38	1 32 38	1 08 14
FOURTH CLASS.				
Unknown	3 15 00	4 24 37	1 09 37	0 45 52
Della	3 15 00	4 22 31	1 07 31	0 45 55
RATER CLASS				
W. H. Gardner	3 20 00	4 05 60	0 45 00	. .. ..
H. N. Ridgeway	3 20 00	4 07 03	0 47 03	. .. ..
S. J. Wilde	3 20 00	4 12 57	0 52 59	. .. ..
L. S. Weston	3 20 00	4 15 10	0 55 10	. .. ..
C. E. Lighton	3 20 00	Withdrew.		

In the second class Myrtle parted her peak halyards, Harriet broke the jaws of her gaff and Eureka lost her bowsprit.

Cohasset Y. C.

COHASSET, MASS.

Saturday, Aug. 1.

The club race of the Cohasset Y. C., on Saturday, was sailed in a strong and puffy S.W. wind, the times being:

	Start.	Finish.
FIRST CLASS.		
In It, R. B. Williams	3 40 00	4 41 45
HALF-RATERS.		
Swallow, John Richardson	3 45 00	5 09 15
No Name, Mr. Bigelow	3 45 00	5 15 45
Scott, John Dean	3 45 00	5 16 04
Honie, C. H. Cousens	3 45 00	5 17 00
Jap, Bouve & Pegras	3 45 00	5 17 30
Hoodoo, Gammons & Wheelwright	3 45 00	5 19 00
Mermaid, W. R. Sears	3 45 00	5 19 04
Blink, F. H. Pratt	3 45 00	5 20 00
Mungo, E S. Willcutt	3 45 00	5 25 15
Sea Gull, Fred Higgins	3 45 00	5 26 00

Mungo and Zig Zag capsized, the latter withdrawing.

Cape Cod Y. C.

ORLEANS—CAPE COD BAY.

Saturday, Aug. 1.

The Cape Cod Y. C. sailed a race on Aug. 1 in a fresh S.W. wind, the times being:

	Length.	Elapsed.	Corrected.
SECOND CLASS.			
Puritan, H. K. Cumming	20.00	1 24 07	0 59 32
Dolphin, O. H. Davenport	15.05	1 32 37	1 02 55
Little Brave, J. Ryder	19.03	1 33 12	1 06 52
Sea Fox, Joshua Smith	18.03	1 41 02	1 14 42
SHARPIE CLASS.			
Elsie, E. W. Rogers	14.06	1 38 55	1 07 56

Dolphin was beaten by Puritan after holding the cup for three seasons.

Revere Y. C.

The Revere Y. C., of Revere, Mass., recently reorganized, sailed its first regatta on Aug. 1, the times being:

	Elapsed.	Corrected.
Promise, M. F. Kerns	1 17 49	1 00 25
Torment, E. H. Hill	1 20 04	1 04 14
Juanita, Marshall	1 25 51	1 08 10
Nemo, S. Lucas	1 27 58	1 08 49
Lark, D. Colvin	1 24 00	1 09 55
Eddie F	Withdrew.	

YACHTING NEWS NOTES.

A dispute has arisen between C. A. Postley, owner of Colonia, and Lewis Nixon, of the Crescent Shipyard, over the charges for the recent extensive alterations to the yacht in converting her from a keel cutter to a centerboard schooner. Mr. Nixon has libelled the yacht for $19,000.

Intrepid, steam yacht, Lloyd Phœnix, was at Genoa on July 20.

Pyxie, sloop, has been sold by H. A. Anthony to W. E. Eldridge, of Newark, N. J.

Yampa, schr., has been chartered by Tams & Lemoine to Edward Browning, of Philadelphia, Mr. Palmer being about to visit Europe.

On July 30 a private match was sailed off Larchmont between the 30-footers Musme and Raccoon for $100 per side, the former winning by 1m. 16s.

The annual regatta of the Hempstead Harbor Y. C. will be sailed on Aug. 8 off the club station, Glen Cove, L. I., starting at 1 P. M. Entries may be made to Ward Dickson, Glen Cove, L. I., by Aug. 6. The regatta will be under Y. R. U. rules.

The New Rochelle Y. C. will sail a special regatta on Aug. 8, with races for the 30ft. special class, regular 43ft. class, and open cats in two classes, fixed and shifting ballast. The start will be made at noon.

Spruce IIIII., the 18-footer recently designed and built by Sibbick for J. A. Brand, is 16.11ft. l.w.l., 5.06ft. beam, with 268sq. ft. of sail. By the Seawanhaka rule, as Spruce IIII. was measured, this would make her about 16.25ft. racing length, or 1.25ft. over the class limit.

Rifle Range and Gallery.

Presque Isle Rifle Club.

Presque Isle, Aug. 1.—At the regular practice shoot the following scores were made, 200yds., off-hand, standard American target, 7-ring, black:

Cincinnati Rifle Association.

Cincinnati, O., July 26.—The following scores were made to-day by members of the Cincinnati Rifle Association at standard target, 200yds., off-hand, 7-ring black. Capt Gindele made a clean score to-

day. We have noted the target designed by Mr. Rabbeth, of Boston, Mass., and are of the opinion that it would meet the requirements of most all our shooters. At present, however, we are inclined to favor the German ring, as that is used principally by our Western German societies:

Gindele.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 11.—ALBANY, N. Y.—Midsummer tournament of the West End Gun Club; targets

Aug. 11.—ALBANY, N. Y.—Tournament of the West End Gun Club. Bluerock traps and targets. Horace B. Derby, Sec'y.

Aug. 11-14.—DETROIT, Mich.—Jack Parker's sixth annual international tournament. Fuller details later.

Aug 12-13.—DULUTH, Minn.—Central Gun Club, fourth annual tournament; excellent programme.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Aug. 26-27.—KALAMAZOO, Mich.—Tournament of the Celery City Gun Club, in connection with Michigan Trap-Shooters' League.

Aug. 25-27.—BINGHAMTON, N. Y.—Binghampton Gun Club's tournament for amateurs; two days targets, one day live birds. Money divided under the Rose system. H. W. Brown, Manager.

Aug. 31-Sept. 2.—ATLANTIC CITY, N. J.—Tournament of the Atlantic City Gun Club, on Young & McShae's pier. For programmes address Harry Thurman, Germantown, Philadelphia, Pa.

Aug. 31-Sept. 2.—ST. PAUL, Minn.—Annual tournament of the St. Paul Gun Club, at State Fair Grounds. B. F. Schurmeier, Sec'y.

Sept. 2-4.—BUFFALO, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y

Sept. 8-9.—MARION, N. J.—Tournament of the Interstate Association, under the auspices of the Endeavor Gun Club of Jersey City, N. J. Added money announced later.

Sept. 8-10.—GALT, Ont.—First annual tournament of the Ontario Rod and Gun Club; $800 to $1,000 added money.

Sept. 10.—WEST LEBANON, N. H.—All-day shoot of the West Lebanon Gun Club.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Sept. 29.-Oct. 2.—HARRISBURG, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct. 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

1897.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The first annual tournament of the Ontario Rod and Gun Club League will take place at Galt on Sept. 8, 9 and 10, with at least $300 guaranteed money, which is expected to be raised to $1,000. The Ontario Rod and Gun Club League was formed in February last, and is composed of six clubs, viz.: Guelph, Hespeler, Waterloo, Mallards, of Hamilton; Brants, of Brantford; and Galt. The objects of the league are: the encouragement of trap and live-bird shooting, the propagation of fish and game, and the thorough enforcement of fish and game laws. A series of home matches between all the clubs for the championship of the league and a magnificent trophy has been in progress since April 3, and will be finished Aug. 31. For information address R. McCruden, Sec'y, Galt, Ont., Can.

The Interstate Association closes this year with a tournament at Marion, N. J., the shoot being held under the auspices of the Endeavor Gun Club, of Jersey City. The Interstate's schedule for 1896 has thus far been a most successful one. Manager Shaner in a personal letter writes us that he considers the recent tournament at Portland, Me., "was the best shoot ever given by the Association." An item of interest is furnished in the following figures: Using one set of traps, 12,000 targets were trapped during the two days of the tournament. Mr. Shaner also says: "Everyone was pleased with the Rose system." The Endeavor Gun Club has decided to adopt this system of dividing purses at its tournament next month.

The Lake Side Rod and Gun Club, of Burlington, Vt., will use the Rose system of dividing the purses at its shoot on Aug. 26-27. The tournament will be given under the auspices of the Interstate Association, and will take place at one of the pleasantest seasons of the year for a visit to the shores of Lake Champlain. A lovely trip for shooters who propose attending this tournament would be to take the boat at Caldwell, N. Y., the head of Lake George, go down the lake to Baldwin, transferring to the boats of the Lake Champlain Transportation Co., the whole making a delightful trip through magnificent scenery.

The annual tournament of the Atlantic City Gun Club will be held on Young & McShae's pier at Atlantic City, N. J., on Aug. 31 and Sept. 1. There is absolutely nothing but a pure sky background at these tournaments on the above pier; the targets are thrown from traps located at the end of the pier and fall into the sea. Naturally the club has no pickups! Anybody who would like to see a programme should write to Harry Thurman, Germantown, Philadelphia, Pa.

The West End Gun Club, of Albany, N. Y., has issued an announcement of its midsummer tournament, to be held at Albany, Aug. 11. Ten events, five at 15 and five at 20 targets, are on the programme. American Shooting Association rules will govern, and purses will be divided into 50, 30 and 20 per cent. if ten or less enter, and 40, 30, 20 and 10 per cent. if more than ten enter. Horace B. Derby, Sec'y, will furnish further information.

The September tournament of the Interstate Association will be given at Marion, N. J., Sept. 8 and 9, under the auspices of the Endeavor Gun Club. For particulars address Elmer E. Shaner, Manager, Pittsburg, Pa.

Those who attended the shoot at Auburn, N. Y., on Tuesday and Wednesday of this week had an opportunity of trying what they could do to bluerocks thrown from the magautrap.

Monroe, Louisiana.

LITTLE ROCK, Ark., July 31.—The Monroe (La.) Gun Club will hold its second annual tournament Aug. 19, 20 and 21. The first two days will be devoted to target shooting, and in these events there will be $300 added. The last day will be devoted to live birds exclusively. Purse will be divided into five moneys. PAUL R. LITZKE.

The Tucker Cup.

ST. PAUL, Minn., Aug. 1.—The tournament of the Minnesota Game and Fish Protective Association was held under the management of the St. Paul Rod and Gun Club, at Kittsondale, yesterday.

Secretary Wm. L. Tucker, who was the moving spirit in the formation of the Association and to whose assiduous and disinterested activity as secretary the development of the Association is so largely due, had been voted an honorarium of $100 for his work. This, however, he refused to take, consenting only to accept $40 and odd, which he devoted to the purchase of a handsome trophy for the Association meets. It was presented and accepted at the Thursday convention.

It is a massive silver cup, standing 12in. high, and is lined with gold. Two shotguns are crossed at the bottom as a support for the bowl. The trophy cost $41, and was made in Connecticut for the Association. On one side of the bowl is engraved the following:

> Trophy First Annual Tournament
>
> Minnesota Game and Fish Protective Association,

> Association Rules to Govern.

There are the figures of a huntsman and dog on the opposite side, and wreaths on the other sides of the cup. On motion it was denominated the "Tucker Cup," in honor of the donor. The trophy is intended for members of the Association, and will be shot for in open tournament, the member winning it three times to be the permanent owner. The only restriction in shooting for the trophy is that a competitor must be a member of the State Association. Association rules will govern all tournaments in which the cup is put up as a trophy.

The feature of the tournament was the contest for the Tucker trophy, which furnished the best scores of the day and aroused great interest among the fair-sized crowd of spectators, among whom were a number of ladies. There were 25 entries in the competition for the cup, which consisted of the highest score resulting from 25 birds at unknown angles. It was raining hard when the first squad took the platforms, and rapidly getting dark.

Dr. L. W. Lyon led off and finished with the high score of 23 birds killed. After this all those missing 3 birds dropped out, thus quickly narrowing the contest down to 4 marksmen. In the last squad H. P. Lawrence did some excellent shooting, and tied Dr. Lyon by scoring 23 birds killed. Of those who shot between the two high men, L. V. Rodecker made a score of 21 and Pfister 22. Dr. Lyon and Mr. Lawrence being tie, it was agreed to shoot off with 10 birds, and the first failure after that to count out the man missing. Lawrence missed the 1st bird and was followed by Dr. Lyon, who scored. It was a pretty contest for 9 more birds, Lawrence "killing" with every report of his gun and Dr. Lyon following suit. Lawrence finished first with 9 out of 10 killed, and Dr. Lyon took the stand for his last shot. The trap was sprung and the bird sailed off almost in a straight line. Dr. Lyon took a quick aim and pulled the trigger. It was now quite dark, but the spectators saw the pigeon fly into pieces, and announced Dr. Lyon the winner of the cup. The contest had been close and spirited, and spectators showed their appreciation of the close score by the most generous applause.

In the first trial Dr. Lyon killed 12 straight birds, missed the thirteenth and fifteenth, concluding his average with 8 straight. Lawrence killed 6 straight, missed the seventh and fifteenth, also concluding with 8 straight.

The victory of Dr. Lyon gives him the possession of the cup for one year, and should he be successful in winning it twice more consecutively it will become his permanent property.

A majority of the guns shoot under assumed names and do not desire their names made public, so it happens that the best shot of the tournament yesterday was J. C., who only missed 16 out of a possible 150 birds. H. C. Lawrence, who shoots under the cognomen of Cat, was second with 17 birds down out of a possible 150. Marshall was third, with 28 birds lost, and Parker brought up the rear of the list with 89 birds lost out of a possible 150.

There were ten regular events on the programme, and they were all shot. Outside of the money prizes, of which there were four for each event, divided according to the equitable system, so-called, under which the money is divided according to the percentage secured by the shooters, there were twenty-five average prizes and ten merchandise prizes, one for each event. The merchandise prizes, with the exception of the eighth event, were divided among the winners of fifth place in each event.

Interstate at Burlington.

THE programme of the Interstate Association's tournament at Burlington, Vt., which is set for Aug. 26 and 27, opens with this enticing picture of the Burlington view, which is worth the going far to behold:

The hill on which Burlington is built slopes gradually from the lake till its summit is reached at College Hill, nearly a mile from its waters' edge, and 300ft. above it. The city is laid out regularly, with streets intersecting each other at right angles. The view looking west from almost any part of the city, where it is not hidden by foliage, is a magnificent panorama of water and mountain. The historic lake lies at one's feet, while the mountains beyond mingle their heads with the western clouds and dip their feet in the blue waters of Champlain. The outlook from Burlington across the broad lake is said by travelers to be the finest lake view in America.

The continual variety in the panorama gives never-ending pleasure; the eye never tires of looking; the senses never weary of the scene. The coloring, the arrangement of the picture are ever changing, never the same. Yesterday the sky was hung with heavy clouds, the water a cold gray; to-day the sky will be dark and lowering and the water the deepest blue.

From the dome of the main college building a view of the rarest magnificence can be obtained; while the western outlook from the college dome is so much admired, the eastern view is scarcely less beautiful—to many equally so. It lacks the water and variety.

But stand upon the summit, now look first eastward over the gradually increasing hills terminating in the Green Mountains, and then westward over the entirely unlike scene bounded by the Adirondacks, you will not find unpardonable extravagance in the remark made by the enthusiastic lover of natural beauty alluded to by the writer just quoted.

There is no view in all the world finer than the eastern one, except the western. It is here that "every prospect" pleases.

The genuine hospitality for which the citizens of Burlington are proverbial, bespeaks for those visiting the trap-shooting tournament a delightful occasion.

The tournament will be held at the grounds of the Lake Side Rod and Gun Club, situated on Lake Side avenue, about three-quarters of a mile from central part of the city. Shooting will commence at 9 A. M. each day. The grounds will be open for practice shooting on the afternoon of Aug. 25, the day preceding the tournament. Price of targets in all events will be three cents, included in all entrances. Shooters may enter for price of targets only, in all events. Information relative to tournament cheerfully furnished by J. S. Denning, Secretary, 75 Spruce street, Burlington, Vt.

Bluerocks will be used, and purses will be divided under the Rose system. The club will add $40 first day and $60 second day.

The Du Pont Tournament.

CHICAGO, Aug. 3.—[*Special to Forest and Stream:*] Chicago and Du Pont and E. S. Rice have broken the world's record. All unite in saying that this is the greatest shoot of this or any other country. Twenty-five States are represented by nearly 200 shooters. The entry for the first event was 134, and forty-seven men tied straight on 5. Entry for second event 125, and twenty-eight men straight on 7. The grounds and offices are perfect. The twelve tents are like an army encampment. The shoot will cost from $7,500 to $10,000. This is typical Chicago hustle. Everyone, including management, astonished at the unprecedented success. Weather warmish, but birds lively.

E. HOUGH.

Endeavor's Three Days' Tournament.

JERSEY CITY, N. J., Aug. 1.—In connection with the yearly one day tournament given by the Endeavor Gun Club on Labor Day, this year on Sept. 7, the club has arranged with the Interstate Association to hold a two days' tournament under the auspices of the club on Sept. 8 and 9, making a three days' tournament. The first day shooters can shoot for birds only or in sweeps that will be arranged to suit the shooters on the grounds. The second and third days will be run according to programme. There will be added money the second and third days, $75 each day, $150 for the two days. The club adds this amount. H. R. STRADER, Sec'y.

Western Traps.

SHOOTING GLASSES.

CHICAGO, Ill., Aug. 1.—Dr. C. D. Westcott, of this city, a member of the Calumet Heights Gun Club and a pronounced lover of the traps, writes thus in regard to what he has discovered in his practice in the matter of "specs." for shooters:

I am an oculist by profession and a lover of the gun, and for the last ten years it has been necessary for me to wear glasses constantly for the correction of a defect (astigmatism) in one of my eyes. Recently so many inquiries have been made by my shooting friends in regard to the glasses which I wear in the field and at the trap that it occurred to me that perhaps a few words upon the subject in general might be of interest to your readers.

While my own glasses are an absolute necessity to my comfort, I congratulate all those who have perfect eyes and strong eyes, and who do not feel at any time the need of better vision or of protection from strong light. As a matter of fact, however, there are probably very few people who have perfect eyes, and I am constantly meeting, in my examinations, with people whose eyes are very defective and even unlike, and who have been unconscious of any defect in vision until demonstrated to them in my office. Of course, it goes without saying that all sportsmen who are obliged to wear glasses constantly are unable to dispense with them in the field or at the trap, and I have found from my own experience that the glasses which are best suited to our needs in every-day life are not adapted to shooting. I have therefore had made for myself and for a number of friends some spectacles with very large, round lenses, set high upon the face, and so tilted that when the head is inclined for aligning the gun the line of sight passes through the lens reasonably near the center and at an angle giving good vision.

In shooting over the water, especially on a white sandy beach, such as we have at the grounds of the Calumet Heights Gun Club, I have found it absolutely necessary to use shading glasses on bright days. I have therefore had my ordinary shooting spectacles duplicated in what is known to the trade as "No. 2 blue," the lenses being tinted a light blue, which does not interfere in the least with vision, but so softens the light that one may keep his eyes wide open and at ease on the brightest day.

I have been surprised and gratified a number of times recently to find that by the simple adjustment of proper lenses I had been the means of improving to a marked degree the scores of some of my friends who shoot at the trap. An increase of from 10 per cent. to 30 per cent. has occurred in a number of instances, to say nothing of the additional comfort experienced by the shooter.

PALMYRA, MO., RECORDS.

Palmyra Gun Club, of Missouri, has just finished a series of twenty shoots, 25 targets per man, an interesting competition inaugurated for the handsome prize of a Lefever ejector gun. The series was won by Mr. W. B. Markell. The records were as below:

	Out of 500.	Per cent.		Out of 500.	Per cent.
W B Markell	429	85 4/5	John McLeod	395	79
A B Drescher	422	84 2/5	Frank Diemer	389	77
W N Bates	419	83 4/5	T E Pratt	355	70 1/10
H A Hollyman	418	83 3/5	F Bernhard	340	68
Geo Bates	416	83 1/5			

J. H. Kelley withdrew on fourth shoot.

The club averaged 79½ per cent, which is exceptionally good shooting.

COMING.

The first annual Spring Lake shoot is announced by Mr. W. A. Heilman, proprietor of the Spring Lake, Ill., Club House, Manito, Ill. The shoot will be held Aug. 11-13. Targets only, for low entrances and 7 events daily. Spring Lake is a famous fishing and shooting place in season, and a good place for fun with rod or gun even in August, it seems.

Central Gun Club, of Duluth, puts out a businesslike programme for its fourth annual, Aug. 12-13. Eight events daily, from 10 to 25 targets. A good list of average merchandise prizes. Professionals "equalized," and winners handicapped 2yds. in next event, 20yd. limit. An explanation of the Rose system is given on a page of the programme, which latter shows a progressive interest in the modern ways of trap-shooting.

The advance guard of shooters for the big Du Pont tournament, at Chicago next week, has begun to arrive, the first of these noticed being Rolla Heikes, from Dayton. Rolla will not say who will win the Heikes-Gilbert contest for the E. C. cup, but probably has an opinion on the matter. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Boiling Springs Handicap.

RUTHERFORD, N. J., Aug. 1.—The regular monthly handicap shoot of the Boiling Springs Gun Club was held here to-day. Despite the large handicap given some of the members, two scratch men tied for first place with a 20-handicap man. The score:

Huck (0)	1111111111111111101011101 11111110110111101111011	—43

W. H. HUCK, Sec'y.

Ithaca Gun Club.

ITHACA, N. Y., July 30.—*Editor Forest and Stream:* The Ithaca Gun Club recently reorganized and held its weekly shoot to-day. Taking into consideration the fact that many of the members had not shot at the traps in several months, the score was very fair. The conditions were 25 targets, unknown traps and angles. C. Rumsey won, breaking 21, while Gebhardt and C. Smith tied for second, each breaking 20. The membership of the club is daily increasing, and the prospects for a successful future are very bright. I inclose score of the second event:

C Rumsey	0111101111110100111111111—21
J H Jennings	1100110101101110111010100—15
D Norton	1011101110110110101011010—16

The Texas Midwinter.

For the first time in a few moons your chronicler of facts and fancies from the Southwestern corner of civilization shows signs of life.

It may be from too much ozone or from a predisposition to indulge in the prevailing *dolce far niente* of any section that breathes within the radius of the Mexican pattern that we antediluvian bohemians grasp a Faber and then lay it down without a stroke on the paper before us; but be it as it may, we acknowledge that we are very lazy and very apt to let the other fellow do the chronicling of facts.

But then when the Texas pigeon season opens wide her gates, and when covey after covey of Bob Whites cleave their way over the tops of the mesquite and in a half-feathered fashion make their escape from the approaching hunter, somehow the lethargy which has had its full sway these summer days rather loosens its hold on the nimrod of the Southwest, and at night, as the note of the upland plover falls on his ear and the shrill whistle of the curlew turns the darkness into a gleam of anticipation, the old-time hunter begins to think and dream of bluebills, canvasbacks, redheads, Dick Merrill, Tom Marshall, the geese, and A. W. Adams.

The great midwinter tournament begins to loom up in the delightful imagination, and the fevered spirit immediately frames a shooting *menu* that would be hard to beat for even Monte Carlo.

Let the reader, on this hot summer's day, contemplate *frappé* bluerocks *à la* magautrap with Dick Merrill to do the most approved empyrean kicking. What with a *faux pas à la* Capt. Money and the "correct thing" on the part of his elderly son, to say nothing of the wild abandon of Tom Marshall's Oriental Dervish dance, would be sufficient to entertain even His Majesty King Matabele, of African fame.

The management of the midwinter have made special arrangements with the weather folk for one full week of splendid frost, beginning with Jan. 20. Icicles, snow and frost are hereby notified to be in suspended liquid form on that date.

There will be a brother act, called the bluestone imperial, presented by the peers of the flight kingdom, Messrs. Quimby and North. Also a sort of De Nemours skirmish, with a smokeless accompaniment in E. C. by that famous pair, Spirit Lake Gilbert and farmer Roll Heikes. A thousand audiences will be on hand to listen to the delightful stories of John Connor afloat or afield as told by the inimitable Judge Lindsay, of Knoxville. A taciturn table will be provided, whereunder whose mahogany the flexible legs of Don Quixote Fulford can repose against the fresh veneer. Chauncey Powers will be given a latitude of three weeks, during which he can expatiate on the virtues of a rod that is based on a brass standard. A longitude will be also provided if C. A. Damon is not out of a job. A. W. Adams will be given an opportunity to shorten his stock or heighten the color of his cone, and Albert Steves will be a special committee to set 'em up. Shorty Bacon will be provided with a natatorium and a free silver man will do the talking for O. R. Dickey. Tom Devine and Irby Bennett will be surrendered to the tender mercies of Joe George, who will endeavor to prove to the former gentleman that Pap Hughes, of Little Rock, knows more about cow killing than does the trolley manicure of the Yahoo Railway. The programme of the midwinter will contain 16 000 cuts of John J. Sumpter as he appears while shooting Du Pont, and no pains will be spared to bring each and every powder in the market on the front rank. The same goes as to guns. Charlie Grimm will be given a grand opportunity to show an anxious public how well balanced his brain is by standing on his head and breaking 20 pairs of doubles with a pump. The management is also in receipt of a soul-harrowing request from Charlie Budd to be allowed his new smoke consumer space for exhibition. It is especially adapted to smokeless powders. During this act Prof. Joe George will sing his famous parody on "A Pretty Girl," entitled "A Simple Pink," while Alphabetical Critzer will show his new Dutch guns. U. M. C. Thomas will fulminate on the excellence of the product of his company, while Winchester Hildreth will endeavor to entertain Redwing Worthington by reading his famous essay on the "Phantasmagoria of Trap-Shooting," or the art of climbing for place. The fire department has been engaged for the occasion, and any one found dropping for place will be discovered. He will also be tossed in the fire net for the drinks.

As to game, every guide, hunter and liar of the Southwest has been retained with a retainer, also a retinue to provide delicate morsels for those who were here last year, but too early. This paragraph is written while the writer's X ray vision is concentrated upon the Missouri mugs: Sargeant and Kinmouth, of Missouri. Every canvasback will have a brand new coat of red paint on his head, while the mallards and teal will receive such an embellishment at the hands of our local artist that Renaissance will feel like giving up her job and going to shaking dice for a living. The effulgence of our roseate sunset will be burnished until it vies in splendor with a $20 shiner, and Billy Sims's punch bowl will be found bowing politely to all visitors at the old stand.

Wild vagaries and all sorts of Oriental imaginings will be on tap for a solid 18-karat month, and if the whole world don't come pretty near being kin at the next midwinter, it won't be the fault of the big 3.

The prospects for game were never better than at the present time, and from all sections of this great game country comes word to the effect that deer, turkey and quail are abundant.

DEER KILLED WITH A STONE.

Mr. Vint. James, one of the prominent ranchmen of the Southwest, who owns a beautiful ranch on the Nueces River, has just returned from his country residence with a wonderful tale of game and black bass.

Messrs. Ben and Wynne Andrews, both of San Antonio, accompanied Mr. James during his summer hibernation, together with Master Scott James, eldest son of Vinton, aged twelve years.

On one occasion when Wynne Andrews went down to the stream for bass a yearling doe came to the water, whereupon a pointer and a setter, closely followed by the boy, gave immediate chase. The poor animal lost its head and ran out on a narrow peninsula, around the base of which curled the limpid waters of the Nueces River, and plunged into the stream, which was only about 4ft. in depth. The boy waded out with a stone in each hand, and upon arriving at a convenient distance "fired" one of the missiles at the animal, but missed him. "Then," said Andrews, "Scott gave him the other barrel and cracked the deer's skull, whose carcass was proudly towed ashore."

The party saw turkeys every day, and they all agree that the quail crop will be larger than ever known before.

EVERYBODY CATCHES TARPON.

Not a day passes at the famous Aransas Pass but what from a dozen up to fifty silver kings are brought out on the sands by the lucky anglers. The tarpon season is at its height, and splendid catches of Spanish mackerel, trout and redfish are reported every day. A new hotel has been built at Ingleside on a beautiful site overlooking the bay for miles.

Texas Field.

The Hollywood Grand National.

Long Branch, N. J., Aug. 1.—The Grand National Handicap, an important live-bird handicap, was brought off to-day on the grounds of the Hollywood Gun Club. Ballard and Finletter, the former from Louisville, Ky., and the latter from Philadelphia, Pa., divided first and second moneys with 45 out of 50. Third money was divided between Murphy, Dolan and Ellison. The scores were:

B Ballard (29)	2021211222220211122022212 2120222122122201222222222—45

Duluth, Two Harbors and Tower.

Duluth, July 26.—Match shot by the Central Gun Club, of Duluth, against teams from the Tower and Two Harbors clubs. Duluth was in most excellent form, and made an average of 75 per cent., breaking 150 birds out of a possible 200. Tower scored 143 and Two Harbors 127.

The conditions of the shoot were 25 birds at unknown angles. There were twenty-four men in the three teams, divided into three squads. Field, of Duluth, led the score with 23 birds, while Shell and Sachem, of the same club, were second with 21 birds. The score was as follows:

Duluth.

Meyers	0110110111010111111110111—19
Shell	1111101011101111111110111—21

Members of the Central Gun Club who attended the shoot made the trip to Two Harbors by boat, going up on the Dixon and returning on the Barker.

The Central Club has prepared its new grounds on London road, adjoining Braeutigam's summer garden, and the first shoot was held there on Saturday. This location affords a splendid field and ideal surroundings. The marksmen face lakeward, so that there is nothing but sky and water as a background for their marks. From this time up to the date of the tournament practice shoots will be held at the new fields every Thursday and Saturday afternoons.

Audubon Gun Club.

Buffalo, N. Y., July 25.—We send inclosed scores of Audubon Gun Club's club shoot for to-day. Nos. 1 and 2 were at 10 bluerocks; No. 3, club badge shoot at 25 bluerocks; Nos. 4 and 7 were at 15 bluerocks; Nos. 5 and 6 were at 20 bluerocks; all unknown angles. In event No. 3 Kelsey won A Class badge, Frieze won B Class badge, A. Coombs won C Class badge.

On Wednesday, July 29, there will begin at Audubon Park shooting grounds a championship shoot at inanimate targets for the championship of western New York. The events will be 50 bluerocks, unknown angles, and will be shot on the first and third Wednesdays of each month; entrance, price of birds. The manager, B. F. Smith, will give two handsome trophies emblematic, one of which goes to the shooter winning most events in twelve, the other for the shooter making the best average in ten of the twelve shoots.

Pawtuxet Gun Club.

Pawtuxet, R. I., July 25.—The club shoot of the Pawtuxet Gun Club was held here this afternoon. Sheldon won the Class A medal for the ninth time; Hawkins won Class B medal for the second time, and Graves captured first prize in Class C for the second time. The scores:

Class A.

W H Sheldon	1111111111110111011111111—23
S D Greene, Jr.	1111100111111101011111101—20

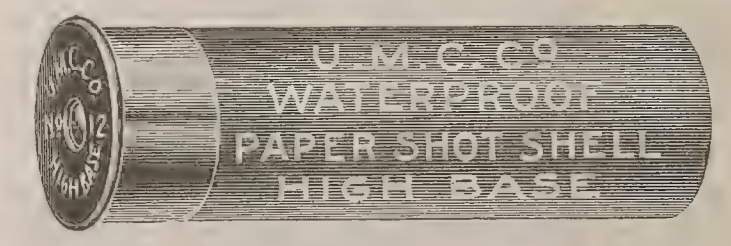
Answers to Correspondents.

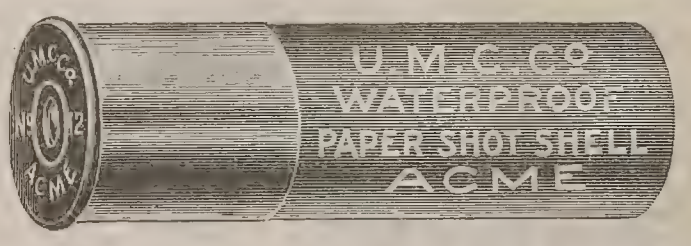
No notice taken of anonymous communications

W. M., Estevan Assa, Canada.—Boil down linseed oil of best quality until it becomes thick and glutinous. It is likely to take fire if boiled in iron pot; use an earthen vessel and boil in open air, with light lid to prevent firing. Then set the oil away in tin can or pail with tight-fitting cover until used.



W. McC., Rouse's Point, N. Y.—What should I do for my Irish setter? He does not seem to be in good health; a little off in coat and thinner than he should be. He does not exercise a great deal and he acts drowsy. He is continually shedding his coat, which, instead of growing darker and glossy, seems to be dry and faded in spots. He was two years old last May. In the morning the corners of his eyes have a little matter in them and his nose seems dry and glossy. He has not much of an appetite on some days and others he eats first-rate. Do you think it would be all right to take him with me camping? Ans. Treat for worms. Wash dog once or twice a week with sublimated soap; allow the lather to remain on. Give 3grs. of phosphate of iron and $\frac{1}{100}$gr. of arsenic twice a day.

J. H. B., Montreal.—I am an assiduous reader of the Forest and Stream, received at the Club Canadien, of which I am a member. Will you kindly answer the following in your next issue: Are wild pigeons (*Ectopistes migratorius*) still in existence, and where? Not one can be seen in the Dominion of Canada, I venture to say. Some thirty or forty years ago they were so plentiful that they were a nuisance. Ans. The wild pigeon is believed to be practically exterminated over a considerable portion of North America, especially that part east of the Alleghany Mountains. Of course the enormous flocks of thirty or forty years ago are never seen now, and its extermination is due entirely to persecution by man. At the same time wild pigeons are occasionally seen, especially in the middle West, and the species will probably long survive, but with changed habits and in hopelessly diminished numbers.



PUBLISHERS' DEPARTMENT.

U. M. C. Latest Shells.

The Union Metallic Cartridge Co. now manufacture a cheap shell for dense powder known as "High Base," which has the same primer

and is the same quality as the well-known nitro shells manufactured by this company. They have also marketed the shell known as

"Acme," which takes the place of the Smokeless shell. Both of these shells have a high base and reduced space to avoid unnecessary wadding, and the peculiar shape of the base is thereby adapted to dense powders.—*Adv.*

Through Wonderland.

PERSONALLY CONDUCTED TOURS TO YELLOWSTONE PARK VIA PENNSYLVANIA RAILROAD.

The Yellowstone Park is one of the most wonderfully attractive regions of the world. Its beauties of scenery, the wild grandeur of its mountains and cañons compel the admiration of every visitor, while its phenomenal geysers and curious mineralogical formations make it a rich field for the inveatigation of the scientist. Universal interest attaches to it, and in order that the natural desire to visit it may be accomplished in the most satisfactory manner the Pennsylvania Railroad Company has arranged for a tour covering a period of sixteen days, leaving New York and Philadelphia Thursday, Aug. 27.

As the tour will be run under the personally-conducted tourist system inaugurated by the above-named company, it is hardly necessary to give the assurance that it will be arranged in the most complete manner. It might be well to state, however, that no other means of seeing the Park thoroughly is comparable to that afforded by a well-ordered personally-conducted tour.

A special train, consisting of a dining, Pullman vestibule, drawing-room, sleeping, compartment and observation cars, which will be the best that can be secured, will be provided, in which passengers will live *en route*, and whenever the journey is broken the choicest rooms in the leading hotels will be reserved for the use of the tourists, for which regular rates are paid, so that the guests, although members of a party, enjoy all the privileges of individuals who may have made their own selections.

The party will be conducted throughout by a tourist agent especially selected for his ability and experience, with chaperon to look after the comfort of lady passengers.

The rate, covering every necessary expense, will be $210 from Boston, and $200 from New York, Philadelphia, Baltimore, Washington and Harrisburg; proportionate rates from other points.

Detailed itinerary will be sent on application to Tourist Agent, 205 Washington street, Boston; 1196 Broadway, New York; 860 Fulton street, Brooklyn; or Room 411, Broad street station, Philadelphia.—*Adv.*

The Fall River Line having made arrangements with the American District Telegraph Company, announces that a corps of messengers will meet the boats on their arrival at New York for the purpose of acting as escorts to strangers, ladies and children; also to deliver letters, hand satchels, parcels, etc., and to collect telegrams for transmission over Western Union lines.

For the service performed the regular American District Telegraph Company rates will be charged.

It is expected that this service will prove a great accommodation to the traveling public.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 15, 1896.

VOL. XLVII.—No. 7. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FOREST AND STREAM OFFICE

346 Broadway

NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

Readers accustomed to buying the FOREST AND STREAM *at news stands, and who are going out of town to points where they cannot purchase from newsdealers, may have the paper mailed from this office for any length of time at the rate of forty cents per month.*

SNAP SHOTS.

On Broadway the other day, some two hundred feet from the FOREST AND STREAM'S front door, an old man set out to board a cable car, and a funny show he made of it. He raised both elbows as high as his head and flopped his arms forward, pranced on his toes, made a wild grab at the car, fell, and was hoisted aboard by the conductor, while a small boy yelled, "Go it, old rooster." He was evidently and unmistakably from the country, and was unused to boarding street cars. His antics were ridiculous, and those who observed him could not be blamed if they smiled good-naturedly at the country greenhorn in the city.

But by and by, we may be sure, it will come his turn to laugh, if indeed he has not had the occasion many a time already, at the verdant ways of the city greenhorn in the country. For greenhorns, though their name be legion, are to be divided into two classes, one of the country and the other of the town. Each is the natural product of its surroundings. For while in town and country there is an inseparable community of business interests, and in a lesser degree of social interests, there is not the same common associations of action, of community of thought, of policy or of occupation. Country and city life being thus in parts separated by the peculiar conditions governing them, each in time comes to have a special education, a necessity imposed by their distinctive environments. And these conditions in turn produce the greenhorn.

When the city man goes into the country he enters an environment with which he is unfamiliar, and his trivial blunders being apparent to all the native observers, they bestow on him a good-natured, homespun ridicule, and mirthfully gossip over his ignorance of country matters, small or great. It is assumed that the "city feller" is the same inefficient man in the city that he is in the country. To the country resident his gloved hand, polished boot and natty costume are not indices of a refined calling, but rather a parade of effeminacy and an insignia of idleness. The city man who tramps through the country with rod and gun is the favorite theme of the country man who desires to ridicule the residents of cities. The more costly the rod, or gun, or dog, the more elaborate the city man's costume, the greater is the detail in showing his finicky attempts and his failure; then the story of how the old muzzle-loader of the country resident killed right and left, and the old birch pole and hook and line pulled out the big fish, make a fitting climax to the ornate failure of the city man.

But the country man comes into the city, and all is changed. He then himself is in the midst of strange things. He betrays his unfamiliarity even more than does his city brother in the country, for he is in the midst of much more rapid and dangerous action. He is in a confusion of noises and activity. There is the roaring of heavy traffic, with the clang of rushing cable cars, high buildings, higher than he ever saw before, and people in crowds hurrying to and fro without the slightest thought of him or any one else, so far as their expression or action indicates. He feels utterly helpless and bewildered. He now is the greenhorn.

Let the greenhorn of the city or country of the East visit the Western country, and both are in a strange environment; then they acquire a new *soubriquet*, that of "tenderfoot." It again denotes a man who is not trained to the thought, manners and action of the environment.

Instead of evoking a mild contempt, the mistakes of the city man in the country or those of the country man in the city should be treated with broad tolerance and kindness. It requires but a short time to correct either. The country man will soon learn, if he be patient and observing, that the toy rod of the city man is a killing instrument, with which the fish-pole cannot compete, and that the city man can quickly learn country customs and ways. The city man will learn, if he be properly considerate, that it is an easy matter for his country brother to put on city ways correctly and with indifference, and that the brethren of city and country, no matter how much they may be greenhorns when they exchange visits, have their hearts in the right place. The lines of demarkation are less sharp between country and city sportsmen, and let us hope that in time they may disappear in the bonds of common fraternity.

We shall be glad to send specimen copies of FOREST AND STREAM to such addresses as readers may give us for that purpose. If you have a shooting or fishing friend who would be interested in seeing the paper, give us his address.

We referred the other day to the generous offer by a sportsman who enjoys desirable shooting privileges to share them with some less fortunate brother whose time given to sport must of necessity be short. The offer is still open, but the person making it advises us that we neglected to note two qualifications required of the one accepting it, namely, that he must be a good wing shot, who can get the birds after they are shown to him; and second, that he must be of those who can afford to spend but little money for shooting. We may add that the person making the offer lives in the eastern part of New York; and that his invitation is just what it purports to be, and is prompted by a generous desire to share his own opportunities with another.

"Now, ladies and gentlemen, please come up where you can hear. My voice is not very strong to-day, for yesterday we had a Sunday crowd and I had to do fifty turns; fifty turns means eating twelve pounds of cotton; and if any of you think it isn't weakening to eat twelve pounds of cotton in a day, try it. Now watch me, ladies and gentlemen, as I eat." And the gaping crowd saw the world-renowned champion cotton eater of Coney Island cram a double handful of cotton into his mouth until his cheeks bulged; and then they saw him, not without dire grimaces and gulpings and jugular contortions extraordinary, swallow the wad; and saw him take another mouthful, and another. A hundred or more men, women and children were willing to testify that they had seen the man swallow the cotton. It was perfectly plain to them. If his audiences should fail to see the cotton swallower swallow the cotton, the swallower of cotton would no longer swallow cotton; his occupation would be gone. He lives upon it, not upon cotton, but upon the people who see him eat it, or think they see him eat it.

As with the cotton eater so with the hornsnake. Both owe their existence to the testimony of eye-witnesses who have beheld their wonderful doings. But while the cotton eater courts publicity and shouts to the multitude to draw nigh and look closely upon him, the hornsnake shuns crowded haunts, retires to woodland retreats and reveals himself scantily and for the most part to solitary observers, as to an old darky woman at nightfall, or to a farm hand bringing home the cows. Very rarely does it happen that a specimen is seen under such favorable conditions, at such close quarters, as was the case with the one which is described to-day by our Mississippi correspondent, Coahoma. This snake was captured alive. Two negroes saw its sting; so likewise did three white observers. Here then were five witnesses who actually saw for themselves the horn and sting on the captured snake. This should be testimony enough to convince the most skeptical, and if Coahoma had been minded to handle the evidence with anything like the enterprising assurance of the Coney Island cotton eater, he might have given the hornsnake a new lease of life. Instead of doing this, however, he affirms that in spite of the credulous reception given the creature by the rest of the party, he contumaciously squeezed its horn and proved it to be stingless. The five persons who saw the sting were mistaken, he tells us; they did not see what they thought they saw. And he hopes that now the stinging snake myth has been finally disposed of. Not a bit of it. If the world was built after that fashion, what would become of the cotton eaters? Man likes to be deluded; he will have his cotton eaters and his sting snakes. Coahoma may squeeze the horns of a thousand reptiles and prove them as innocent of harm as the babe at the mother's breast; but the hoop snake will go on rolling, the hornsnake stinging, and the joint snake, smashed to flinders, will link itself joint by joint together again. You may scotch these serpents, but you shall not kill them.

The Canadian authorities appear to be quite as inefficient in their protection of the wood buffalo of the Northwest as the United States have been with the buffalo of the West. In the Northwest Territories buffalo are by law protected at all times, and in the Unorganized Territories, which comprise all the Northwest Territories not included in Assiniboia, Alberta and Sasketchewan, they are protected until 1900. The law as to the Unorganized Territories, which goes into effect for the first time this present year, would practically be worthless even if enforced, for it provides that "Indians and inhabitants are exempt, and travelers, explorers and surveyors in need of food." A game law which exempts Indians and inhabitants is no game law worth enacting. As a matter of fact, since the protective laws were provided more wood buffalo hides and heads than before have been received at Edmonton, the great receiving and shipping center of the fur trade of the Northwest.

The failure of the law in the Northwest Territories appears to be due to conditions similar to those which have rendered laws unavailing elsewhere. There is no one to enforce them; they will not enforce themselves, nor will they ever do the least good until an official shall be provided to put them into operation. A game warden at Edmonton, to overhaul the furs received there and to confiscate buffalo hides and heads, would soon put a stop to the slaughter of what is practically the last remnant of this species on the continent. Canada is in many respects so efficient in the protection of her game reserves that this condition in the Northwest Territories is all the more a reproach; and we cannot believe that the authorities will permit it to continue.

In the names of those to be included in Mr. Fred Mather's charming sketches of the men he has fished with is that of "Uncle Dan" Fitzhugh, of Bay City, Mich., who died on June 26 of this year, at the age of seventy. Mr. Fitzhugh was by personal qualities endeared to his angling friends. Of him Mr. Herschel Whitaker well says: "He was one of nature's noblemen, a true sportsman, a brave spirit, with a heart as gentle as a woman's."

We may now venture to consider the New England copperhead question as settled. Our California correspondent has found out that copperheads are a Connecticut and Massachusetts institution. He has also discovered that our Natural History columns have a trans-continental range, and that by recourse to them a seeker for knowledge may peer from his stand on the Pacific coast into the crevasses and snake dens of New England cliffs.

The Sportsman Tourist.

SPORT IN INDIA.

II.—The Great Plain.

If we now suppose ourselves to emerge from the belt of sub-Himalayan forest and proceed southward we find ourselves on the vast alluvial plain which forms all the northern part of India. So gentle is the slope of this immense surface that the ancient city of Delhi, which stands at about its center, 1,000 miles from the sea on either hand, is yet but 800ft. above sea level. Less than 1ft. per mile is the slope, and down it slowly glide the waters of the great rivers Indus and Ganges, whose shores are lined with a succession of populous cities. Here we have the seat of one of the most ancient civilizations known to the world of our day.

This great plain of northern India was all cleared and settled ages ago, and a dense population now fills it. Under such conditions the sportsman would hardly expect to find anything to attract him, but yet there is plenty of sport to be had on this wide, densely peopled area. In no other country would this be possible; any people like ourselves would long ago have made a clean sweep of every bird and beast. But the mild Hindoo is a vegetarian and has no taste for field sports. "Live and let live" is his motto. One day when out after duck I inquired of a native fisherman (because many will eat fish, though not flesh) whether there were any otters in those waters.

"Plenty," he replied, "we often see them."

"Why, then," I asked, "do none of you ever trap or shoot them? Their skins are good and they destroy many of your fish."

"God has made the otters as He made me," he replied. "They also are fishers as I am. What right have I to molest them?"

Such is the beautiful religion of these good people; it is a pity that some little of this respect for wild animal life cannot be imported into another country that we know of. The result is that right around the villages and among the crops game is to be found.

The black antelope, that most graceful and swiftest of all creatures on the face of this earth, roams over these wide plains. While a farmer is hoeing at one end of a field the antelope will be taking a nibble at the other end. They are not plentiful enough nor voracious enough to do any real harm to the crops, and of course they get driven about a great deal, but they can always get a bite somewhere, by night if not by day. Here and there will be a few acres of fallow or waste land, where they can collect to rest and lie down unmolested. They have little fear of the native, but in most districts they have learned by this time to keep clear of the white man and his gun, so that on the open plain, with no cover but the crops, it takes a lot of careful stalking to get a shot. The buck is black above, with pure white below, stands nearly 3ft. in height, weighs about 100lbs. and carries very elegant straight horns, spirally twisted and running up to 2ft. in length. The doe is smaller and light fawn colored. Their speed far exceeds the fastest greyhound's. I have often succeeded, when riding out with my greyhounds, in coming on antelope by surprise and laying the dogs on to them at close quarters, but in a few tremendous bounds the deer will stretch away ahead; eagerly and keenly though the dogs will strain after him, they may run themselves to a standstill without putting the antelope to any fatigue.

In a district where they are plentiful I have known a game hog to shoot twelve in one day without even leaving the high road along which he was driving. But there is a very strong feeling among English sportsmen in India against the game hog, and this feeling has increased so much of late years that no one would dare now to kill twelve bucks in a day or anything like it. The following is, roughly speaking, the code of Anglo-Indian sportsmanship.

(1) Not to shoot an unreasonable amount of any kind of game, however plentiful it may be.

(2) Strictly to respect the breeding season.

(3) Not to shoot the does or hinds of the deer and antelope tribes, only the bucks and stags. This rule is very strict, and the man who shoots hind or doe is looked upon with much contempt.

The best sportsmen not only will never think of firing at anything but stags and bucks, but they will not shoot even a young one whose horns are not of a good size—nothing but fine, well matured animals with good heads.

The black antelope is the only species of large game that lives right in the open plains and fields, relying entirely on his speed and never entering coverts.

Although the great plain is so entirely cleared and densely populated, there are few districts which do not contain some stretches of scrub and bush land, high grass, etc., and the tall crops of millet and sugar cane also afford cover to game which cannot live in the open. Along the borders of all the great rivers runs a strip of land a mile or so wide which cannot be cultivated because it is flooded every rainy season, though dry for most of the year—rough ground, full of high grass and bushes. In such places a variety of game is found, large and small. We here find the nilgau, a large, heavy species of antelope standing 4½ft. high, but not much sought after by sportsmen because his horns are insignificant. The hog deer is a small species of antlered deer standing some 28in. high and carrying a good three-pointed horn. Wild hogs are also common in these localities.

Pea fowl, black partridge, gray partridge, florican and hares all abound in grass and bush coverts.

In waste, sandy places the great Indian bustard is seen from afar off. He has to be shot with the rifle, as it is seldom possible to get within gun range.

Several species of sand grouse are met with and afford excellent sport. Blue pigeons are very common, and in groves of trees the beautiful green pigeons are met with.

The great Indian plain is also a wonderful wildfowl country. All over it are found pieces of water, varying from ponds up to extensive lakes or marshes of several square miles, half filled with reeds and swamp grass and affording cover to untold millions of wildfowl. Most of these are migratory and have their breeding grounds among some almost unknown lakes in Thibet north of the Himalayas. About October they come south and every suitable piece of water swarms with them all the winter. Many of the species of wild duck are the same as the American and European ones, while others are peculiar to Asia. We have in India about twenty-five different kinds of wild ducks and geese, besides an immense variety of herons, storks, cranes, ibis, pelicans, plover and other shore birds and waders, all in great quantities. The snipe shooting is something unequaled and vast flocks of quail are found among the crops. Nowhere in the world can wildfowl shooting be met with in such great variety, or so easy to get at and in such an excellent climate.

That reminds me to say a little about the climate. Popular imagination no doubt usually pictures India as a very hot country, abounding in snakes, reptiles and insects. The reality is as follows, speaking now of northern India, where we at present are supposed to be:

In April, May and June there is a very dry heat; it is very hot out on the plains, but good in the cool of the forests. This is very healthy weather and there are no snakes or insects around. July, August and September are the rainy season—terribly hot and steamy; snakes and insects out in plenty. This is an abominable period, and anyone who can do so escapes to the mountains. But the great body of Indian officials who run the country, judges and magistrates, police officers and engineers, as well as most who are in the country for business and trade, all have to stick it out at their posts, carrying on their work and not getting away on the average more than one hot season out of four. Glad they are when September is well past and another winter begins. The winter of northern India, from the middle of October till the middle of March, is absolutely perfect weather, neither hot nor cold. The forests are still too damp and dense from the previous rainy season to go into, but from October to March one can enjoy camping in perfection on the plains and have all the sport above referred to. Most of the officials spend this season in camp, going about the district they have charge of. The great beauty of the Indian cold season is its absolute certainty. There may be similar weather in the Southern States of America where it is not too damp. (I went to Florida once in December and found the climate unbearable from its dampness—not to be compared for one moment with India at the same season.) In the drier Southern States there may be a winter as good as the Indian, but then it is liable to be interrupted by a "norther" and there may be snow in New Orleans. This cannot happen in India—never has happened during all its long history—because the great wall of the Himalayas across the north shuts off any "northers." Hence we have a perfect winter of about 60° Fahrenheit absolutely steady, the only possible break of the weather being just a little rain now and then. There are no snakes or insects about.

Altogether for excellence of climate, facilities for camping comfortably, and variety of sport no country can compare with northern India.

Major G. M. Bellasis,
Bengal Staff Corps (retired).

[To be continued.]

MY OLD SUIT OF CLOTHES.

There are certain memories clinging to an old suit of clothes that are none the less charming in spite of their humble origin. Every year at the close of my September vacation I hang them away in their old resting place and wonder if I will ever wear them again. I have them on now, over here at Hemlock Lake, and they are just as good as ever, and oh, how delightfully easy they are, how they conform to every curve of my frame and settle down so restfully when I take my after-dinner siesta. Shall I analyze this old suit of clothes of mine? Will anybody care to listen to their simple tale?

The coat and vest are mates, made at the same time and made to stay. Twenty years ago they were builded by my tailor on lines distinctly laid down by me. This was before the days when a good dead grass color canvas shooting coat replete with many pockets could be bought at any sportsmen's supply store for $2.50, so I sent for the good brown canvas and had him make me a sleeveless coat with seven outside and one large inside pocket, the last one for game and reaching clear around the skirt. The vest was fitted with sleeves and had two large side pockets and two rows of cartridge slips across the breast. The corduroy trousers I haven't had so long, but they belong to the old suit just the same and play their part acceptably.

Now I presume a thousand readers of Forest and Stream have exactly such an old suit as I have, and possibly they may protest against my flaunting these old relics before them, sneering at the very idea of there being anything worth mentioning in an old hunting suit. But wait a moment, we all love an old gun, an old friend, an old dog, an old rod! why not an old suit of clothes?

What a mine of recollection I unearth when I take down the old coat and go through it systematically. The right shoulder is frayed and worn where the friction of the tip stock of my gun has overcome the toughness of the canvas and left a jagged hole. It took many excursions to wear the old coat that way. Through the mists of years they take shape before my eyes as I hold the time-honored garment at arm's length. Along the Ohio River bottoms I tramp for quail. I am watching a runway for deer at the headwaters of the Shenandoah in Virginia. I am looking for grouse on the Au Sable in northern Michigan, while in my own western New York I am scouring the counties of Steuben, Livingston and Ontario for general results.

I feel in the upper left-hand pocket, sacred to my tobacco pouch, and as I take out a pinch of powdery, dusty leavings I can almost pick out the Piccadilly, curly cut and Seal of North Carolina (I abominate granulated tobacco) from the mess and tell just when and where I burnt them.

In another pocket I find a little tin match-box packed full of old-fashioned sulphur matches, so old and frayed that an attempt to light one only yields a faint, sheolic sizzle. That box once contained split shot for bait fishing for trout, and years ago I packed it full of sulphur matches, but I only carried them thinking some day they might come in handy; but they never did. In the same pocket, clinking weirdly against its mate, I discover a little old brass compass scarcely ¾in. in diameter. It was given me by a friend many years ago, and gratefully received as a most useful addition to my kit. It is a little open-faced affair, and how it ever survived the hard knocks it has received in company with the match-box I don't understand; but as I take it out and lay it in the palm of my hand it looks as bright and clear as a new cent and flops around to the north as promptly as a private at salute. And now I take out a big blue silk handkerchief used for neck protection only, and guiltless of the laundry for more than a decade. How many times its soft, ample folds have kept out sun and rain and wind in the years that have gone. Last of all, I take out the old soft rubber drinking cup and contemplate it lovingly. I wonder from how many springs and mountain streams I have taken water through the medium of that cup? Originally the color of it was white, but time and the corroding influence of a variety of waters have had their effect on the old cup, and it is now a dingy gray; but it is still pliable and water-tight, and will do good service for many years to come. I turn the old coat around and dive into the roomy game pocket, and draw forth bits of feathers, fur and twigs. So disintegrated and small are these relics that I fail to locate them minutely, and as I turn them over in my hand how the days in the autumn woods come back to me, and I recall many a satisfactory contribution made to that old pocket.

Hanging up the coat, I look into the pockets of the vest and only find a few stray shot, a couple of quill toothpicks and a stub lead pencil. The trousers yield a long-bladed, clasp knife, given me more than fifteen years ago by a friend in the hardware business. The blade is a splendid piece of steel, and so arranged that once open it cannot be closed without pressing a spring in the back. Before my friend, the rector, went over the river we all must cross, he taught me that the only way to treat trout was to clean the morning's catch at luncheon and the afternoon's yield at the close of the day's sport, and then to pack them nicely in the creek with fresh ferns; and upon arriving home they would be all ready for the pan. So when I take out this fine old knife it all comes back to me: the rector and I seated down by the Loyalsock in Sullivan county, Pa., each with a little pile of trout before him, plying our knives and pipes and voices, while the grand old hemlock-clad hills look down upon us lovingly.

Ah, well, I don't find anything more in the old suit but pleasant memories, so I relegate it to its accustomed hooks, noting with pleasure that it don't seem to be growing old any faster than its owner. May the old suit yet see much service, and come through the thickets with its wearer safely into the clearing. H. W. D. L.

Dansville, N. Y.

TWO IN LAPLAND.

"What's better for supper than Little Neck clams and cold salmon on a hot night in July?" said Pod, helping himself bountifully to the salmon.

"You'll get tired enough of salmon before you get back; I imagine," said Dick. "Well, you wouldn't catch Frank and me running off to the wilds of Lapland for sport, would he, Frank? But here's luck to you, anyhow; may you reach the Varanger in safety and have lots of sport."

We drank the toast reverently; Pod ordered more salad and we all made merry there in the Arena until late in the evening, when we separated reluctantly, promising to meet again at the steamer.

Next morning, as usual, the steamer was crowded with people bidding good-by to friends and relations. We managed to get our crowd together for a few moments, and then the cry of "All ashore that go ashore!" made us grip hands for the last time. A few moments later the great ship moved out into the North River, and amid the cries and shouts from friends on the dock we steamed down to the Narrows and were soon out of sight of land.

For seven days we did hardly anything but eat, sleep, walk about the decks and loaf, and then one evening just as we were going down to dinner somebody spied land, and we all crowded to the rail, straining our eyes to catch a glimpse of the unsatisfactory blue streak on the horizon which represented land. The time came for us to disembark, early in the afternoon of the next day, and getting our duffle together we went ashore, through the custom house, as quickly as possible, and rushed up to London. It was 11 o'clock at night, however, when we finally established our headquarters at the Charing Cross Hotel. We had had nothing to eat since 1, so now with one common, all-absorbing desire we strode out of the hotel and up the Strand in search of a grill room. We found a good-looking place not far away, where we went in and ordered chops and ale for two, and silently fed for nearly two hours. How we did eat! Pod especially, I thought, would never cease his attacks on the thick, juicy English chops and pewter tankards of Scotch ale; but at last he called a halt and then we went back to our hotel and turned in.

Four or five days in London spent in procuring forgotten necessities and in seeing the sights once more, and Pod and I again took the trail for Norway and sport. We were a day and a night on a Newcastle steamer crossing the North Sea, and on the morning of July 18 arrived at Bergen and took passage on a small mail steamer bound to Vadso, on the Varanger Fjord. As our ship did not sail until 11 that night, we amused ourselves in wandering about the town, watching the sailors unload the great cargoes of fish from their peculiarly shaped boats, and in visiting the grave of Ole Bull, the great violinist.

Precisely at 11 o'clock by the light of the midnight sun we left Bergen and resumed the lazy life of travelers on shipboard. For a few days the Norwegian meals and cooking were the chief interest, and these were really quite unique, especially the breakfasts. For the morning meal the true Norwegian usually takes a small quantity of *aquavit* (a sort of brandy made from potatoes), then sausages of various kinds, or dried reindeers' tongues and goat's milk cheese, or cod's roe, and ends up with a little caviare or anchovis, washing the whole down with a poor apology for beer. On the Vesta, however, we fared a trifle more luxuriously, and in the morning usually had boiled eggs, and hot fried fish or meat for luncheon.

Two days after leaving Bergen we arrived at Troudjheim and went ashore for a couple of days. We had a very good dinner at the hotel, and then we inquired what we could do to pass the time, and were much surprised to find that all places of amusement were accustomed to close on Saturday night, opening again Sunday night. We thereupon put in the evening in a quiet way in the gardens of the hotel.

On re-embarking we found the number of the Vesta's passengers very much decreased. An amusing little professor from an Austrian university off on a botanizing trip, a Norwegian forest master resplendent in green uniform and brass buttons, and a Mr. M. were the only pas-

sengers besides Pod and myself. We soon became acquainted as well as the differences in language would permit, and found them all very pleasant. Mr. M. was especially pleasant to us, however, and it was through his kindness that we were enabled to get the splendid salmon fishing that we did. We shall never cease to think of him with the greatest gratitude and affection.

For a week we steamed in and out of the beautiful fjords, enjoying the magnificent scenery. Entering some quiet fjord, shut in by rugged mountains dotted with snow fields, we would sound our whistle, and a quaint little boat of the old Viking ship model would come out from some little fishing village to get the weekly mail and possibly a passenger. When the reverberating echoes of the whistle had died away a desolate silence would resume, broken only by the clank of the anchor chains, the subdued tones of the quiet voiced sailors, and the mournful cries of the myriads of sea gulls that continually hovered about the ship.

On July 31 we arrived at Vadso, on the Varanger Fjord, and next morning at 7 left the Vesta, crossed the fjord in a little steamer to Elvnaes, the name of a solitary post station at the mouth of the Pasvik. Here the lendsman, or local magistrate who keeps the station, showed us the way to a small log cabin which had been built by some sportsman a few years previously, and to this little cabin we at once brought up our duffle and lived like princes for the one week we were there.

Early next morning Mr. M. engaged two Lapps with their canoes to row us on the salmon pools. Pod at once rigged his rod and spent the morning on the river.

After dinner I had my turn, while Pod went to a pretty little lake for trout. He took three beauties of about ¾lb. each and then returned, and I went to the lake and caught three more trout, while he killed his first grilse and a small salmon of about 6lbs. That evening we both went for lax (salmon), and I had the good fortune to get a small grilse just as we were leaving the river.

The next day, at 10 in the evening, I took to the upper pools and Pod stayed at the mouth of the river. About three hours' rowing back and forth across the quiet river in the oppressive northern stillness was enough, and I gave it up and dropped down to where I left Pod. As we came in sight, he shouts out, "Look out, I've got a monster; have had him on ever since we first came out." Almost before the words had left his mouth a great fish jumped about 6 or 8ft. into the air near my canoe, and fell back with a tremenduous splash into the water. Very much excited, I directed my Lapp to put me on shore, and ran along the bank to where Fred's Lapp was cautiously trying to beach his canoe, and watched my pal get out upon the bank and begin the final struggle. Just as Pod got the salmon into shallow water he got frightened at something and dashed away again. Again Pod got him near the shore, and again he dashed away, until at last, after fighting for three long hours, he gave up, and Pod had him in for the last time. With a quick movement one of the Lapps hooked him with the long-handled gaff just back of the gills and, staggering up the bank, flung him on the pebbles. Next morning we found he weighed just 36lbs.

Pod was completely worn out from excitement and nearly frozen by the cold mist that comes up from the river at night, so after a hearty pull at my flask we all helped lift the salmon into one of the canoes and crossed the river to camp. Before going to bed Pod insisted upon making a sketch of his prize; so Andreas and I managed to hang him in the middle of one of the long gaffs, and each of us supported an end on our shoulders while Pod made his drawing.

Next morning after breakfast Andreas rowed me slowly back and forth across the big pool at the mouth of the river, and I sat in the stern with a long length of line out, earnestly hoping some mighty salmon would be tempted to take my blue phantom minnow and give me such a fight as Pod had a few hours previous. As I am dreaming of fishing luck in general and my jovial pal's in particular I am aroused by a jerk at my line and in half a second more am sitting bolt upright shouting to Andreas to get his Lappish wits together and row, for my line is running out like wildfire. At last the Lapp takes in the situation and commences to row toward the fjord in the direction in which the fish is going, and then we have an exciting race: salmon versus Lapp, both going for all they are worth. When only a few more yards of line remain the salmon suddenly stops and I reel in hurriedly and am just about to give thanks, when he is off again up river. Again reel hums and Lapp groans, but not for long, for the fish has started in to use other tactics and ceasing his long runs now dashes from side to side, tugs at the line several times in quick succession, and comes to the surface once or twice and lashes the water into foam with his huge tail, and having tried his level best to get away at last lets himself be taken to shallow water, and after a final dash or two is gaffed and on the pebbles at my feet. "*Stor lax*," says Andreas (*Anglice*, big salmon), "more big as other man's," which statement I am inclined to doubt; for, although he is a monster, I cannot believe him to be over 36lbs. To settle the question, we lift the *stor lax* into the canoe and paddle back to camp. When Pod and Mr. M. saw what I had on my back as I toted the fish up the bank there were audible expressions of surprise from both of them, and in a second more they had the salmon on the balance and he weighed in kilos what is equivalent to 39 15/16lbs., so we called him a 40-pounder.

Pod went on the river all that afternoon, while Mr. M. and I went to the lake for trout, and after tea I took the upper pool and killed a lively 25-pounder that made a beautiful fight before he could be brought to gaff. He was one of the river fish that keep more to the fresh water and consequently did more leaping than the salmon of the lower part of the river, sometimes leaping 6 or 8ft. into the air two and three times in quick succession. Andreas nearly lost me this fish by his clumsy management of the gaff. It is surprising how clumsy some of these Lapps can be, often making two and three attempts before they secure a fish; and of course, although a salmon be almost drowned, when he feels the sharp prick of the gaff hook he will dash off again and leave one in constant fear of his ultimate escape.

The next day being Sunday, Pod and I strolled acr the boundary into Russia and Pod made sketches of scenery. On Monday the forest master was expecte return from his trip to the interior, and we made u party to meet him at the beautiful Harefos or H Falls. We went up river about six miles to the f passing through Borisgleb. Here a small Greek church is situated; the priest lives all alone and ministers to the wants of a dirty village of Lapps, called Scalp Lapps, on account of a hereditary disease which renders them all bald. He is a most picturesque looking man in his long blue gown, white hair, and as we passed by begged us to come in and drink some overland tea, but we were in a hurry to reach the falls and had to decline. As we left the village we could see the Lapps coming out of their squalid huts on their way to mass. It was one of the numerous holy days of the church calender, and the women were arrayed in all the finery of bright bits of scarlet cloth and brass ornaments as they responded to the confused jangle of the small peal of bells that the church boasted.

With the sound of the bells growing fainter and fainter in the distance, we pushed forward on our journey to the Harefos, where we soon arrived and had luncheon, and after luncheon caught many pounds of trout and grayling before the forest master came in. The fishing was magnificent, but my luck was not with me, so I gave it up at last and netted for Pod, who was pulling them out in great style. In about half an hour we had sixteen beautiful trout and grayling that weighed about 20lbs. Then we returned to the station, and for the next day or two killed several salmon and grilse, but none over 10lbs., until the night before we broke camp, when Pod had a fierce fight with a 38-pounder that brought our salmon record up to 198lbs. for the one delightful week we spent there.

On the morning of Aug. 8, in company with Mr. M., we said good-by to the people who had been so kind to us at the station and sailed back to Vadso to join the mail steamer going south.

STORLAX.

Natural History.

HOW BIRDS AFFECT THE FARM AND GARDEN.

BY FLORENCE A. MERRIAM.

[*Continued from page 104.*]

Loggerhead Shrike.

THIS shrike is the common United States butcherbird. In the summer he lives on insects—98 per cent. of the food for July and August in eighty-eight stomachs consisted of insects, mainly grasshoppers. In winter, when insects are scarce, the shrike becomes carnivorous; indeed, mice form 11 per cent. of the food for the year.

As will be inferred, the beneficial qualities of the shrike far outweigh the injurious.

Rose-Breasted Grosbeak.

This beautiful bird has shown itself of especial importance to the farmer because of its fondness for potato beetles, and should be protected and encouraged in every way.

Wood Pewee.

The pewee, like its relative, the phœbe, feeds largely on the family of flies to which the house fly belongs.

Yellow-Bellied Flycatcher.

This little flycatcher does good by catching the injurious weevils.

Vireos.

The greenlets may be found from morning till night searching among the leafy treetops for insects both in our forests and in our villages and towns. They probably rank next to the cuckoo in the destruction of caterpillars, and are also of great value from their fondness for bugs and weevils, May beetles, inch worms and leaf-eating beetles.

Brown Thrasher.

Mr. Judd, in his report on the thrasher, says: "The fruit grower who sees the birds flocking into his cherry tree not only neglects to observe the birds sandwiching in with the luscious fruit dainty morsels of insects, but also overlooks the fact that when the cherry season is over they

BROWN THRASHER.

raise havoc with his worst enemies. The quantity of food taken from cultivated crops by the thrasher amounts to only 11 per cent.; of this 8 per cent. is fruit, and the rest grain. The farmer is more than compensated for this loss by the destruction of an equal bulk of May beetles, which, if allowed to live, would have done much more harm than the thrashers, and left a multitudinous progeny for next year."

Robin.

The robin is accused of eating cultivated fruits, but examinations show that less than 5 per cent. of his food is grown by man. As nearly half his food is wild fruit, it would be easy to substitute something for the garden products that he troubles. On the other hand, nearly half his food is animal, including wasps, ants, bugs, spiders, large per cent. of grasshoppers, at least eight quarts of cut worms, pay for twenty-four quarts of cherries, blackberries, currants and grapes?" And Mr. Bruner says: "He is a poor business man who pays $10 for that which he knows must later be sold for 15 cents or even less. Yet I have known of instances where a robin that had saved from ten to fifteen bushels of apples that were worth a dollar per bushel, by clearing the tree from canker worms in the spring, was shot when he simply pecked one of the apples that he had saved for the grateful or ungrateful fruit-grower."

The robin is such a favorite that it is particularly interesting to know what wild fruits can be planted to draw his attention from the small fruits of the garden when he chances to take an undue amount. The wild fruits found in his stomach are dogwood, wild grape, wild black cherry, choke cherry, bird cherry, mulberry, greenbrier berry, cranberry, blueberry, huckleberry, holly berry, elderberry, hackberry, service berry, spice berry, hawthorn, bittersweet, Virginia creeper, moonseed, mountain ash, black haw, barberry, pokeberry, strawberry bush, juniper, persimmon, saw palmetto, California mistletoe and bayberry.

Crow Blackbird.

Sometimes birds become too crowded in one place and their numbers need to be reduced. This is occasionally true of the crow blackbird, for when it descends upon a field in hundreds of thousands it inflicts real damage. But such instances are exceptional and can usually be

CROW BLACKBIRD.

prevented. One of the blackbird's commonest pursuits is to follow the plow, and after the birds have been doing it their stomachs are found "crammed with grubs." They also eat the destructive rose bug, curculio, May beetle, grasshopper, cricket and locust. Indeed, Professor Beal's conclusion is that "By destroying insects they do incalculable good."

Bluebird.

More than three-quarters of the bluebird's food is animal, nearly a quarter of it being grasshoppers and crickets, and a tenth caterpillars.

There is no cultivated fruit on his list, but as he is a bird which everyone is anxious to attract, it is well to know for which wild fruits he seems to have a preference. He has been found to eat bird cherry, choke cherry, dogwood, bush cranberry, huckleberry, greenbrier, Virginia creeper, strawberry, juniper berry, bittersweet, pokeberry, false spikenard, partridge berry and wild sarsaparilla.

Phœbe.

The phœbe lives mainly upon animal food. It destroys some useful insects, but does more good than harm by eating numbers of weevils, so injurious to peas, beans and wheat; and also by reducing the number of flies, bugs, May beetles, caterpillars, squash beetles, elm-leaf beetles and grasshoppers.

WEEVIL.

Red-Winged Blackbird.

Mr. Lawrence Bruner says, "In the red-winged blackbird we have a friend that we little dream of when we see the large flocks gathering about our cornfields during late summer and early fall. During the balance of the year it is engaged most of the time in waging war upon various insect pests, including such forms as the grub worms, cut-worms, grasshoppers, army worm, beet caterpillar, etc. Even when it visits our cornfields it more than pays for the corn it eats, by the destruction of the worms that lurk under the husks of the large per cent. of the ears in every field.

"Several years ago the beet fields in the vicinity of Grand Island were threatened with great injury by a certain caterpillar that had nearly defoliated all the beets growing in many of them. At about this time large flocks of this bird appeared, and after a week's sojurn the caterpillar plague had vanished."

In winter the red-winged blackbird serves the farmer by destroying seeds of ragweed, foxtail grass and bindweed, while all through the summer it does great good by "destroying myriads of caterpillars, grasshoppers and weevils. Indeed it is without a peer as an enemy to one of our most injurious classes of insects—the weevils."

Meadow Lark.

It has been said that the meadow lark eats clover seed, but in looking for it in stomach contents it was found in only six out of 238 stomachs, and 99 per cent. of the food at clover time was found to be insects, mainly grasshoppers—insects whose ravages have been notorious from the earliest times. Prof. Beal says, "The number eaten is so enormous as to entitle the meadow lark to rank among

SMALL GRASSHOPPER.

nost efficient of our native birds as a grasshopper de-er." It is estimated that the value of the grass crop l by meadow larks on a township of thirty-six square

miles each month during the grasshopper season is about $24.

"Nor are the other components of the insect food less important except in quantity. Some of the most injurious beetles form a considerable percentage of the stomach

MEADOW LARK.

contents." Among other insects eaten by the meadow lark are May beetles, ants, bugs, caterpillars, curculios and leaf beetles. In conclusion Prof. Beal says, "Far from being injurious, it is one of the most useful allies to agriculture, standing almost without a peer as a destroyer of noxious insects."

Woodpeckers.—Red-Headed Woodpecker.

The redhead eats more grasshoppers than any other woodpecker. It also assists in destroying June bugs and weevills. In the North its main food is beechnuts. It does some harm by eating grain and fruit, but not enough

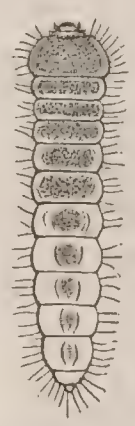
RED-HEADED WOODPECKER.

to amount to much. As it eats a large quantity of wild fruit, it could probably be diverted from the cultivated varieties by planting wild ones where they do not exist. The best would probably be dogwood, mulberry, elderberry, choke cherry and wild black cherry.

Sapsucker.

The sapsucker has the habit of drilling holes in the bark of trees, and, as his name would indicate, sucks the sap that exudes from the tree. But this is not all, nor does it doom him to disfavor. Now and then an individual sapsucker may girdle and kill an ornamental birch on a lawn;

HAIRY WOODPECKER.



but for one which does that, numbers are at work destroying the insects that gather at the sap on the hardy forest trees which the woodpecker will not harm. A description of the sapsucker's performance says, "As the sap exudes from the newly-made punctures, thousands of flies, yellow jackets and other insects congregate about the place, till the hum of their wings suggests a swarm of bees. If now the tree be watched, the woodpecker will soon be seen to return and alight over the part of the girdle which he has most recently punctured. Here he remains with motionless body and feeds upon the choicest species from a host of insects within easy reach."

Some sapsuckers have been experimented with to find out if they could live principally on syrup, but in each instance have died from the diet. Stomach examinations bear out the testimony. The sapsucker is largely an insect eater. Thirty-six per cent. of his solid food consists of ants. He also destroys wasps, beetles, bugs, flies, grasshoppers and crickets. He eats more flies than any

SAPSUCKER.

other woodpecker. To keep him from ornamental trees it might be well to plant the dogwood, black alder, Virginia creeper, wild black cherry and juniper.

TREE-BORING LARVA.

Downy Woodpecker.

This little woodpecker, the smallest of the family, has been accused of eating fruit, but in 140 stomachs examined apple was found in only two and strawberries in one. On the other hand, almost 75 per cent. of the bird's food is insects. Eleven woodpeckers taken in Kansas in winter contained 10 per cent. of grasshopper eggs. The little bird also destroys May beetles, plant lice and ants. A single wood-borer will often kill an entire tree, and one-fifth of the downy's animal food consists of caterpillars, many of which bore into wood and live on stems and leaves. Indeed, the downy is the most beneficial of all the useful woodpecker family.

Hairy Woodpecker.

The hairy comes next to the downy in usefulness. It eats a large number of beetles and caterpillars, almost no grain, and only wild fruits. Sixty-eight per cent. of its food is animal, including ants, beetles, bugs, grasshoppers and spiders.

Flicker.

Nearly half of the food of the flicker is ants. Three thousand were found in one stomach. As ants spread plant lice, destroy timber and infest houses, the flicker is certainly a useful bird. It does good work in other ways

FLICKER.

also. Like many innocent birds, the flicker has been accused of corn-eating, but only five out of 230 stomachs contained any corn.

Prof. Beal, having spoken of the good work the woodpeckers did in Nebraska at the time of the grasshopper devastation, says of the downy, hairy and flicker: "Not one of the trio shows a questionable trait, and they should be protected and encouraged in every possible way."

A Bull Caribou Without Antlers.

Editor Forest and Stream:

According to your request, I send more details of the caribou without antlers reported in your issue of July 25. As to its age by the teeth, it was past four years, having a full mouth. It was alone, was in full flesh, its hide unscarred by combats, its neck thin like that of a cow. Its hoofs, too, were full and sharp for the season, hence I conclude it was not in the rut. In my previous note for "indentation" read "indication." PINE TREE.

Commissioner Whitaker's Outing.

FISH COMMISSIONER HERSCHEL WHITAKER, of Detroit, has gone off on a six weeks' camping, hunting and fishing trip in Colorado and Wyoming. This, Mr. Whitaker says, is the first rest and divorce from business he has ever had, which is to say that it will be enjoyed to the full.

HORN SNAKE EVIDENCE.

MISSISSIPPI, July 8.—*Editor Forest and Stream:* I have captured and now have in possession a real, genuine, *bona fide* stinging snake of the most approved pattern.

It cost me an hour's hard and hot work, with two negroes assisting, to get him out of a thicket of weeds and bushes and reduce him to a state of captivity—that is corralled in a sack with the mouth tied up.

It also cost me $1.75 in cash to secure the aid of the negroes.

While battling with this monster of destruction and trying to get a string around him among the weeds and briers, and after getting him noosed, the negroes saw his sting repeatedly, and one of the negroes knew a man, to-wit, Harry Johnson, who had been stung by a snake of this variety and who died in twenty-five minutes in consequence.

Col. D. M. Russell, a prominent gentleman of this neighborhood, and likewise Mr. Frank Moore, assured me most positively that these snakes do possess stings, which they use with deadly effect. They knew this to be a fact, being familiar with the snake and having seen its sting.

To-day, when I was getting the snake out of a box and securing him for examination, which I did by tying him head and tail and in the middle of a long stick, Mr. Alcorn and Mr. Meek, likewise Mrs. Mosby, the landlady, all saw his sting plainly as he flirted his tail around. Another strong symptom which I failed to mention: when I first approached the snake before his capture and endeavored to drag him into the road with a whip handle, as he crawled away the end of his tail was curled up in a little vertical curve, something after the manner of the scorpion when disturbed.

Nevertheless, and notwithstanding this cloud of witnesses and circumstantial evidence, I soon found that I could take the end of his tail between my two bare fingers and squeeze it with perfect impunity, as in fact this much maligned reptile is one of the most harmless of creatures, without either capacity or disposition to do injury to anything larger than a frog, which he would doubtless swallow on occasion.

This specimen is 4ft. 8in. long, with size and shape similar to the chicken snake. His body is of uniform color, not quite black, but dark, with a tinge of wine color underneath; the ground color is scarlet, with irregular transverse bars of dark bluish color. These bars, instead of going straight across, have a jog, or offset, at the median line.

The snake crawls with its head and neck very close to the ground, and slightly flattened. It has a disposition to hide its head when disturbed, and flirt its tail around when forced to activity, which characteristics doubtless account for this myth of its being armed with a sting.

The dentition is similar to that of the other non-venomous constrictors of these parts.

The body is covered with scales about ⅛in. wide, and glistens as if the skin had been varnished.

My specimen is slow and deliberate in his movements and very docile. He is entirely undemonstrative, making no effort to inflict injury either with head or tail, and can be handled with perfect freedom.

And now I hope the stinging snake myth has been finally disposed of. The foregoing illustrates the proneness of the human mind to yield to deception, and lends its evidence in support of my position, to wit, that all the acts in the daily lives of the great majority of the human family are shaped and controlled by delusions of one kind or another. COAHOMA.

[This snake, so often referred to in these columns, is no doubt *Farancia abacura.*]

COPPERHEADS.

PRINCE'S BAY, N. Y., Aug. 3.—*Editor Forest and Stream:* It is really amusing to read the article by Forked Deer about the copperhead. It is a pity that he could not have had in the first twenty years of his life the information that I am going to give him now, but we are not too old to learn. I used to live in Massachusetts myself, and when I came away from there I left lots of animals and reptiles that I had never seen. But I still believe they lived there.

The copperheads den with rattlesnakes on the lower end of Mount Tom, on the southerly exposure of the mountain, in a large ledge composed of trap rock. This ledge is nearly at the top of the mountain, about 1,000ft. above the sea.

About the first of May, when the sun begins to strike in on those rocks, the copperheads and rattlesnakes begin to crawl out. I have been there myself and have seen them caught with a pair of wooden tongs about 8ft. long, and those we could not catch with tongs were shot. Copperheads are found on the south side of Mount Tom for a distance of four or five miles, and they are found in the meadows along the trout brook, and on top of the mountain at the same season of the year.

You must bear in mind that Mount Tom is in Massachusetts. But the war on rattlesnakes and copperheads has thinned them out and very few are seen of late years, but there are a few killed every year. If Forked Deer doubts the truth of this article let him write to William Street, proprietor of the Eyrie House, Mount Tom, Mass. Mr. Street always has a few rattlesnakes and copperheads on exhibition at his summer resort. In reading this article don't be misled. The tongs we caught the snakes with were about 8ft. long, not the copperheads. The Mount Tom copperhead rarely reaches over 3ft. in length.

As to color, the copperhead is rightly named from the end of his nose to the tip of his tail. A. L. H.

Editor Forest and Stream:

That the copperhead is very rare in New England cannot be questioned, but that Massachusetts has a few I know from experience. The only one I ever met in his native haunts I came upon suddenly while creeping up to some very shy birds on a ridge of hills a few miles from my home in Canton. I had come within 2ft. of the snake and should have stepped directly on him had I not while looking out for dried sticks seen his head sticking from under some leaves. The head was the only part in sight, the rest being completely covered by dry leaves, but I did not even raise my gun to my shoulder in order to kill my first snake of a large number I had handled and examined. The instant I saw the head I recognized it from descriptions I had read.

That was several years ago and I heard of no others until last year, when some men employed on the Blue Hill Reservation of the Massachusetts Metropolitan Park Com-

mission (this name attracts many wild creatures that otherwise would have stayed at home) caught two alive, besides eight or nine rattlesnakes. Unfortunately I was unable to get to see them, though I believe one is "pickled" in the Boston Natural History rooms.

This year I was more fortunate, as one of the park men informed me at once of the only one caught for 1896 as yet. This one, like the one I shot, was an innocent looking little fellow barely 3ft. long. He was also similarly marked, being spotted a good deal like a rattler and washed all over with rusty copper, the scales on the nose and forehead being most conspicuous, as they were most shiny. He was in a box with a glass cover, having for company one yellow and one black rattlesnake, also a large blacksnake. The rattlers and the copperhead stayed in one end of the box, seeming to be afraid of the blacksnake, which twisted around as he pleased. This appears to be good evidence in support of the blacksnake's ability to kill a rattlesnake.

The fishing Forked Deer has done, as he hints, would hardly have helped him to see a copperhead in my section of the country, as all I have heard of were in very high ground, which is in exact accordance with the views of FOREST AND STREAM, which is as things should be.

Further particulars can doubtless be obtained by inclosing a stamp to Mr. Dings, of the Blue Hill Reservation, Ponkapog, Mass. J. H. BOWLES.

POTTSVILLE, Pa., Aug. 3.—*Editor Forest and Stream:* The copperhead is quite common in our mountains hereabouts, but this year seem to be unusually plentiful. All of us who do any fishing or hunting are perfectly familiar with them. Quail and grouse are fairly plentiful. F. C. P.

POTSDAM, N. Y.—*Editor Forest and Stream:* Up here in St. Lawrence county, N. Y., much further north than Connecticut, there are many copperheads. I know this because I have killed them. Last week while visiting in the country my cousin killed one, helped by the dog, who will not touch them till he can grab the tail.

NI-HA-NA-WA-TE.

HAS THE SPARROW REFORMED?

WILLIAMSPORT, Pa.—*Editor Forest and Stream:* Inclosed quill contains an insect and some larvæ of the same. The history of the insect is as follows:

Several days ago we noticed a number of bluish-gray patches on the grass of our lawn. These patches had about the appearance of the track of a person who had been walking through ashes. The blades and stems of the grass, which formed the patches or spots, were thickly crowded with the insects, and the latter had the appearance of small hoppers when they partly flew and partly leaped after being disturbed.

We had already determined to apply a solution of Paris green to the grass when an unexpected, much abused ally made his appearance. A swarm of European sparrows devoured the obnoxious pests, and in the course of a few days reduced them to small numbers. The sparrows still hunt the scattered few of the insects and will without any doubt keep them successfully in check.

Another, to us, new habit of the sparrow has been noted through the present summer—that it lives with the best understanding among a number of robins, which latter birds are in the habit of extracting from the ground numbers of earthworms to feed their young. The sparrows, with heads inclined to one side, also drew many fat worms in exactly the same manner from the soil, between the grass, and never was there noticed any dispute between our friend with the red breast and the foreigners of bad reputation, the English sparrow.

AUGUST KOCH.

[In the quill sent with this letter were five species of insects, namely: *Jassus inimicus* (Say.), *Orgilus mellipes* (Say.), *Hydrellia formosa* (Löw.), *Psilopa atrimana* (Löw.), *Odontocera dorsalis* (Löw.). Of these, the first is a leaf hopper and is decidedly injurious to vegetation; the second is a parasite of the family *Broconidæ*, and is undoubtedly beneficial; the last three are muscid flies, which are not especially injurious or beneficial. We conclude that the sparrows were eating the leaf hoppers, and if so they were doing good service.]

The Florida Manatee.

Editor Forest and Stream:

I perceive that FOREST AND STREAM is still firing an occasional shot at the Florida game butchers, but I'm afraid its ammunition is wasted, for most of them belong to that stupid class who neither read nor think.

Even men who consider themselves respectable go deer hunting in midsummer, and would shoot a fawn three days old without compunction, and then go boasting about that they had killed a deer.

Not the slightest respect is paid to the game laws about St. Augustine. They commence on quail in September, and every Sunday for miles around a stranger might suppose a belated Fourth of July was going on.

FOREST AND STREAM appears to be troubled about the fate of the manatee, and so am I; but Florida has legislators of wonderful foresight, who can always be relied on to see the danger of exterminating game and plumage birds after they have disappeared, and it's hardly worth while to trouble ourselves about the rapidly disappearing manatee, for our wise solons will attend to that, as they attend to everything else in that line. DIDYMUS.

Color Phases of the Scarlet Tanager.

PHILADELPHIA, Pa., Aug. 4.—*Editor Forest and Stream:* I have been much interested in the articles lately published in your paper on the plumage of the scarlet tanager, more especially as I have recently made a careful study of the plumage changes in this species in preparing my paper on "Molting of Birds" (Proc. Acad. Nat. Sci., Phila., 1896).

It is remarkable that Dr. Coues should still query the statement that the male scarlet tanager changes to the olive-green dress in the fall, and that Mr. Ridgway even in the new edition of the Manual makes no allusion whatever to the olive winter plumage of the male bird.

Specimens showing the change from the red to the olive plumage, though not very plenty in collections, owing to the apparent prejudice against making up ragged molting skins, are certainly to be found in the larger museums. I have recently examined a half dozen such specimens taken at various dates in August, showing all gradations, from one in which the olive feathers are just bursting from the sheaths, and do not yet show on the surface of the plumage, to some that are entirely olive.

There is one interesting point in the coloration of the primaries and secondaries that has not been mentioned by your correspondents. In some of the red spring males these feathers are dull, brownish black edged with olive, as in the female, while in the others they are jet black.

An examination of a large series taken at all seasons shows that the spring molt from olive to red does not extend to the long wing feathers, so that the young bird in its first breeding season retains the olive-edged primaries and secondaries of his fall plumage. Then at the annual molt in August, when he resumes the olive dress, he acquires a new set of wing feathers, which are jet black. The black shoulder patch mentioned by Mr. Koch is retained throughout the winter, as shown by specimens from South America WITMER STONE.

Game Bag and Gun.

A NEW MEXICO SHAVE.

WE started from Virginia on Thanksgiving Day to look after some mining property in the Toas range of mountains, near Tres Piedras, New Mexico.

Our first stop made was at Pueblo, Col., where a most welcome leg-stretching was employed in purchasing our outfit of mining tools, provisions and other necessaries of camp life, and again we took our way toward the land of the ancients, which, as seen from the Denver & Rio Grande route, presents little else to view but a barren waste of mountain and plain, relieved occasionally by deep arroyos or dry river beds that mark the past of mighty cloudburst torrents.

Arriving at Tres Piedras, we spent the night, finding none of the "blissful haven of rest" described to us, but instead a good deal of a rapid little mining town of the usual hotel, saloon, dance hall and barroom outfit.

In the morning we hired a team and moved over to Toas, the last resting place of that famous hunter, scout and Indian fighter, Kit Carson. Here we pitched our camp, hired our men, and with drill and pick commenced what proved to be a long and fruitless struggle with rugged nature for her precious metals.

A month of steady work brought a craving for variety, so a bear hunt was decided upon, and the carcass of a cow was dragged out on the range where Bruin & Co. were known to frequent. Night came and with it we took our stands, placed with a view to intercept the bear should one be attracted by our bait. I, on account of my youth and general inexperience, was given a tree about 50yds. from the carcass and presumably out of the line of action.

Left to myself, I was soon perched on a limb with my back to the trunk and high enough up to see over the underbrush, though I confess this wasn't the sole object of my elevation. A light mantle of snow covered the ground, adding to the clearness of this already beautifully clear, though cold night.

At first my position was comfortable enough, but after a while inaction, with its slower circulation, allowed the cold to penetrate, and time moved with leaden wings. Then I got to speculating if it wasn't all a put up job on the tenderfoot, and the boys were laughing over it in the cabin's warmth.

But these annoying doubts were cut short by the sounds of a peculiar shuffling tread coming through the underbrush. Then, to my horror, an immense, so it seemed to me, black bear came in view, stopped, took a smell as an observation, and started toward my tree. My hair began to get up on end, every nerve was a jump, and instinctively my limbs prepared to carry my body to the top of the tree at a gait no bear could catch; but again bruin stopped and sniffed the air uneasily, and from noting of his actions sprung the thought that perhaps I wasn't the object of his intentions after all, and that if I kept quiet he mightn't find anything suspicious and go his route. Then like a flash I remembered I was out for bear; also, if it ever became known that I had such a chance and let it slip my standing in camp would be gone forever.

These thoughts pulled me together with a jerk, and shoving my Winchester in position I took the best aim I could and pressed the trigger.

Perhaps it was the kick of the .45-90, or the excitement, or numbness, or all three together, that made me lose my balance. I can't say. Suffice it to tell that almost with the report I was flat of my back on the ground, not over 25yds. from the first bear I had ever seen free of cage or collar.

On my feet, I realized that that bear was a fighting bear, and also to outrun him was impossible, one leg being hurt in my fall; so whipping out the pair of heavy Colt's revolvers that I had been twitted for bringing along, I opened up a fusillade such as, one of the boys afterward remarked, reminded him of the Maxwell-Jones war back in Texas.

The last chamber empty, I dashed, one after the other, the heavy weapons at the savage face now almost at me, and, trying to spring to one side, tripped and fell behind a boulder with a despairing cry, sure my time had come. But no! Even as I fell rifles began to crack, and "mine enemy," in a last attempt to reach me, dropped almost by my side. The boys were soon anxiously crowding round, and stood. This recalled my dazed senses and I promptly responded. Revived, the "cheek" begot of an hundred year American independence asserted itself, and with all the dignity torn clothes and scared face could command I demanded: "Who was ass enough to shoot my dead bear's skin full of holes?" But the boys understood, and with many a shout and laugh cut up a regular war dance, so glad were they that I was not really hurt.

Stock was taken of our victim, a very fine specimen of the black bear. We found nine bullet holes, and six of these were credited to me. "Pooty good fur night work with a pistol," our captain pronounced it.

My weapons being found, bruin's head was lashed to a pole, and with the boys dragging him I marched limping but triumphant into camp. MACK.

SPORTSMEN PAST AND PRESENT.

Editor Forest and Stream:

I have just read an article headed "How Sportsmen Originated" from the pen of the gentleman who harbored a doubt as to clipping partridge heads with a rifle. I have long since forgiven him for questioning my character for truth and veracity, and will state beforehand that it is through no ill will that I ask space in your valuable paper to make some comments on his recent article.

I believe the gentleman has made the too common mistake of confounding two distinct types of woodsmen, viz., the sportsman and the hunter, and it may be he has woven in some of the characteristics of the scout. To be candid, I think he has.

I take exception to applying so broad a meaning to the term sportsman. The early settlers of whom he speaks did not kill game for sport. My grandfather was one of the first white settlers to follow Gen. Wayne's trail into eastern Indiana. He was a successful hunter, as were his sons, who grew up among the Indians and wild animals, but they were hunters and not sportsmen.

They were fine rifle shots, and, like the native Indians, could course through the woods as if guided by instinct; but they shot deer for the carcass and not for sport. My father has told me how he would start deer in the morning and run them on foot a circle of twelve to twenty miles, getting nearer as they became warm and tired, until when the opportunity offered he dropped one, which he would hang to a stout sapling; then, picking up his rifle, he started in pursuit of the remainder of the herd, loading as he ran. We cannot censure these pioneers, for meat was a necessity with them, and in this year of grace the land over which they chased the noble deer is largely through their industry converted into a fertile vale, too valuable for agriculture to shelter a hunter. And yet the sportsman can take a reasonable bag of quail in season. He can kill an occasional squirrel, and try his skill with the rifle at a rabbit on the jump. If he will broaden the meaning of sportsman sufficiently, he can crack away at the rabbit with a scatter gun, making a mess of him if he hits. Yes, there certainly is a place where the hunter ends and the sportsman begins.

I have thought of this while reading recently of the slaughter of the noble elk out West. And what sport can there be in taking fifty bass in a day, or killing fifty geese? This is not sport—it is slaughter.

The pioneers were hunters from force of circumstances. Practice made them perfect in woodcraft. We, their descendants, inherited their virtues, and to them we are largely indebted for our love of the woods and the freedom we there find. But hunting is no longer profitable except as viewed from the standpoint of a true sportsman. I think I am as good a rifle shot as my father was, and I can't comprehend how anyone can be possessed with a greater love of the chase than I am; but though the opportunity presented itself, I could not enjoy the slaughter of game to the extent it was practiced in years gone by and is now going on in remote parts of the United States.

The hunter kills game for the game, the sportsman kills for the sport; he accepts the game in proof of his ability, and puts it to good use because it is rare and worthy. Above all, he is not a hog, and knows when he should quit killing. I wish to cast no reflections on the pioneers, but owing to the scarcity of game the hunter of to-day should be suppressed. Let us be sportsmen.

G. W. CUNNINGHAM.

GAME IN NORTHERN AROOSTOOK.

Editor Forest and Stream:

There have been many reports the past two years of the increase of moose in northern Maine, but as I have not been able to go to the woods to see for myself I have been skeptical. Now I no longer doubt, since I learn on reliable testimony of settlers and lumber cruisers of the numbers seen, greater than usual, and of course of the greater killing by sportsmen from outside and by the settlers themselves, who in the far back haunts of this game on the headwaters of the St. John and its tributaries work their own sweet will with never a fear of wardens. But there is this difference in the two classes named: whereas the city sportsman (?) is mainly animated by the desire to boast of his prowess on returning, the settler kills to supply his own and his friends' families' needs for food, and rarely leaves any to waste. I know of one tributary, formerly a favorite haunt, that for many years did not contain a moose until this season, where over a dozen were seen by one party cruising, and where several have been killed already. As the game is so persistently hunted in season and out, it is clear that the increase cannot be accounted for except by migration from the great moose country of the Northwest. Maj. Butler's book tells us of that great moose country in "The Great Lone Land."

When game warden Collins came into this section a year or so ago it was thought by some that he had taken his life in his hand and meant to stop poaching. But Charley Morris's bullet at the mouth of the Allegash seems to have changed his inclination, for he has turned boniface at the old Eagle Hotel, Fort Kent. By the way, Morris is not the villain and desperado he has been painted, as hundreds of sportsmen and others who know him well will testify. I have known him since he was a babe in arms at the old log camp, foot of northeast carry on the west branch of the Penobscot. Old Joe Morris, who then run the camp, was his father, and here he was born and grew up the good guide and hunter that he is. Collins was not enforcing the game law at the time he was shot, "but that is another story."

Deer too are plenty as fleas on a fox, and are increasing rapidly. All the killing, in season and out, cannot equal the natural increase. When the deer go it will be when the wolves again return in force.

As to caribou, but little is seen of them during hot weather in any year. I have an opinion that flies do not plague them so as to cause them to take to water. No doubt they will be plenty as usual when their favorite season, winter, sends them frolicking over the barrens.

PINE TREE.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

AN IDEAL LOG CAMP.

BIRCH ISLAND, Hobb Lake, Me., Aug. 6.—*Editor Forest and Stream:* I have just completed on this lovely island an ideal log camp, at least I consider it so, and those who have seen it say that there is none so handsome in the New England States. Be that as it may, it is a superb piece of log building, and the situation on this beautiful Hobb Lake, with a charming view of wooded islands and a range of mountains on the horizon, complete a most attractive picture.

The ground plan of camp is as follows: First floor, two rooms, 18×20ft. The front room, with open brick fireplace, I use as a living room, the rear room I use as a billiard room. The entrance up stairs is from the billiard room. On the second floor are four chambers, 15×10, and amply large for two single beds in each, besides the other needed furniture. There are two windows on either side of the roof, thus giving each chamber two windows. A covered piazza in front, 20×8ft., completes the plan. The whole structure is covered with hand split cedar shingles 2½ft. long. The logs were very carefully chosen, are straight and uniform in size, and are put together in splendid shape. The interstices between the logs are filled outside and inside with quarter rounds of basswood instead of the usual moss, and this helps to heighten the clean, white appearance of the beautifully peeled logs. Planed spruce floors and sheathing of same between the rooms, the logs showing in the ceilings. Bear skins are spread on the floors, and trophies of the chase are put up and about everywhere. Rods and guns are supported on brackets made of deer's feet bent to the proper shape.

I may as well mention a few attractions of this lovely region. Deer are exceedingly plentiful. I scarcely expect to be believed, but at Turner Pond Camp (one of the outlying camps connected with the sporting preserve of Mr. L. P. Kinne, who owns the island) one of the guests last week counted forty-one deer on the borders of the pond at one time. I myself have frequently seen a dozen at once. And a few days since I saw a bull and cow moose at Turner Pond and my guide paddled me within 30yds. of them (it was in broad daylight), and then didn't dare to proceed further, for the moose both came out into the pond to meet me, and the guide did not dare to go nearer. It was my first sight of a moose and I could scarcely have wished for a more interesting one. I paddled up to a group of five bucks and one doe on the same pond, all standing within a space of 20ft. square. This pond is as noted for trout as deer, and is one of many ponds teeming with good-sized fish. I have been about some of the Maine sporting camps, but I have never found such a beautiful scenic section coupled with the superb hunting and fishing. There is no difficulty in getting the legal limit of game in a very short time.

The first day of October of last year my party stayed at the Hobb Falls Camp, on Moose River, nine miles from the main camp, and at night three deer hung in camp beside a canoe bottom up covered with partridge, duck and small game. Do you wonder I built a camp?

C. S. COOK.

A TEST OF THE .30CAL. MILITARY.

MENDOCINO COUNTY, Cal.—*Editor Forest and Stream:* I have read with much interest the discussion (already closed) which the question of A. H. in your issue of June 11 brought forth, viz., the most suitable caliber for large game, and I admire very much the masterly manner in which A. H. considered and handled the evidence, and the conclusion arrived at, .45 90 being my choice.

But I see by your issue of July 25 (which is just to hand) that the .30cal. U. S. Army or military and sporting rifle is brought quite conspicuously to the front, and as I have had an opportunity of trying one of these guns for accuracy and penetration, and thinking the results would be interesting to many readers of FOREST AND STREAM, I submit the following report:

About five weeks since, a dealer in this city who had just added one of these guns to his stock said to me: "This gun is warranted to me to be accurate for one mile, and will shoot through a solid bar of iron 1in. in thickness. Let us try it some day. That is," he continued, "with these cartridges loaded with smokeless powder and metal-jacketed bullets." This statement did not surprise me, for I had often before heard and read similar and even greater things about the almighty capabilities of the new .30cal. rifle with nitro smokeless powder and steel-jacketed bullets with chilled points (with a 6in. twist to the rifling), which gave the bullet six turns to the inch.

A few days afterward I called for the gun. The owner then being absent on business, I procured a piece of tough iron 8in. long, 2½in. wide and 1in. in thickness. Then with the gun, ten cartridges and a wiping stick I went home to my ranch.

The gun was .30cal., barrel of nickel steel, 26in. in length, made by the Winchester Arms Co., with cartridges made by same company, loaded with 30grs. smokeless powder and a 160gr. metal-jacketed bullet.

On screwing one of the bullets in a vise and pulling the shell off the bullet it would seem that the heavy metal in the shell was crimped quite too deep into the jacket which incased the bullet, for the jacket parted at the crimp and stripped completely off the base end of the bullet. I thus learned the general make-up of the cartridges and their contents and had nine left to shoot with.

First shot, at the iron 1in. in thickness; distance, 20ft. from breech of gun. Result: flying fragments to a dangerous degree, and an indentation in the iron about the size and shape of the large end of a quail's egg and less than ¼in. in depth.

Next came two shots for accuracy and penetration in wood; distance, 40 measured yards from a rest. The rest consisted of a seat, support to lean right side against, support under each elbow, and gun resting lightly about 8in. from muzzle on a soft folded coat. Target consisted of pasteboard, properly lined with pencil, and speck in center to aim at, tacked on flat side of block, of green black oak; I moved the pasteboard a little after first shot. Result: first shot struck ⅛in. above speck aimed at and ⅜in. to right of center perpendicular line. Second shot a little lower and closer to center perpendicular line. A 5-cent nickel just completely covered both the bullet holes in the pasteboard. On splitting the block I found first bullet, extreme penetration, 4¼in.; second bullet, 4⅛in.

Next I fired two shots off-hand, distance 375yds. measured; target, small building, with half of letter envelope about 3½in. square to aim at; fired both shots before examining. Results: one bullet 8½in. to right of paper and 5in. low; second bullet, 5in. to left of paper shot at and 3in. low.

At this time I was accompanied by a friend who has been an acknowledged good shot for many years, both with gallery and sporting rifle. We then tried to find a rabbit to see how clean we could wipe it off the face of the earth, but we failed to find one, so concluded to finish our cartridges at a black stump; and on finding a suitable place to stand, where the rear sight would be in the shade and the front sight in the sun, I stuck a small white flower 1in. in diameter on the side of the stump and fired at that, ninety paces distant, off-hand. My first shot hit above and 1¼in. from the edge of the flower. My second shot was a little lower and 2in. from flower. The third shot, fired by my friend, landed 1¾in. high from center shot at and to the right. The fourth and last shot was fired by my friend, the bullet striking sidewise and 5in. high and to the right. This was caused by the imperfection of cartridge, no doubt.

Omitting the whys and wherefores, I will give as my opinion, judging from the very meager trial or test just had, that for accuracy at any reasonable distance this gun is in the No. 1 first class, and as to penetration it is equal to all that can be reasonably expected with so light ammunition.

My friend, on witnessing the performance of this gun and also shooting it himself, frequently expressed himself as follows: "Why, with the sights that are on my Ballard on this gun, either you or I could kill a deer with it at 500yds." "I believe when I get a little used to this gun, with sights like what I have on my Ballard, I could hit silver dollars all day at 100yds." "Next thing I buy bigger than a jackknife will be one of these guns."

I will further state that the measurements, etc., as given above, were taken at the time the shooting was done for the purpose of showing the owner of the gun, who has since informed me that he had made a mistake in giving me the thickness of the iron; the iron should have been ½in. in thickness.

J. M. ROBINSON.

Uncle Lisha's Outing.

BOSTON, Mass., July 22.—*Editor Forest and Stream:* Allow me to express the hope that the series of charming sketches, "Uncle Lisha's Outing," lately concluded in your columns, may soon be republished in book form.

I am sure I voice the wishes of many others of your readers equally with my own in this desire. The several characters whose haps and mishaps are so graphically and interestingly described are to many of us like well-loved and long-time friends, whom we meet again with sincere pleasure. Personally I have passed many pleasant hours with "Danvis Folks," in "Uncle Lisha's Shop" or in "Sam Lovel's Camps," and I hope soon to place this chronicle of their latest deeds on my library shelves, beside the volumes wherein their earlier experiences are described.

I would like also earnestly to thank Mr. R. E. Robinson for the pleasure I have derived from these delightful tales.

During my boyhood's years I lived in a section of country where the dialect as spoken by these characters was the common language; so that reading it this late day is to me like hearing the voices of the past, awakening memories that are at once both pleasant and sorrowful.

With sincere best wishes for the constant and increasing prosperity of FOREST AND STREAM, and the hope that it may continue to be in the future, as it has been in the past, the leading sportsman's journal of the country, I remain

FRED. F. ROBY.

Death of Dr. Bamber.

ROCHESTER, N. Y., Aug. 8.—*Editor Forest and Stream:* Dr. O. Stewart Bamber, formerly of this city, died on the evening of the 6th at his farm at Canastota, N. Y.

The Doctor was an enthusiastic sportsman, never as happy as when following a well-broken dog through the partridge or woodcock cover.

He had for about fifteen years been a regular reader of the FOREST AND STREAM, and had at the time of his death the complete files of the paper for about twelve years in his office.

He acted as secretary of the last bench show given in this city, and I think Uncle Dick will recall the numerous trips from Machinery Hall out to the back entrance to the fair grounds in a pouring rain and gale of wind, with a very poor lantern to guide us, mud over our shoes and our Uncle's duster hanging about him like a dish cloth.

One of the Doctor's latest contributions to FOREST AND STREAM, if I remember correctly, was "Through to Twitchell," published some three or four years since.

He was for several years owner of the beagle Jack Rowett, which did some winning down the circuit two or three years since.

He leaves a wife and one child, together with a host of warm friends, to mourn his loss.

GEO. C. CROSS.

Game Pictures.

THE series of game pictures by Mr. A. B. Frost, published by Charles Scribner's Sons, New York, has been enriched by two more recent contributions, the subjects being "Autumn Woodcock" and "Quail Shooting." In the latter two pointers apparently have roaded the wary birds from dense cover into the open, where the climax, the rapid flight of the birds to cover, the dogs on point and back, and the sportsman with gun to shoulder and about to fire, make a very pleasing scene. Mr. Frost selected the surroundings most happily. A rail fence along which is a dense growth of bushes with a touch or two of evergreen trees, a ravine running through the middle ground, and old fields peeping through in the perspective, with woods in the background softened by distance, make an ideal haunt of the quail.

"Autumn Woodcock" is a very pleasant picture, though the subject is a most difficult one to handle, as to show the woodcock in his typical haunt would be much like painting a bear in a cave. Yet Mr. Frost has done well. Along a glade where woods and open meet, where a brook and the shadows keep the soil damp, two setters—the one orange and white, the other black and white—have come to point and back, the shooter emerging with his gun at ready for the expected rise of the phantom bird. The text accompanying the pictures infuses a further spirit of the sports of the woods and fields, making reminiscent chapters common to the life of all who have had the hunter's enthusiasm and experience.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

VII.—George W. Simpkins.

"WHEN vacation time comes," said my mother, "if you are a good boy and go to school regularly, don't ruin your shoes in the swamps nor tear your clothes in the nut trees, you may go and visit with Mr. Simpkins, where you will have all the fishing and shooting that you want. He writes that he would like you to spend your vacation with him, and perhaps you may see a deer, for they are plenty near his place. It all depends, however, on the way you behave between now and then."

"Who is Mr. Simpkins, mother, and where does he live?"

"He is a farmer who lives up in Warren county on the border of the great woods. His farm is on the Schroon River, where there are plenty of fish, and the woods are full of game of all kinds. He married a distant relative of mine whom you never met, but who spent some months with us before you can remember."

Here was a prospect of fun! Fishing and shooting, with the chance of seeing a real live deer. There was a stuffed buck in the State Geological Hall in Albany, but it appeared to be ridiculously small to my notion, for I had read that "A monstrous buck came crashing through the underbrush," while the little animal, a trifle moth-eaten, that stood stuffed and looking unhappy, was not as big as our brindle cow.

This was in the spring of 1849—recalled by one of mother's letters now before me—and I would be sixteen years old when August came. From a public library Cooper's "Deerslayer" was borrowed, and John Atwood and I studied it carefully. It was excitingly interesting, and we held our breath when the cap was lifted from the old pirate Hutter, in his ark, and he was found to be scalped when they thought he was only drunk, and the whole story of Indian fighting, capture and escape from torture, so took possession of us that the book was finished before it occurred to John to say: "It's a mighty good story, but I'll be durned if it tells much about killin' deer. I thought it was a-goin' to tell a feller how to find 'em, an' how to shoot 'em, an' it's all about killin' Ingens. I don't want to kill any Ingens—they never hurt me none—but I would like to get a crack a deer. You got to have a good rifle an' take 'em jes' back of the fore shoulder, right in the heart, or they'll run off an' die. You couldn't kill a deer! You'd git scared if you saw one. I don't believe ole Port Tyler could kill a deer, 'less the deer stood still, for they jump 100ft. at a lick, an' lightnin' 'd have a hard time to ketch 'em."

The days were filled with talk of the coming expedition into a land where the deer had not only lived, but had been seen feeding among the cows; and the nights were filled with visions of deer whose horns were as high and branching as an oak, and the squirrels were leaping from tine to tine, disturbing the partridges which were nesting in the antlers. Even dreams have ends to them, whether of sport, fame or wealth. The long-looked-for day came, and the start was made. At this day all is blank until Glens Falls was reached, and whether we started from Albany by rail, canal or stage is uncertain. The ecstatic pleasure of at last really going to this promised land of fish and game obliterated all such purely mechanical ideas as the ways to get there. But Glens Falls was a place to be looked out for with open eyes. Here was the cave in which Hawk-Eye and Uncas stood off the Mingoes! Here was the precipice from which Uncas killed the Mingo who fell from an overhanging tree, and Uncas was chided by the scout for hitting him some "2in. below" the painted belt line, as memory recalls the story.

Mother went up with me. She was entirely ignorant of the history of that terrible night in the cavern when the screams of the tortured horses directed the rescuers to the cave, and actually seemed indifferent about visiting places which to me were not only historic, but sacred.

Here I must pause and look back. At that time the difference between history and fiction was not a strictly defined line. My ideas of such things were crude. To-day, forty-seven years later, when one should be able to discriminate between fact and fancy in what passes for history, that line seems as misty as ever. Prescott's "Conquest of Mexico" is grand, but we do not find the evidence of an advanced civilization before the conquest of that country. The great temples have not a stone left. There is not a trace of an aboriginal, intelligent people, while at Glens Falls the cave of Uncas is there, in part. The great cliff, where the Mingo was shot by Uncas, is being torn down, and a few years ago I was there with a Fish Commissioner who had no poetry in his soul, and who actually suggested cutting away a portion of the celebrated cave of Uncas to make a fishway!

I have strayed from my text, but let us hope that the people of Glens Falls or of the State of New York will preserve this cave as all other historic places are preserved, for if the cave is not a part of real history it should be made so by law.

We had a rest at Glens Falls and then took stage for Caldwell, at the foot of Lake George, and so on to the village of Warrensburgh. Perched beside the driver, the trip was exhilarating, and the scenes of the French and Indian war which he pointed out emerged from the mists of imagination and became realities. Two young canal drivers were seated on the boot, with legs dangling, amusing themselves with song, and during a lull in the talk with the driver or a slackening of speed snatches of a quaint melody floated up. It was a song never heard before nor since and, like all the old ballads, of interminable length. Alas! the railway has killed all the country ballads and substituted the inane songs of the roof-gardens and concert halls, to the disgust of the student of folk-lore. This song of the canal drivers was a quaint one, relating to the heroic feats of a Mr. Riley, who had lost an eye, and its quaint old chorus of "To ri odalink" rings in my ears as I write; the rest is lost.

It was evening when Mr. Simpkins met us at the hotel in Warrensburgh with his team. He was a stalwart farmer whose appearance, from team to person, denoted thrift, and his cordial reception soon made us friends. A drive of three or four miles northward brought us to his farm, a welcome from Mrs. Simpkins and supper. The house was at the foot of a mountain, up which ran a

road, and most of the farm was in a deep bend of the Schroon River, where the soil was very rich and from which a crop of grain had been taken. It was too late in the day to fish or shoot, but my fishing tackle was laid out and inspected and we talked of field sports until bedtime, when a tired boy turned and caught enormous fish which unhooked themselves and either walked back into the water on their tails or vanished into air. A squirrel which I had killed turned into a live bear and was charging me when Mrs. Simpkins called me to breakfast, and the real world came suddenly back. If the shade of Shakespeare could have spent the night with me he would have amended his saying: "Dreams are the children of an idle brain." Mine was busy.

Bait had been provided and the river was reached. Mr. Simpkins had often fished before, but it was evident that my schooling under Reuben Wood and John Atwood rendered me competent to show him how to rig his lines, select his poles and how to properly impale a worm. He chose a low point of land where there was a high bank and a deep hole on the opposite side, in the bend, and we fished. At that early day there were no black bass in either Schroon Lake or the river, and we took a fine lot of perch and a few other fishes. He was an observant man and showed me where kingfishers had nested in a hole in the bank, under a stump, and we dug out the nest and a lot of fish bones, and the nesting habits of this bird were learned.

Gray squirrels were plenty, they could be seen and heard in all directions from the house, and as this kind of game was rare about Greenbush, where the little chickaree, or red squirrel, was abundant, there was every morning either fishing or squirrel shooting, and in the evening a shot or two at the great northern hare, a new animal to me, which they said was white in winter. Mother went home after a week, saying that she had eaten fish and game enough to last for some time, and I went up the mountain the day before she left and brought her five ruffed grouse—we called them "pa'tridges"—to take home to the family. I made the usual promise which a mother always expects, to be a good boy; no hard matter, with no schoolmaster near and all the time to do as I pleased.

One day we were fishing in the river, taking an occasional fish and watching little rafts of boards float by, when one with a man on it came in sight. He was steering it with a pole and starting any others that had lodged along the banks; when he saw us he pushed up ashore and, after the usual greeting, said: "Simpkins, we are going to have a deer hunt day after to-morrow, will you go?"

"Yes, where are you going to make the drive?"

"Over on the West River, where we went last year. Our boys haven't had a bite of venison this summer and they think it about time for it, we'll look for you, sure," and he poled his raft into the stream and was soon lost to sight.

The "West River" was a local term for the Hudson; the Schroon, of course, being the "East River." I had heard that Simpkins was a mighty hunter, especially good at still-hunting. He said that the season was too early for the latter sport, because the trees and underbrush were in full leaf. He brought out his favorite gun, oiled the locks and cleaned the barrels. It was a double gun, one barrel a rifle and the other a smooth-bore, quite heavy and handsomely finished. I had been using a single-barreled shotgun on the grouse and squirrels, and had not seen this one. Old Gunner, his hound, had an eye on the gun, and it might have been hard to say whose excitement was greatest, his or mine. There was this difference between us: Gunner was asking and expecting to go, and I would not ask and did not expect to be invited to join in a hunt with men who might not like the intrusion; but you have no idea how much I would have liked an invitation!

"Ever shoot a rifle?" he asked.

"No, but I've seen a man shoot at a mark lots of times, and have often sighted it on his targets, and I know how to load one." All this to show that I thought I could be trusted with a rifle if he'd only ask me to go. O, if he only would! "I know you put the bullet on your flat hand and pour on powder enough to cover it, and that's the proper load. Then you put the powder in the rifle and lay a greased patch over the muzzle, put the bullet on the patch and force it down, way down until it is home and the ramrod bounds on it. The rod won't bounce if the bullet isn't home." This was to give him further proof that I knew enough about a rifle to use one. Would he ever take the hint?

"I've killed eleven deer with this gun," said he, "and I haven't had it two years. Killed all but one with the rifle barrel. That one was close by, not over 30yds. off, and I missed it clean with the rifle; the bullet may have touched a twig and gone off somewhere else, for the deer stood broadside to and didn't see me. He jumped at the shot, but I fetched him with buckshot in the other barrel. Ever see a deer?"

"Not a live one, only stuffed ones in the museum, but I would like to see a real live deer in the woods, jumping as they do in pictures." There! that was a distinct bid for an invitation. If it didn't come after that he was a stupid, or did not want me. He put the gun aside, filled his powder horn, spent much time with other things and then slowly said:

"How would you like to go along?"

"Oh, Mr. Simpkins! you don't mean it! I would be in the way, I fear."

"No, you can go if you like; I'll go up the hill to Kellam's and borrow a rifle for you; he has three, and you can practice with it this afternoon and we'll get an early start in the morning."

My rifle shooting that afternoon did not break all records, unless for bad off-hand shooting; but who could do good shooting when all a-tremble from head to foot? The fact that many monstrous bucks were killed in bed that night proves that I had some sleep. Otherwise it might be doubted if an eye was closed.

By the time we had gone a few miles the party numbered six men and about as many hounds. A man took all the dogs to put them out singly as he found a deer track, while the rest went on to take stands on the runways. I was placed in a road looking over a field to a piece of woods some 200yds. off, and told to watch a point where a deer might come out, but not to shoot until it had jumped the rail fence, when it might stop to look up and down the road if not frightened, and so a good shot might be had. It seemed many hours, it may have been half of one, when a hound that had been baying for some time in the distance was evidently getting nearer, still he was afar off. A farm wagon came rattling up the road with three men in it. When opposite me, as I turned to look at them, one arose and yelled, "See that deer!" I looked back and saw something like a small calf turn and reenter the woods. So that little thing was a deer! Where was the hound? In the pictures the hounds were pressing the deer hard, some of them tearing at his flanks (see advertisement of the Bromfield House in one of the last pages of this journal). More time passed, such long hours I never did see, the sun was not yet at meridian, and the hound kept slowly approaching—O, so slow—and finally old Gunner came out of that bit of wood, giving tongue at intervals, and after slowly getting to the place where I first saw the deer he turned and followed its track, making a V out into the field. I had at last seen a real live deer! That was a thing to tell John Atwood and Port Tyler, and to brag about.

After a while a man appeared from the woods. It was the driver. He saw the track and wondered what turned the deer back. He said that it was an old runway that was seldom used and none of the party wanted it. "Yet," said he, "the first deer of the season took it, and you'd have got a shot only for that wagon."

Perhaps it was well that it turned out so, for, as he spoke, a rifle shot was heard off to the left, where the deer went, and we learned afterward that one of the party stopped my deer a mile above, and it was a fair-sized doe in good condition.

So far there was a lack of excitement in hounding deer. The long solitary waits, not long in reality, but intolerably so to a boy whose gun was ready, and as he fixed himself on the runway mentally said: "Now bring on your deer!"

The patience of the fisherman somehow was mislaid. The case was different. Of course you must wait in the quiet of a mill pond for a fish to come to sample your bait, but here was a noisy, bell-mouthed hound proclaiming his every move, bringing to you a new game of great size, which tested your marksmanship to its utmost, with a 16 to 1 chance that you missed him. He would not swallow your hook and be pulled in by main strength, O, no. Here I give up the comparison. We all know just how it is. I've tried to tell how I think it is, but give it up. Can't do it.

The driver took me over to the river, and put me on a runway there, and left. He said that the other hounds were off, some out of hearing, but they might bring a deer this way. I was on a high bank on an outside bend of the river and could see down to the next bend, about 100yds., and there was a shallow riffle that a deer could walk from opposite my station to the point below, on my side. I ate my lunch. Squirrels jumped about and a partridge alighted on a nearby limb. Temptation is one of the hardest things to resist, and I have not always been equal to the task, but this day I simply took good aim at them and thought. It had been impressed upon me that I must not shoot except at a deer, that a shot from me would testify that a deer had come my way and would confuse others. Hounds were tonguing in several directions. I had about lost interest in this stupid work when, "flecked with leafy light and shadow," a buck walked down the opposite slope into the river. It must be a dream. There were no hounds after him that could be seen, and it seemed as if I was choking. He drank, looked around and drank again. I must shoot him! That fact slowly came to me, but I was all a-tremble. He walked diagonally across the river. I aimed and fired. He floundered in the water. Surely he was hit, but might escape! Never thinking to load and shoot again, I left the rifle, and with bare hands started for the buck to take him by the horns and drown him. I slipped on the slimy stones and fell twice, but the buck was slipping and falling also. I was within 20ft. of him when a rifle shot dropped him. It was the driver who had hurried forward at the sound of my shot, and just in time to save the day. Unless a scratch on top of the neck was made by my bullet, I missed him. The slippery stones threw him when he tried to run, and to my statement that I intended to take him by the horns and drown him the driver said: "You durned fool, he'd 'a' ripped all the clothes offen you with his forefeet, and might 'a' taken your bowels out at the same time. Don't you ever go to foolin' with a deer that has got fight left in him, or you won't have any left in you." The shots brought two more out of the party, and the buck was soon skinned and cut up for transportation. Although the horns, being in the velvet, were said to be of no use, I insisted on saving them as a trophy of my "first deer," for, like Falstaff over the dead body of Hotspur, I intended to "swear I killed him myself." So the trophy was preserved and taken to Albany, and for many years I did more lying about killing that buck than a dealer in garden seeds does in his spring catalogue. Simpkins said: "A little lie like that never hurts anybody. Most all young hunters lie a little about their game." At first it hurt me to lie about it—especially to old Port Tyler, who wanted all the details—but the story soon assumed the veracity of history. In later life I killed many deer, but they somehow never assumed the importance of the only one I ever lied about. I wrote John Atwood about it, quoting from "As You Like It:" "Which is he that killed the deer?" and winding up by telling him he didn't know a thing about the jump of the deer, for they couldn't make over 15ft. at a jump.

A quarter of the doe was given me to carry. I was put on the road home, while the rest went another way. Stopping at Kellam's about sundown, his wife gave me supper, and leaving the rifle, I took a shotgun and shouldered the venison for home, down the mountain. An unearthly scream came from a distance, and my pace quickened. Again the horrible scream was given closer by, and with an open pocket knife and a cocked gun I jumped along down hill, leaving tracks that surprised men who saw them next day. Getting over a rail fence near the house the knife pricked my wrist, and it seemed as if the animal had me. I was faint with fright, and it was some time before Mrs. Simpkins could learn the cause. Her husband came about midnight and heard her story as he was about to get in bed. He dressed, called Gunner, took his rifle and started up the hill. Kellam and he put the dogs out, but old Gunner soon came back, cried, got between his master's legs and could not be made to stir. A puppy went on and put up something, but they could not follow it. A panther had been about the locality some time, and shortly after I left Mr. Simpkins killed a large one. A Mr. Beadenell said it was a bluejay that screamed and scared me, but when I told this to my friend he said: "Bluejays don't scream after dark," and that settled the jay question.

At this time Simpkins was perhaps thirty five years old. He had not lived near Warrensburgh long and moved West a few years later, and I lost track of him. Memory recalls him as an intelligent farmer, a good hunter, an indifferent fisherman and a good friend who helped me lie about that deer, for which let us hope that both he and I have been forgiven, and that the recording angel, as in the case of "Uncle Toby," after recording the sin dropped a tear upon the page and blotted it out forever.

FRED MATHER.

ANGLING NOTES.

Fly-Fishing at Night for Rainbow Trout.

My memorandum book has some notes concerning my recent experience in fly-fishing for rainbow trout at night, and I intended to write them out for this column. Before I could do so my attention was called to a query in a monthly publication: "Is trout fishing at night considered legitimate sport?" The editor of the publication says in reply, "Among anglers who follow trout fishing for the ethical pleasure it affords and not for the pounds of fish, cruelly fishing for trout at night, especially with natural bait, is not considered legitimate. At that time the trout are oblivious to danger, and, if hungry, the merest tyro can catch them. But the great body of fishermen do not recognize this law of angling ethics and you will not be reflected upon," etc.

This, being interpreted according to the law of the Cadi, means that the great body of fishermen are blind to the fact that they uphold an illegitimate method of fishing. Now, if it is only the small body of fishermen who consider night fishing illegitimate, which is apt to be right in the construction of the ethical question, the majority or the minority?

Had I been the author of that answer, after reading it in cold type, I would have felt it my duty to call it in for repairs out of respect to the opinion of the great body of fishermen. If a well-known name had not been signed to the answer I would have said that the writer never caught a trout at night. Perhaps my sensibilities are blunted, but I must confess that I do not comprehend why it is more cruel to fool a trout at night than it is in daylight. I have never fished for trout at night with natural bait, but I have often fished for them at night with the fly, and my experience has been such that on this subject I can honestly say in the words of George Washington, "I would rather be right than flock with the minority."

Another thing: if "the merest tyro" can catch trout at night with the fly he can catch them at any time and anywhere that they will rise to the fly, if I am a judge of the matter. But my own fishing is getting cold, although I suppose after reading the answer I have quoted I ought to swear that I never caught a trout at night instead of confessing my sin.

I was at St. Hubert's Inn, at the lower end of the Keene Valley, ten days ago, and had to visit Chapel Pond, which belongs to the State, in a business way. I had a limited time to do certain things, and the programme called for a visit to Chapel Pond between dinner at 6:30 P. M. and 6 o'clock the next morning, when I was to start for Westport. Mr. W. Scott Brown, the superintendent of the Adirondack Mountain Reserve Association, who was to go with me, said I might get some rainbow trout from the pond after dark, as they would not rise during the day. My rod case with my rods had been left at Lake Placid, and Mr. Brown very kindly loaned me one of his, and I had a fly-book and several reels in my bag. Chapel Pond is beautifully situated and is one of the finest ponds in the Adirondacks, containing brook, rainbow and lake trout, although it is not fitted for the last-named species, which have been planted in it within recent years. You approach the pond through a grove, chiefly of white birches, and on the shore opposite from the road a great cliff rises, seemingly from the water's edge. Directly under this cliff, when you reach it, you find a mere ribbon of shore and on it a lady has a camp as novel and picturesque as can be found in the Adirondacks. A visitor to the camp has a feeling that a fragment of that cliff is very liable to come tumbling down at any moment and bury the camp and occupants under tons of Paleozoic rock, but when one forgets that destruction is frowning from aloft the camp is a very charming spot and as secluded as if it were provided with moat, portcullis, men-at-arms and all the trimmings of an ancient castle. I called upon the ladye of the castle, for it was her warder who owns the boats on the pond, Will Owens by name.

If my call was one of courtesy, inclination prolonged it, and when I got into the boat to fish it was half an hour after 9 o'clock. Half the pond under the cliff was in the shadow and half in the bright moonlight, and the white birches stood out like ghostly sentinels as the moonlight fell upon them.

Owens confirmed what I had previously been told, that the rainbow trout would not rise to the fly during the day and there was no certainty that they would do so at night, although that was when they were caught, if ever. He said that a visitor to the pond once saw the trout jumping apparently all over the surface of the water, and went out in high feather to fish. He came in without a fish, and said that, though the trout were so thick and so hungry they were eating the bushes on the shore, they would not look at his flies. Owens told me they would rise to nothing but a white miller, and although my fly-book contained two gross of flies or more, there was not a white miller in the lot, so I put on a white-winged coachman and a dusty miller. Owens offered me a white miller, but I declined it in spite of his protests, as I believed that either of my flies would answer the purpose. I got one strike from what seemed to be a big trout, and pricked him as I turned him over in the water, and after that the trout in that pond had no further use for my flies. I was finally forced to accept, with thanks, a white miller from Owens, and thereafter I got some fish.

Of six fish taken there was but one strike with a rush and splash and that was my first one that got away. Five of the trout were rainbows and one was a brook trout, and they ran from just under ½lb. to just under 1lb. in weight. The "strike" was peculiar and did not deserve the name. The boat was paddled parallel to and within casting distance of the shore, and I cast close inshore and slowly drew the fly into deeper water. The strike was very faint and like catching the hook on a blade of grass,

but when the hook did catch a blade of grass a strike on my part produced a trout if well hooked. Owens had some peculiar ideas about the striking of the trout and he was satisfied that they came up behind the fly, took it gently in the mouth and swam along with it until they cast it out as worthless after a trial. He said the strike was so gentle that it was difficult to distinguish it from any motion of the rod, and so while he cast with the rod in his right hand he held the line in his left hand and struck at the slightest check of his line.

I have an idea that if the "merest tyro" should go to Chapel Pond and could overcome his ethical scruples sufficiently to fish at night for trout to eat (and give him white millers at that) he would be found in the woods eating browse before he would be found eating trout of his own catching.

Digging Eels for Bait.

On the last day of July I was called at 5 o'clock A. M. in Binghamton, N. Y., in order to get a train on the Erie R. R. for Deposit. There was nothing particularly inviting about such an early call, for I could get no breakfast until I had ridden forty miles, and there was a journey ahead of me that would continue until 3 o'clock the next morning.

Between Binghamton and Susquehanna I discovered a number of men fishing in the Susquehanna River as the train hurried past, and they interested me to the extent that I forgot about my breakfast. After breakfast at Deposit I had to drive eight miles to Cannonsville, in Delaware county, to look at a new dam on a tributary of the West Branch of the Delaware, to see if it required a fishway. The proprietor of a livery stable drove me to the little hamlet, having undertaken to get me back in time for a certain train. He was curious to know who I was and what business I had in Cannonsville, and I was obliged to say I was not a commercial traveler, although this was my first trip over the road. As he would know sooner or later, I finally told him I was going to examine a dam. He knew all about it, knew who I was, and said he would give me a pointer: "I will drive you right to the dam and you can look it over and have time to get your train, if the people in the town do not find out who you are and what you are here for. If they do there will be fifty men there to give you advice, and if you listen to them all you will not get any train to-day."

The dam did not require a fishway, as the building of such a structure would simply let the black bass up from the river into an excellent trout stream and destroy the trout fishing. My driver entertained me with fishing gossip of the neighborhood, and pointed out Collet's Dam as we passed it as being the limit of the run of shad years ago, before the dam at Lackawaxen was built. After the building of the latter dam no shad ran up the West Branch of the Delaware until fishways were built in Lackawaxen Dam, and since then the shad have returned regularly; "but they are not good to eat, as they have a peculiar taste, which spoils them for food." Collet's Dam is seventy-five miles above Lackawaxen. Returning to Deposit, I observed men, singly and in groups, fishing in the river. The water was so clear and inviting that I wished that I had time and a fish rod and I would have been in the river up to my middle, as I saw the men. I asked if it was customary for so many people to engage in fishing in the river, and my driver explained that after the farmers had finished haying and had gathered their oats they always took a vacation and spent it in fishing the river or neighboring ponds. "I will bet a dollar that on a little pond containing black bass just back of that hill you will find twenty-five farmers fishing to-day." On the shore of an island in the river I saw a man apparently spading the margin of the river. He was digging in the water close to the shore and throwing the mud up on the bank, while seven men were fishing just below him. I asked what the man was doing, and my friend said, "Digging lampers for bait." I was out of the wagon before he could stop, breaking my eye glasses in my haste, for I wished to see the operation of digging eels, even if I missed my train. Sure enough the man was digging young lamprey eels much as one digs angle worms. The young eels were from 6in. to a foot deep in the mud along the shore and he got one about every time he lifted a shovelful of mud. The eels were about 5 or 6in. long and the men told me they were the best possible bait for black bass. The hook is put through the skin two-thirds of the way from the head to the tail, and when I went down to where the men were fishing with eel bait, and saw the bait in the water, I did not wonder that it was good for bass. A man who furnished me with black bass bait in West Virginia brought me some black lizards, at which I drew the line, but young "lampers" are all right and make an excellent bait, although they may seem a little snaky at first, but they are such clean little things no fisherman can object to them.

The fishermen on the West Branch of the Delaware would do well to take a foot rule with them when they go fishing for black bass, or at least get a nice flat stick and measure off on it eight consecutive inches and cut off the stick where the 8in. begin and where they end, and if they apply the 8in. stick to the bass they catch they may find that some of them should go back in the water alive to avoid breaking Section 111 of the Game Law, which has a penalty clause of $10 for each bass retained under 8in. in length. I did not measure the small bass that I saw on a string and in a boat, but I judged that some of them were very small for 8in. bass. The history of the black bass in the river, as it was told to me, is like that of the bass in many other waters in the State. At first the bass grew to good size and fish of from 3 to 4lbs. were not uncommon. Now a 2lb. bass is considered a big fish and there are a great many small fish from a few ounces in weight to three-quarters of a pound, the smaller ones outnumbering the ¾lb. fish. It is only another case of exhaustion of the natural food of the river, and for lack of food the fish are dwarfed in size. Apparently there is no other fresh-water fish that will so thoroughly clean out the food supply as the black bass.

Nature never intended the black bass for small waters, but where they have been introduced food must be supplied when they have exhausted the natural food, or the bass will be of small size. Crawfish is one of the best of foods for black bass, and where they have been introduced to my knowledge they have multiplied rapidly in spite of the bass.

Ouananiche in United States.

If the so-called landlocked salmon, which is not landlocked, was first known as ouananiche, why should not the fish be known as ouananiche, whether caught in Canada, Maine, New Hampshire or New York? Priority in the scientific names of fishes establishes the name to the point of calling a black bass a trout, through a misunderstanding of description and a deformed specimen of fish; and why should not the same rule obtain with common names, particularly when the antecedent name is more appropriate than those which come after?

Dr. John D. Quackenbos, writing me from Sunapee Lake, N. H., tells me of the capture of a ouananiche in that lake. A gentleman was trolling the shores of the lake for black bass with a small Skinner spoon, when he hooked a ouananiche of 11lbs. When the fish was brought to the side of the boat an attempt was made to net him with a small trout net. The net was placed over his head and that was as far as it would go, and then the fish went off with the net, wearing it as a collar. But another fisherman with a larger net came to the rescue and the fish was secured.

Another visitor to Sunapee Lake was particularly fortunate in his catch and the diversity of it. In one day he hooked and killed a ouananiche of 13lbs., another of 5¼lbs., a speckled trout of 3lbs., a golden trout or Sunapee saibling of 2¼lbs. and four smaller trout weighing 4½lbs., making a total catch of 27¾lbs. The next morning he killed another ouananiche of 9lbs. and several trout weighing from 1¼ to 3lbs. each.

It is four years since the first fingerling ouananiche from Maine were planted in Lake Champlain, and this year a number of the fish have been caught by anglers. Lake Champlain and Lake George are destined to become fine ouananiche waters in the near future. Two years ago I planted a carload of fingerling fish of the species in each lake for the U. S. Fish Commission, and last year two other carloads of fingerlings were planted, to be followed by two carloads next fall. This year the Fisheries, Game and Forest Commission of New York planted all the streams where the young ouananiche have been deposited with fresh-water shrimp as food for them. In one lake the adult fish will find an abundance of frostfish (round whitefish) for food and in the other an equal abundance of smelt.

Black Bass Scores.

On several occasions I have urged that the number of black bass to be taken in one day by one angler be limited by law. Last winter the New York Legislature passed a law which does limit the number of bass which can be taken in a portion of the St. Lawrence River to twelve fish, and no bass are to be killed that are less than 10in. in length. That is a good law as far as it goes, but why it should stop at the St. Lawrence River is what I cannot understand. If it is a good law for this river why not apply it to all the waters in the State? The black bass is the one fish which the Fisheries, Game and Forest Commission cannot supply to fished-out waters except in limited numbers, and it is the one fish which is not protected during the breeding season, except in Lake George.

This year the people of the State asked for nearly 2,000,000 of black bass to be planted in various waters, and the Commission could supply only a few hundred of adult fish, and yet these few hundred of black bass would be all-sufficient to stock or restock any waters in which they are placed if they could be protected during their breeding season and the fishermen would use ordinary common sense in fishing for them. If the fishermen all strive to see how many bass they can take in a day, a week or a season, simply to make a score or to have the catch photographed, no water can stand the drain for very long. As already stated, Lake George is the only water in the State in which the black bass are protected during their spawning season, as the lake is closed until Aug. 1. This lake was for years poached persistently, and bass regularly taken from their beds in the spring with "grab hooks" or burrs. The Lake George Association, under the presidency of Gen. Robert Lenox Banks, began a war against the poachers some years ago, and has kept it up until this day. Black bass, both fingerling and adult fish, have been planted by the State in the lake for several years past, and with moderation in fishing the lake is in a fair way to again become an excellent water for black bass fishing. Complaints are yet made that there are no black bass in the lake worth fishing for, but this is not true, for the records prove the contrary. And such records! This year when the season opened on Aug. 1 one fisherman caught and exhibited 78lbs. of black bass. They were arranged in rows and photographed. Several of the fish weighed from 4 to 5lbs. each. Another fisherman and his guide caught on the first day twenty-seven black bass, weighing 66¼lbs. Sixteen of them averaged over 3lbs. each. A local newspaper commenting on this catch says: "It is believed that such a number of large bass cannot be taken in a day by one gentleman and his guide between the St. Lawrence and Mississippi." Possibly not, and perhaps a fishing smack could not beat it, but if the crew of a fishing smack should beat it they would not call it sport, but business. With the State trying to restock the lake and the fishermen trying to skin it, the efforts of the State will sell as a poor second choice.

A Record Small-Mouth Bass.

A black bass of 7½lbs. was caught in Lake George since the season opened. This is about 1lb. heavier than any bass ever before taken from the lake of which there is authentic record, and the fish was not taken by either of the fishermen already mentioned.

It is a laudable ambition to kill a big fish of any species by fair angling and such a record is praiseworthy, but I am not so cock sure about the other kind of records made in a lake that is undergoing the process of restocking.

Salmon at Mechanicville.

Quite a number of letters have come to me asking if any salmon have been seen or killed this season in the Hudson at Mechanicville. I have heard of none being killed, but a number of salmon have been seen jumping in the river below Mechanicville and above the Troy dam. The sloop lock in the Troy dam is open much of the time and thus the salmon can pass it in the absence of a fishway.

A. N. CHENEY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

THE BIG TROUT OF RUSH RIVER.

Up in Pierce county, Wis., about thirty miles back of Maiden Rock, on Lake Pepin, there rises a beautiful stream, which, as it winds its way toward the lake made by the Father of Waters, runs through one of the most beautiful and picturesque valleys that it has ever been our privilege to visit. Rush River was the name given this stream years ago by the early settlers, on account of the enormous growth of rushes that lined its banks for miles, making it a great resort for wild game of all kinds, particularly in the winter season, and great and wonderful are the stories told of the game and trout taken in this valley in an early day.

Fed as it is at intervals by large and beautiful springs, the stream is clear and cold, and an ideal home for the genus *Salvelinus;* and were it not for the floods that occasionally sweep down the valley, which have been more frequent of late years, trout would still be there in abundance; but the combination of floods, nets and illegal fishing has nearly depleted the stream, so that now large catches are rarely taken. There was one big fellow left, however, and it remained for Mr. G. F. Benson, of Lake City, to capture this royal beauty.

A few days ago, while riding down the valley with a friend, after having fished for some time rather unsuccessfully, Mr. Benson determined to try for this big trout, which was well known, having been hooked and lost several times in the same deep hole by different fishermen, thereby gaining quite a reputation. Putting on a large minnow, he cast into the deep hole where his lordship was supposed to live, and to his great surprise was soon rewarded by a strike, which at once told him that the king of the river was hooked—and now began the tug of war. Standing at the foot of a steep bank sloping abruptly off into water 10ft. deep, Mr. Benson could hardly move out of his tracks while playing the fish, which would make grand rushes first to the shallow water below the pool, then to the same above, evidently afraid to leave the deep water. Hallooing to his friend, who sat waiting in a buggy near by, Mr. Benson said, "I've got the big trout on. Don't expect to ever land him, but you may have a chance to see him if you'll come down."

It is unnecessary to say that the friend came tearing down at once, and as the trout rolled up and down in the water like a porpoise he exclaimed, "Great Scott! you've got a whale."

No one but a person of rare skill and judgment could ever have landed this fish with light tackle, but Mr. Benson possesses both; and after a long tussle he succeeded in exhausting the big fellow, so that the friend, who is also something of an expert, reached into the water with both hands and landed him, when he was at once killed. It was then found that he had swallowed the hook, which was what saved him. His mouth bore numerous scars of former battles. He weighed exactly 5lbs. and 1oz. I inclose a profile of the trout herewith. Mr. Benson has fished on this stream every consecutive season for nearly twenty-five years, and has caught many large ones, but this is the king of them all. WAPAHASA.

WABASHA, Minn., July, 1896.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

While the ouananiche taken out of the Grande Décharge this season have not, as a rule, been up to the size of those of former years, they appear to have been larger in number. The record fish thus far was a full 7 pounder, caught off the rocks on the south side of Isle Maligne by Mr. Ritchie, of the Island House. This fish rose to a small Jock-Scott fly. The fish are remaining later than usual this season in the Décharge, and at present the fishing there is quite productive, with promise of continuance for some time to come. Among recent visitors to these waters have been Monsieur Trubert, Ambassador of France at Washington, and Vice-Admiral Erskine, of H. M. S. Crescent. The Rev. Wm. R. Turner, of Washington, and his wife, and Mr. and Mrs. J. P. Dawes, of Lachine, have all been enjoying the ouananiche fishing at the Grande Décharge. Mr. E. J. Myers, of New York, finished up a most successful season's outing, as usual, by camping upon the island at the Fifth Falls of the Mistassini. Messrs. R. R. and W. F. McCormick, of Biscayne Bay, Fla., have spent over two months in the country about Lake St. John, and have now gone upon the Triton Tract after some of the monster trout that frequent Lake Batiscan and contiguous waters.

Mr. Robert Mather and a party of friends from Chicago went up the Peribonca some time ago on a prolonged trip to Lake Tschatagama after ouananiche and trout, and Mr. Graham H. Harris, attorney, of the same city, expects to spend about a month fishing the waters of the same section of country, including the lower stretches of the Aleck and Little Peribonca rivers. From this time on to the end of the ouananiche fishing season on Sept. 15, and the last of the trout fishing on Sept. 30, the best sport of the year may be looked for. In addition to the rivers above mentioned, the Metabetchouan may usually be depended upon to furnish a large amount of ouananiche to anglers during the last twenty or thirty days of the season.

In July, which is usually the poorest month of the season for both ouananiche and trout, Col. Andrew Haggard, of England, and the writer had some very good sport in a new section of country northwest of the Peribonca River. We ascended the Little Peribonca some thirty-five miles, crossed one height of land into the headwaters of the Epipham River and another into those of the Des Aigles. In the best portions of the Little Peribonca we lost all the ouananiche and trout fishing that we might otherwise have had because of a landslide up the stream caused by a storm, followed by a flood. The water was so discolored that it could not be fished at all. In its upper waters we took any number of small trout. Lake Epipham swarms with trout, and here we enjoyed excellent sport. In Lac des Aigles the trout are larger, and in July rose but poorly, though we took a few good fish of 1½lbs. average. But in the discharge of the lake and all the way down the Des Aigles and Aleck rivers the trout rose freely, though not quite so large in size as those found in the lake. But chub and doré rose frantically at our flies in Lac des Aigles, and two of the doré or golden pickerel killed there weighed 5½ and 4½lbs. respectively. These pickerel must not be confounded with the true pike (*Esox lucius*), which I am aware is often called pickerel in the United States, and a fine specimen of which, 26lbs. in weight, was

recently caught by Miss Cockerell, a young American lady, in la Grande Décharge.

For salmon the present has been a phenomenal season. Lord Aberdeen, the Governor-General, has taken some late fish in the Cascapedia, and Col. Haggard only this week killed two or three good fish long after the guides had told him that it was no use to look for them.

Rev. Abbe Casgrain, who has secured the fishing rights of the Bonaventure River, succeeded in killing over 500lbs. of salmon there in a few days. Mr. Amos Little and party of five, including Messrs. Yates and Borden, all of Philadelphia, enjoyed some of the finest salmon fishing in the Moisie pools that it is possible to wish for. On the Marguerite, Mr. Walter Brackett, of Boston, and Messrs. Robert Plumb and Henry Russell, of Detroit, killed a large number of beautiful fish, several of over 30lbs. each in weight having fallen to each rod.

E. T. D. CHAMBERS.

QUEBEC, Aug. 7.

NOTES FROM FISHING WATERS.

Lake Memphremagog.

OWL'S HEAD, P. Q., via Newport, Vt., Aug. 4.—Lake Memphremagog is a veritable paradise for those who love to fish. Yesterday Mr. Paul Stockly, of New Jersey, succeeded in landing fourteen fine black bass.

Prof. Chittenden, of Yale, was especially pleased with his catch of Aug. 2, when he displayed to the admiring guests of Owl's Head Hotel no less than forty black bass, weighing in all almost 80lbs. Prof. Chittenden has also caught many of the beautiful lake trout which are abundant in Lake Mempremagog. M. H. WATKINS.

PALMYRA, N. Y., Aug. 6.—Mr. McGrady, one of the players in the Palmyra baseball nine, caught a carp last week on a minnow while fishing for bass. The carp weighed 8lbs. 3oz. A few minutes after landing him a second carp was hooked (same kind of bait as before), but got away. W. P. S.

COBBOSSEECONTEE LAKE, Winthrop, Me.—I have spent my vacations for eight years with the bass and pickerel at Cobbosseecontee Lake. The angler will not be disappointed there. The fall shooting promises well.

J. P. W.

Muskalonge in Kentucky.

MR. JAMES DUPUY, of Ironton, Ky., sent us for examination the other day the head of the immense pike, so called, taken by him in Kentucky. It proved to be the head of a muskalonge. On being apprised of this identification, Mr. Dupuy writes:

"I am glad to know that I have actually taken a muskalonge, and that the identity of these fish is clear. We have always called them pike, and we have caught plenty of them, catching as many as six in one day on one of our trips. They are an extremely resolute fish, striking the bait with great vigor and making a hard fight for life when hooked. We use live bait, but catch as many with dead bait. At one time my father carried a minnow home in his pocket and laid it on a rock; four days afterward he took the dried, shriveled bait and caught a muskalonge 34in. long. We never throw a bait away until rotten. Once we caught a muskalonge 37in. long which had a small bass partly digested; we took what was solid and caught another muskalonge.

"This fish, of which I sent you the head, was caught about 9 o'clock in the morning on Monday, Nov. 18, 1895. We find roe in them as late as that in the season, and this one had enough to make a meal for three of us. We do not know just when they spawn, but think early in April, as they are on the beds then; but the water is hardly clear or low enough to tell for sure whether they are spawning. When red horse spawn about May 8 we catch them, but they are then empty of roe.

"I killed a female squirrel last November which would have given birth to four in a day or two, and on July 20 I killed one with three young nearly ready for delivery. Both of these circumstances are quite unusual, but last fall we killed five or six in the same condition. Is it not unusual to find them with young in November?

"Around where we camp report says the wild turkeys have done well, and plenty of young ones are to be found; we look forward to a successful hunt this fall. There are plenty of squirrels in the woods now."

Salt-Water Fishing near New York.

SALT-WATER fishing has been rather poor recently owing to the numerous heavy thunderstorms of the past few weeks. For a period of a couple of weeks there was practically no bluefishing to be had, but during the past week it has been better than ever. The boats of the Sheepshead Bay (Long Island) fleet have all made large catches. Capt. Nat Wilson, with a party of seven guests on board the Pacific, made the star catch of the week last Wednesday, when he brought in seventy-six bluefish. Capt. Will Cowdrick, of the Cricket, reported the capture of thirty-one blues for his party on Sunday, among which were some of the largest fish caught this season. To get to Sheepshead Bay take Nassau trolley cars from the Brooklyn Bridge or Broadway ferries, or steam cars from Manhattan Junction, East New York.

Weakfishing has also been affected by the thunderstorms, but, unlike the bluefish, the weakfish have not taken the hook very fast lately. At Broad Channel, a station on the Rockaway trestle, where the fishing was very good earlier in the season, a big falling off in catches has been noticed. The fish are still there and will break all around a boat, but they will not bite.

Fluke fishing still continues good. A good place for fluke is at the can buoy, off Rockaway Point, by row or sail boat from Sheepshead Bay. A party of three caught forty-six there last Sunday while the water was high. Sand porgies are just beginning to bite off Ritchie's Point, Sheepshead, and the snappers will be in in a week or two. G. F. DIEHL.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Game and Fish Protection.

ST. LAWRENCE ASSOCIATION.

CLAYTON, N. Y., Aug. 6.—*Editor Forest and Stream:* The annual meeting of the Anglers' Association of the St. Lawrence River was held at the Walton House, Clayton, yesterday. There was a large attendance and much interest was manifested in the proceedings. The meeting was called to order at 11 A. M. by President W. C. Browning, of New York. W. E. Wolcott, of Utica, was elected recording secretary.

The minutes of the last annual meeting and of several special meetings held during the year were read and approved. The secretary also read a number of communications in regard to international park matters, and exhibited a map showing certain Canadian islands, eleven in all, which have been set apart by the Canadian Government for park purposes. The islands reserved are Aubrey, Mermaid, Beau Rivage, Camelot, Endymion, Gordon, Ninette, Georgiana, Constance, St. Katharine and Adelaide. The secretary had heard that the Canadian Government had appropriated $25,000 to improve these islands.

Hon. William Smith, of Ottawa, ex-Deputy Minister of Marine and Fisheries, who was present by special invitation, said he understood this was to be done in case similar action was taken regarding islands on the American side, but the appropriation referred to had not yet been made.

Wm. H. Thompson, of Alexandria Bay, said that one of the points designated in the article defining the boundaries of the international park reservation should be the Brother's Island Lighthouse, on the Canadian side, instead of Kingston.

President Browning delivered his annual address. He believed the Anglers' Association was doing good work and Canadian authorities appeared disposed to coöperate with it. He referred to the alien labor law, and said he thought nothing could be done in Washington to modify it, but it was treated as a dead letter at the islands. Canadian oarsmen are allowed to come on this side. Continuing, Mr. Browning said: "We have been notified by the State Fish and Game Commission that they would like to know what we want done on the river. We want them to come here and meet us, and expect that they will do so some time this month. We want them to report to the Legislature what is required to be done to keep our side even with the Canadian side. We propose to have several islands set apart on this side, as has been done on the Canadian side, which will be free to all for camping grounds, etc. I have every assurance that the Fish and Game Commission will recommend an appropriation to purchase a similar number of islands. I want to say to Mr. Smith that while the Canadian laws are good they do not carry them out. I saw in Brockville the other day nearly a bushel of bass which a man was trying to sell. There were several hundreds of them, but we found only four that measured 10in. in length. Others ranged from 5 to 9in. I think there were more bass under size than will be taken on this side of the river during the whole season. Canadians wanted a 12in. limit on bass, but do not enforce the 10in. provision. We need more protectors on the river, and one is especially needed at Clayton."

Maj. J. H. Durham, of Cape Vincent, said that directly opposite that place there was netting on the south shore of Wolfe Island, far within the limits of the proposed reservation, and also in American waters. Nets are set within a few rods of the shore of Wolfe Island. Those who are fishing there claim they have a license from the Canadian authorities to do so. The waters, however, are clearly within New York State. We have been unable to find out whether they have a license or not, and have thus far hesitated to take out the nets, and the matter is unsettled. We would like to know from some authority whether they have a right to fish there.

President Browning suggested that the secretary write to the Canadian authorities.

Treasurer R. P. Grant, of Clayton, presented his annual report, which made this showing: Balance on hand last year, $716 62; receipts, $163.62; expenses, $587.86; balance on hand, $292.38.

A. C. Cornwall, of Alexandria Bay, chairman of the executive committee, reported that the Association had obtained from the State 2,000,000 wall-eyed pike and 100,000 muskallonge during the year, which were deposited in the St. Lawrence River.

Maj. Durham spoke of the desirability of protecting the 200 square miles of bass spawning beds in the vicinity of the towns of Lyme and Brownville. The licensing of netting, the speaker said, is doing more harm than the old practice of illegal netting. Netters are boasting that they get more privileges for $1 than they had before.

President Browning asked Maj. Durham to come before the State Fish and Game Commission when it visits the river and state the condition of affairs.

Dr. J. E. Liddy, of Clayton, spoke of the feeling in Three-Mile Bay against the licensing of netting. He was surprised at the great number of bass which are being taken every day.

Henry R. Heath, of Brooklyn, said the Association had taken a great step forward during the past year. The Thousand Island reservation is in the hands of the State Fish, Game and Forest Commission. As the commissioners are to be at the river this month, he thought it would be wise to give them an object lesson. He thought they should be taken on the bass grounds, so that they can see just what is needed.

President Browning said that for some reason they seemed afraid at Albany to legislate as the Association desired.

Mr. Thompson spoke very forcibly of the condition of affairs in the district where the bass spawning beds are situated.

President Browning said the people of Chaumont Bay wanted the bass territory protected.

G. M. Strough, of Clayton, thought action should be taken as speedily as possible.

George C. Boldt, of New York, moved that a committee be appointed to receive the State Fish, Game and Forest Commissioners when they visit the river, with power to act. Carried.

The following were named as such committee: George C. Boldt, W. C. Browning, W. H. Thompson, G. H. Strough, R. P. Grant, A. C. Cornwall.

C. E. Britton, of Gananoque, Can., said he was in sympathy with the efforts to stop netting. Parliament meets Aug. 19, and he thought it would be a good idea to have the Association appoint delegates to meet in Ottawa shortly after. He was glad to say he was in a position now to render service which he was formerly not able to.

The following officers were elected: President, William C. Browning, New York; first vice-president, Henry R. Heath, Brooklyn; second vice-president, Hon. Charles R. Skinner, Albany; secretary, W. H. Thompson, Alexandria Bay; treasurer, R. P. Grant, Clayton; executive committee, A. C. Cornwall, Walter Fox, Alexandria Bay; G. H. Strough, G. M. Skinner, John Foley, Clayton; George C. Boldt, Charles G. Emery, O. T. Mackey, New York; R. H. Pullman, Baltimore, Md.; G. T. Rafferty, Pittsburg, Pa.; F. J. Amsden, Rochester; Charles E. Britton, Gananoque.

Several new members were admitted, after which the Association adjourned. PORTSA.

New Jersey Protection.

STATE Fish and Game Protector Charles A. Shriner, of Paterson, N. J., reports for July nineteen prosecutions. He says of the month's business:

Owing to the prevailing warm weather little could be done toward carrying on the work of stocking streams and lakes with fish, and this work will remain in a state of suspension until colder weather sets in. Warden Hendershott obtained possession of forty-six mature small-mouthed black bass and these were placed in Culver's Lake, according to instructions.

The work at the hatchery at Hackensack has also come to a standstill, the distribution of shad fry having been completed on the 7th. The total number of fish hatched and distributed from this station during the season has been over 41,000,000.

Considerable attention has been devoted to watching the menhaden vessels which were at work during the month in New Jersey waters, but it was found that all these had been duly licensed. The captains of vessels interviewed all had the same complaint, that the run of menhaden was very small this year; in fact, several of the vessels which obtained licenses made use of them only once or twice and then laid up on account of the scarcity of fish. What fish there were put in an early appearance, before the date fixed by the Menhaden Association for beginning work, so that the few companies which do not belong to the Association and which started work early reaped the benefit of the early advent of the fish.

From Barnegat Bay came the usual annual complaint of the mischief done by netters, but visits from several wardens and the appointment of a deputy who lives on the bay checked the depredations complained of. The difficulty at Barnegat Bay is that the method of procedure against violators of the law differs from that provided against violators of the general fish and game laws, in that at Barnegat Bay proceedings can be instituted only in debt and no imprisonment can follow a failure to pay a judgment. The last Legislature was requested to place the violators of the law at Barnegat Bay on the same footing with other violators of the law, but declined to do so. Until some such change is made offenders will continue to have little respect for the law.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 1 to 4.—Kingston Kennel Club's bench show. H. C. Bates, Cor. Sec'y, Kingston, Ont.

Sept. 7 to 10.—Binghampton Industrial Exhibition's sixth annual bench show. C. H. Barrett, Supt.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.

Sept. 15–18.—Orange County bench show, Newburgh, N. Y. Robt. Johnston, Sec'y.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee. Louis Steffen, Sec'y.

Sept. 22 to 25.—Queens County Agricultural Society's bench show Mineola, L. I. J. Mortimer, Manager, Hempstead, L. I.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y, Manitou, Man.

Sept. 7.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 19.—Brunswick Fur Club's annual hound trials, Barre, Mass. Bradford S. Turpin, Sec'y.

Oct. 26.—Hempstead, L. I.—Natioonal Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 10.—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Greene County, Pa.—Central Beagle Club's trials. L. O. Seidel, Sec'y.

Nov. 16.—National Fox Hunting Association's third annual trials Bardstown, Ky. F. J. Hagan, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

COURSING.

Sept. 22.—Cheyenne Valley Coursing Club's meeting, Sheldon, S. D, Dr. J. P. Aylen, Pres.

Sept. 29.—Aberdeen Coursing Club's annual meeting, Aberdeen, S. D. Dr. F. W. Haragan, Sec'y.

Oct. 6.—Mitchell Coursing Club's meeting, Mitchell, S. D.

Oct. 21.—Altcar Coursing Club's meeting, Great Bend, Kan. T. W. Bartels, Sec'y.

Oct. 28.—Kenmore Coursing Club's annual meeting, Herrington, Kan. C. A. Robinson, Sec'y.

The Mineola show premium list may now be had on application to secretary James Mortimer, Hempstead, N. Y. The prizes are $6 for first in challenge classes, and $6, $ and $2 for first, second and third in open classes.

MIMETIC DISEASES.

The following is a circular issued by the American Anti-Vivisection Society. It was written by Matthew Woods, M.D., Member of the Philadelphia County Medical Association and of the American Medical Association:

In connection with the letter the American Anti-Vivisection Society is sending to the newspapers of the land, on the subject of "Hydrophobia as a Simulated Disease," having more to do with scare than virus, it may be well by way of sequel to say a few words in reference to that class of maladies which might be characterized *mimetic*, and also to that variety of person possessing a disposition to acquire, through the medium of abnormal fancy, diseases of which he has no symptoms except those recognized by unaided sight.

The influence of the mind over the body, and *vice versa*, is a question so broad that half has not yet been told, and it remains, perhaps, for some Columbus of the future to discover that exalted or depressed psychic conditions have much to do with the production of many of the phenomena of even religion, literature and art, as they are already known to be important factors in the creation of various nervous states.

Just as to a hungry man the idea of food excites the secretion of saliva, literally "making his mouth water," and reflecting on sorrow causes the secretion of tears, and consequently the emotional states of which these are but the visible manifestations, thus the thought of certain maladies produces sometimes, in the easily impressed, their mental conception and subjective symptoms so distinctly that they are sufficiently the victims of the disease they imagine, to deceive not only themselves and their friends, but also the doctor.

This disposition to assume a distemper, though they have it not, is confined to no class, sex or condition, but equally common to all.

The junior student of medicine, whether male or female, frequently appropriates the disease at the time under investigation in his class, so that during the college year the more susceptible may have all the disorders described in the curriculum, while even the most stoical may have imagined himself into at least one.

It is a familiar fact that at the close of many of the discourses delivered, say, from the Chair of the Practice of Medicine the professor is privately consulted by students suffering from all the symptoms described; and this imitative peculiarity is not limited to such ailments as disease of the heart, consumption, Basedow's disease, gall-stone, cancer of the pancreas or appendicitis, but some have been known to become hemiplegic—viz., incapable of motion and sensation in the right or left half of the body, as the case may be—during a realistic lecture on cerebral apoplexy; others seized with violent "pain in the knee" during an elucidation of the symptoms and pathology of Potts's disease, while there are reports of students acquiring all the subjective symptoms of dislocation or fracture, because of the impression made upon their minds by the lecturer while discussing these surgical states.

Thus we see that hydrophobia, as conceived by the lay mind, is not the only disorder honored by imitation.

The philosophic physician understands the significance of the phrase "expectant attention," knows that with some patients it is but necessary to indicate a certain line in the development of a distemper in order to have them follow it, or, as Dr. W. B. Carpenter puts it, "the thoughts and feelings, when left to follow their own course by suppression of the controlling power of the will, may be determined by suggestions either from within or without."

The epidemic dancing mania which swept over Italy some centuries ago, and which was called tarantism because of its supposed origin in the bite of the tarantulus—*Lycosa tarantula*—is another illustration of the power of the mind over the body, as is also the facility with which certain people acquire "hydrophobia" and recover from it, unless treated by Pasteur or his men.

Tarantism, the Italian affection, differed from the French endemic, St. Vitus' dance, with which it was contemporaneous, inasmuch as the movements of the tarantati, except when in a condition of lethargy, were stately and graceful, were modified by looking at red colors and luminous surfaces, and cured by music.

Although the sufferers were sometimes subjected to such treatment as being buried up to the neck in earth, yet the success of music as a remedy was so invariable that a class of tunes and songs was composed called tarantella, for their cure, and no patient seemed to think that it was the "correct thing" to get well except through the aid of music.

No age or social condition, it would appear, was exempt from this imaginary disorder, for we read of a "philosophic bishop" who allowed himself to be bitten by the tarantula, and then dancing with all the delirious *grotesquerie* of the peasant.

Now, however, expectant attention not being in that direction in Italy, the people may be bitten again and again by the ground spider without their becoming tarantistic.

St. Vitus' dance,* an epidemic that broke out in France in 1374, is another illustration of unconscious mimicry, which is, "in fact, the result of the 'hold' taken by the mind of an idea suggested to it, that hold being the stronger in proportion to the want of other sources of healthful activity."

This dancing seizure, which began usually in an epileptic convulsion and ended in exhaustion or death, with a long series of curious capers between, also affected persons in all stations of life. Peasants abandoned their fields, shoemakers their benches, clerks their desks, even clergymen, forgetting the dignity due their profession, joined furious multitudes, forming circles in the streets, and after the initial spasm, losing all control of their senses, danced deliriously for hours, until they fell to the ground in almost lifeless collapse.

During these paroxysms the possessed saw the heavens open, revealing the Saviour enthroned with the Virgin; others were haunted with visions of spirits or demons, whose names they shrieked out, according as their religious notions of the age were variously reflected in their imaginations.

Vehemence so deprived them of their senses that many dashed their brains out against walls and corners of buildings, or rushed headlong into rivers and were drowned. Roaring and foaming as they were, bystanders could only restrain them by placing benches and chairs in their way, in the hope that the high leap necessary to get over them might impede their progress to destruction. Yet after these attacks many returned to their former employments as if nothing had happened, while thousands paid the penalty of their infatuation by health shattered beyond recovery or often even by death.

In the light of the above illustrations of the power of the mind over the body—for these were not ill in the ordinary sense, nor were they malingerers who assumed sickness for gain—it is not strange that many people among us, having been previously bitten by dogs, unconsciously simulate what are to them symptoms of hydrophobia. From childhood familiar with stories of horrible death from the bite of rabid animals, it would be singular indeed, expectant attention being thus created, if at least a few, under the influence of ideo-motor action rather than rabies, did not produce replicas of that "series of symptoms" falsely called hydrophobia, and so lose control of their reason as to re-enact for us the familiar antics of "getting down on all fours," "barking like dogs," "foaming at the bill," as Goldsmith says of a hydrophobic goose while writing derisively of this curious possession, "going into convulsions at the sight of water," and finally making a tragical denouement between the traditional feather beds, or worse—being sent for treatment to some institute of Pasteur.

When, in connection with this tendency on the part of certain impressible persons to develop symptoms of diseases they do not have, we are aware that "dread and inability to swallow water, associated with convulsive movements and psychic manifestations," are common features of at least thirty other diseases besides hydrophobia, then it can be understood that even the best medical men—lyssophobic themselves—may sometimes be "guilty of such errors in diagnosis as may result in fatal errors of treatment."

This in itself is a striking illustration of the pernicious influence of the common belief in regard to hydrophobia.†

Under the influence of a dominant idea, the intensity of which "blinds the common sense and subjugates the will," man has often been controlled by curious fancies. There has perhaps never been a period in semi-barbaric or even civilized history when pathologic or rather symptomatic mimicry did not exist, and the experience of that physician must be limited indeed who has not met patients blind with perfect eyes, deaf with sound ears, and weak beyond hope with the muscular development of a Hercules.

Evanescent psychic rather than physical conditions these—curiosities somewhat to the general practitioner, yet common to the specialist—requiring for their cure not so much drugs as moral suasion and discretion.

Of the same nature, yet more in the domain of what might be called theologic delusions, were the Pythonic inspirations of Delphic priestesses, the Flagellant processions of the thirteenth and fourteenth centuries, the grotesque performances of the Convulsionnaires of St. Médard, the reception of the Stigmata, the Tigretiér of Abyssinia, the Leaping Ague of Scotland—the intelligent reader can supply many varieties of modern creation—all illustrations of now well-known forms of ideo-motor action, intensified by emotional excitement, rather than specimens of definite disease; and as these, under the light of deliberate scientific investigation, are to a great extent eliminated from the religious life of the day, can we not hope for the time when "hydrophobia" also may be relegated to the limbo of abandoned vagaries?

* St. Vitus' dance of the Middle Ages was not exactly the same disease as St. Vitus' dance of to-day—chorea; yet chorea too is so apt to be imitated that it is not well to expose persons suffering from it to public gaze, as it is liable to produce its counterpart by the mere powers of mimicry in the persons, especially children, who behold it.

† See Dr. Dulles's "Diseases Mistaken for Hydrophobia."

Spaniels and Field Trials.

Boston.—*Editor Forest and Stream:* With profound regret I read the circular letter of the American Spaniel Club, published in Forest and Stream of Aug. 8. I felt a keen disappointment. Everything seemed to be within reach of the club, and nothing was needed to insure the success of the trials save the entries. Mr. Bloodgood had offered the use of a large tract of land for the running of the trials in Massachusetts and there were great numbers of dogs to draw upon for entries, the dogs being owned by many owners distributed in territory as nicely as could be for the support of a trial. And here fell an important spaniel interest from no other cause than inexcusable apathy. It will take the field feature of the spaniel interest many years to recover from this setback, if it ever does so. An attempt ending in such total failure is much worse than no attempt. The owners of spaniels can now go on breeding without any reference to field form, for it would be folly to claim that there is any use for the spaniel in the field, after the admission that there is not any one who uses them for that purpose, conveyed in the fact that there was no one who made entries. If there are one or two men who do use them for field work, the presumption is that they are indulging a personal fancy, and in any event such a small minority does not establish the usefulness of the spaniel any more than would two or three men establish the use of the dachshund as a quail dog, were they to use him for that purpose.

Field trials of dogs or trials of beauty on the bench do not establish themselves by merely announcing that the clubs intend to hold them. They must work for success in their line as men work for success in other lines. Often the success or failure rests with the secretary. If he sits idly by waiting for entries to come in, and waiting for the possible patrons to make the affair a success by their own efforts, he will probably report to his club that the affair is a failure, that the public wants none of it. But let the secretary be wide-awake and industrious, know his duties and know men and their abilities—in short, have the proper executive functions—and the whole results change. Success comes from the working for it. A perfunctory executive may do very well for routine office work, but not for work which requires the genius of enthusiasm and tireless industry. To merely say "we are going to give a trial," and then let matters drift along as they may, is not the proper way to conduct matters. Members and owners must be written to, other members and owners must be urged to personally urge the merits of the trials on the indifferent, the neglectful the timorous and the hopeless. Energy and good sense is needed from start to finish. There must be a general *esprit de corps* reflected from the energy of the leaders.

I for one, who has at heart the success of the useful and beautiful little dog, the spaniel, deeply regret the failure to hold the trials, the more so as all the circumstances seemed so auspicious for their success, and failure comes alone from apathy. Cocker.

M. F. T. C.'s Entries.

Manitou, Man., Aug. 4.—*Editor Forest and Stream:* I herewith inclose you list of entries for the Manitoba Field Trials Club's Derby. While not so large as last year, still large enough to make good trials, with perhaps a larger number of starters than last year. I hope such may be the case. All were whelped in 1895:

E. C. Johnson's Queen of Morocco, b., w. and t. setter bitch (Spot B.—Miss Monk).

W. F. Ellis's Popsy Wopsy, l. and w. setter bitch (Duke of Manitoba—Dora M.).

W. F. Ellis's Dr. Jamieson, b. and w. setter dog (Val lit—Ross).

F. J. G. McArthur's Mingo Kent, l. and w. pointer bitch (Strideaway—Clip o' Kent).

F. J. G. McArthur's Flingo Strideaway, l. and w. pointer dog, same litter.

E. McKenney's Barrister, b. and w. setter dog (Val Lit—Cam Sing).

E. McKenney's Maid of the Morn, b. b. setter bitch, same litter.

John Wootton's Ben Bondhu, b. and w. setter dog (Dick Bondhu II.—Maud à Rose).

John Wootton's Sue Bondhu, b. and w. setter bitch, same litter.

John Wootton's Rosa Bondhu, b., w. and t. setter bitch, same litter.

James D. Poston & Co.'s Florence Gladstone II., b., w. and t. setter bitch (Antonio—Florence Gladstone).

W. R. Holliday's Billy T., b. and w. setter dog (Revenue—Daisy Bondhu).

T. W. O'Byrne's Moerlein's b. and w. pointer dog (Rip Rap—Belle of Ossian).

T. W. O'Byrne's Redskin, lem. and w. pointer dog (Love's Kent—Fritz Fay).

H. K. Milner's Almeda, l. and w. pointer bitch (Rip Rap, Jr.—Prairie Belle).

W. I. Love's La Dolle, lem. and w. pointer bitch (Love's Kent—Fritz Fay).

Dr. George Eubank's Rodstone, b., w. and t. setter dog (Cinch—Rod's Flounce).

Dr. George Eubank's Ripstone, b. and w. pointer dog (Rip Rap—Pearl's Dot).

Del Monte Kennels' Tick's Kid, b. and w. pointer dog (Tick Boy—Lulu K.).

Del Monte Kennels' Tony Works, l. and w. pointer dog, same littter.

H. Ames's Quenn, b., w. and t. setter bitch (Blue Ridge Mark—Lou R.).

H. Ames's Christena, b., w. and t. setter bitch, same litter.

S. P. Jones's Hurstbourne Zip, b., w. and t. setter dog (Tony Boy—Dimple).

J. J. Odom's Count Odom, o. and w. setter dog (Count Gladstone IV.—Topsy Avent).

H. H. Maybury's Alabama Girl, l. and w. pointer bitch (Von Arrow—Lady Mull).

John Wootton, Hon. Sec'y-Treas.

International Derby Entries.

Chatham, Ont., Aug. 8.—*Editor Forest and Stream:* Below you will find International Derby entries. Although the entry list is small, owing to distemper taking nearly all last year's puppies, just as much interest is taken in the trials; and the All-age and Amateur stakes will be well filled.

The trials will be held at Mitchell Bay, except the Amateur stake, which will be run under the heat system, near Chatham, on the day before the regular trials, Nov. 16.

Birds have bred well and will be plentiful; cover will be good, owing to the frequent showers.

Heather Bloom—H. Marshall Graydon's b., w. and t. English setter bitch (Dash Antonio—Bly).

Drenagh—J. B. McKay's Irish setter dog (Finglas—River Roe).

Foyle—J. B. McKay's Irish setter bitch (Finglas—River Roe).

Sirius—Stephen Lusted's b., w. and t. English setter dog (Dash Antonio—Bly).

Spotted Star—Samuel Holme's liv. and w. pointer dog (Lord Graphic's Star—Spotted Girl).

Maud W.—Leamington Pointer Kennels' b. and w. pointer bitch (Plain Sam—Beppo's Mollie).

Frank—Albert Drouillard's Irish setter dog (Fingalen—Fawn).

Joe—T. G. Davey's b. and w. pointer dog (Plain Sam—Beppo's Mollie).

Heather—T. G. Davey's b., w. and t. English setter bitch (Brighton Tobe—Norah).

Lucy—T. G. Davey's b., w. and t. setter bitch (Brighton Tobe—Norah).

Grace—T. G. Davey's o. and w. setter bitch (Brighton Dick—Lady Mack).

Mellbrook—R. Banghaus's b., w. and t. setter dog (Dash Antonio—Patty). W. B. Wells, Hon. Sec'y.

Union Field Trials.

Indianapolis, Ind., Aug. 8.—*Editor Forest and Stream:* The transfer of the Continental Field Trials Club's Bicknell trials to the South left a very large part of the country without trials. This being a fact, the dog men of this territory have deemed it wise to supply the vacancy, and have therefore organized the Union Field Trials Club, and will hold trials the first week in November either at Bicknell or Carlisle. The club will run two stakes, a Derby and an All-Age stake. The breeds in each stake will run together.

The stakes will be run on the percentage plan. The officers and judges will charge nothing for their services, therefore the expenses will consist of postage, printing, traveling, hotel and living expenses of the secretary and two judges, besides the pay for services of two fence men, therefore the expenses will be a small item. The entries to the Derby will close Sept. 15 with $5 forfeit and $10 to start. The entries to the All-Age stake will close Oct. 15 with $5 forfeit and $10 to start. After deducting the expenses the balance will be divided 40 per cent. to first, 30 per cent. to second, 20 per cent. to third and 10 per cent. to fourth.

The officers and members are as follows: President, Norvin T. Harris, Lyndon, Ky.; First Vice-President, Royal Robinson, Indianapolis; Second Vice-President, J. L. Adams, Louisville; Third Vice-President, Richard Merrill, Milwaukee; Secretary-Treasurer, P. T. Madison, Indianapolis. Members: Hon. Stanley Adams, Louisville; L. Rausch, St. Louis; Hon. Thos. Taggart (mayor), Hon. Harry S. New (editor Indianapolis *Journal*), Wm. H. Dye, Geo. T. Kerr, Horace F. Wood and S. H. Socwill, all of Indianapolis.

One member will be chosen at Bicknell and one at Carlisle. It now rests with the handlers and owners to make the prizes as large as they desire. Entries will be accepted from any part of the country; therefore, wins in this club's trials will be as valuable as those of any other club in America. The trials will be judged by Mr. Royal Robinson and Mr. S. H. Socwill. The printed matter will be ready for mailing in a few days.

P. T. MADISON, Sec'y-Treas.

POINTS AND FLUSHES.

Mr. J. B. Blossom writes us that his Irish setter bitch Dollymount (Signal—Duchess) whelped sixteen puppies (twelve dogs) by Bedford on July 25. Only seven are living. This was an exceptionally large litter. As both sire and dam are noted winners, great expectations are had of them. Mr. Blossom adds: "I don't recall my advising you that my Bedford, winner of first in the great Lexington, N. C., field trials, 1892, was bred to Coleraine at the last New York show—result, a litter of twelve (seven dogs) on April 22. The usual mishap which makes the breeding of blue bloods a perpetual disappointment has gradually reduced the number to two bitches, of which I have one, a beautiful little lady of over three months of age. Coleraine was a beautiful bitch, but was ruined in this country by bad training and handling. In England, although only whelped in April, 1890, she won first in Derby in National Field Trials; third, All-Aged Stake, Kennel Club Field Trials, 1891; also third in Derby and All-Aged Stake, U. S. F. T. C. Trials, 1891. As you know, I purchased some time ago the Irish setter Brian Boru II. I then said that he had the darkest blood-red coat that I ever saw, bar none. As Rosamond, winner of first in open class, New York show, 1896, was the darkest red setter there, I bought her and bred her to Brian. The pups ought to be of superb color, for Brian is a number of shades darker than even Rosamond. She is good in the field also, as I expect Brian to show himself to be."

In a letter bearing recent date Mr. Walter L. Mann, secretary of the Orange Gun Club, Orange, Mass., writes us that Mr. L. A. French's Irish setter, a famous field dog in that section, was killed by an electric car.

The *Breeder and Sportsman* says: "At a meeting of the San Joaquin Valley Agricultural Society, held at Stockton on Tuesday evening last, it was decided to hold a bench show on Sept. 30, 31 and Oct. 1 and 2. Medals will be awarded in all classes. There will also be two handlers' prizes of $20 and $10. The office will be opened and the premium list will be issued on Aug. 15. Applications to the American Kennel Club will be made at once. The Stockton fanciers guarantee 100 dogs from that section." Let us hope that the Society will not stick to Sept. 31 too closely, as elsewhere that date is not in high esteem.

Mr. John Wootton, honorary secretary-treasurer of the Manitoba Field Trials Club, is to be congratulated on the good showing he has made in the list of Derby entries, numbering twenty-five, published elsewhere in our columns. No doubt but what there will be a successful chicken trial in Manitoba this year.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

THE SCHOOL FOR ALL AGES.

NOWADAYS there are schools where three generations from the same family go to learn, and where children, parents and grayheads go into the same class. We doubt if Mother Shipton, who prophesied so many wonders that have come to pass in our day, would ever have dared to predict this leveling which is now an accepted fact.

However though that old worthy may have foreseen the locomotive engine and some of the uses of electricity, the bicycle was beyond her ken, for when the bicycle is at the root of a fact, both prophecy and reasoning fail.

The rise of the great army of cyclists in this country has necessitated bicycle schools where persons who lack confidence in their own ability to learn to ride go for instruction. These schools are scattered everywhere, and the large cities have them by the score. Sometimes they are instituted by the agents of a particular bicycle for the use of their patrons alone, and sometimes they are open to every one who has the necessary fee for instruction.

In Hartford, Conn., the home of the Columbia bicycle industry, is a notable school, from which from April 1 to July 1 of the present year nearly 1,200 finished riders have graduated. Estimating the population of Hartford at 60,000, and provided this rate of 4,800 per year was continued winter and summer, it would not take a great while till every man, woman and child of the population had mastered the art of controlling the "little steel steed."

However, others besides residents of Hartford visit this school. Joseph Jefferson, Roland Reed and other actors of note have received instruction here, and it is said that President Cleveland is to become a pupil.

The school has attracted many pupils from the outside world, and there is a reason for this, which is to be found in the very efficient system of instruction carried on.

When a pupil enters the school he is taken in hand by a well-drilled instructor, who first mounts him on a bicycle and then takes him around the floor, steadying him meanwhile by holding on to the seat as he walks beside. As soon as the pupil begins to get an inkling of what is required of him, the instructor mounts his own wheel, and, having a firm hold of the other's handle bars, rides side by side with his pupil. It takes an expert to do the trick, but when once it can be safely accomplished the learner obtains the mastery of his wheel in about half the time necessitated by the common methods of instruction. Strangely enough, there seems to be little if any danger attached to this system, for not a single accident has been reported as a result of the innovation. The danger which would be incurred in teaching ladies, from their dresses becoming entangled in the instructor's wheel, has been obviated by the use of pins, which keep the refractory garment under control.

Under this system progress is rapid. Even the ladies learn to balance after an average of three lessons. Then, having been firmly grounded in the rudiments, the pupil becomes a highway graduate and the diploma is not long forthcoming.

A WOLF IN SHEEP'S CLOTHING.

THEY were lying around under the shade of the maples that gave the name to the particular mountain "summer resort" they patronized. The two or three men all wore knickerbockers, and the half score girls were mostly attired in dress of one style or another that had been curtailed at the bottom. Propped up against the trees or the side of the house near by were a number of bicycles.

It was a hot day, and the small talk based on that ineffable boon that had come to relieve the monotony of the long, lazy days—the bicycle—had somehow lagged. Each person there had had ample opportunity afforded him or her to become acquainted with the particular merits or demerits of each wheel, and any one of those present could have passed a perfect examination on the condition of the roads running north and south along the lake or west to the railroad.

There had been no mishaps worth mentioning; even the most timid summer girl of the lot had begun to lose her fear of her wheel, for it had developed no new tricks in the last twenty-four hours, and all the horses and cows in that part of the country had become resigned to the inevitable and ceased demonstrations of alarm or hostility when the bicycle brigade appeared.

But at the very moment when things were at their lowest ebb, and the two or three who were struggling bravely to put a little life into the conversation were almost ready to succumb to the general lethargy, a welcome diversion occurred. The timid young lady (she was still timid when anything in knickerbockers was in sight) spied a man coming up the road straight to where they lounged under the shade of the maples. When she had imparted her discovery there was a noticeable increase of animation among farmer Jones's summer boarders, and even the sleepiest managed to train their eyes in the direction of the newcomer. Their first impressions were soothing.

Like themselves the stranger was a cyclist and wore the conventional costume—knickerbockers, golf stockings and cap. He was a rather good-looking young man, and his manners, as they discovered when he came to dismount and join their circle without the formality of an introduction, were extremely easy.

However, as the blue stocking girl said afterward, it was not their fault that he did this, for they had given him no encouragement. The newcomer was a good talker and soon he had effected a marvelous transformation in the scene. With wonderful tact he had worked up a perfect outburst of enthusiasm on the subject that among themselves they had worn threadbare. The timid girl in relating her fright when the cow objected to her red sweater vied in holding his attention with Miss Blue Stockings, who insisted that aluminum skirt guards were the acme of cycle manufacture, and with half a dozen others who discussed the roads, the mails, the trains, steamboats, mountains, lakes and a thousand other well-worn subjects—mostly in connection with their bearing on the wheel.

Even the young men condescended to ask a few questions of one they had reason to look upon as a dangerous rival, and to each and all the bearing of the newcomer was equally affable.

There was a certain mystery about his presence that no one could penetrate, however, till finally one of the most popular summer girls asked him what books he liked to read. Was it hypnotic suggestion that had prompted the question? In discussing the event afterward most of the party inclined to this belief, and in support of their argument they affirmed that what happened subsequently could not have occurred except on the supposition of hypnotic powers on the part of their visitor. The principal dissenters from this view were the young men, who under their breath murmured "bunco."

Without entering into the merits of the discussion we hasten to explain that on hearing the word book the fascinating stranger produced from his clothing an arrangement of covers that turned in and out to show sample bindings, and which contained a lot of sample pages relating to the history of the bicycle from the earliest ages to the present day, including the lives of notable writers and riders from Ezekiel to Speaker Reed, illustrated by 1,700 original engravings, etc.

It is a shame to dwell on the mortification of those thirteen people, so we will draw a curtain over their feeble efforts at resistance and subsequent ignominious surrender.

Suffice it to say that they could find no way out of the trap into which they had fallen, and that they succumbed with the grace of martyrs going to the stake. They took up a *pro rata* subscription for the great work (published in half a hundred parts or more) and they donated it afterward to the landlord of the "Maple Grove," who, against his better judgment, was forced to send to the city for a special book case to contain it.

At last reports the guests of the house had taken temporarily to boating as a diversion, and bicycles and book agents are tabooed subjects of conversation. HAL.

"Points of Support."

THE idea of providing riders with points of support to enable them to "utilize their forces more effectively" seems to be having a run just now with the manufacturers of bicycle accessories.

One of the latest of these devices consists of a pair of braces which run over the shoulders of the cyclist and unite at a ring near the small of the back. From this ring depends a hook intended to be attached to the saddle, thus practically tieing the rider to his seat.

According to the prospectus, this arrangement is intended for long-distance riders, for fast riders, for climbing hills, and "as a brake going down hill" (back pedaling).

Any cyclist can determine for his own benefit the desirability of this principle, which is the same as that of the Swiss "normal bicycle," by buying or making a set of braces such as described, or, more simply still, by holding on to the back of the saddle with one hand when going up hill or down.

IT has been the custom to account for the failure of the June regattas of the larger clubs by saying that the racing of the New York Y. C. cruise had superseded them; but now the cruise has come and brought no racing, a dozen yachts on the squadron runs and but half a dozen for the two Goelet cups, the principal prizes of the year. For its part, the New York Y. C. has been extremely liberal in offering prizes in all classes and under terms specially suited to the existing conditions in yachting. So far as the actual management of the races is concerned, a vast improvement in courses, methods of starting, etc., has been made in recent years, the interest, both to the racing owner and the spectator, being greatly increased. With it all, there has been a notable falling off in the racing of the large yachts, and this year it is more painfully apparent than ever before. As a steam yacht display and a social function, the cruise of 1896 may be set down as a qualified success; as a racing function, it has proved a failure. The true reason why is not apparent; perhaps there is no one reason, but several hidden causes have coöperated to stop the course of building and racing in the larger classes.

To determine all of these causes is a difficult matter, much more to suggest suitable remedies; a much easier and more satisfactory course is that, taken by so many, of abusing the existing rule. This is an amusement that requires little thought or labor and no special knowledge of yachting; any one can become proficient in it in a single season without leaving his comfortable chair on the club piazza. It is a pity, however, that those who are so loudly insistent on the failure of the measurement rule do not go so far as to specify in what respects it has failed, and that nothing seems further from their minds than the suggestion of some practicable remedy. Even granting that the present length and sail area is bad, it certainly cannot be abandoned until something is found to take its place, and we commend to the various profound critics of the rule the task of proposing a better one. Never was there a more favorable opportunity for securing the adoption of one common rule of measurement by all American yacht clubs than exists at the present time; the one serious difficulty is to find such a rule.

The truth is that the present state of yacht racing is much less a matter of formula than of conditions, and that no formula, however perfect, can to-day overrule the conditions of modern yachting and restore to the racing a usable and desirable type of yacht.

New Rochelle Y. C.

THE special regatta of the New Rochelle Y. C. on Aug. 8 was sailed in a very light wind, but few yachts competing, the times being:

FIXED BALLAST—25FT. CLASS.

NEW YORK Y. C. ANNUAL CRUISE.

WITH the race of Aug. 12 for the special 30ft. class, the New York Y. C. terminated a cruise that while pleasant as a cruise has been anything but successful from a racing standpoint. A fairly large fleet has followed the flagship for ten days over the usual course, with the exception of the visit to New Bedford, this year omitted. Many of the yachts were steamers of large size, filled with merry parties in which ladies were included as a matter of course; the ready naphtha launch has done much to promote social intercourse among yachtsmen, and so far as society afloat is concerned the cruise has been an exceptionally pleasant outing. As for racing, in either cruising or racing trim, it has not been a success; very few yachts have taken part either in the Goelet cup race or the squadron runs, and the contests have lacked the keen interest that has so often attended them over the same courses. The racing of the cruise points strongly to the decline of yacht racing in the large classes, a matter that is now beyond remedy.

Second Day—First Squadron Run.

HUNTINGTON BAY TO NEW LONDON.

Tuesday, Aug. 4.

The programme of the cruise left the first day's run to be decided according to the weather between Morris Cove and New London, the latter distance being 64 nautical miles. At sunrise the wind was light, but from the S.W., the right quarter for a run, and at 6 o'clock the signals were given for a start for New London. The usual prizes were offered for the runs, the conditions being framed as far as possible to favor the yachts in cruising trim; but very few owners have sent aloft their racing flags for the cruise of 1896. The starters were not only few in number, considering that this is the great event of the yachting year, but as usual there were but two or three to a class. The starting line was laid out off Eaton's Neck, and the fleet was timed:

Wasp	7 00 57	Choctaw	7 04 57
Norota	7 01 50	Olga	7 05 00
Queen Mab	7 01 52	Iroquois	7 06 29
Carmita	7 02 12	Quissetta	7 07 14
Minerva	7 02 18	Marguerite	7 09 47
Eclipse	7 02 41	Emerald	7 09 58
Uvira	7 03 52	Amorita (handicapped)	7 10 00

With an ebb tide and light S.W. wind, and spinakers set to starboard, the fleet headed down the Sound. As in all long races, the yachts separated after a time, sailing in different winds, all light and fluky, shifting spinakers from side to side and signaling with balloon main topmast staysails. For a time the fleet was lost in a light mist, and even had the maneuvers been interesting they were invisible to all spectators. Fortunately the wind, after coquetting all day with the yachts, at last landed them off the Pequot House after a slow and uninteresting race. The event of the day was the easy win of Colonia. Iroquois did good work with Marguerite, the fin-keel Carmita scored a victory over Wasp, and Minerva, once more in the racing, won easily from Uvira. The official times were:

SCHOONERS—CLASS 2.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	7 10 00	3 40 24	8 30 24	8 20 24
Emerald	7 09 58	4 31 41	9 21 43	9 18 41

SCHOONERS—CLASS 3.

Marguerite	7 09 47	4 41 30	9 31 43	9 20 23
Iroquois	7 06 29	4 32 40	9 26 11	9 13 18

SCHOONERS—CLASS 4.

Amorita	7 10 00	5 06 05	9 56 05	9 32 51
Quissetta	7 07 14	4 48 44	9 41 30	Not meas.

CUTTERS CLASS 4.

Eclipse	7 02 41	5 37 16	10 34 35	10 17 00
Wasp	7 00 57	4 56 28	9 55 31	9 37 56
Carmita	7 02 12	4 56 13	9 54 01	9 36 12

CUTTERS CLASS 5.

Uvira	7 03 52	6 01 12	10 57 20	10 18 53
Choctaw	7 04 57	6 04 07	10 59 10	10 20 25
Minerva	7 02 18	5 41 15	10 38 57	9 55 37

CUTTERS—MIXED CLASS.

Queen Mab	7 01 52	4 51 02	9 49 10	9 49 10
Norota	7 01 50	6 04 09	11 02 19	10 05 58
Olga	7 05 00	Not timed.		

The winners were: Schooners—Class 2, Colonia; class 3, Iroquois; class 4, Quissetta. Cutters—Class 4, Carmita; class 5, Minerva. Mixed class—Queen Mab.

Third Day—Second Squadron Run.

NEW LONDON TO NEWPORT.

Wednesday, Aug. 5.

Wednesday was much the same as Tuesday—very hot and with no breeze at all in the early morning, a light S.W. wind coming in about 9 o'clock.

The fleet was increased by a number of yachts lying at anchor in New London, among them Volunteer, Merlin and Wayward. The former started early with the cruising division, the other two electing to race, Merlin of course going in with Colonia and Emerald, while Wayward took Queen Mab out of the mixed class. The preparatory signal for the single stickers was given at 9:40, with a start at 9.50, the schooners going away at 9:55. The start was timed:

Wasp	9 51 06	Drusilla	9 53 02
Queen Mab	9 51 32	Liris (handicapped)	9 55 00
Awa	9 51 48	Iriquois	9 56 22
Norota	9 51 58	Quissetta	9 56 30
Carmita	9 51 59	Marguerite	9 57 18
Uvira	9 52 05	Merlin	9 58 04
Choctaw	9 52 40	Amorita	9 59 06
Minerva	9 52 50	Colonia	9 59 18
Wayward	9 53 02	Emerald	9 59 41

The first leg was a reach to Race Rock on starboard tack; then spinakers were set to starboard. The wind was light and fluky, and the fleet broke up, Colonia, Amorita Quissetta and others keeping off shore, while Emerald kept close to the beach. Toward noon the wind shifted to the south and straightened, spinakers came in and balloon staysails were set. Emerald gained a little by getting the breeze first and took the head of the long procession. When past Point Judith she set her spinaker to starboard, but soon jibed and shifted it to port. Colonia kept up a lively stern chase, but an unsuccessful one. The liveliest fight of the day was between Amorita and Quissetta, a hot luffing match resulting in a win for the former. Quissetta is not yet measured, and her exact time in the runs is not known. Phantom, schooner, lost her foretopmast, though not racing. The official times were:

SCHOONERS—CLASS 2.

	Start	Finish.	Elapsed.	Corrected.
Emerald	9 59 48	2 43 05	4 43 15	4 41 23
Colonia	9 59 11	2 44 52	4 45 41	4 45 41
Merlin	9 58 04	2 49 26	4 51 22	4 51 22

SCHOONERS—CLASS 3.

Marguerite	9 57 14	2 58 15	5 00 57	5 00 57
Iroquois	9 56 32	2 56 12	4 59 50	4 58 52

SCHOONERS—CLASS 4.

Amorita	9 59 06	2 53 05	4 53 59	4 53 59
Quissetta	9 56 30	2 54 35	4 58 05	Not meas.

CUTTERS—CLASS 3.

Wayward	9 53 02	3 21 14	5 38 12	5 38 12
Queen Mab	9 51 32	3 16 37	5 24 55	5 22 50

CUTTERS—CLASS 4.

Wasp	9 51 06	3 17 06	5 26 00	5 26 00
Carmita	9 51 29	3 29 00	5 37 01	5 36 52

CUTTERS—CLASS 5.

Uvira	9 52 05	3 31 33	5 39 28	5 39 28
Choctaw	9 52 40	3 35 17	5 42 37	5 42 26
Awa	9 51 48	3 44 33	5 52 45	5 52 23
Minerva	9 52 50	3 37 13	5 34 23	5 31 33
Liris	9 55 00	3 44 27	5 49 27	Not meas.

CUTTERS—CLASS 6.

Norota	9 51 58	3 45 10	5 53 12	5 53 12
Drusilla	9 53 02	Not timed.		

The winners were: Schooners—Class 2, Emerald; class 3, Iroquois; class 4, Amorita. Cutters—Class 3, Queen Mab; class 4, Wasp; class 5, Minerva; class 6, Norota.

Fourth Day.

NEWPORT HARBOR.

Thursday, Aug. 6.

Thursday, one of the very hottest days of the year, was spent in harbor, the day being devoted to miscellaneous festivities, "with fireworks in the evening," everybody being "there" At noon the fleet dressed ship, every vessel in the harbor showing some sort of decoration. All hands then went ashore to assist in the ceremony of raising a flagpole on Washington square, the pole being presented by the Lawrence Club, which is housed in the old Perry mansion. The rowing and launch races were held in the afternoon, the first race, in yachts' dinghies, being won by Amorita's dinghy, with Nydia's second, beating boats from Narada and Merlin. The pair-oared gig race, for the Owl colors, had three starters, Crusader's boat winning, with Halcyon's second and Marietta II.'s third. Some misunderstanding arose over the four-oared gig race for the Gamecock colors, an objection being made to Amorita's gig as a racing and not a service boat. Iroquois's gig rowed over alone. There were three starters in the launch race, from Alert, Sylvia and Flying Cloud. Flying Cloud, with 7m. allowance, won easily. In the evening a water pageant and illumination of more than usual splendor afforded amusement to the yachtsmen and townspeople. The electric display of mottoes and devices was very elaborate, and the harbor procession was a great success.

Fifth Day—Goelet Cup Race.

NEWPORT.

Friday, Aug. 7.

Considering that the New York Y. C. cruise is the great event of the yachting year, and that the race for the Goelet cups is the great event of the cruise, the season of 1896 can hardly be classed as a brilliant one so far as the large yachts are concerned. The Goelet cups are not only among the most valuable, both intrinsically and artistically, that are offered for American yachts, but no large racing yacht can consider her record a success unless she possesses one of them at least. They are silver trophies, costing $1,000 and $500 each, one given for schooners and the other for cutters, sloops and yawls, by Mr. Ogden Goelet, one of the American yachtsmen who is just now enjoying the abuse of his countrymen because he is building a steam yacht on the Clyde instead of the Delaware. Apart from other liberal donations in the support of American yachting, Mr. Goelet has presented two cups each year since 1882, at an outlay of $22,500 up to this year. The cups of 1896 were made by Tiffany & Co., the schooner cup from a design by Stanford White, the well-known architect, and the cutter cup from a design by the artists of the company. The former is a large bowl, with figures of mermaids and dolphins forming the handles; the latter is a Græco-Roman vase.

All of the Goelet cup races have been sailed over one or the other of two courses, one with Block Island Buoy and the other with Sow and Pigs Lightship as the outer mark. The "Block Island Course," as it has been sailed for some years, is from off Brenton's Reef Lightship, just outside Newport Harbor, around the buoy off Block Island, 14 nautical miles S.W.; then about W.N.W. 18½ miles to a mark off West Island, and W. by N. 6 miles to the line. The "Sow and Pigs Course," over which the famous first meeting between Puritan and Priscilla took place in 1885, is from the same line E. by S. 18 miles, N. by W. 4½ miles, and 16 miles to the line. Each of these courses is a triangle with a very short base, and though the first leg is laid off as nearly as possible to windward, any shift of wind may turn it into a reaching race. In other races at various times in the same waters a very good triangular course has been laid out, the first leg being S.W., or against the prevailing wind, and this year a change was proposed by Mr. Goelet in the adoption of similar courses, as more nearly in accord with the present methods in yacht racing. The directions, as issued by the regatta committee, were as follows:

General Instructions.—Capt. Goelet reserves the privilege of inviting foreign yachts that may be in American waters to enter the event. By invitation of the commodore, the regatta committee will be on board the Sylvia. Entries, which must be in writing, will be received at the New York club house up to 10 P. M. Aug. 2, and on board the Sylvia up to 8 A. M. Aug. 7. The start will be off Brenton's Reef Lightship at 10:30 A. M., wind and weather permitting. Should the race be postponed, it will be started on the following day, if favorable. The course will be triangular, ten miles to a leg. Club rules will govern, with the exception that there will be no time limit.

Starting Signals.—(Should a signal gun miss fire a prolonged blast of the whistle will be given.) No. 1. Preparatory: A gun will be fired and the blue peter hoisted. No. 2. Start for single masted vessels and yawls: Five minutes later a third gun will be fired and a red ball hoisted. No. 3. Start for schooners (handicap time for single-masted vessels, etc.): Five minutes later a fourth gun will be fired and a second red ball hoisted. No. 4. Handicap time for schooners: Five minutes later a fifth gun will be fired and both balls will drop.

Courses.—No. 1, letter C.—From an imaginary line between the Sylvia and Brenton's Reef L. S. 10 miles S.W. to and around a mark 3⅛ miles S.S.W.⅞W. from Point Judith whistling buoy, leaving it to port; 10 miles E.S.E¾E. to and around a mark, leaving it to port, and 10 miles N. by W.½W. to finish line, which will be drawn as for the start; 30 miles. No. 2, letter F.—From an imaginary line between the Sylvia and Brenton's Reef L. S. 10 miles S. by E ½E. to and around a mark, leaving it to starboard; 10 miles W.N.W.¾W. to and around a mark 3⅛ miles S S.W.⅞W. from Point Judith whistling buoy, leaving it to starboard, and 10 miles N.E. to finish line, which will be drawn as for the start. N. B.—The marks will be floats displaying red flags with white stripes. At the finish the Sylvia will display a large club signal at the fore and a red ball by day; and after dark she will show four white lights, hung vertically, and will burn club signals at 10-minute intervals.

On the day before the race an objection was made to this change of course by the smaller schooners on the ground that it gave a preponderance of reaching in favor of the larger vessels, and the regatta committee finally agreed to sail over one of the old courses. The entries were:

SCHOONERS.

Carmita, Howard Caswell	54.93	0 10 35
Wasp, Lippitt Bros.	54.97	0 10 26

Of the schooners, Marguerite, Iroquois and Elsemarie, though nominally starting for the Goelet cup, had no chance of winning it from the other four, but made up a private sweepstakes.

The morning brought little wind, but by the time that the fleet was outside the harbor, many steam and sailing yachts being present to follow the race, there was a fresh wind from S.S.W. and a heavy swell on. The three schooners in the sweepstakes race carried working topsails; Emerald, Colonia, Amorita and Quissetta carried club topsails, but the latter lowered hers when outside. Wasp and Queen Mab followed her example, but Carmita hung to hers. The flagship anchored off Brenton's Reef Lightship, and the regatta committee—Messrs. S. Nicholson Kane, Governeur Kortright and W. Butler Duncan, Jr., the latter acting in the place of Mr. Archibald Rogers—gave the signals for the Block Island course, to windward on the first fourteen-mile leg, a run of eighteen miles to the second mark, and a close reach of six miles home. While working about the line, Wasp was in collision with the steam yacht Viking, tearing her mainsail badly, while Viking lost her bowsprit. The sail was hastily repaired to last through the race, but was more or less of a handicap all day. The preparatory signal was given at 11 o'clock and the start for the three cutters at 11:05, the times of crossing being:

Wasp	11 05 48	Carmita	11 08 27
Queen Mab	11 06 35		

The start for the schooners was given at 11:10, but just before the signal Quissetta's mainsail came down with a run, the halyard block giving way; the mishap was too serious for immediate repair, and the yacht withdrew. The others were timed over the line:

Colonia	11 10 41	Emerald	11 11 45
Elsemarie	11 11 21	Amorita	11 12 50
Iroquois	11 11 34	Marguerite	11 13 07

All of the yachts crossed the line on the starboard tack, but very soon went about and stood in for the Narragansett shore, Colonia, with her great draft, being the first to tack offshore again. For a time Wasp gained on Queen Mab, but as they worked out offshore the latter managed to pass her to windward. Colonia held first place of the schooners, with Emerald second, but Amorita was nearly holding her own with the latter. They worked along down the beach to Point Judith, Colonia and Emerald keeping offshore and getting more wind than those closer in. When near the point a light fog hid them for a time, but they ran out of it and were once more visible, Colonia with a long lead, while Amorita was so close to Emerald that the latter barely crossed her bows. Colonia was alone at the Block Island mark, passing it in fine style with nothing thrown away, and breaking out her spinaker at once on the starboard side, then setting her balloon maintopmast staysail and balloon jibtopsail.

After crossing on opposite tacks, Emerald and Amorita tacked and came together again, this time Amorita forcing Emerald about, being on starboard tack. Queen Mab found the steam yacht Peerless in the way as she rounded, but went clear. The tide was running very strong and carrying all the yachts on the buoy, they having allowed too little for it, and Wasp, Amorita and Emerald were in close company. When they next met Emerald crossed Amorita's bow. Wasp and Emerald met at the mark, but the schooner gave way. The following times are unofficial:

Colonia	1 39 30	Carmita	Not timed
Queen Mab	1 47 25	Elsemarie	Not timed
Wasp	1 53 10	Marguerite	Not timed
Emerald	1 53 37	Iroquois	Not timed
Amorita	1 55 06		

They started down wind with spinakers to starboard, and made the long run of 18 miles without other incident than a gain for Colonia; the times at the West Island mark being:

Colonia	3 34 52	Wasp	3 55 40
Emerald	3 48 25	Marguerite	Not timed
Queen Mab	3 49 45	Elsemarie	Not timed
Amorita	3 55 05	Iroquois	Not timed

After a jibe all headed for home on a close reach, running off the last 6 miles quickly. The full times were:

SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Queen Mab	11 06 25	4 34 35	5 28 00	5 28 00
Wasp	11 05 48	4 46 25	5 40 37	5 30 11
Carmita	11 08 27	5 13 31	6 05 04	5 54 29

SCHOONERS.

Colonia	11 10 41	4 15 24	5 04 43	5 04 43
Emerald	11 11 45	4 32 23	5 20 38	5 18 50
Marguerite	11 13 07	4 59 42	5 44 35	5 39 51
Iroquois	11 11 34	5 07 33	5 55 59	5 48 20
Amorita	11 12 50	4 42 20	5 29 30	5 17 22
E'semarie	11 11 21	5 07 00	5 55 39	5 41 46

Queen Mab beat Wasp 2m. 11s., and Carmita 26m. 29s.

Colonia beat Amorita 12m. 39s., Emerald 14m. 7s., Marguerite 35m. 8s., Elsemarie 37m. 3s., and Iroquois 43m. 37s.

Marguerite beat Elsemarie 1m. 55s., and Iroquois 8m. 29s.

The elapsed times over each leg were:

SCHOONERS.

	1st Leg.	2d Leg.	3d Leg
Colonia	2 28 49	1 55 22	0 40 32
Emerald	2 41 52	1 54 48	0 43 58
Amorita	2 42 15	2 00 00	0 47 15

CUTTERS.

Queen Mab	2 40 50	2 02 20	0 44 50
Wasp	2 47 22	2 02 30	0 52 45

The race was by no means an exciting one. The victory of Queen Mab over Wasp was a surprise, but Colonia's work of late had prepared everyone for her victory over Emerald under existing conditions. The race was a fair one in all respects. Wasp suffered somewhat from her accident before the start, and Queen Mab was bothered by a steam yacht at the first turn, but otherwise it was decided on the merits of the yachts.

Sixth Day—Third Squadron Run.

NEWPORT TO VINEYARD HAVEN.

Saturday, Aug. 8.

There was no wind on Saturday morning for the run to Vineyard Haven. A light breath from the N.W. served to carry the fleet from the harbor to the start off Brenton's Reef Lightship, and a start was made at 11:20. Some excitement was caused by the schooner Intrepid drifting ashore near Beaver Tail, but she was hauled off safely by the tug N. P. Doane. The fleet started with next to no wind at all and drifted all day in alternate calms and catspaws. Colonia was in the lead, but as she neared the finish line off West Chop toward evening she stuck on the end of Middle Ground Shoal. Her cabin lights were open and she rolled down badly in taking the ground, a good deal of water finding its way into the cabin and spoiling the costly upholstery. The finish was an all-night matter, as the times show:

SCHOONERS—CLASS 2.

	Start.	Finish.
Fortuna	11 30 00	Did not finish.
Montauk	11 30 00	6 o'clock Sunday morning.

SCHOONERS—CLASS 3.

Alcœa	11 30 00	6 o'clock Sunday morning.
Merlin	11 30 00	Did not finish.
Colonia	11 30 00	Ran aground.

SCHOONERS—CLASS 3.

	Start	Finish.	Elapsed.	Corrected.
Marguerite	11 30 00	8 08 21	8 38 21	8 38 21
Iroquois	11 30 00	8 13 00	8 43 00	8 42 07

SCHOONERS—CLASS 4.

Amorita	11 30 00	7 44 50	8 14 50	8 14 50
Quissetta	11 30 00	7 37 30	8 07 30	8 04 12

CUTTERS—CLASS 3.

Wayward	11 25 00	8 15 00	8 50 00	8 50 00
Queen Mab	11 25 00	7 52 22	8 27 22	8 26 16

CUTTERS—CLASS 4.

Wasp	11 21 51	7 39 40	8 17 47	8 17 47
Carmita	11 22 55	Did not finish.		

CUTTERS—CLASS 5.

Uvira	11 25 00	Not timed.		
Choctaw	11 23 41	9 42 20	10 18 39	10 18 29
Minerva	11 22 51	7 o'clock Sunday morning.		

The winners were Montauk, Alcœa, Marguerite, Quissetta, Queen Mab, Wasp and Choctaw.

Eighth Day—Fourth Squadron Run.

VINEYARD HAVEN TO NEWPORT.

Monday, Aug. 10.

Sunday was spent in harbor at Vineyard Haven, the yachtsmen resigning themselves to all the gayeties which Cottage City affords. This year the usual run to New Bedford was omitted, the fleet returning direct to Newport, and at 5:30 A. M. on Monday the signal for starting from the harbor was given. The cutters were started at 6:30, the line being off West Chop, and the schooners at 6:35, the times over the line being:

Uvira	6 35 40	Iroquois	6 42 58
Wasp	6 36 01	Wayward	6 40 00
Carmita	6 36 43	Colonia	6 43 47
Queen Mab	6 37 15	Amorita	6 44 38
Minerva	6 37 32	Marguerite	6 45 00
Choctaw	6 39 17	Atlantic	6 45 00
Quissetta	6 41 29		

Many of the fleet, including some racers, had gone to the eastward. The yachts were hardly over the line before the wind fell and left them in a strong flood tide. Some anchored and some wrestled with the tide until after two hours they were just on the line again. About 11 o'clock a light S.W. wind came in, Wasp catching it first. The fleet was scattered all over Vineyard Sound, and when the breeze became strong enough to start the race in earnest against the tide, the new start was a most uneven one. The breeze freshened as the fleet left the Sound, and a finish was made off Brenton's Reef about 5 o'clock, but the race was simply a fluke throughout. Quissetta, by good luck, took the cup offered by Vice-Com. Ward for the schooner winning the greatest number of runs, and Wasp won the cup offered by Rear-Com. Ledyard for cutters. The final times were:

SCHOONERS—SECOND CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	6 43 47	4 54 12	10 10 25	10 10 25
Atlantic	6 45 00	Did not finish.		

SCHOONERS—THIRD CLASS.

Marguerite	6 45 00	5 20 23	10 35 28	10 35 28
Iroquois	6 42 58	5 58 58	11 16 00	11 15 07

SCHOONERS—FOURTH CLASS

Amorita	6 44 38	5 01 30	10 19 52	10 19 52
Quissetta	6 41 29	4 57 58	10 16 29	10 13 11

SLOOPS—THIRD CLASS.

Wayward	6 40 00	5 48 16	11 08 16	11 08 16
Queen Mab	6 37 15	4 55 52	10 18 37	10 16 09

SLOOPS—FOURTH CLASS.

Wasp	6 36 01	4 52 32	10 16 31	10 16 31
Carmita	6 36 43	5 50 53	11 14 10	11 14 02

SLOOPS—FIFTH CLASS.

Uvira	6 35 40	5 48 02	11 12 22	11 12 22
Choctaw	6 39 17	6 11 12	11 31 55	11 31 45
Minerva	6 37 32	6 21 35	11 44 03	11 41 25

The winners were:

Schooners—Class 2, Colonia; class 3, Marguerite beat Iroquois 20m. 21s.; class 4, Quissetta beat Amorita 6m. 41s.

Cutters—Class 3, Queen Mab beat Wayward 52m. 7s.; class 4, Wasp beat Carmita 57m. 31s.; class 6, Uvira beat Choctaw 19m. 23s. and Minerva 29m. 3s.

A special race for the 30ft. class was arranged for Aug. 12, after which the fleet will disband.

Lake Geneva Y. C.

LAKE GENEVA, WIS.

Saturday, Aug. 1.

THIS was the second race for the 15ft. class, the race being for points which count toward a prize at the close of the season. Puckachee has 6 points, Little Dipper has 4 points, Ysabel has 4 points. One-gun start.

	Start.	Turn.	Finish.	Elapsed.
Ysabel, B. Carpenter	10 22 00	11 44 00	12 39 00	2 17 00
Puckachee, Miss E Rumsey	10 22 00	11 43 30	12 41 25	2 19 25
Little Dipper, Miss R. Sturges	10 22 00	11 44 10	12 41 45	2 19 45
Josephine, C. R. Crane	10 22 00	11 46 40	Did not finish.	
Columbia, A. Chandler	10 22 00	11 47 30	Did not finish.	

Ysabel won 4 points, Puckachee 2 points.

Judges—H. W. Marsh and Will Waller, Jr.

Brockville Regatta.

BROCKVILLE, ONT.—ST. LAWRENCE RIVER.

Saturday, Aug. 8.

THE sailing regatta at Brockville, Ont., was stopped in the morning by a calm, but in the afternoon a second start was made, in a fresh S.W. wind. In the 15ft. class Peiper was sailed by S. G. Averill, of Ogdensburgh, and led over most of the course, but was finally passed by Mischief and Anita, both of Montreal. Peggy, sailed by her owner, made a very poor showing and withdrew after the first round. In the larger class Gethar won.

Quincy Y. C. Series.

HOUGH'S NECK—BOSTON HARBOR.

THE Quincy Y. C. arranged a series of three invitation races, which were sailed over the club courses on July 29, 30 and 31. On the first day there was a fresh S.W. wind, making a good race, the times being:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Emma C., P. A. Coupal	29.05	2 02 13	1 34 29
Ida J., F. E. Beekman	29.04	2 05 24	1 37 36
Harbinger, W. F. Bache	28.01	2 09 10	1 40 27
Beatrice, John Cavanagh	25.06	2 19 53	1 48 21
Arbutus, J. F. Small	29.11	Withdrew.	
SECOND CLASS.			
Gleaner, F. O. Wellington	23.00	2 10 07	1 35 44
Privateer, A. E. Schaaf	22.11	2 11 08	1 36 39
Rex, J. B. Farrell	24.00	2 12 40	1 39 28
Swirl, H. M. Faxon	21.07	2 17 04	1 40 52
Tacoma, S. N. Small	22.00	2 17 21	1 41 42
Cleopatra, M. Macdowell	21.07	2 18 12	1 42 00
Moondyne, Shaw Bros.	24.08	2 23 13	1 50 47
Eulalie, R. G. Hunt	22.03	Disabled.	
Romance, L. Sears	24.04	Withdrew.	
THIRD CLASS.			
Arab, W. F. Scott	18.01	2 18 50	1 37 24
Zoe, J. McCarthy	19.06	2 23 00	1 43 50
Nancy Hanks, P. J. Maglathlin	20.06	2 25 03	1 47 22
Opechee, W. P. Barker	19.09	2 26 49	1 48 02
Enigma, G. F. Mayberry	18.05	2 30 40	1 49 47
Onaway, W. E. Geyer	20.07	Withdrew.	
Wawanda, Beumer & Paltern	19.11	Withdrew.	
KNOCKABOUTS.			
Tautog, W. O. Gay	21.00	2 14 59	2 14 59
La Chica, C. V. Souther	21.00	2 16 35	2 16 35
FOURTH CLASS			
Sunbeam, H. B. Faxon	16.05	1 25 13	0 54 07
Fantasy, W. Allerton	15.09	1 28 53	0 56 51
Alpine, C. J. Blethen	17.06	1 26 36	0 56 53
Primrose, W. B. Burrell	17.05	1 26 48	0 56 59

Enigma, G. F. Mayberry	18.05	Withdrew.	
FOURTH CLASS			
Sphinx, A. Keith	17.11	2 02 55	1 33 44
Sunbeam, H. B. Faxon	16.05	2 17 19	1 46 13
Fantasy, W. Allerton	15.09	2 21 26	1 49 24
Alpine, C. J. Blethen	17.06	2 21 08	1 51 25
Tina, A. Cook	15.06	2 28 32	1 56 09

Eulalie protests Cleopatra for fouling; all of the fourth class were protested for rowing after the preparatory or for sculling with the rudder.

The third race was sailed on July 31 in a reefing N.W. breeze, giving some lively work and fine sport. Boston's only 15-footer, Mr. Small's Anita, went into the larger class with a crew of three and won very fairly. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Ida J., F. E. Beekman	29.01	1 38 05	1 04 43

Beverly Y. C.

THIRD CHAMPIONSHIP—BUZZARD'S BAY.

Saturday, Aug. 1.

THE 236th regatta, third championship, was sailed in a good single-reef breeze. An error of the judge in changing course signal after preparatory gun lost Bernice her chance for the race; a protest was the result, but as the other boats were not at fault it could not be granted.

Anonyma found her day and did well. Grilse did well till it breezed up, then proved again that she was built for and needs four men.

Sippican at last was measured after the race and proved to be 11in. out of class. This gives third prize in July 4 race to Alison, and second prize in July 11 race to Doris.

The race advertised for July 25 at West Falmouth was not sailed, but postponed to Aug 29

Courses: 11¼ miles for second class, 7¾ for third and fourth classes, 5½ for fifth class; wind S W.

	Length.	Elapsed.	Corrected.
SECOND CLASS CATS			
Anonyma, B. Y. C., F. L Dabney	24.09	2 11 48	1 58 06
Linotte, B. Y. C., W. P. Wilson	25.10	2 13 11	2 00 48
Mist, B. Y. C., Geo. H. Lyman	25.01	2 13 52	2 00 36
Bernice, B. Y. C., J. G. Young, Jr	25.08	Sailed wrong course.	
May King, B. Y. C., D L. Whittemore	26.00	Withdrew.	
Surprise, B. Y. C., Jas. L Codman	24.01	Disabled.	
THIRD CLASS CATS			
Colymbus, B Y. C., A. Winsor, Jr	21.06	1 44 31	1 32 00
Sippican, B. Y. C., W. H Davis	22.11	1 36 26	. .. ..
Cayuse, B. Y C., F W. Sargent	20.01	. .. ..	. .. ..
Melro, B. Y. C., D. L. Whittemore	20.03	. .. ..	. .. ..
FOURTH CLASS CATS.			
Elsa, B. Y. C., H. & F. Burgess	19.00	1 43 23	1 28 04
Howard, B. Y. C., H. O. Miller	18.00	1 45 48	1 29 12
Cinch, B. Y. C., H. Parker	18.01	1 46 04	1 29 37
Dawdle, B. Y. C., R. S. Harcy	17.06	1 46 35	1 29 20
Daisy, B. Y. C., Howard Stockton	19.00	Withdrew.	
FOURTH CLASS JIB AND MAINSAILS			
Heiress, B Y. C., Geo. G. Amon	19.00	1 36 40	1 21 21
Grilse, B. Y. C., W. E. C. Eustis	19.00	1 40 05	1 25 26
Ghuzz, B. Y. C., Lawrence Brooks	18.09	1 46 54	1 31 16
Silence, B. Y. C., J. Crane, Jr	19.00	1 50 34	1 35 15
Sally, B. Y. C., W. S. Burgess	19.00	Disabled.	
FIFTH CLASS CATS.			
Imp, B. Y. C., Geo. B. Dabney	14.05	1 21 21	1 06 27
Vif, B. Y. C., A. Winsor, Jr	14.04	1 25 55	1 10 54
FIFTH CLASS SLOOPS			
P D Q, B. Y. C., R. W. Emmons	14.02	1 25 00	1 09 46
G G, B. Y. C., H. E. Brewer	15.00	1 34 41	1 19 56

Winners of prizes: Second class cats, Anonyma first, Mist second; third class cats, Colymbus first; fourth class cats, Elsa first, Howard second; fourth class sloops, Heiress first, Grilse second; fifth class cats, Imp first; fifth class sloops, P D Q first.

Anonyma, Colymbus, Heiress, Elsa and Imp win second legs for pennants; Surprise, Melro, Dawdle and Vif each having one leg. P D Q wins a leg.

Judges, S. G. King and Geo. P. Gardner.

The open regatta at Marblehead on Aug. 8 was postponed to Aug. 29 on account of a calm.

American Steam Yachts.

THE *Marine Record*, in commenting on a quotation from an English journal relating to the position of the FOREST AND STREAM in opposition to the Payne bill, says:

We must take some exception, however, to the statement that the FOREST AND STREAM is ahead in its arguments against the Payne bill. These so-called arguments, so far as we have seen them, consist of mud-throwing of a nasty and unconvincing character. Among the yachts which have been made the targets for the malice of this publication are the Wadena and Comanche, the former built by the Cleveland Ship Building Co., and the other by the Globe Iron Works Co., of Cleveland. * * * The remark regarding the Wadena is a palpable misrepresentation, as the lengthening occurred after she had been in commission some time. True, it was "after trial," but not immediately after her trial trip, as the Anglomaniac sporting paper would have it believed. The lengthening was caused by no fault in the original design, but because the owner wished to reduce her draft without sacrificing any of her rather unusual amount of auxiliary machinery. As for the Comanche, this far-fetched comparison is based upon the simple fact that considerable deck space was allowed forward, in compliance with the wishes of her owner. This does not spoil her looks by any means, and both the Wadena and Comanche are yachts of which any American might be proud. The Comanche was built to be in every respect an American yacht, in design as well as in material, and the fault found with her appearance seems based solely on the idea that nothing is good which does not follow the English styles, in the matter of houses as well as of model. The continuous success of American sailing yachts over their British competitors, in which the credit is given very largely to the hull design, is a sufficient vindication of American ability in that direction. Why should designers not be allowed some latitude in laying out the deck plan as well?

When Wadena was lengthened has nothing whatever to do with the question of her design, it is even a fact that she made a trip across the Atlantic and back before being rebuilt; but many of the old salt-water sailors who saw her leave Tebo's with her decks nearly level with the water never expected to see her again. That she did get back proves just about as much as the recent crazy venture of rowing across the Atlantic in an open boat. The *Record* chooses its words very carefully in explaining that the object of lengthening was to reduce her draft, 10ft. 6in., certainly not excessive for a seagoing yacht of her length. The real reason for the alteration was that the yacht as designed had not sufficient displacement for her machinery and coal, and with enough coal aboard to carry her to a convenient coaling station on her ocean trip she had next to no freeboard, her deck being perilously near the water. If this is not bad design, we do not know what to call it, for the yacht was specially designed for a trip around the world. The faults were later remedied at an expense that would have paid a designer's fee many times over.

Comanche is a very serviceable craft, far superior to many other American steam yachts, a good sea boat and elegantly furnished below, but that she is absolutely devoid of that graceful appearance which is popularly supposed to characterize the more costly steam yachts is hardly capable of argument, it is only necessary to look at her.

The "latitude" of her deck plan is only one point of many open to comparison in considering her appearance.

The *Record* continues:

But even if these statements were true, it must be admitted that the only means which builders have at their command for securing improved pleasure tonnage is practice, and how is this to be secured when owners spend their money across the water? Builders are not warranted in building large yachts for sale, as the people who enjoy sufficient means to possess such luxuries insist upon outlining the general arrangement of such a boat. And as for the alleged deficiences in American yachts, the root of the whole matter, it is most likely, lies right in this characteristic. The prospective owner who places an order for a yacht with an American builder insists on being her architect, and the gentleman who enjoys that title is reduced, in fact, to the standing of a mere draftsman. The owner wants things arranged after a certain fashion, and often his desires are such that compliance with them is an absolute impossibility, especially if he has had no experience to give him proper and practical ideas. After this is explained to him, he will insist on having his own way as nearly as possible, and in this way builders are in many cases forced to act against their better judgment. Then, if the experiment turns out badly, the builders receive all the discredit. If an American places a yacht order in England, he either gives the builders full discretion in the matter, or else he is so far distant that he is unable to dictate with any certainty. He is either too far away to inspect the yacht during process of her construction, and the builders, it is probable, either do not consider his unique instructions as matters serious enough to pay any attention to, or else they convince him in a peremptory and *ex cathedra* style that his suggestions cannot be considered for a moment; that they violate all established rules for English yachts and yachtsmen, and the owner is awed into submission. It is admitted that American merchant vessels of the same grade of workmanship present a far better appearance and are really better than those of the British; and why should it be otherwise, under the same conditions, with pleasure craft?

We were under the impression that most shipbuilders ask for trade under the representation that they are masters of their profession, fully competent to carry out all contracts that they make; according to the *Record*, however, it is the duty of the customer to pay for the education and the unsuccessful experiments of the builder. This is closely in accord with the idea prevalent in many trades, that the yacht owner of all men was specially created to pay bills, and for no other good purpose.

The plea of the interference of the owner has come up repeatedly in this discussion, but whatever weight may attach to it, there is in it nothing to justify an ignorance of design. Some of the most conspicuous failures have been made in filling what was practically a *carte blanche* order, with a minimum of limitations from the owner. On the other hand, one of the largest of the new Watson yachts was practically designed in New York last fall under the eye of the owner, who was most rigid in his requirements. Like others who have advanced this same point, the *Record* fails to explain why there is such a difference as it claims between steam yachts and sailing yachts; in the latter, as in Yampa, Lasca, Emerald and Defender, both owner and designer manage to work in harmony and a perfect vessel is produced; if this method of procedure is possible with sailing yachts in this country, and with both steam and sailing yachts in England, why is it not possible here in the case of steam yachts?

The *Record's* remarks about mudslinging and malice are strongly suggestive of our recent experience with the *Marine Journal*, which started on the same tack by denouncing our statements as untrue, but when confronted with an opportunity to prove them so promptly declined the issue. As the *Marine Record* has assumed to speak with authority as to Wadena and Comanche, possibly it will give us some information which we have been unable thus far to obtain, and tell us who the designers or draftsmen were who made the plans for these American yachts.

We are willing to give to this discussion the widest possible scope, as we believe in the end good will come of it, but we must remind our correspondents, however, that our space is limited, and request them to keep as closely as possible to the direct points at issue, and to avoid the introduction of others less relevant. The following letters have come to us in answer to the statements of a correspondent a short time since, and as a matter of justice to both sides we publish them, but we can give little space in the future to such side topics.

Editor Forest and Stream:

I certainly take exception to some of the statements of Mr. R. R. l'Hommedieu in his article "Yachts on the Pacific Coast," which appeared in the FOREST AND STREAM of July 18.

In the first place he says I start off by generally abusing the shipbuilders on the Pacific Coast, and says that the fast war ships that have lately been built here speak well for some one's brains in designing.

I am glad to see that Mr. l'Hommedieu gives some one the credit for the design of these war ships, but why not be consistent and also give Mr. Herreshoff and Mr. Burgess credit for their work? Their work not only speaks for itself and needs no defender, but is a monument to their ability, which will forever be the admiration of their fellow craftsmen.

The statements I made were intended as advice to those who might be thinking of following naval architecture as a means of livelihood, and are plain facts which can be greatly enlarged upon with regard to the conditions to be encountered.

One of the greatest dangers to American workmen, that of foreign immigration, could be easily overcome if employers would only live up to the contract labor law. It is a well-known fact that this law is evaded in every line of manufacture. The knowledge of these things may be the means of saving some young man from wasting a whole lot of time which he can put to much better advantage.

Mr. l'Hommedieu says, "If an American shows that he can design a fast craft he may be sure of holding an enviable position."

My advice to him is to ask any of the men—for the product of whose brains some one else invariably gets the credit—who have grown gray at the business and who are still just plain ship draftsmen, why they are not holding these enviable positions. There are some people green enough to believe that conscientious efforts will bring their own reward, but they will soon find that we have not yet reached the millennium. Perhaps he can tell what becomes of all the apprentices who disappear when their apprenticeship is completed. Let me tell him that the majority have had their eyes opened sufficiently to quit the business and seek a more profitable occupation. A few—poor fellows—who feel that they have neither time nor money to spend in learning a new profession, are obliged to work at their trade and be contented with a bare living, without any hope of bettering themselves.

As for yacht designing, the man who patronizes the naval architect will not only get his yacht cheaper in the end, but will stand small chance of having a failure, provided he goes to a designer who knows his business. The boat builder goes to work and whittles out a model from which he gets his lines. The chances are he knows nothing whatever about displacement or stability, and is therefore unable to tell how much ballast the yacht requires or just how much canvas she can carry. The best he can do is to make a guess by comparison with a similar yacht which has been tried. In nearly all of these boat-builder productions a large percentage of the ballast is carried inside the hull, where it does not belong, and this is one great reason why the yachts of the Pacific Coast are unable to carry the sail spread of the Eastern yachts.

I have also heard a prominent boat builder of San Francisco tell some most unique yarns about the awful effects of outside ballast. Now these yachts, designed on methods which are absolute, are the so-called modern yachts of the Pacific Coast. I fail to see how a boat can be called modern which is cut in two amidships and has an overhang stuck on the bow and stern, as I see Catherine, one of the boats mentioned by Mr. l'Hommedieu, was treated.

In what respect are these yachts any better than the yacht of twenty years ago?

The successful yacht of to-day is designed without reference to any model whatever. Her displacement, centers of buoyancy, gravity, metacenter, center of lateral resistance and center of effort, are found or closely approximated before a single stick is touched. There are certain elements—such as the center of gravity—that cannot be accurately located until the ship is completed, but they can all be closely approximated from the design beforehand, which is a great deal better and more likely to result in a successful boat than by the rule-o'-thumb methods and guesswork employed by the boat builders.

Before ending I should like to add that there is a field for the naval architect where the recompense is sufficient to enable a man to have a good, comfortable home, but even there the position is a sadly underpaid one for the duties and responsibilities involved. I refer to the construction corps of the United States Navy. To become a naval constructor a boy must enter the naval school at Annapolis and graduate at the head of his class or second, the first two being given the choice of entering the construction corps. This will mean lots of hard work, but anything that is worth having is worth working for. I believe the age for entrance to Annapolis is fifteen to nineteen years. Let me add just one more statement. A man with the mental attainments of our naval constructors would be sure of a high salaried position in some other walk of life. The appended letter from the owner of Folly, which Mr. l'Hommedieu belittled, is self-explanatory.

WM. B. COLLIER, JR.

VALLEJO, July 25.

Mr. W. B. Collier, Jr., Vallejo, Cal.:

Regarding Folly, which my brother and I built from design No. 124, by the late Edward Burgess, and which Mr. l'Hommedieu says never showed any evidence of speed, I can say that in the first and only race she ever sailed, some five years ago, on Admission Day, she easily beat Mollie Woggin, built by Capt. Turner, our foremost shipbuilder, for his own use in a moderate breeze, without any kites and only a mainsail and two headsails. Mollie Woggin is a boat of about the same size, and Capt. Turner expected he would have no trouble in disposing of us. You can get a corroboration of this statement from Mr. J. W. Pew, of Truant, who sailed Folly on that day. The rest of the class was nowhere.

What she would do against the present boats of the same size I cannot say, as she has not been in commission for some years. I have been too ill to do any sailing, and my brother has been too busy. She is yet in good condition, and I hope some day to have a try against the latter-day craft. Folly was designed especially for this bay, to be a "safe, comfortable and fast boat," and not for speed alone. She draws rather too much water for ordinary bay use. She is certainly safe, as I have had her out in a white squall and sailed her to her anchorage without letting go a sheet. Yachtsmen who saw this performance say they now have no doubt of the safety of this type of boat.

I believe that at the time we built the boat she was the first built on lines furnished by others than our home designers; and if I remember rightly Mr. Pew was the next to get an Eastern design for his catboat Truant, now a sloop

As to Mr. Burgess not being familiar with our waters, that may be so; but I gave him our conditions after consultation with Mr. Chas. G. Yale, a man who is better posted on yachting hereabouts than anybody now sailing. And as for Folly being a failure, I can only say that, in my opinion and in the opinions of many others more competent to judge perhaps than your critic, she is not; on the contrary, she fully answered my expectations in every particular. It has been the fashion of those ignorant of her performance to call her "well named," and I find the belief still extant. Very truly yours,

GEORGE F. DAVIDSON.

The New Y. R. A. Rule.

TO ALL appearances the new rule of the Y. R. A., adopted late last season, has already proved a complete failure, the yachts built under it, quite a number in all the classes from 52ft. downward, being in no way an improvement on the bulb-fins produced under the rating rule in its later years. The English yachting journals are now discussing the situation; the *Yachtsman* has published several letters, too long for reproduction here, condemning the rule, and the *Field* criticises it as follows:

Talking of rating rules, there seems to be a chorus of opinion that the new rating has produced an over-canvased boat in all classes, and that already the coefficients require altering. The principal charge against the rule is that it admits of too much canvas, and in the small classes holds out an inducement to cut down draft of water, while at the same time it does not encourage an increase of under-water body, or the increase is so trifling that it is not worth consideration. The fin bulb has not even been "scotched," nor in the large craft has draft of water by the girth measurement. Beyond this the girth measurement is a great deal of trouble and endless expense to owners. We think the ideal rating rule has yet to be found. Girth, as at present used in the formula, does not check draft to any appreciable extent, and might as well be dispensed with, and the light tax on canvas encourages enormous sail plans. If girth is to be retained with all its troublesome details, it should be whole girth, and most decidedly the square root of the sail spread should be used at its full value and not at half its value. If the coefficients are struck out of the rule and the constant divisor altered, the formula may produce the type of yacht which is said to be desirable, but we very much question whether the formula as it at present stands will ever produce anything but a very much over-canvased vessel and a poor performer in strong breezes.

Pente is an example of what the new rule can work. She is 31.5 on the waterline, and as a 5-rater carried 953sq. ft of canvas. As a 36-footer under the new rule she could have 1,224sq. ft., and have her girth increased nearly 2ft. No doubt she would be a much faster boat than she is at present, and most likely would win prizes against this year's craft if anyone pleased to make the alterations to her; still, all this does not disclose the benefits which we were led to expect would accrue from the new rating rule.

This has brought out the following letter from our old friend Thalassa, in the following issue of the *Field*:

SIR: Many yachtsmen in the small classes will feel grateful to you for your critical paragraph, published in the *Field* of 11th inst. By it we can now see that the new rule has signally failed to do that which it was specially designed to perform, viz., to increase under-water body and introduce a better type with more accommodation.

Mr. Baden Powell's heart-breaking supplications to let the poor erring creature have another chance, because she has been handicapped by the sins of her progenitors, form an excellent specimen of special pleading; but they acknowledge the crimes of his client, and there is no time in this life to await the reforms of the unfortunate.

Most people will agree with you that the girth measurement, being useless and troublesome and expensive, should be discarded; also that the tax on sail should be increased by altering its coefficient to unity.

Were there changes made in the rule we should probably find it an improvement on the old rule, and a vast deal better than the present girth rule. It would become: Linear rating $= \frac{L + B. + \sqrt{S.}}{2}$ Thus the new 30-rater Florence would figure out ½ (25.64 + 7.36 + 28.62) = 30 81, and Norman at ½ (29 51 + 10.93 + 33.83) = 37.13.

Mr. Linton Hope writes me that he has "come to the conclusion that the present rating rule is no use for the small classes, as it is producing a worse machine than ever"; and Mr. C. P. Clayton has published his opinion, that "the most successful craft built to suit the new rule are worse boats than those built to suit the old rule"; and he also writes of "the utter collapse of the new rule."

When the strongest erstwhile advocate of the present rule uses such language, what more need be said by one who has opposed the rule from its inception and has predicted that it would never act as Mr. R. E. Froude intended?

THALASSA.

Duxbury Y. C.

DUXBURY, MASS.

Saturday, Aug. 8.

THE third regatta of the Duxbury Y. C. was sailed on Aug. 8 in a very light breeze. The race for the Davenport cup, two legs for which are held by Cleopatra, was not finished on account of the light weather. Nancy Hanks was entered for it against Fanny D. The times for the smaller classes were:

FOURTH CLASS, A—CATS, 15 TO 18FT.

	Length.	Elapsed.	Corrected.
Amie, M. S. Weston, Jr	17.02	1 18 44	0 51 55
Honest John, J. C. Dawes	17.04	1 19 44	0 54 06

FOURTH CLASS, B—SPRIT SAILS, 15 TO 18FT.

Major D., C. H. Drew	16.01	1 18 39	0 51 36
Yankee, A. E. Walker	16.10	1 18 00	0 51 49
Natalie, H. M. Jones	17.02	1 18 43	0 52 54
Gypsy Girl, W. Steele	16.09	1 20 30	0 54 18
Eunice B Weston, I. Symmes	17.03	1 20 10	0 54 26
Ideal, C. F. Bradford	16.10	1 21 06	0 54 55

FOURTH CLASS, C—GAFF FORESAILS, 15 TO 18FT.

Dolphin, N. Morton	16.06	1 24 48	0 58 14
Tom Jeff, S. S. Richards	17.07	1 25 06	0 59 44
Myra, S. B. Cheney	18.00	1 24 54	0 59 57

Jamaica Bay Y. C.

FAR ROCKAWAY—JAMAICA BAY.

Saturday, Aug. 8.

THE Jamaica Bay Y. C. sailed a club regatta on Aug. 8 in a fresh S.W. breeze. Runaway and Cecelia were in collision before the start, the former being so disabled that she could not start. The times were:

CLASS A—SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Cute	3 40 50	6 28 33	2 47 43	2 07 43
Iris	3 44 20	Did not finish.		
Runaway	3 44 20	Disabled.		
Cecelia	3 44 20	Did not finish.		

CLASS B—CATS.

Lochinvar	3 40 40	6 36 35	2 55 55	2 55 55
Loyal	3 41 25	Did not finish.		

CLASS C—CATS.

Vitesse	3 40 20	6 44 20	3 04 00	3 01 00
Triby	3 40 55	Did not finish.		
Gennette	3 43 23	Did not finish.		

Cohasset Y. C.

COHASSET, MASS.

Saturday, Aug. 8.

THE Cohasset Y. C. started a club race on Aug. 8 in a light W. wind, the times being:

FIRST CLASS.

	Elapsed.
In It, R. B. Williams	1 09 30
Heron, E. Stoddard	1 12 15

15FT. CLASS.

Hoodoo, Gammond & Wheelwright	1 46 08
Mermaid, W. B. Sears	1 49 10
Mungo, E. S. Wilcutt	1 53 30
Jap, Bouve & Pegra	1 55 18
Swallow, John Richardson	1 55 28
Sea Gull, Fred Higginson	1 58 23
Honie, C. H. Cousens	2 01 04
Nit, Joseph Bigelow	2 03 05
Blink, Fred H. Pratt	2 06 30
Scoot, John Dean	2 10 00

Pathfinder.

THE new steel steam yacht Pathfinder, built for F. W. Morgan, of Chicago, at a cost of $75,000, demonstrated on her first trial trip late this afternoon that she is one of the speediest, if not the speediest, boats on the Great Lakes. The trial far exceeded the expectations of Pathfinder's owners, builders and designer. The engines worked splendidly, and she answered her tiller to perfection. Several thousand people lined the banks of the river and the shores of the lake, watching the beautiful craft as she glided through the water. On board was Capt. Morgan, her owner; Capt Warner, John Williams and Wm. Herrick, of Chicago; Designer Poekel, Walter Reynolds, manager of the Racine Boat Company; Capt. Hale, of the yacht Alcyone, of Chicago, and thirty other guests. She was in charge of Capt. Danstaedt, of Detroit, and Engineer James Froth.

On the first run southeast against a head sea the boat made over nine miles an hour with 125lbs. of steam and the engines running 125 revolutions a minute. With 155lbs. of steam and 155 revolutions of the engine per minute she made seventeen miles an hour. On account of the machinery being new and stiff the boat was not speeded to her full capacity, but good judges aboard predicted that she could make twenty miles an hour with ease, and when pushed can make as high as twenty-two miles.

The yacht is constructed of the finest steel, 145ft. over all, 14ft. 3in. beam, 12ft. depth, 8ft. draft, and has a displacement of 150 tons. The main engines are four-cylinder, triple expansion, 14in., 19½in. and a two 20¼in., with 16in. stroke. The boilers are of the company's own special design and will develop 1,000 horse power. In addition to the main engines there are four small ones for driving the dynamos, pumps, blower and circulating fan. There is a steam capstan, electric light service throughout the boat, telephone service, hot and cold water, steam heat, etc. There are four steel water-tight bulkheads, making the yacht unsinkable in case of a collision. These are divided by four different water compartments. The boat has two spars, and in the distance has the appearance of a small man-of-war.—*Chicago Tribune, July 26.*

The Lake Races.

LAKE ERIE will this year be the scene of a number of interesting races between the best yachts of the lakes, including several new ones. A number of races are scheduled and some interesting matches are promised, with the probable result of a revival of interest in yachting on all of the lakes. The racing opens at Port Dover, Ontario, at the eastern end of the lake, on Aug. 3-4; then follow the Erie regattas, Aug. 6-7, and then the four days, Aug. 10-13, at Cleveland, where the Cleveland Y. C. will hold its open regattas in connection with the centennial celebration of that city. From Cleveland the fleet will go to Put-in-Bay, near the western end of the lake, where the races will be held on Aug. 17-22, and then all the yachts will cross to Toledo for the final international races between Vincedor and Canada.

The Chicago champion, Vincedor, left that city on July 29 in tow of the steamer Madagascar, in company with three barges, and should have reached Detroit on Aug. 2, but during the night a heavy N.E. gale sprang up, and the yacht was forced to drop her towline before Milwaukee was passed. She made sail and ran before the gale into Port Washington, north of Milwaukee, lying over night and sailing next morning with a light breeze. The night of July 31 was spent in harbor at Manitowoc; next morning more bad weather was met with, the yacht putting back. On Aug. 2 she started again, and made Mackinac at noon next day.

The Canadian champion, Canada, though unsuccessful at first in her preliminary trials with the older Toronto and Hamilton yachts, has improved greatly, and of late has defeated Zelma and Aggie a number of times. She took part in the Port Dover regatta of Aug. 4 and won easily from two local yachts, Scorpion and West Wind. In the second class, Dinah, of Hamilton, beat Puritan, Eva and Vivia, and in the third class Hiawatha won.

Cowes Week.

THE racing week at Cowes began on Aug. 3 with the regatta of the Royal London Y. C., followed next day by the race of the Royal Yacht Squadron for the Queen's cup. The course was from off Cowes around the Lymington Spit Buoy and back around the Bullock Patch Buoy, 50 miles, with a N.W. wind. Meteor crossed first, with Britannia on her weather, followed by Hester and Mohawk. Hester was announced as the winner, but the race was afterward given to Mohawk. On the same day Ailsa and Satanita sailed in the regatta of the Royal Southampton Y. C., the former winning. On Aug. 5 Meteor, Britannia, Caress, Ailsa and Satanita started for the R. Y. S. prize of £100. There was a strong N.E. wind and the race promised to be very exciting, but when off Ryde Meteor lost her bowsprit and topmast. Britannia, Satanita and Caress passed on the wrong side of a buoy and withdrew and Ailsa was disqualified. Whether all the withdrawing and disqualification was intentional or not does not appear, but the race will be resailed.

The race of Aug. 6 was for the Town prize of £100, the course being from Cowes west around the Lepe Buoy, then east and around the Warner and back; two rounds, 48 miles. Ailsa, Britannia, Satanita, Corsair and Caress started in a good N.E. breeze; the former winning. On Aug. 7 the Meteor challenge shield was sailed for, again in a northerly wind, Ailsa winning.

The 30-Footers at Newport.

ON Aug. 4 the 30-footers sailed a race for the Morgan cup, two rounds of a triangular course in a light S.W. wind, the times being:

	Finish.	Elapsed.
Esperanza	4 32 30	1 57 30
Asahi	4 33 15	1 58 15
Hera	4 36 50	2 01 50
Caroline	4 37 35	2 02 35
Wawa	Withdrew.	
Dorothy II	Withdrew.	
Vaquero III	Withdrew.	

Vaquero took the ground and Wawa, which lost the finish, picked up a lobster pot. Dorothy was steered by Gerald Paget, owner of Rosemary.

On Aug. 5 the fleet started again for a sweepstakes, the course being a run from Brenton's Cove to Dyer's Island and a beat home, 16 miles. Asahi and Hera led on the run, but were beaten by Vaquero on the windward work.

Another sweepstakes was sailed on Aug. 7 over a new course, 10 miles to windward to the bouy off Point Judith and return, in a fresh S.W. wind. The times were:

	Start.	Finish.	Elapsed.
Vaquero	11 05 00	12 58 45	1 53 45
Asahi	11 05 00	12 59 25	1 54 25
Hera	11 05 00	1 00 35	1 55 35
Caroline	11 05 00	1 01 00	1 56 00
Wawa	11 05 00	1 01 15	1 56 15

On Aug. 8 the wind was very light and a slow race was sailed over the triangular course. The times were:

	Start.	Finish.	Elapsed.
Hera	2 50 00	6 08 50	3 18 50
Esperanza	2 50 00	6 16 05	3 26 05
Vaquero	2 50 00	6 23 40	3 33 40
Caroline	2 50 00	6 23 45	3 33 45
Musme	2 50 00	6 30 45	3 40 45
Wawa	Did not finish.		
Dorothy	Did not finish.		
Asahi	Did not finish.		

The racing will continue next week, the new Rosemary taking part.

East Bay Y. C.

CENTER MORICHES—GREAT SOUTH BAY.

Saturday, Aug. 8.

THE East Bay Y. C. sailed its annual regatta on Aug. 8 over a 10-mile triangular course. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Madcap	4 01 00	6 41 35	2 30 35	2 30 35
Sunol	4 10 50	7 10 50	3 00 00	2 58 40
Zoe	4 10 30	7 37 50	2 57 20	2 53 47
Druid	4 10 40	6 57 50	2 47 10	2 43 21

YACHTING NEWS NOTES.

The Eastern Y. C. will hold special open races on Aug. 18 and 19 for sloops of the seventh and special 30ft. classes, and for knockabouts. The races are open to all yachts which conform to the requirements of the respective classes, viz.: In seventh class sloops, waterline 30ft. and not over 35ft.; in special 30ft. class, the agreement of owners as made in November, 1895; in knockabout class, the rules of the Knockabout Association. Entries must be delivered to the secretary of the club, William S. Eaton, Jr., Eastern Y. C., Marblehead, before 10 A. M. on the day of the race. The prizes on Aug. 18 are: For special 30ft. class, first, a purse of $100, presented by Capt. Henry S. Hovey; for knockabouts, first, a cup, presented by Com. Gardner; for seventh class sloops, first, $100. In each class where five or more start, a second prize of $30, and where seven or more start, a third prize of $10. The prizes on Aug. 19 are: For special 30ft. class, first, a purse of $100, presented by Rear-Com. Hemenway; for seventh class sloops, first, $100. In each of these classes, if five or more start, a second prize of $30, and if seven or more start, a third prize of $10. For knockabouts, purses presented by Capt. C. S. Eaton, viz.: First, $100; second, if five or more start, $50; third, if seven or more start, $25; fourth, if nine or more start, $15, and fifth, if eleven or more start, $10. The prizes being given by Mr. Eaton, Cock Robin will not compete. In the special 30ft. class prizes of $50, $25 and $15 will be given to the professional helmsman.

The 30ft. special class has received a new addition in the Sibbick yacht Rosemary, nominally of 36ft. linear rating, Y. R. A., but built, as we understand, to the special rules governing the new 30ft. class. She is owned by Mr. Gerald Paget, of London, brother-in-law of Mr. Whitney, owner of Dorothy, who will spend the summer at Newport and race the yacht there. Mr. Paget also owns the 1-raters Caprice and Cigarette, built by Sibbick last year. Rosemary, as the new yacht is named, came over on the Wilson Line steamer Ontario, and was launched at Brooklyn, being rigged by her skipper, Capt. Vincent, and his crew of two, who accompanied her. She has been accorded the privilege of free entry, as she will be reshipped to England later in the season. She is now at Newport and will sail in all races of the class there.

A race was sailed on Lake Oconomowoc on Aug. 1 in a moderate N.W. wind, the times being:

	Elapsed.	Corrected.
Hope	0 59 12	0 55 57
Bird	1 00 30	0 59 34
Skedaddle	1 01 21	1 00 27
Argo	1 01 30	1 00 56
Yumpin' Yaper	Capsized.	
Empress	Withdrew.	
Idle Hour	Withdrew.	

The Almy Water Tube Boiler Co. has supplied the following yachts with boilers since the last cruise of the New York Y. C.: Steam yacht Gretchen, John E. Reyburn; Arcturus, Rutherford Stuyvesant; Parthenia, Stephen B. Roach; Giralda, E. S. Renwick; Indolent, J. C. Rhodes; Illawarra, Eugene Tompkins; Corsette, C. A. Tatum; Vesta, Henry A. Laughlin; Orienta, E. R. Ladew; Magnet, T. A. Howell; Valima, Wm. H. Post; Chepita, C. W. Wharton; Iduna, F. A. Foster; Marion, N. Witherell; Kaloiah, C. L. Hubbard; Ardarth, J. A. Aspinwall; Aida, W. P. Douglas. This record speaks for itself.

The third annual regatta of the Chippewa Y. C., of Chippewa Bay, N. Y., on the St. Lawrence River, will be sailed on Aug. 19. The programme includes a race for the Bell trophy, recently sailed for at Ogdensburgh; a race for St. Lawrence River skiffs, and one for sailing canoes, a prize of a $50 cup being offered by C. M. English for the latter event. There will also be rowing races. Particulars may be obtained of H. W. Williams, Secretary, Chippewa Bay, N. Y.

The Corinthian Y. C. of Philadelphia, the Corinthian Y. C. of Atlantic City, the Corinthian Fleet of New Rochelle, and the Knickerbocker Y. C. have made a joint cruise on Long Island Sound, from New Rochelle to New London, the combined fleet dividing there for Shelter Island and Newport.

We have received from the Corinthian Y. C., of Philadelphia, a copy of the club book for 1896, a handsome volume quite worthy of this flourishing and progressive club. The membership is now 163, with a large fleet of yachts.

A rumor that is hardly worth repeating is to the effect that Valkyrie III. will be raced next season under the management of Sir James Bell, former head of the Thistle syndicate.

Cleopatra, the fast Hanley cat, originally named El Paso, has been sold by Melbourne MacDowell to H. M. Faxon, the Boston yachtsman.

The regatta of the Hempstead Harbor Y. C., set for Aug. 8, was postponed to Aug. 15, on account of lack of wind.

Illawarra, steam yacht, Eugene Tompkins, was at Halifax on Aug. 7 bound from Bras d'Or Lakes for Boston.

Almy, steam yacht, Frederic Gallatin, passed Skagen Fyr, Denmark, on Aug. 1.

Canoeing.

THE ROYAL C. C. RACES.

WE published last week the account of the race for the Royal C. C. challenge cup, the principal event of the annual sailing week of the club. The races this year, instead of being up river, were at Burnham-on-Crouch, at the mouth of the Thames; on open, and as it happened rough water. It will be remembered that in 1894, the year Mr. W. W. Howard visited England first and entered for the R. C. C. challenge cup as the representative of the New York C. C., but half an hour before the race started he withdrew his entry on the grounds that the waters were unsuitable for canoe sailing; in consequence of which act the R. C. C. withdrew the offer of a special cup promised for an international race at Burnham later on. Last year Mr. Howard's canoe Yankee was shipped back to Clayton, N. Y., for alterations, and did not reach England in season for the challenge cup race, for which she was entered. This year Mr. Howard arrived from America in season to prepare for the race, which he entered as a member of the British C. A. Unfortunately for the correctness of the *Field's* surmise, his victory has awakened no enthusiasm in this country, and there has been no disposition whatever to claim it as an international event.

The *Field*, in the following comments, deals very severely with some of the leading features of modern canoeing, and in many points we agree with it, having preached the same lesson some years ago when there was still some chance of saving American canoeing from the racing machine. In the canoe yawl race alluded to, two boats were abandoned by their crews and towed in, one being finally wrecked. The *Field's* comments are as follows:

The "sailing week" of the Royal Canoe Club for 1896 was held at Burnham-on-Crouch on open salt water, and has undoubtedly furnished by actual facts just the very lessons which it has been found almost impossible to drill into some men by mere words of warning. If these lessons are now neglected sailing canoeing will be just about killed as a sport; of course, a few odds and ends will always be found at it, but true canoe sailors must forsake the sport if it is kept in its present form, wherein winning races can only be attained by a perfect acrobat mounted upon a dangerous machine.

The Crouch racing has amply proved what it was intended to prove; it has done so in the kindest manner—that is, without loss of life, without actual loss of prestige to British canoe sailors, and without demonstrating any really better type or class of canoe than the existing rules permit to be produced; and yet has clearly pointed out where the present machine nature ought to be toned down for the general good of canoe sailing. The move of the Royal C. C. to open tidal water for a sailing course was decided upon with intent to demonstrate by actual experience and facts that, though the rules permitted equally the sharpie and the skimming-dish type, the racing machine and the useful cruiser type, the man ballasted and the metal ballasted craft, there are conditions on such waters when the type of craft innocently in favor on the Thames and other quiet inland rivers are in other waters absolute death traps. Drowning in the north at Easter, and very nearly drowning in the summer in the south, should be ample teaching for any men who claim to have average quality of brains. Past capsizes, with happily prompt rescues, in sheltered waters, are soon forgotten, and the "cheap-jack" creation, the flimsy flying orange-box type of canoe-yawl, or butchers' tray canoe, are again manned with human life. The reckless life that elects thus to embark may be allowed to go, but the sport of canoe sailing should not also be drawn into the idiotic vortex.

The second point is the slack state into which the sport of canoe sailing has been allowed to drift. When the technical details of the racing are noted, it will be seen that no serious attempt, or, perhaps, proper attempt, was made to defend the cup against the attack of Yankee, Mr. Howard's canoe. It may be all very well to say that Mr. Howard only raced as representing a British club and not as an American, but we venture to say and suggest that ere these lines appear in print the victory will be claimed as international.

It may be international, and whether Mr. Howard was backed by one club in America or one in England matters little or nothing; no doubt he would have raced just the same, but the grave fact remains that the holder of the cup and the club owning the cup were not ready, and were not properly tuned up with defenders; and in the previous days of the week, while the Englishmen were racing in hard weather and straining their flimsy craft to true basket-leaking stage, the American boat never entered a race; she went only for the cup. The holder of the cup, instead of getting to Burnham by train and then practicing over the course day by day, spent his days and nights in an otherwise gallant struggle against wind and tide and a heap of mishaps in a passage around by sea, which landed both man and boat in a state of total collapse at Burnham on the morning of the race. Thus, in part at any rate, the Royal C. C. challenge cup for the first time is won out of the club.

We do not in the slightest degree intend to spare men or materials by using the common form of gushing praise where none is due; we prefer to state facts only, and expert men can thereupon form opinions which, we will venture to say, amply bear out all we have written for years past in connection with the sport.

Looking at the fleet of canoes and yawls at Burnham, with the exception of the two "cruising canoe" class new boats, there was not a canoe "up to date"—that is to say, that new craft could have been built, or older craft could have been reballasted and rerigged "up to date." The two cruiser class canoes were new and untried, and one lost her mast; the other was leaking to perfection all the time, and neither had a suit of sails which could fairly, or at all, be said to "set." The Dragon performed in a manner which should take a few years clean off the life of her owner. She ran before the wind with the whole of her fore deck out of sight under water; the water was up to the tack of her mainsail and rushing aft; the "bucket well" was full, and in this canted-down-by-the-head position of hull the rudder barely touched the water. Can any craft go the pace in such circumstances?

The two cruiser class canoes, though new and untried, were further "out of it," in that with their large sloop rig and very high freeboard and body structure, they demand and were intended to have bulb keels; they had at Burnham only plain metal center-plates, and not heavy ones even at that. Three hundredweight of ballast inside them would not have acted up to 100lbs. on the bulb. Yet their owners and all who saw them acknowledge them as fine, roomy little craft, and speak highly of the class as a future class, capable of racing and of cruising. Prucas, canoe, is merely a 30in. beamed semi-sharpie, not a new boat, but a very fast old one, and if she had not got strained to a bad leaking point we doubt not she would have given Yankee a close tie-up; her sails are far from being in racing fettle, but the handling she received from Mr. Laws was a masterpiece worthy of better stuff to handle.

The Viper, the last year's holder of the cup, was much in the same swim as Prucas; her gear and sails are capable of renewal, and where serious sailing is contemplated it is unfair to the club and country to "spoil the ship for a ha'porth o' tar." The Viper has a heavy lead bulb keel, she has a long slide seat, and every one expected great things of her in a blow, and for light breeze looked to Prucas or Dragon to ghost along with Yankee.

The report of the racing we publish below is from the hand of an able canoe man, who attended closely upon each race. The report gives merely the outline facts; but it cannot be denied that in two, if not three, of the capsizes it was providential that assistance happened to be at hand. The ebb tide would undoubtedly have swept the men out into the open sea, and if not soon washed off the upturned boats exhaustion of the human frame must set in, and with it the end. We have steadily put out and never wavered in our opinion, that for open water, estuary or coasting, there is no excuse for sailing in a capsizable canoe-yawl, and under present rules there is none of the old-time necessity for a sailing canoe to be unballasted; indeed she may easily be fitted so as to be uncapsizable. And further, if common sense and general sport are to be supported, and canoe sailing is to be conserved as a reasonable sport for ordinary men, gymnastic monkeying or dangerous implements must be effectually discouraged. It can be done by the stroke of the pen, and we venture to say that the Burnham racing has furnished the warning to act, because any further warning must come from a coroner's inquest.

So far as the canoe is concerned, though, no doubt, a small thunder clap would be fired off by the racing machine owners—say three men—the class would die an immediate and quiet little death if the sliding deck seat were abolished; at least, and in fairness to moderate men—non-scorchers—the sliding seat length should be limited to the beam of the canoe, as it is already in the cruiser class, and no built-up or box wells should be allowed in any canoe; a canvas bucket well may be movably fitted, and will save a fill up, but the actual well of the canoe should be clearly enough to sit down in. The canoe without a well at all, or fitted with a self-draining, built-up, saucer well, with no possibility of putting anything but a sponge below, is nothing but a necessary flotation evil to float and connect a sail, a center-plate, and some animal ballast. The sliding seat in moderation as to length of slide is a great comfort even for cruising; but when it comes to a full length stretch of some 5ft. or more, it is merely a monkeying machine, whereby the aquatic acrobat is enabled to manage a large sail on an inflated cylinder to more racing advantage than a sailer can manage a fair rig on an honest boat.

In the challenge cup race the Yankee displayed wonderful speed on the reach, and, as two-thirds of the course was in a reaching wind, no doubt she was at her best; but her time win of 27m. 51s. is not really "cut 'em down" time when we see the lamentable condition of each and all her competitors. Here we may point out one important thing. It is, that each of these canoes had traveled in very hot weather on railway trucks, uncased, *i. e.*, bumping; whereas the Yankee had traveled slung on canvas in a case, and from experience of these delicate craft we can certainly say such treatment makes all the difference between a dry and a leaky boat.

We have on former occasions very fully described the Yankee, but many now reading of her may not have heard of her before. She is very fast, straightaway through the water; that is the utmost that can be said in her favor. She is a racer or nothing. The man is always outside her; he is above her so long as he can keep there. With her plate lifted and her sails lowered and with no man on board, Yankee would not float upright. She is a shallow V-sectioned canoe, 16ft. long over all, and nearly the same in the water; 30in. beam, very small freeboard, and very little sheer. The deck seat is raised up like a garden seat, and the side plank, for sliding the man out to windward, is about 5ft. long; the well is only a few inches deep, and drains any water into the centerboard case. The spars are stumpy, and of ridiculous and unnecessary diameter; her masts, booms and gaffs are hollow, but about half their diameter would give ample size for equally light hollow spars if built in fair quality of wood. The wooden jaws to the booms, battens and gaffs are cumbersome, and had far better have been made even in sheet brass; the rigging has very much of the toy shop look, bar one fact, that the sails certainly stand well. The reef gear as fitted, which is the old loop-draw-through gear, is not novel; it is simple, but we found similar gear in days gone by worked well enough in fine weather, but kinked and snarled in wet and refused duty; yet such loop gear is very handy for a cruising sail, but is not close enough for racing. The rig is mainsail and mizzen, nearly of equal area; the mainmast is stepped right in the eyes of the canoe, and the mizzen not far aft of midships; hence, in order to get the lateral resistance center sufficiently far aft for such a sail plan, the center-plate has to be dropped through the boat right in the well and amidships, thus putting an end to any possibility of having a sit-down well or any other pleasure or comfort, or cruising fitments.

Perhaps this is as it should be allowed in the unlimited racing machine; but the whole contrivance is foreign to one's feelings as to a genuine boat; she is a machine, she is raced as a machine, she comes to England for a particular pot race, she sails in no other race (this year) and she is packed up and goes away. Dragon in shape and fitment is but little better from the useful point of view, and has not proved as good from the racing view. It must be devoutly hoped the club will not encourage any further building of these useless things; the cup can be just as sportingly raced for in a useful type of canoe. The only source of life to these racing machines lies in the extraordinary long slide of the deck seat; this in balancing outboard of crew is about equivalent of 6ft. beam, whereas the rule only allows 30in.; but if the slide seat were limited to the width of the canoe, the extreme end could only run out about 1ft. beyond the side, and then the sail could not be carried on the machine except in very moderate weather.

The defaulters in the canoe-yawl class were both of semi-sharpie type—wretched, shallow, uncomfortable and dangerous things; no good even for speed. The canoes beat them in fine weather and smooth water, and in rough water they capsize and risk their crews' lives. Except lightness of hull for transport, and perhaps cheapness of first cost, there is little to be said in their favor. It is a pity that one or more of the powerful canoe-yawls were not down and sailing the Buxy course, just to have exhibited the difference of behavior, but probably the crews of Meryl and Rogue experienced enough to know how certainly they would be drowned if a similar accident occurred in a rather more open and less frequented place.

Be it remembered, these boats were not in novices' hands; they were manned by some of our smartest canoe sailers, and probably got all the handling the poor things were capable of receiving. One is a "total loss"—a wreck—and the sooner the others go the same track the better for genuine canoe-yawl sailing and cruising.

The Grindstone Meet.

Com. Huntington and Mr. Robertson, of the camp site committee, went to Grindstone Island last week and established the camp. Though Friday is the date of the formal opening, the camp has been ready all this week.

A. C. A. Membership.

Applications for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the Forest and Stream.

Bisley Revolver Competitions—July, 1896.

In all the competitions, except the aggregates, 42 is the highest possible score, bullseye 2in. at 20yds. and 4in. at 50yds.

Military Series I., sliding target, 20yds.: First, Walter Winans 39; second, A. Bosling 38.

Military Series II., disappearing target, 20yds., at intervals of 3 seconds: First, Walter Winans 42 (best on record); second, A. Bosling 41

Military Series III., rapid firing, 20yds., 6 shots in 12 seconds: First, Walter Winans 38 (equals his previous best on record); second, A. Bosling 36.

Military Series IV., limited entry, stationary target, 20yds.: First, Lieut. Stanton 40, Walter Winans 39.

Military Series V., 50yds. target: Walter Winans and Lieut. Staunton tied on 38.

Military Series VI., advancing target, 50yds. to 20yds.: First, Walter Winans 38 (best on record now); second, W. B. Joynt 37.

"Any" Series I., sliding target, 20yds.: First, Walter Winans 38; second, A. Bosling 37.

"Any" Series II., disappearing target, 20yds., at intervals of 3 seconds: First, Walter Winans 41 (equals his previous best on record); second, L. Pritchard 40.

"Any" Series III., rapid firing, 20yds., 6 shots in 12 seconds: First, Walter Winans 39 (equals his previous best on record); second, A. Bosling 38.

"Any" Series IV., limited entry, 20yds., stationary target: First, W. B. Joynt 42; second, Walter Winans 41.

"Any" Series V., 50yds. target: Walter Winans and Lieut. Staunton tied on 39.

"Any" Series VI., advancing, 50yds. to 20yds.: First, Walter Winans 42 (best on record, target inclosed); second, Lieut. Pritchard 41.

Military Aggregate, highest possible score 252: 1st, Walter Winans 234; second, A. Bosling 226.

"Any" Revolver Aggregate, highest possible score 252: First, Walter Winans 240; second, Lieut. Pritchard 230.

Revolver Grand Aggregate (revolver championship of England), highest possible score 504: First, Walter Winans 474; second, Lieut. Pritchard 453.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES

Aug. 19-20.—Warsaw, Ind.—Third annual tournament of the Lake City Gun Club.

Aug. 20.—Chicago, Ill.—Heikes versus Gilbert, for the world's championship at targets. Watson's Park, Burnside, Ill., 2 P. M.

Aug. 25-27.—Binghamton, N. Y.—Binghampton Gun Club's tournament for amateurs; two days targets, one day live birds. Money divided under the Rose system. H. W. Brown, Manager.

Aug. 26-27.—Burlington, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Aug. 26-27.—Kalamazoo, Mich.—Tournament of the Celery City Gun Club, in connection with Michigan Trap-Shooters' League.

Aug. 31-Sept. 2.—Atlantic City, N. J.—Tournament of the Atlantic City Gun Club, on Young & McShae's pier. For programmes address Harry Thurman, Germantown, Philadelphia, Pa.

Aug. 31-Sept. 2.—St. Paul, Minn.—Annual tournament of the St. Paul Gun Club, at State Fair Grounds. B. F. Schurmeier, Sec'y.

Sept. 2-4.—Buffalo, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—Marion, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y

Sept. 8-9.—Marion, N. J.—Tournament of the Interstate Association, under the auspices of the Endeavor Gun Club of Jersey City, N. J.; $150 added money.

Sept. 8-10.—Galt, Ont.—First annual tournament of the Ontario Rod and Gun Club; $800 to $1,000 added money.

Sept. 10.—West Lebanon, N. H.—All-day shoot of the West Lebanon Gun Club.

Sept. 15-16.—Kansas City, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Sept. 29.-Oct. 2.—Harrisburg, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct 6-8.—Indianapolis, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—Newburgh, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

1897.

March 23-25.—New York City.—The Interstate Association's fifth annual Grand American Handicap at live birds.

June (third week).—Cleveland, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

B. F. Smith is making every effort to have a successful shoot at Audubon Park, Buffalo, N. Y., Sept. 1-5. Tuesday, Sept. 1, is preparation day; Wednesday and Thursday, Sept. 2 and 3, target days; Friday and Saturday, Sept. 4 and 5, are live-bird days. At least $500 will be added to the purses in the target events; $750 guaranteed in the live-bird handicap, all surplus added. An item of interest to amateurs is the announcement that the management will have events in each day's programme open only to shooters who cannot break more than 75 per cent. There will be eight events each day open to all. Of course the Rose system of dividing purses will be used at this tournament; B. F. Smith knows a good thing when he sees it, and is glad to push it along. Another special feature is Smith's statement that magautraps will be used in all the open events. The Buffalo shoot of Sept. 1-5 promises to be a good one. Keep your eye on "Buffalo" Smith.

The victory of Bert Claridge in the Du Pont trophy shoot at Chicago last week is a very popular one among Eastern shooters. Claridge is a consistently good shot, and has always made good records on his home grounds at Baltimore. In the shoot for the Du Pont trophy last October, on the grounds of the Baltimore Shooting Association, Claridge was strongly fancied as a probable winner, his mark being 28yds. His 9th bird, however, fell dead out of bounds; his 10th also escaped, but he finished with 23. In this year's Grand American Handicap he was placed back 1yd., his handicap being 29yds. At the end of the 20th round there were only two straights, Carl von Lengerke and Claridge Both lost their 21st birds, while the Baltimorean followed the precedent he established in the Du Pont shoot by losing his 22d, and going out with 23. His mark at Chicago last week was 28yds. Last October Fred Gilbert was placed on the 27yds. mark; at Chicago he stood at 32yds.

The Interstate Association's tournament at Burlington, Vt., promises to be an interesting affair. The programme of events for the first day calls for 175 targets, all in 15 and 20 target races, some at known and some at unknown angles, with a total entrance fee of $17.50; $40 will be added to the purses on this day. On the second day the programme consists of 10 events, the first 9 being similar to those on the programme for the first day; the 10th event is a handicap event, 25 to 33 targets per man. $2.50 entrance, $25 added to the purse in this event; altogether $60 will be added to the purses on this day. In all events there will be 4 moneys, and all purses will be divided under the Rose system. In the first two events on each day, a 6¼lb. keg of Hazard's Blue Ribbon will be added to first money. Information relative to the tournament, etc., will be cheerfully furnished by J. S. Denning, the secretary of the Lake Side Rod and Gun Club, Burlington, Vt.

The annual shoot of the Hell Gate Gun Club was a monster affair. It took place at Dexter Park, L. I., on July 28, fifty-seven shooters facing the traps. In eleven out of the twelve months in the year the club meets once each month, the members present shooting at 10 live birds per man for yearly prizes, handicaps being awarded to the more skillful shots. On July 28, it being the annual shoot, each man shot at 20 birds, no handicap. There were twelve prizes offered for competition. S. J. Held and J. P. Dannefelser, the latter the well-known gunsmith of Chambers street, tied for first place with 16 out of 20, Tom Short and Eugene Doeinck being next with 15 each. On the shoot-off at 10 birds, Dannefelser defeated Held by 9 to 6. The twelve winners were: Dannefelser, Held, Short, Voss, Doeinck, Gunther, Sands, Steffens, Webber, Himmelsbach, Paynter and P. Woelfel.

Thursday, Aug. 20, 2 P. M., and Watson's Park, are the date, hour and place for the contest between Rolla Heikes and Fred Gilbert for the world's championship at targets and for the cup emblematic of that championship presented by the American E. C. Powder Co. The conditions are: 50 singles, unknown angles; 50 singles, expert rule, one man up, 5 traps down and retire, and 25 pairs. As noted in our issue of Aug. 8, Fred Gilbert readily accepted Heikes's challenge, naming date, hour and place as above. Heikes and Gilbert will probably meet in front of the magautraps at Detroit this week; Jack Parker's shoot always draws the boys together.

The programme for the Interstate Association's tournament at Marion, N. J., Sept. 8-9, will soon be in the hands of shooters. It will be found that the Endeavor Gun Club, of Jersey City, the club under whose auspices the shoot will be given, has decided to do its best to make the shoot an interesting one. A special feature will be the revival of the Novelty rule, a style of shooting that has been neglected too long, and that is really one of the most sporting ways of shooting at targets that has ever yet been devised. The club will add $75 a day to the purses—$150 in all.

G. S. McAlpin, of this city, won the Brookdale handicap on the Hollywood, N. J., grounds on Saturday last, Aug. 8, by killing his 15 birds. Edgar Murphy was second with 14. McAlpin was at 29yds., Murphy at 30yds. The other shooters with their handicaps were: Bland Ballard (30), T. W. Morfey (30), Branch (26), Count (26), White (28), P. Daly, Jr. (29), L. Finletter (30), Clancy (26), Edwards (29), Fred Hoey (30), A. L. Ivins (30).

Last week's extremely hot weather spoiled many of the club shoots in this neighborhood. It is all very well to say in winter: "I prefer hot weather for target-shooting." But there's a limit to the degree of heat referred to, and if E. S. Rice broke the live-bird tournament record in Chicago, Sergeant Dunn, the weather prophet of New York city, gives the credit of heat record-breaking to the week of Aug. 2-8. The East is bound to be in it some way or another.

The South End Club, the Independent and the East End clubs, all trap-shooting organizations in the city of Reading, Pa., have recently concluded a series of three interclub team races for the team championship of the city. The teams were of six men, each man shooting at 25 targets. The grand aggregate for the three matches—450 targets per team—shows South End 356 breaks, Independent 300 breaks, and East End 294.

The Binghamton (N. Y.) Gun Club's tournament, Aug. 25-27, is a purely invitation shoot. The programme contains the following personal note: "You are cordially invited to attend this tournament, which is strictly for amateurs, and no one is eligible to participate without a personal invitation."

Steps are now being taken to bring back to life the New Jersey State Association. This Association was in a healthy condition when it suddenly ceased to breathe some ten or twelve years ago. With State organizations all round her, New Jersey should not be willing to remain behind the times in that line.

Next Saturday the Endeavor Gun Club, of Jersey City, N. J., and the Dunellen, N. J., Gun Club shoot the third and deciding match in their series of twelve-men team races. This one being the rubber, both clubs will do their utmost to put their best teams in the field. The shoot takes place at Marion, N. J.

Mr. E. E. Lincoln, secretary of the Hingham, Mass., Gun Club, writes us under date of Aug. 6 that the first monthly shoot of the Massachusetts State Shooting Association for the season of 1896-7 will be held on the grounds of the Hingham Gun Club, Hingham Center, on Wednesday, Aug. 19. All persons interested in the sport of trap-shooting are cordially invited to take part.

The Hazard tournament at Cincinnati last May was a record-breaker in its own particular line, and now here comes the Du Pont live-bird tournament at Chicago making a new record in the way of attendance and number of contestants in any one live-bird event; and that, too, in the month of August!

If there was not a large attendance at the recent tournament held at Worcester, Mass., on the grounds of the Sportsmen's Club, the quality of those present was quite warm enough. Van Dyke's work with the new Winchester rifle does not seem to have spoiled his handling of the repeating shotgun.

Jack Fanning, the Gold Dust representative from San Francisco, has been doing some rattling good shooting while here in the East. Last week he showed the boys in Chicago that he was just as well able to mow down live birds as any of them.

The third shoot of the New Jersey Amateur Trap-Shooters' League will be held at Passaic, N. J., on Aug. 20, on the grounds of the Passaic City Gun Club.

The U. M. C. Co. advise us that the new Acme shell noted in our last issue replaces the Walsrode shell and not the Smokeless, as our note read.

Aug. 11. Edward Banks.

Western Traps.

WINSTON—"DAVENPORT."

Chicago, Ill., Aug. 8.—On Monday next, Aug. 10, Jack Winston and Louis "Davenport," of New York City, shoot a 100-bird race, live birds, $100, side bet of $50.

George Kleinman may shoot Winston a race next Wednesday, Aug. 12. Winston wanted to shoot Budd, Gilbert, Bingham and the whole wide world this month. It is hoped he will close some more races, as the boys here have their shooting blood warmed up a little and are not averse to a carnival of the old-time sport.

Jim Riley will accept Jim Elliott's (forfeitless) challenge to shoot soon.

A good entry is expected at Jack Parker's shoot next week. A number go on from here. E. Hough.

Trap at Richmond, Ind.

Richmond, Ind., July 31.—The members of the Richmond Gun Club spent a very pleasant day on their grounds at Athletic Park to-day. Abundance of shade, plenty of green grass and a good supply of pure water make the park an ideal spot for spending a summer day. This fact, added to the shooting, attracted a goodly number of spectators. The shooters were few in number, but were thoroughly interested in the sport and kept the trappers busy. When the Richmond boys have another shoot I want to be there. Scores:

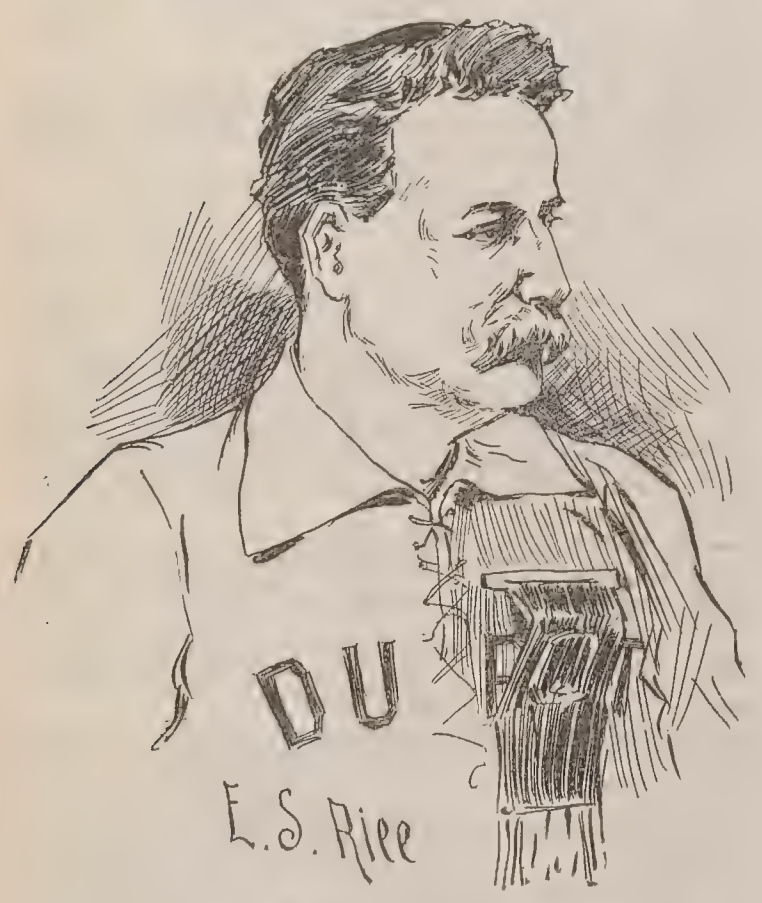
O. H. Hampton.



THE DU PONT TOURNAMENT.

A Grand Success.

Chicago, Ill., Aug. 4.—The year 1896 has been one of great tournaments. So great have some of these been that it seemed the high-water mark of tournament records had been reached, and that it would be presumption to confidently set a higher mark for an ambition in tournament giving. Certainly had it been left to the unbiased opinion of experts it would hardly have been decided that the records of so great a year, as well as the record of all the years, and probably of all the countries, would be broken by a man who had never held a tournament, who was not familiar as a personality in the trap circuit, and who set for the meeting place of his tournament the city of Chicago, a great city to be sure, but one which had been deficient for some time in great shooting gatherings. The result has shown that Chicago is really the best place in the country for a great undertaking demanding public spirit and unlimited expenditure of means. That city certainly is the home of hustling, and time and again has shown its parentage of sons able to handle large material affairs. It would be something very much less than fair which would detract from Mr. E. S. Rice, the general agent of the Du Pont Powder Co., an iota of the full credit he deserves for conceiving and carrying out to perfection the greatest shoot of the day—the Grand Smokeless Powder Championship Handicap Live-Bird tournament of E. I. du Pont de Nemours & Co. Mr. Rice had the idea of the shoot in his head for more than a year, and has quietly and with perfect system been elaborating his plans during that time. He has had at his disposal the powerful machinery of a number of agencies throughout the country, and he has behind him the resources of a great firm. The shoot represents an expenditure in all of about $10,000. Even with such backing no ordinary executive ability would have produced a result like the one visible to-day, a result which is simply an astonishment alike to the participators and the promoters of the enterprise. There seems to have been an entire independence in plan and in method, and an entire carelessness of method of other managements in the past. For instance, it was a very wise idea not to attempt a mixed tournament of live birds and targets, although it was freely predicted that a live-bird tournament alone would not bring out a crowd. Mr. Rice banked on the unapproached reputation of Chicago as a live-bird town, and built upon the information coming in to him from his agents over the country. He felt that he could go ahead upon the lines laid out, and the result has far more than justified his widest expectations. He deserves credit not short of enthusiastic praise.

SPECTACLE OF THE GROUNDS.

An entrance to the old-time grounds of Watson's Park at Burnside, on Monday, the preparatory day of the big shoot, offered a stroke of the eye not less than astonishing, and such as has never been possible here before. The ample resources of the park had been amplified and extended. Beyond the extremity of the long row of club buildings reached a vista of canvas, not less than a dozen great house tents in line, giving the idea of a military encampment, and one governed with military neatness and precision. Additional buildings, booths, screens, scoring stands, settees, awnings, etc., etc., lay to the back of the double set of traps which occupied the center of the field. Near the club house stood the big headquarters tent of the Du Pont Co., occupied by the Du Pont Co. as headquarters. Here were the desks, tables, secretaries' appliances, etc., etc., with ample room left for guests. Many ladies were here at all times. Messrs. Francis and Alexis du Pont, of Wilmington; Mr. E. S. Rice, Mr. Wm. S. Colvin, president of the Hazard Powder Co.; Messrs. R. S. and Fred. Waddell, Mr. Wm. McBlair and others of the associates or agents of the Du Pont Co. were to be found at this headquarters in the field. The handsome Du Pont championship trophy naturally held a prominent place at the headquarters, and a series of glass cases displayed in a fetching manner the products of the great powder house whose munificence and enterprise were so unmistakably in evidence. Back of this was situated the general office of the cashier and chief of scorers, an office so admirably and systematically managed as to be beyond all criticism. The executive staff of the office and grounds management was as follows: E. S. Rice, Manager; H. P. Collins, Secretary, Baltimore, Md.; Jos. D. Wood, Treasurer, Chicago, Ill.; Executive Committee: W. L. Shepard, 155 La Salle street; Col. C. E. Felton, Hartford Building; E. S. Rice, 60-62 Wabash avenue, Chicago; George W. Andrews, official scorer, Chicago: Referees: Cup event, John Watson, Chicago, Ill; team contest, W. L. Shepard, Chicago, Ill.;

event No. 1, Aug. 4, Dr. O. F. Britton, Indianapolis, Ind.; event No. 2, Aug. 4, Col. C. E. Felton, Chicago, Ill.; preparation day, John G. Smith, Algona, Ia. Beyond the headquarters tent was the Audubon Club tent, and next stood the tent of Montgomery Ward & Co., well occupied, of course, and near by the big pavilion set aside for the use of the press. The latter body has never had such royal treatment as it has received from the management of this shoot. Beyond the press tent there stretched to the south a series of fine canvas houses devoted to the general public of shooterdom, and arranged after a unique fashion. One tent bore the wide placard of "Dixie" ("Tennessee, Kentucky, Virginia and the South"), and was devoted to the use of gentlemen from below the Ohio River, although it is not of record that the Ohio River constituted any line of demarcation either in this tent or anywhere else upon the ground. Other tents bore the banners of "New York, Pennsylvania and Ohio," "Indiana, Illinois and Iowa," "Wisconsin, Michigan and Minnesota," "Missouri, Kansas and Nebraska," etc., etc. So imposing an array of edifices for the convenience of shooters has never been seen in the history of tournaments in this country. In the sunshine of a perfect day, countless streamers and banners floated cheerily and added life to the scene already animated. It was not a shoot, but an exposition; it was not a tournament, but a spectacular assemblage of the clans, a rallying of the regiments of the gun, a great fair wherein was to be seen the best of the phenomena of the sport of shooting at the trap. It was a privilege and an education to be present.

THE TRIBUTE OF THE COUNTRY.

By noon of the first day there were present or in town, as nearly as could be determined, representatives from twenty-five States of the Union. The entry as announced by wire to Forest and Stream reached the figure of 134, a number fairly unprecedented in view of the character and significance attaching thereto. Nearly 200 shooters were upon the ground or in the city of Chicago on this first day. These were men representing the flower of the trap shooting country, North, South, East and West, men who came here seriously with plenty of money in their pockets, and each one seriously expecting to go away with more money than he brought. The programme certainly gave lavish promise of this. It said to the shooters for the big team event: "No matter how many of you there are, nor how great a purse your sweepstakes may constitute, the management will add to that purse an equal amount, not guaranteeing the purse merely, but doubling it." Other added money was also of princely amount. With such a basis, productive of such a gathering of typical shooters, and amid a setting so magnificent, it is no wonder that Mr. Rice, whose daring and executive ability has brought this to its climax, felt his heart filled with a pardonable pride. He has worked day and night over this for months. When he saw success so well in hand he was in danger of a reaction, and privately admitted that he was fairly on the point of collapse, and hardly knew whether or not he could run through the week without breaking down. It is not the hurried and imperfect words of a newspaper report which will give the best idea of this tournament, no matter how enthusiastic such may be. Its record will best be scattered by the lips of those who saw it and returned to their homes over the country. In these reports, and not in even the most well-meaning of those of the sporting press, will Mr. Rice and the company he represents find their best recompense of praise and the reward for an undertaking so perilously begun, so safely ended.

THOROUGHNESS OF DETAIL.

If it be impossible to speak too highly of the scope and daring of the business enterprise in holding this shoot, it is alike impossible to avoid praise for the thoroughness of detail in carrying it out. It was in every way a show affair. There has never been a tournament so spectacular, so attractive and so essentially high grade in every respect. The free and easy side in the methods of shooterdom were not visible. It was the best dressed crowd of shooters and spectators one has ever seen at a tournament. There was not the first suspicion of indecorum or carelessness in any regard. In this one does not mean to reflect in any way upon the usual customs at tournaments, but simply to commend especially the excellence of this tournament. It was neat and orderly—as quiet and elegant as an evening entertainment. There was no undue jollification at any time, and not a boisterous word or remark heard upon the grounds. In short, it was shooting as it can be and as it ought to be among the gentlemen of the gun.

All this smoothness of detail evinced careful preparation and intelligent execution. From the tournament stationery up to the cashier's printed blanks, from the legendary banners to the uniform of the executive staff, everything was thoughtful, thorough, neat and precise. The uniform of the field staff attracted favorable comment. It consisted of a white cap of yachting model, and white sweater with the magic word Du Pont on the breast. These insignia were carried into the squad arrangements to some extent. The Southern men wore the white cap, white sweater and white duck trousers, the sweaters bearing the inscription, "Dixie for Du Pont." The Southern men made what was called the "White Squadron," and presented a very fetching appearance. The tireless hustler, Mr. Fred Waddell, had done all that he could in his section of the country for the success of the shoot, and of course was here and there and everywhere over the grounds. Mr. R. S. Waddell, of Cincinnati, filled a similar rôle. St. Louis sent Mr. McBlair, the company's agent, and Baltimore contributed Mr. Collins. The Messrs. Du Pont, who were present at the shoot, could certainly look about with pride upon their large and able business family.

VISITING SHOOTERS.

It would be impossible in the space allowable to mention even the names of the entire multitude of shooters who were present. Chicago and Illinois of course turned out in force, and in a measure the local men felt themselves joint hosts in receiving the distinguished visitors from all over the Union. All the way from San Francisco came Mr. John S. Fanning, the only, but the able, representative of the coast. From the other side of the continent, the Empire State of New York sent the following able delegation: Buffalo, Audubon Club team—C. S. Burkhardt, captain; E. C. Burkhardt, F. D. Kelsey, B. F. Smith, H. D. Kirkover, Clinton Bidwell, manager; Mrs. H. D. Kirkover, mascot. Also Messrs. Harvey McMurchy, Sim Glover, E. D. Fulford, L. T. Davenport, Justus von Lengerke.

Pennsylvania sent most of her men from Pittsburg. Besides Mr. Seth Clover, of Erie, there were Messrs. J. G. Messner, A. H. King, W. S. King, W. G. Clark, J. O'H. Denny, W. J. McCrickart, Elmer E. Shaner, all of Pittsburg.

Ohio, the State of corn and champions, sent out the following highly respectable body of men: Messrs. R. O. Heikes, E. D. Rike, Chas. Tippy, Dayton; Chas. Young, Springfield; D. A. Upson, Ralph Worthington, Cleveland; F. D. Alkire, Woodlyn; Geo. Sprosse, Toledo; C. Bodifield, Cleveland; R. S. Waddell, Wm. Schuler, Cincinnati; Capt. W. A. West, Portsmouth.

Indiana was represented by the following well-known gentlemen from different parts of the State: Messrs. Hyatt L. Frost, J. L. Winston, Geo. A. Beck, Willard Thomas, H. B. Hill, J. G. Small, Fred Erb, Jr.

Maryland contributed the following thoroughbreds, all reared on wild celery and terrapin: Messrs. Chas. MacAlester, J. R. Malone, H. T. Ducker, B. W. Claridge, C. E. Bonday, J. M. Hawkins, H. P. Collins.

Old Kentucky contributed a handsome quota in the following: Messrs. Samuel Hutchings, J. S. Phelps, Jr., W. W. Watson, Ralph Trimble, Jos. Coyle, Tony Gastright, Lieut. A. W. du Bray.

Tennessee was represented by these popular gentlemen: Messrs. T. A. Divine, F. P. Poston, F. J. Waddell, Frank Legler and Thos. Callendar.

Minnesota sent a strong delegation, which included Mrs. W. P. Shattuck, the accomplished lady shot of Minneapolis. When Mr. Rice made the acquaintance of that lady and learned that the State of Minnesota had other skillful lady shots, he declared that next year he would have a special event arranged for lady shooters. The Minnesota delegation was as follows: Dr. L. W. Lyon, Messrs. B. F. Schurmeier, H. C. Hirschy, J. C. Highhous, John P. Burkhard and Roger McGinnis, of St. Paul; W. P. Shattuck, of Minneapolis; Mr. Muir, of Jackson.

From Georgia came Mr. T. C. Etheridge, of Macon; and to offset the Minnesota delegation from the north end of the country, Texas sent from the antipodes the popular circuit rider Mr. Wallace Miller. The State of Michigan sent Mr. Jack Parker, of Detroit; Mr. S. J. Corbett, of Detroit, and Mr. Ben O. Bush, of Kalamazoo; J. H. Shrigley and McQueen. The Kansas delegation lined up as follows: Messrs. B. O. Running, Atchison; Jas. W. Sexton, Leavenworth; D. W. Edwards, Severence; Lou. Erhardt, Atchison.

Mississippi was voted by Mr. L. D. Herrick, of Scranton.

Mr. Francis G. Du Pont

Iowa sent the strong aggregation whose names follow: Messrs. C. W. Budd, C. M. Grimm, F. Gilbert, G. Peterson, E. D. Trotter, H. J. Wilson, J. Georgeson, J. G. Smith, G. E. Agard, G. Lyons, G. P. Christianson, L. T. Crisman, J. Avery, J. Little, F. J. Scott, J. Wilson, H. West.

Wisconsin was well represented by Messrs. G. L. Dieter, R. Merrill, Dr. Williamson, Theo. Thomas, L. J. Petit, H. Vose, Dr. Morrison, Hon. George W. Peck, H. Carter, G. Wise, G. A. Lougee, C. Cooley, Mr. Ford, Col. Farrell, H. W. Bosworth, Paul Browne.

The State of Nebraska sent a lot of stalwarts, as shown below: Messrs. J. P. Smead, F. Montmorency, G. F. Buckee, J. C. Read, F. S. Parmelee, W. P. McFarland, J. J. Dickey, Omaha; A. A. Glade, Grand Island; C. E. Latshaw, Lincoln; J. W. Den, Arapahoe; W. T. Den, Brownville.

Arkansas had but one representative, but a good one, Mr. John J. Sumpter, Jr., of Hot Springs.

Missouri had on hand five well-known men: Messrs. J. E. Riley, J. Porter, C. Gottlieb, Chas. Schmelzer and Mr. Wilmot.

The State of Illinois and the city of Chicago had a great many men in attendance. It would be impossible to attempt to give a complete list of these, but among those present on the second day were the following:

Dr. H. H. Frothingham, Chauncey Powers, T. A. Marshall, Mr. Samuelson, A. M. Bacon, Harry Dunnell, Burt Dunnell, Capt. A. H. Bogardus, J. E. Price, Capt. A. Arison, J. J. Kleinman, Abe Kleinman, Geo. Kleinman, M. J. Eich, H. McFarland, Col. C. E. Felton, T. L. Parker, Geo. Roll, J. A. Ruble, Ed. Bingham, Fred Taylor, Dr. McKey, Dr. Liddy, T. P. Hicks, Dr. Shaw, R. Kuss, S. Palmer, W. L. Shepard, A. W. Adams, Ed. Steck, W. R. Morgan, R. B. Organ, W. P. Mussey, B. Barto, T. B. Leiter, Wm. Crosby, C. E. Morris, I. P. Watson, L. C. Willard, Geo. Sibley, C. S. Wilcox, Frank Bissell, Frank Place, C. B. Dicks, M. J. Pitzen, J. J. Smith, Geo. Franklin, Fred. Dilg, Geo. Beck, R. S. Mott, F. P. Stannard, O. von Lengerke, Ab. Price, H. Levy, W. S. Cutler, J. Hoyt, Ernest Rice, F. E. Coppernoll, Al. Miller, E. E. Parkman.

THE RECORD ENTRY.

Aug. 4.—It often happens that in crack tournaments the first event is the largest of the shoot, the entry being boomed up as much as possible. One must confess that on seeing the record of 134 shooters in one event of the preparatory day it seemed possible that this would be the highest entry of the occasion. It seemed unlikely that at so late a date of the circuit a greater number of shooters could be assembled who would actually go into a live-bird event with a stiff entrance fee. It was almost amusing to see the look of surprise upon the faces of all when the entries began to come in on the first event of Tuesday, the first day proper of the shoot. The tide rolled up and swelled past the mark of 134, and did not pause until it included thirty-five squads of five men each, a total of 175 men who put up $10 each to shoot at 10 live birds. This purse, although of course it was all division, carried with the $150 added money the total cash of $1,900, birds included. It occupied the entire day for its shooting. Event No. 2, at 15 birds, was never begun, nor did it seem that it was to be reached at all. The enormous entry blocked the wheels of the programme. It was decided to drop the 15-bird shoot and go on with the team contest Wednesday morning.

This was the largest live-bird sweep the writer has ever seen. It was surpassed at one time in Chicago in 1881, the wild pigeon days, in the Board of Trade Badge shoot of the Illinois Association, to which such frequent reference is made as the record shoot. In that event there were 185 entries, and the shoot was at 15 birds per man. There were eight plunge traps in line, and the then famous Louisville ball team were imported to do the trapping. Fred Pfeffer, of later base ball celebrity, was one of the trappers in that shoot. The shooting went on with such rapidity that, although it began at 11 A. M., the entire event of 185 entries was concluded before dusk. Still, one would not wish a return to the brutal plunge trap, single barrel days. It is impossible to evade the belief that this sweepstake of the Du Pont tournament has a higher significance and represents a more considerable following of the sport.

The weather for Monday, the first day, was clear and warm. On Tuesday the thermometer ran up to 94, and Chicago was treated to one of her unusual hot spells. The heat was oppressive and fatiguing. In spite of it the shooting went on, and strange to say the birds needed little flagging. The birds are doing very well indeed for August. On the average they start well and fly strong, though their lack of plumage is shown in a weakness which succumbs readily to a few pellets of shot, which in the winter would not stop them at all within bounds. It would be impossible at this season to hold a live-bird shoot successfully in the South, and it is pleasant to be able to add that the experiment of holding one in the North is the opposite of a fiasco from a shooter's standpoint.

Below are the scores made in the two events shot on "Preparation Day," and in the one event decided on the first day of the tournament, Tuesday, Aug. 4. On Preparation Day No. 1 was 5 birds, $5, birds included, $75 added, three moneys; No. 2 was 7 birds, $7, birds included $100 added, four moneys. The event on the first day of the shoot was at 10 birds, $10, birds included, $150 added, 5 moneys:

THE GREAT TEAM CONTEST.

Aug. 5.—The heat continued intolerable, the thermometer during the day ranging at 95°. As usual upon these grounds a smart breeze blew during part of the time, but the air was laden with heat and failed to refresh the sweltering mass of humanity that crowded the ground. Of shooters and spectators there were several hundred

W. B. CLARIDGE AT THE SCORE.

present, including a large number of ladies, who held the places of honor in the headquarters tent and under the canopies near the scoring line. It was a beautiful crowd, and one whose presence was inspiring to the management and to the shooters participating. Both sets of traps were kept busy during the day. In spite of the heat the birds did their part well and straight scores were by no means numerous. It was commonly said that any man ought to kill every bird he shot at in such weather, but not every man did so by any means. The sultry and oppressive day did not serve to materially lower the spirits of those present, and the time passed by in merriment and jollity of a quiet sort. Toward evening the heat became mitigated somewhat and the shooting was more enjoyed. The crowd stayed until nearly dusk, reluctant to leave the scene. After the close of the regular events Mrs. Shattuck, of Minneapolis, shot a few birds at No. 1 set of traps. She killed 4 out of 5 in very pretty style and called forth much applause.

As mentioned earlier, the 15-bird sweep was carried forward another day, and shooting was begun at once on Wednesday morning in the team contest, the conditions of which were as follows: Five men from any one State (all members of an organized club) to constitute a team, no limit to number of teams entering from State, 10 birds per man, entrance per team $50, added money per team entering and shooting $50, birds included, 4 moneys.

The liberal terms of this contest called forth the magnificent entry of twenty-eight teams of five men each from all parts of the country, a total of 140 men who put up $10 each on the third day of a live-bird shoot in the month of August. We have had no event of any such magnitude in live-bird matters in this part of the country. This contest attracted a great deal of attention, and was concluded late in the day amid the close attention of all who understood the least about shooting. The emulation among the different teams was very keen, State pride entering into it somewhat as well as the desire to get high up in the great purse of $2,450. It was well in the middle of the afternoon when matters began to approach a climax in the team contest. It was rumored about the grounds that no team could go straight, but that a possible 49 out of 50 remained for Iowa and Illinois teams, Mr. Chas. Grimm for Iowa, and Mr. Chauncey M. Powers for Illinois, still having to shoot their 10 birds. In order to make the competition absolutely fair no team shot together, but the squads were broken up so that each team member shot with members of teams other than his own, and shot 5 birds at each set of traps. This method was certainly fair, though it made the shooting appear somewhat complicated to those not posted in the game.

At length it was noised about that Grimm was to shoot his score. The Iowa veteran stepped to the line as sturdy and self-confident as ever. His friends were around him and behind him, regarding his every move with eager interest. In his first 5 there were whispers that he was not centering his birds with his first barrel, though he mowed them steadily with his second. In his last 5, however, he steadied down and shot like a machine, going straight amid great applause. Then the scene shifted to No. 2 set of traps, where, amid a squad of other team members, the tall, dark and slender young Decatur shooter, Mr. Chauncey M. Powers, was called on to shoot the last 5 birds of his string. He too was surrounded by his friends; the non-shooters openly eager and disturbingly apprehensive, the shooting friends equally eager, but encouraging by their stolid silence. Of course the squads were shot in rotation, each man shooting 1 bird out of 5 in order. This prolonged the finish. As his turn came, Mr. Powers stepped to the score quickly and nervously, but without agitation. He had said to the members of his team, "If those other fellows can run 10 straight so can I, and I am going to do it." Each time as he stepped to the score he dried the perspiration on his ungloved right

hand carefully, and stood with his gun broken, not inserting the shells until the trapper boys were well back from their work. His coolness was good prophecy, and he cut down his birds, none of which were very hard, in very handsome style until but two remained for him to shoot at. At this time there was heard along the spectators' line, which crowded the rail, a certain amount of talk of a sort which had come up earlier in the day over this question of the finish between the Illinois and Iowa teams. One lanky individual voiced this loudly in the remark, 'If that man drops one bird, he will make about $300 for his gang." Another asked him how this was, and he explained by showing that if Mr. Powers should drop one bird and throw his team in the second place, the two teams could divide all of first money and a part of second money among themselves. Mr. Powers knew this situation perfectly, and indeed it had been recognized by members of both teams. He must have heard something of the talk which was going on about the score at the finish, and if he did the situation must have been a peculiarly trying one, for any man is apt to miss a bird, and had he done so there would have been ugly rumors about, although no one in the least acquainted with him or his friends upon his team would have entertained the least suspicion of their honesty, no matter what happened. While some of this talk was going on, the artist, Mr Wells, and myself were standing back of the score, and we had occasion to remark to the lanky individual above mentioned that they could not pile up money enough in front of Chan. Powers to make him miss a bird. About this time I heard Tom Marshall talking behind us (Mr. Marshall, by the way, having lost the only bird for the Illinois team through over confidence in the use of his second barrel. He had his bird knocked down with the first barrel near the line and it could have been retrieved, but he fired at it on the ground with the second, missing it, but scaring it over the line, where it died). Mr. Marshall when overheard was talking to some one about the situation in progress, and I heard him say, "I will bet you $300 to $100 that Powers kills straight, and if he did not I would bet you all I had he did not miss on purpose."

There was silence when Mr. Powers stepped to the score for his last bird. He rubbed his hand on the side of his coat, and quietly dropped in his shells. His bird, out of No. 5 trap, tarried an instant and then went an easy right-quartering incomer, which he killed in one-two order. There was a great burst of applause at this, and Mr. Powers was very heartily congratulated on his plucky finish. There was much talk upon the grounds of this after the conclusion of the contest, and a great many pointed out with pride the fact that the Western men had not dropped for place when the opportunity offered. One fails to see the pertinence of such pride It is a matter of course that gentlemen shooting in competition for money will shoot honestly. It is not necessary to remind a gentleman that he is a gentleman, nor does he need cautioning to be one. Had Mr. Powers been unfortunate enough to lose his last bird, he would not have received the slightest suspicion from any one who knew him. All of which shows the benefit of a clean and gentlemanly record as a man and a shooter. Inferentially it shows the disgust in which the public holds any other kind of a shooter.

Mr. Trotter, who was unfortunate enough to lose the only bird for the Iowa team, shot a strong gait, but caught a twisting, left-quartering driver which was too much for him.

It was expected that some of the Eastern teams would go up into the money, but Baltimore went to pieces, and New York got two 8s and a 9 in her string. The Buffalo Audubons fell down and did not get into the money. Kentucky shot the strong gait of 45 and yet did not get into the money. Second place was shared by Pittsburg's team, the Summer Gun Club of Chicago, and the Ohio team, these tieing on 48. Capt. Parmalee, of Omaha, escorted a strong team into third money with 47. Fourth place on 46 was divided by Kansas City, Wisconsin and Garden City team, of Chicago. It is a pretty hot competition when in a five men team event at 10 birds there are four moneys and 45 will not get a place. Yet there were five ties on 45: Ohio No. 2, Ohio No. 3, Kentucky, South Chicago and New York. The purse was divided: $980 first money, $740 second money, $425 third money, and $245 fourth money.

Considerable interest attached during this team contest to the squad of veterans known as the "Old Shooter's" team. Of these the names are familiar with the shooting public. Capt. Bogardus once electrified the word with his skill. Col Felton is one of our old old-timers, and Abner Price, his companion in the Chicago Audubon Club, showed he could still shoot a bit when he went out with 10 straight. J. J. Kleinman is getting along in years now and is well entitled to be called a veteran of the gun. J. E. Price is also one of the familiar faces at Chicago traps.

The Kentucky team might have done better had it not been for an accident which occurred to Mr. Watson's gun. A bit of primer blew back into the lock and the gun would not stand cocked. He took up another gun and lost 3 birds with it.

This team contest was admirably conceived and well executed, and constituted an event of great shooting interest.

It now appearing that the programme could be shot through, it was resolved to take up on Thursday the unshot 15-bird sweep and the grand Championship Handicap for the trophy.

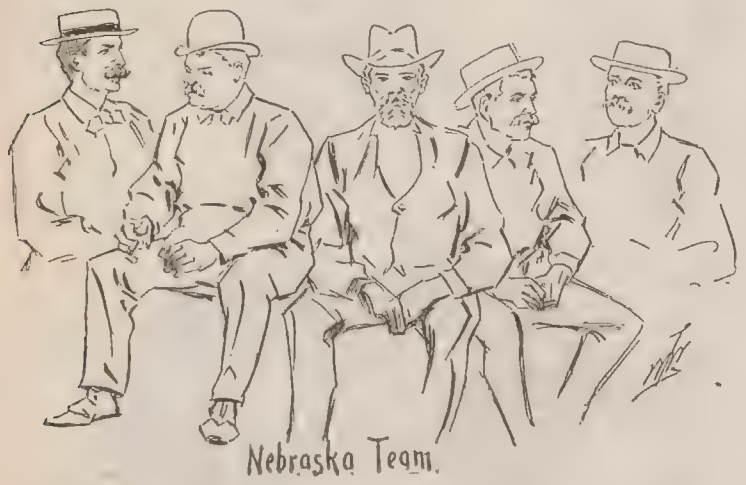
Scores in the team race follow:

Nebraska: A. A. Glade 8, J. J. Dickey 7, Squirrel 7, J. Den 10, Latshaw 7—39.

Pistakee: H. Dunnill 10, M. J. Pitzen 6, W. Dunnill 9, R. Dunnill 9, R. S. Mott 6—40.

Kansas City: J. B. Porter 10, J. E. Riley 8, Gottleib 10, Taylor 8, Wilmot 10—46.

Garfield: Dr. Shaw 6, F. P. Hicks 9, Dr. Liddy 9, S. Palmer 8, P. Kuss 8—40.



Ohio No. 2: D. A. Upson 10, Bodie 10, Spross 10, Tippy 8, R. S. Waddell 7—45.

Evanston Gun Club: F. Dilg 7, Jas. J. Smith 9, A. Schmitz 7, Franklin 9, Beck 9—41.

THE TENTED FIELD OF THE DU PONT TOURNAMENT.

Kansas team: Edwards 9, Sexton 9, Running 9, Erhart 4, Rooney 6—37.
Illinois No. 2: T. Marshall 9, R. Bacon 10, E. Bingham 10, Crosby 10, Powers 10—49.
Old Shooters: J. E. Price 7, A. Price 10, Col. C. E. Felton 8, J. J. Kleinman 9, A. H. Bogardus 9—43.
Ohio No. 2: Schuler 10, West 9, Ackerman 10, Hickey 8, Small 9—45.
Kentucky: Chadwick 10, Du Bray 10, Watson 7, Trimble 9, Faucitt 9—45.
Pittsburg: W. S. King 10, J. O'H. Denny 10, A. H. King 9, W. G. Clark 10, Messner 9—48.
Ottumwa, Ia.: J. Avery 8, T. J. Scott 8, Scott 9, Conrad 7, Chrisman 9—41.
Western, Ia: Peterson 9, Hughes 10, Christianson 8, Georgeson 10, Lyons 7—44.
Baltimore: Macalester 9, Bonday 8, Hawkins 9, Du Pont 10, Claridge 8—44.
Indiana: Voris 8, Hill 9, Winston 10, G. Beck 6, F. Erb, Jr., 9—42.

C. E. Latshaw. Frank Parmelee. W. T. Den. J. W. Den. G. F. Brecker.

Summer Club, Chicago: George Roll 10, J. Samuelson 10, T. L. Parker 9, Dr. Frothingham 10, C. B. Dicks 9—48.
Omaha: F. Parmalee 9, Brucker 9, Smead 9, Montmorency 10, J. C. Read 10—47.
Council Bluffs: R. O. Graham 8, A. Beresheim 8, W. F. West 9, Harden 7, J. G Smith 8—40.
South Chicago: J. P. Watson 10, L. C. Willard 10, A. C. Anson 8, Anthony 8, Steck 9—45.
St. Paul: J. C. 9, Holt 7, Reid 8, Hamlin 7, McGinniss 9—40.
Wisconsin: Dr. Williamson 9, Thomas 10, G. Deiter 9, Petit 9, Merrill 9—46.
Tennessee: F. P. Poston 9, J. J. Sumpter, Jr., 9; Etheridge 8, Callender 7, Divine 8—39.
Garden City, Chicago: G. Kleinman 10, M. J. Eich 8, McFarland 9, A. Kleinman 10, Ruble 9—46
New York: Fulford 9, Glover 10, McMurchy 8, Davenport 10, J. von Lengerke 8—45.
Iowa "Indians:" Gilbert 10, H. Wilson 10, Trotter 9, Budd 10, Grimm 10—49.
Buffalo "Audubons:" C. S. Burkhart 8, E. C. Burkhart 9, B. F. Smith 8, Kirkover 9, Kelsey 9—43.
Ohio: R. E. D. 10, Alkire 9, Redwing 10, Young 9, Heikes 10—48.

UNPRECEDENTED CHAMPIONSHIP ENTRY.

Aug. 6.—The weather remained extremely warm, the thermometer registering 83° at 8 A. M. This heat continued during the day until in the afternoon the sky was overcast by thunder clouds. At 4 o'clock a blinding, driving rain set in, which drenched the grounds and drove shooters and spectators into huddled, laughing groups inside the big tents. The excellence of the arrangements now became manifest, for there was ample canvas room to house all comfortably. At 5 P. M. the storm broke away, leaving a smiling and cheerful mass of humanity behind it in the city of Chicago, which had sweltered for four days in the worst heated term ever known here. The swift drop of the temperature was appreciated by the shooters, who welcomed the relief from the torrid heat. The quacking of ducks, honking of geese and whistling of snipe could be heard arising along the line, which contained abundance of high quality field shooting material Shooting from No. 1 set of traps, where the score was under cover, continued during most of the storm.

No event was concluded on this day, but the phenomenal character

of this tournament again manifested itself in the unprecedented strength of entry. The management never at any time expressed itself as hopeful of more than seventy-five entries in the championship handicap trophy event, and the more conservative shooters were of the opinion that not more than sixty five entries could be secured, the sum of $31.50 making a pretty stiff entry for a hard times epoch. Yet little by little, and by fits, starts and jumps, the entry in the championship handicap sprang on and up until it reached sixty-five, rolled over seventy-five and passed the 100 mark. Nor did it tarry there. In the afternoon it was discovered that not less than 124 shooters had qualified for the championship contest, with two forfeits up additional. The cream of the shooters of the country made this entry, the best of the good ones all over the land. The winner of this event may justly feel that he has met the pick of the shooting fraternity and won a championship entitled to be called such in the widest sense of the term possible in any handicapped competition.

Entries were also received simultaneously for the 15-bird sweep, $15, $200 added, which remained unfinished from the day before, and the magnificent total of 123 entries was reached here. Both these great events were put in progress at the same time at the two sets of traps, each man shooting 5 birds in rotation in these events. It became apparent that as not more than 2,000 birds a day could be shot the end would not be reached until Saturday. Although shooting continued steadily during Thursday, matters did not get far enough along so that one could get anything of a line on the winners. Gilbert remained straight at the end of the day. As he walked from score to score he was followed by a curious crowd who pressed about to see him shoot. Things will be closer by this time to-morrow, and the end of the event will see everyone keyed up to as high a point of interest as has been known in the shooting world of America.

The work of the handicapping committee was done conscientiously and carefully, and only after much deliberation. The figures will be seen in connection with the scores. The question of handicapping in so large and representative a gathering of shooters is a weighty one, and one in which absolute justice is an impossibility, since it involves the shifting and variable quantity, daily shooting form, something which cannot be weighed nor measured. It would be wrong to say that the committee was absolutely fair, and perhaps in some cases they made serious errors, but it is quite right to say for them that they did their thankless work no doubt as well as any one else could have done it. Gilbert, at scratch alone, conceded a yard and in some cases two yards to men who have every right to believe themselves in his class at least, though of course it was well and proper he should go scratch. It was graceful of the members of the committee, Messrs. Marshall, Powers and Merrill, to take the next mark ahead of scratch, 31yds. The 29yds. line found a lot of strong ones, and even at 28 the fight was good, but results in the shooting for the most part bore out the judgment of the committee, so far as could be discerned in the early stages of the game. For instance, Macalester, of Baltimore, who was thought by many entitled to stand as far back as the best, dropped out of straight early in the game, and others of the good ones followed. Some young shooters went well forward, and the only lady contestant, Mrs. Shattuck, of Minneapolis, was given the limit, 25yds. The same distance (25yds.) was given to another shooter, Leach, of South Dakota, and not until after this was decided did the committee learn that Leach held the championship of his State at live birds. All these things may mean much or little in regarding the result, but it would be in bad taste to make any restrictions whatever upon the work of the committee. In reference to their decisions there will probably be about 124 different opinions, plus several thousand of cipher opinions of shooting readers all over the country. No handicap for championship which embraces so wide a range of shooters can, within the bounds of human reason, be called absolutely just or fair; but no one can tell where it is or is not fair. There is much unwritten history of the pressure brought to bear upon the committee by men who wanted good things allowed them, but the consensus of opinion is that they did their work exceedingly well and in a manner entitling them to the thanks of all.

AND THE MILL GROUND ON.

Aug. 7.—The refreshing shower of the evening previous was but transitory in its effects. All day the heat was severe and at 7 P. M. the thermometer stood at 83°. Men from the South said they had rarely seen any weather so depressing. Under such circumstances it was impossible that live-bird shooting should be seen at its best. The traps are pulled by automatic machines, and should it happen that a given trap does not fall for some time, so that the bird is held a prisoner in the blistering iron box for a few minutes, the life is gone out of it so far as strong flying is concerned, and the man who draws it has an easy one. It cannot be said that August is a good time for a live-bird shoot, though a dozen Augusts might pass by without seeing such a hot spell as we are having here this week. It should not be

thought from this that the birds are all duffers or that they need flagging to any great extent, for such is not the case. They average very good indeed.

A glance at the scores would show that they were too much for some of the best of the live-bird shots, even before the race had progressed as far as the 10 or even the 5 hole. All day long both sets of traps were kept busy working, the trophy race being shot at No. 1 set in front of the club house, and the 15-bird sweep at the No. 2 set on the other part of the grounds. No results were reached. The trophy contest did not see half the shooters up to the 15 hole. It was thought that the 15-bird sweep might be finished by noon of Saturday, but the old shooters said the management would be lucky if the two events were both finished by dusk of Saturday night. All shooters were urged to be on hand early Saturday morning, as it was desired to close the tournament this week. It was proving to be a very elephant of a shoot, bigger than anybody had looked for. Mngr. Rice laughingly declared that he was in the position of the man who was looking for a bear fight, and who, when he got it, called for some one to come and help him turn the bear loose. Only about 1,600 to 1,750 birds have been shot daily—not up to the usual capacity of the grounds. This fact is due to the size of the crowd and the difficulty of getting in motion in the morning.

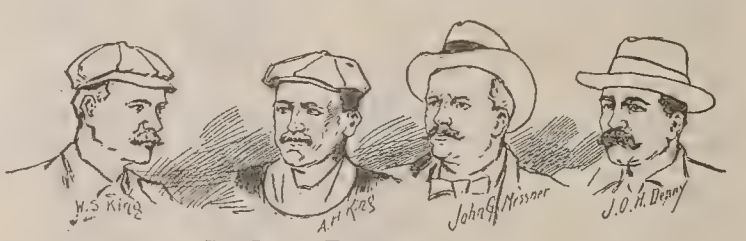
One shooter, Ed Vories, of Crawfordsville, Ind., was allowed to

shoot his score straight out, he being called home by wire announcing illness in his family. This was done by consent of the shooters although he might have been allowed to take down his money and pay for the birds he shot at. He went out with 22. Another shooter, Capt. A. C. Anson, of baseball fame, found after the close of the entry that he had been left out by mistake of the party he had told to enter him for the shoot. He insisted he wanted in, as he was sure he was going to win all that money. By consent of the shooters he was allowed to put up his $31.25 and to shoot straight out, as he was unable to be present Saturday. He had missed 5 birds at the 22 station, and the boys were that much better off for his $25. Another shooter, Sherman, of St. Paul, who had forfeit up for the contest, injured his hand in pulling up a tent stake on the grounds and was unable to shoot. The management released him courteously. In the 15-bird sweep Jack Parker was allowed to shoot out straight, as he was called home to arrange matters for his shoot there next week. These were about the only deviations from the conditions governing the races, and were perhaps condonable, if not desirable, in shooting of such importance, where the conditions should apply to all alike.

About 3 P. M. there was a rumor spread about the grounds that Gilbert dropped a bird in the trophy race. Investigation proved this wrong, as it was found that he missed the bird at No. 2 set of traps, where the 15-bird sweep was in progress. The bird was an easy hopper, and Gilbert was, as he expresses it, very "fussy" about missing such an easy one.

A dark and hasty glance was made at the scores to see who was left in the straights. There were 25 squads, and only about half of these

Fred Gilbert.



had shot up to the 15 hole. Some men at the 10 hole were still straight, but of those who were straight still at the 15 hole only 17 men could be found, among these being Gilbert, Budd, Claridge, Latshaw, Sumpter, Burkhart, Kirkover, Gottlieb, Hoyt, Miller, Georgeson, Kuss, Shaw and A. H. King. A number of men had already finished straight at the 15-bird sweep, among these Penrose and McMurchy. There were many sorrowful faces by night, worn by men who had dropped a bird in the trophy race. Conservative shooters estimated that there would not be over 6 to 8 straight with 25 at the finish, and that the result of the ties would not be known before Monday.

INTERESTING FEATURES OF THE CLOSING DAY.

Aug. 8.—And still the torrid wave continued. The thermometer at 9 A. M. stood at 86°. At 11 A. M. it was 99° in the shade. At 3 P. M. it was 98° at the top of the Auditorium tower, where the signal service station is located. At 11 P. M., the date of this writing, it is 92° in the Forest and Stream office. If people don't think this was a "red-hot" shoot they don't know one when they see it.

It is hardly believable, yet the oldest shooters will confirm it, that in spite of the great heat the birds flew well. There was a stiff breeze from right to left across the score, and this gave legs to a lot of them. There were some birds flying at 3 P. M., when the thermometer was at 98°, which were as good as any one often sees in the winter time. John Watson said that this was a crate of Dakota birds. They came with a mixed lot of duffers and made a hard spot for the shooters who caught them. Charlie Budd got two of these and killed the first to applause, but on the second, a fast left-quarterer, saw his chances of a straight go over the fence. Mott, Hicks, Palmer, Dr. Williamson, Crosby, McMurchy and a few others were up in squads just at the time this tough lot of birds came in. Each one of these shooters had as much asked of him as he has license to expect in the winter shooting, and each showed himself a shooter. Crosby had two lucky kills, high up, that landed plump against the wire inside. Dr. Williamson

stopped two screamers. McMurchy went to the score straight at this stage of the game, but dropped no less than two out of his five, getting two hot tailers fast as lightning streaks. Seth Clover, standing by at the score, remarked that he had never seen any such birds at any time or any place. It was hard luck to get in this coop of birds, and many shooters fell by the wayside. Rolla Heikes had already fallen out of it. Heikes lost a high outgoer, hit light with first and full with second. Gilbert lost two birds, his 18th and 21st. The former was a high outgoer, and Gilbert was too slow with the right. He says he then flinched on it with the left, and shot ahead of it. His 21st bird was hit full with both barrels and died high in the air, but fell over the line. Gilbert could claim no easy drawings, for he got only two birds inside the line of traps. He did not complain at his handicap, but it was commonly thought he had a-plenty to carry at 32yds. It was freely declared by the long distance men early in the afternoon that no "long" man was going to win this race. The result proved the truth of the prediction. At 2:30 P. M. there remained only five men who had killed 25 straight: B. W. Claridge, of Baltimore, 29yds.; George Roll, of Blue Island, Chicago, 30yds.; Wallace Miller, of Texas, 29yds.; C. Gottlieb, of Kansas City, 29yds.; Kirkover, of Buffalo, 27yds. For some time these were on the anxious seat, before it was learned that no one else could go straight.

The big 15-bird sweep, which came near swamping the tournament this week with its long course, ran its length by the middle of the afternoon, and then the shooting moved on faster, both sets of traps being put to work on the trophy event. At 4 P. M. there was a season of fright and fear which put the whole shoot in jeopardy for a few moments. This was nothing less than a threatened bird famine. John Watson had not figured on any such an entry as came in this week, and for once in his life began to run short of birds. He had

more ordered, but they were sent wrong by the express company. There were only about 50 birds left on the grounds when a delivery wagon drove up post haste and six crates of birds were hustled out to the scoring lines. Mr. Rice drew a long breath then. Gilbert took occasion to remark that if "Mr. Rice should fall off a church steeple he would land in a Christmas tree." Certainly it was great luck that the shoot was not stopped untimely at the middle of the most interesting part.

Meantime at the No. 1 set of traps, in the 15-bird sweep, there had

occurred an incident which should not be allowed to go by without mention, even were mention not requested by the management, namely the disqualification of a shooter for the offense of dropping for place. Early in the week J W. Fahnestock, who runs the Wayne Hotel at Fort Wayne, Indiana, came on the grounds almost a stranger to all. He wanted to shoot, and as he was a man sixty years old and claimed to have no experience, the handicap committee put him at 26yds. He shot on through the programme under the name of Jack. He killed 5 straight in one sweep and 9 out of 10 in another, and killed 13 out of his first 15 in the trophy race. He had killed 12 out of 14 in the 15 bird sweep, and when he went to the score he turned and said to the scorer, "How many have I to shoot?" The reply was that he had but one more to shoot. Fahnestock then said in the hearing of several, "I think 12 is about good enough for me." He put only one shell in his gun and held his gun low down by his hip, waiting till the bird got well away and missing it deliberately. Mr. Shepard was angry at this, and there was much heated complaint over it among the shooters, who did not like such open rottenness in shooting. Mr. Rice heard one shooter say that "if this was shooting, he would shoot no more at any tournament." "You need not stop shooting yet," said Mr. Rice, "we don't allow any such thing on these grounds." He then went to Fahnestock and asked him if the accusations were true. Fahnestock admitted they were. Mr. Rice then told him he had forfeited his right in the purse, and could shoot no more on the grounds. "But, of course, I can finish up at the other score in my trophy entry," said Fahnestock. "No," said Mr. Rice, "you cannot fire another shot on these grounds in this tournament while I am managing it, in the trophy or any other contest, no matter whether you dropped in that event or not. You can go to the desk and get your money back, but you cannot shoot here any more. We are running a straight shoot." Much demurring, Fahnestock went and got back his money and started to leave the grounds. On his way he met Mr. Du Pont, and made complaint to him over the way he had been treated. Mr. Du Pont had heard nothing of the occurrence before this, but told him that he had been treated just right. And so he had. It is preposterous to think that there should be any doubt upon this point whatever. It was a piece of fairness and justice such as has been all too uncommon in our tournaments. The incident itself is deplorable, but that the result of it was just such as it was proves that this shoot was run in just the way any shoot among gentlemen should be run. The Du Pont Company does shooting some good when it shows that it will not tolerate anything but honest shooting. Mr. Rice is a benefactor of a practical sort when he disbars from a fair competition a man who is not fair. Little by little the once unpopular doctrine of honesty in shooting is becoming popular. It is bound to win. The sport of trap-shooting cannot get on without it.

There is no use denying that dropping for place was once common, or that it is now becoming uncommon. It was always detestable and unworthy of a moment's tolerance. If FOREST AND STREAM ever did an iota of good in the world, it did it in the breaking up of this outrageous practice, which it did alone and without the support of its weak-backed contemporaries, who feared to say a word of criticism of anything which the "boys did." The boys don't, now.

THE 15 BIRD RACE.

The scores in the 15-bird contest show 123 entries. The conditions were: 15 live birds, $15 entrance, birds included, 5 moneys, $200 added. Scores:

Fifteen straight: H. Dunnell, Steck, Scheele, B. Dicks, Dr. Williamson, Macalester, Parmelee, Bingham, Dr. Frothingham, W. R. Miller, Wilmot, J. J. Sumpter, Jr., I. P. Watson, West, Chadwick, Kelsey, McFarland, M. H., W. S. King, W. G. Clark, H. McMurchy, H. A. Penrose, J. B. Porter, C. S. Burkhardt, G. Roll, Georgeson, L. C. Willard, Latchaw—28.

Fourteens: Messner, G. L. Delter, C. M. Price, T. A. Marshall, R. O. Heikes, Fred Gilbert, Du Pont, J. P. Malone, Sexton, Brucker, J. Parker, B. F. Smith, Clark, Vories, Plumber, J. J. Kleinman, J. J. Dickey, B. E. Hughes, Reilly, Anthony, A. Kleinman, Etheridge, Reed, Kirkover, Peterson, Dwyer, Robinhood, Merrill, Alkire, J. Ruble, McGinnis, Glade, R. E. D., Barto, Pitzen, Westfield and Spross—37.

Thirteens: Erb, Carkeek, Witz, Eich, Seth Clover, Powers, Hawkins, Solomon, Fulford, Dr. Shaw, Gottlieb, Montmorency, C. W. Budd, H. J. Wilson, Redwing, L. T. Davenport, George Kleinman, J. S. Fanning, A. H. King, A. W. du Bray, J. E. Wright, H. B. Hill, O. von Lengerke, Squirrel, Sim Glover, Fawcett, E. D. Trotter and J. W. Den—28.

Twelves: Sweeney, C. M. Grimm, D. A. Upson, B. W. Claridge, Samuelson, W. H. Clay, J. O'H. Denny, E. Rice, T. P. Hicks, T. Callender, R. Trimble, Miller, Agard, Klehm, Smead and Thomas—16.

Elevens: W. L. Shepard, C. E. Bonday, C. T. Bodifield, E. C. Burkhardt, J. C. and J. M. Avery—6

Other scores were: Leach, McVey, S. Palmer and Frost, 10; L. D. Herrick and Denn, 8. (According to our scores G. Jack scored 12 out of 14 and Phipps 3 out of 5, neither shooter completing his score.)

THE FINISH IN THE TROPHY.

There was apprehension lest the great trophy race, which had exactly 125 entries and one forfeit, would not be concluded on Saturday, but one by one the shooters fell, until at 4:45 P. M. only the five men above mentioned were left straight with 25 out of the whole great aggregation of the nation's best trap shots. These men were followed with eager interest as they stepped to No. 1 set of traps to decide the ties. The man George Roll was looked over with curiosity. He was in a way a dark horse. He is a member of the Blue Island Shooting Club, of Chicago, and not of any special record. He is a giant in form, but of admirable and muscular proportions and of pleasant features. A man of undeniable good feeding and digesting powers, of iron constitution, there are few men before the traps whom one would more readily designate as "built for a shooter." Roll's record at this shoot shows the turn of Fortune's wheel. He had, up to the time he stepped to the score for the ties, killed and scored every bird he had shot at during the shoot, and he had shot the programme through, scoring 72 birds clean, the only man who came near doing so. More than that, he had in his last four practice shoots killed 17, 10, 8 and 10 straight, so that he had actually killed during several days of all kinds of birds and at all kinds of shooting 117 birds straight. He was naturally a favorite, except among those who shook their heads and declared him "due to miss."

Gottlieb, of Kansas City, is a sturdy and large-framed man of good shooting form. He delayed the game by being absent when the five men were lined up for a photograph before the tie began, but at length came up smiling.

Wallace Miller, of Texas, showed a powerful and well-built man, of calm and steady expression and a bright hazel eye.

Kirkover, of Buffalo, youthful and smooth-faced, was stocky, sturdy and rather dangerous looking. He looks like a cold nerved, sandy sort of fellow.

Claridge, of Baltimore, was slight and nervous-looking, and hardly the man one would pick to win in such a corner.

It was after 5 P. M. when the score was cleared for the five contestants. The wind had fallen, and the air was sultry and oppressive. The birds were not going well at all, deprived of the breeze which had prevailed earlier. It was expected that the men would line out into a long and exciting tie on easy birds, and that they might not finish before dark. And then occurred the unexpected. The great Du Pont trophy race came to the suddenest, shortest, abruptest, and almost the funniest ending that ever did happen to a big shoot. Here were five men who had killed 25 birds straight each, and who had shot out all the country up to that notch. It might be believed they would, one or more of them at least, run a few more straight. What actually happened was that at the 3d bird of the 5 tie birds every man but one was shot out, and only one of the entire five got his 5 birds straight!

Gottlieb got an owl of a driver that he could have killed with a club, but he only feathered it. He sat down in consternation.

Roll killed his first bird to applause of friends, who were more enthusiastic than polite to the visitors. But his second bird, by no means a hard one, was not centered, and though it fell dead out of bounds it had to be scored lost. This was his 119th bird straight had he killed it.

Wallace Miller, with his Winchester repeater, cut down his first bird sharply and surely. His second was an easy one, killed at the trap. His third bird was a driver, not fast, and turning slowly to the right as it drew away from the traps. He was slow and off with his first, and very slow with his second. The bird was feathered slightly with the last shot, but no gun could kill it at that distance, and it went over. Wallace sat down, looking sad and chagrined.

Kirkover, of Buffalo, looked a winner, and was a favorite with many from the start. He smashed his first 2 birds down well, but the traps gave him for his 3d a right-quartering incomer, which is Kirkover's invariable hoodoo. He missed this bird almost clean, only raising a few feathers with his second. He retired without a murmur, but not looking pleased at all.

Claridge, thin and nervous, was apparently at first cool enough, and called his "pull" with a calm Southern drawl which argued well. But all at once a most unmistakable funk seized upon every man in that squad of five, and Claridge shared it plainly. He none the less got down 3 birds. At his 4th he stood sighting his gun for the preparation and was just on the point of calling "ready," when he accidentally pulled off his right barrel, shooting into the ground about halfway to the traps. This was too bad, and it was enough to rattle any shooter, but he pulled himself together and killed his bird with the first barrel when it was sprung. He was applauded loudly at this. He then stepped up for his last bird, which, if killed, left him alone with 5 straight in the tie and made him winner. He got a soft, big, blue-slate pigeon, which just barely hopped up about 2ft. at No. 4 trap. Quick as lightning the nervous shooter cut away, plainly firing while the bird was in the air. It was not touched by the charge, and alighted by the trap. Claridge fired at it as it stood upon the ground and the bird fell forward, apparently not seriously injured except for a broken leg, which prevented it from starting. "Dead bird!" exclaimed referee John Watson, sharply. The dog ran in and seized the bird. The most exciting race ever shot for the Du Pont trophy was over. The crowd broke over the fence. In a minute Mr. Claridge was surrounded by a swarm of friends who shook hands and heaped up congratulations.

Mr. B. W. Claridge, winner of the Du Pont trophy, is a member of the Baltimore, Md., Shooting Association. He is twenty-seven years of age, of rather slight build; but wiry and nervous. He has had little experience at the trap, his first shooting at birds being at the Baltimore Du Pont tournament. He is, however, of long experience as a field shot, and has shot quail and ducks in Florida and all over the South. Like Gilbert, he is a new character in the trap-shooting world, measured by years of time. He is a very pleasant and good-looking young man, and his win was popular.

So the big trophy goes back to Baltimore, whence it came to the West. It looks as though it was intended by the Baltimore men to have it stay there, for before Mr. Claridge had gotten away from the score he was challenged by Mr. James Malone, of Baltimore, and the forfeit was put in Mr. Rice's hands.

Mr. Claridge shot a Daly gun and used Leader shells, with 3¼drs. Du Pont powder and 1¼oz. No. 7 shot.

The money was divided by the five tie men before shooting. The purse paid as follows: first, $937 50; second, $781 25; third, $625; fourth, $468.75; fifth, $312.50. These are the largest moneys ever shot for in open competition in the history of the country, so far as can be learned at this writing.

The Du Pont Smokeless powder grand championship handicap, for trophy and $1,000 guaranteed, to be shot at one or central set of traps, and to be continued until finished, 25 birds per man. In this event Du Pont Smokeless exclusively to be used, entrance $25, birds extra.

The five men tied for the cup with scores of 25 each shot off at 5 birds; Claridge won by killing his 5 straight. Scores:

Claridge (29)	22122—5	Roll (30)	10 —1
Kirkover (27)	220 —2	Gottlieb (29)	0 —0
Miller (29)	210 —2		

NOTES AND INCIDENTS OF THE SHOOT.

Mr. Louis Duryea, of New York, who has seen some of the hottest shooting of this country and Europe, said that he did not believe the equal of this shoot had ever been held at any place or at any time in the world.

Mr. J. S. Fanning, of San Francisco, said that he had never seen a shoot like this. Mr. Fanning states that trap-shooting is having a great boom on the Pacific Coast; California State shoot running over 150 entries.

Jack Winston, now of Washington, Ind., was troublesome as ever to those willing to talk 100-bird races. He closed a race with Louis Duryea, and was after Budd, Gilbert, Bingham and everybody else whom he could engage in conversation. Chicago shooters hope Winston will get on some races to be shot here this month.

Jack Parker was busy taking entries for his shoot next week.

Plumber Read, of Omaha, in the team contest on Wednesday, killed his last bird in a close place. He missed it with the first and dropped it close to the line with a long second. This put his team into the 47 hole all alone.

Wallace Miller, of Texas, was a favorite among the Southern men for a good place in the championship contest.

Mr. T. A. Divine, of Memphis, at last made good his promise to visit Chicago. His irrepressible spirits made him a favorite with every one on the ground. Unfortunately Mr. Divine was taken ill on Thursday and felt obliged to return home, to the regret of many friends here.

Mr. F. P. Poston, of Memphis, left on Thursday for Baltimore. Mr. Poston shot a good gait, and many wished to see him enter the handicap for the trophy.

Mr. Tom Callender, of Nashville, is looking well after a long period of sickness this spring. He remains in Chicago to shoot a few targets and then goes to Detroit. There is no more popular man on the circuit.

Capt. A. W. du Bray, of the Parker gun, tells a hard-luck story. He missed the first bird he shot at in the sweep, and then ran 37 straight in the sweep and team contest, but dropped a bird out of his first 5 in the trophy championship. If he could have bunched his hits in the latter event it might have had vast importance with him.

Eddie Bingham, of the Du Pont Chicago office, was a busy man, and by night of each day was fairly worked to a standstill.

Fred Gilbert proved himself a pleasant and modest young man, and won favorable comment from all.

The system of taking entries and handling cash devised by Mr. Rice proved itself a good and smooth one.

Mr. H. P. Collins, of Baltimore, was a popular and efficient secretary, and Mr. Joseph P. Wood, the treasurer, had many pleasing traits besides that of handing out meal sacks full of money to the lucky shooters.

Mr. Geo. W. Andrews, the official scorer, was called on to do a lot of hard work for the press boys, but won their esteem by his kindness and thoroughness.

John Watson showed that he could trap a few thousand good birds even in the sultry time of August.

Mr. H. A. Penrose is soon coming out with a new target which is a beauty and a breaker.

Mr. H. McMurchy, of the Hunter Arms Co., has been suffering from illness, but retains enough good looks for all practical purposes.

Hon. Tom Marshall, of Keithsburg, was one of the stayers, of course. He has not yet got over his surprise at scaring his dead bird over the line with his second barrel in the team contest Wednesday.

Rolla Heikes, of Dayton, looks physically very fit, and saws wood as silently and smilingly as ever.

John Watson's retrieving dogs had their hands full, so to speak.

Chicago showed that she could handle a big crowd and a big event with all her old-time smoothness. When it comes to getting ahead of Chicago it is necessary to arise about 12:01 in the morning.

Watson's Park again proved itself to be without flaw in the rapid and systematic handling of live-bird shooting. Mr. Watson and his sons received a great many words of praise.

Mr. Charles Macalester, of Baltimore, was met with pleasure by many Western men who have often read of him.

Fulford lost his chance of a straight in his first five birds of Thursday in the handicap.

Seth Clover and Sim Glover look alike in print, but not in any other way.

Budd and Grimm, of Iowa, were, as usual, to be found close together. Powers and Merrill also were usually not far apart, though there is not much need of figuring averages at a live-bird shoot where one only gets to shoot 10 or 15 birds a day.

Mr. Francis G. du Pont, of E. I. du Pont de Nemours & Co., was at the grounds each day until Friday, when he was called away on business. Mr. Du Pont is a gentleman of singularly urbane and pleasing personality. He appeared very happy and contented, and expressed himself as highly satisfied with the manner in which the tournament had been planned and carried out.

Not a rough word or ill-timed jest was heard upon the grounds. There never was a more dignified, nor yet more pleasant shoot. The presence of the many ladies was a worthy feature. The tournament showed shooting as it can be and ought to be done.

The official badges worn by the large force of executives were rich and handsome, and in keeping with the whole scheme of this lavish tournament. Over 2,000 handsome coat badges were also given out by the management, the latter a tasty Du Pont medal on a red, white and blue ribbon.

Since time immemorial the two Dromios, Charlie Budd and Charlie Grimm, have occupied parlor No. 2 at the Windsor Hotel when in Chicago, and their quarters have come to be the night rendezvous of the crowd. Here were given daily, or nightly, renditions of the Indian Sagwa dance by Gilbert, Trotter and others of the Iowa Indians. Patterson, of Chicago, proved himself capable of an elaborate *pas seul*, and Latshaw gave much appreciated and really artistic banjo solos.

The Eastern men seemed rather out of form on the whole, and the bulk of the total winnings remained in the West.

Uncle Jake Pentz, of New York, gets wild when told that it takes Chicago to hold a really big shoot. He tells what New York could do if it had as much money up. The fact remains that Chicago was the first to put up the money. It's your jump next, Uncle Jake.

One glance along the spectators' rail showed three men sitting together whose combined weight was 714lbs. They were Jim Riley and J. Porter, of Kansas City, and R. B. Organ, of Chicago. At another time there were five men together—Riley, Porter, Organ, C. B. Dicks, of Chicago, and Ed. Rike, of Dayton, Ohio—whose combined weight was 1,245lbs.

The purse in the team contest event, $2,450, one believes to have been the largest ever offered the shooters of this country up to that time. Yet even this was surpassed by the magnificent money in the trophy contest, which was $3,125 net. First money in the team contest was $980, but there being five moneys in the trophy race, first money in that event figured $937 50. These be princely figures.

Mr. Abner Price, the Chicago veteran, says that he has shot for forty years, and never saw nor heard of a shoot like this. "And yet they talk about hard times," said he.

Mr. Alexis du Pont disclaims being a yachtsman, but cannot disown his sunburn—not after this week at Watson's.

Mr. Rice will now, as the novelists say, seek some much-needed repose.

The Du Pont uniform, white cap and sweater, was extended to the executive committee, the referees, the squad hustlers and the trappers. The latter had "Du Pont" on the back of their sweaters instead of the front, for geographical reasons.

F. E. Coppernoll was a rattling squad man at No. 1 set and always had No. 1 chair at the score full.

During the shoot two genuine carrier pigeons were discovered in the coops at the score by Tom Marshall, undoubtedly sent into the market by mistake. The "shooting mayor" took possession of them and will send them home to Keithsburg.

"Just tell them that you saw me!" is the song that the old-fashioned J. Watson bird sung as it whistled over the line to the visiting shooters who had never been here before. And they looked and sighed and said, "We saw you."

Mr. W. L. Shepard, head executive, was a busy man.

Mr. Rice proved himself a master of system and detail. Every question raised was answered at once without delay and without error. There never was a smoother shoot. It was a model affair. It was good enough for Chicago. And it was Mr. Rice's maiden effort.

In less than an hour after the big 15-bird sweep was ended Saturday (123 entries) Mr. Collins and Mr. Wood, at the office, had all the money in the envelopes, ready to hand out to the shooters as they asked for it. It is believed that so large an event as this has never been paid so swiftly. It was the same with the trophy purses. Almost at once the men were in line at the window and getting their pay.

There was one "amateur" crowd, known as the "McBlair squad." It was made up of the Southern shooters—Miller, of Texas; Sumpter, of Arkansas; Sexton, Gottlieb and Wilmott, of Missouri—none of whom had ever shot 500 live birds in their lives, they say, before coming here. Yet Miller got 25, Sumpter 24, Sexton 23, Gottlieb 25 and Wilmott 23, a total of 120 out of 125 birds shot at.

It was a hard week for records, retrievers and pie *à la mode*.

In shooting, it seems, there is a difference between "theerabouts" and "theer." On a Dakota bird on Watson's grounds you want to be "theer" and not "theerabouts."

The long row of tents came to be called "Paradise Alley." It was certainly a paradise for shooters.

And, by the way, when you want a good shoot, come to Chicago. The city is still located near the lake front, and there are a few J. Watson birds left.

P. S.—Chicago arises at 12:01 A. M.

E. HOUGH,
1206 BOYCE BUILDING, Chicago.

Hunters' and Fishermen's Picnic at Brush Lake.

WOODSTOCK, O., July 30.—The first annual Hunters', Fishermen's and Trap Shooters' Picnic, held yesterday under the management of Woodstock and North Lewisburg sportsmen, was a great success. The scene of the picnic was Brush Lake, O. Everything passed off well, and all present voted it one of the best and most successful gatherings of sportsmen ever held in the country. The programme events for trap-shooters was a good one, and was taken part in by 57 shooters. Representatives were present from Columbus, Urbana, Irwin, Bellefontaine, Plain City, Mechanicsburg, etc.; in fact, several hundred took part in the day's proceedings: boating, bathing, fishing, short and long range rifle shooting, and trap-shooting.

In the team race contests at the trap, ten men to a team, 20 targets per man, Urbana defeated Plain City by 154 to 136. The Mechanicsburg team of ten defeated Woodstock's team by 134 to 11. In the Bellefontaine and Urbana team match the Urbanas won again by the score of 154 to 136. Thus Urbana took the honors of the day at the traps. Ten traps were kept going continuously from 9 A. M. until 6 P. M., at which time a heavy storm of wind took our tents up into the air, and drove the shooters to more permanent shelter. The breaking up of the sport was compensated for by the agreeable change in the temperature, the extreme heat during the day having been very trying. Targets were all thrown at unknown angles; this, together with lack of practice, affected the scores, still the work was satisfactory on the whole. This was a strictly amateur shoot, and that was what the boys wanted.

The scores made in the sweepstake events shot during the day were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

A Coombs	..	5	16	..	..	..	..	..									

All events were at unknown angles. No. 3 event was the club badge shoot. E. C. Burkhardt and Dubbs tied for Class A badge; E. C. B. won shoot-off at 25 targets by 52 to 16. Tom Tiddler won Class B, Howard Class C.

Trap at Tucson.

TUCSON, Ariz., July 26.—Below are the scores made to-day in our club's medal shoot. Hallowell having won the last medal (for best average in four monthly shoots), he was handicapped at 18yds., Aldridge also being placed on that mark. In a match at 25 targets Hallowell beat Weber by scoring 22 to 20. Scores in the medal race were:

Thirty singles and 10 pairs:

C Meyer, Jr (16).....110111111111111111010001010111 1—23
11 10 10 10 10 10 10 10 10 11 11—13—36

Shooting at Reading, Pa.

READING, Pa., Aug. 1.—The last of a series of three team races between the three leading clubs of this city took place to-day on the grounds of the East End Gun Club at the Black Bear. The South End team was again the winner, and thus captured the team championship of the city which these contests were to settle. Fent. Cooper, of Tamaqua, Pa., better known among live bird than target shooters, shot on the team of the Independent Gun Club, but made a poorer showing than if he had been shooting at 25 live birds instead of the same number of targets. The shooting was not easy, the targets being thrown down hill, while the traps were screwed up to the highest notch. The scores were:

South End Gun Club: Essick 22, Harrison 21, Eschelman 17, Shaaber 15, Jones 14, Yost 13—102.

Independent Gun Club: Schrader 21, Ritter 19, Cooper 14, Larkins 13, Henry 10, Scheele 10—84.

East End Gun Club: Coldren 17, Eppinger 14, Stump 13, Hafer 11, Lawrence 11, Barman 7—76.

Worcester Sportsmen's Club.

WORCESTER, Mass., Aug. 4.—The members of the Worcester Sportsmen's Club held their regular shoot this afternoon and did some good work. The best shooting was done in the second shoot in prize series C, the conditions of this shoot being 30 singles, known angles. The scores were:

Ide, 30; W. H. Buck, W. L. Davis and A. W. Walls, 29 each; M. P. Roach, 28; Link, Harvey, Tolman, McClellan, V. D. Kenerson, Ide (made up score), 27 each; Whitin, Hanson, M. D. Gilman (made up score), 26 each; Snell Hanson (made up score), 25 each; Mascroft, Claflin, V. D. Kenerson (made up score), Whitin (made up score), 24 each; Larkin, Jones, M. D. Gilman, 23 each; Knowles, 22; Ball, 17.

In the L. C. Smith trophy event the scores were: Davis and Mascroft, 24; Whiting and Tolman, 21; Ide and McClellan, 17.

Other sweeps were also shot, the results being as follows:

No. 1, 10 targets, 16 entries: First, with 9, A. W. Walls and Snell; second, with 8, Buck, Snell, Kenerson, Davis, Ide; third, with 7, McClellan.

No. 2, 15 targets, 20 entries: First, with 15, Mascroft, Davis; second, with 14, Buck; third, with 13, Snell, Whitin and Ford; fourth, with 12, McClellan, M. Buck, Gilman.

No. 3, 15 targets, 17 entries: First, with 15, Buck; second, with 14, Link, Snell; third, with 13, Walls, Gilman, Kenerson; fourth, with 12, Larkin, Ide, Ford, McClellan, Hanson.

The Charlotte Tournament.

CHARLOTTE, N. C., Aug. 3.—The fifth annual tournament of the Charlotte Gun Club, of this city, was held here July 28-29, with added money of $100 per day. We cannot report our tournament a complete success, as we had a very slim attendance; but we can truthfully say that a more clever set of gentlemen never met before traps. The following were among the number who favored us with their presence: Messrs. Hunter, Wagner, Mattingly and McKelden, of Washington, D. C.; Dean, Hewitt and Hammond, of Richmond, Va.; Worthen, Peterman and Wohltman, of Charleston, S. C.; Bridgers, of Tarboro, N. C.; Bansket, of Columbia, S. C., and Little, of Gaffney, S. C.

Notwithstanding the fact that the weather was awfully warm, nearly every one "entered for all day," and shot from start to finish of the programme. Everything worked smoothly except the traps, which caused considerable trouble and delay. Ordinarily, when traps work badly, shooters kick and growl, but it seemed that the entire crowd felt that we were sufficiently punished by an absence of shooters and never a word was said, all of which was highly appreciated. The weather was entirely too hot for shooters who are unfortunate enough to have to wear glasses, as will be evidenced by a glance at the scores of Messrs. Wagner and McKeldon, of Washington, both of whom are excellent shots. All of our local shooters "stuck to the boat," although in some cases it was a losing game.

Below are tabulated scores with percentages:

FIRST DAY, JULY 28.

Events:	1	2	3	4	5	6	7	8	9	10

CASHIER.

Dunellen Defeats the Endeavors.

DUNELLEN, N. J., Aug. 1.—The second team race of the series of three arranged between the Endeavor Gun Club, of Jersey City, and the Dunellen Gun Club, of this place, took place to-day on our grounds. The conditions of these races are: 12 men to a team, 25 targets per man. The home club won to-day by 10 breaks, the scores standing 235 to 225. Several sweeps were shot during the day, all purses being divided on the Rose system. Scores in the sweeps were:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

J. H. CROSSLAND, Sec'y.

Big Shoot at Philadelphia.

PHILADELPHIA, Pa., Aug. 1.—In connection with the Caledonian games held at Washington Park, on the Delaware, to-day, a shooting tournament was held which proved to be one of the most exciting contests of the season and brought out a great many of the crack shots of this city and its vicinity, and as a result several very close and most interesting competitions were shot off.

The shoot was held in an open space back of the groves, where an improvised range and the necessary trenches were thrown up. The ground selected was well adapted to shooting, as the contestants had a clear range, excepting on the right were a clump of woods which made a tantalizing background. But, considering all, the scores were in most cases very good.

The main event of the tournament was a team race, six men to a team, the prize being a very handsome cup. Fourteen teams competed, the Keystone Shooting League winning the cup in an easy manner. The scores were:

Keystone Shooting League: W. Wolstencroft 24, Landis 24, I. H. W. 20, E. David 21, H. Ridge 23, Capt. H. Thurman 23—135.

Florist Gun Club: Burton 20, A. B. Cartledge 21, Craig 18, C. D. Ball 20, S. P. Sife 20, Capt. G. Anderson 21—120.

Silver Lake Gun Club: French 17, Woodstinger 17, Holdt 20, Day 23, Felix 22, Lane (Capt.) 20—119.

Southwark Gun Club: Numbers 19, Stoffer 22, Ashton 16, Mink 23, Apker (Capt.) 20, Rowcroft 18—118.

West Jersey Gun Club: Seaming (Capt.) 16, Wilson 21, Theoberger 21, Longnecker 18, Budd 19, Voorhees 16—111.

Penn Gun Club: T. V. Smith 14, J. R. Yost (Capt.) 21, J. W. Carsel 19, A. McMichael 16, F. Gross 14, C. Stanger 18—102.

West Chester Gun Club: G. Foulke 20, Copple 11, Eachus (Capt.) 21, Huber 13, Miller 20, Devoe 17—102.

Forest Gun Club: A. C. Stevenson 21, H. B. Stevenson 19, O. K. Stevenson 18, Morison (Capt.) 9, W. N. Stevenson 17, Van Nort 15—99.

Hillside Gun Club: A. Reinhard 14, W. Afman 10, Capt. T. Carlisle 21, J. Fertsch 17, M. Bisbing 17, R. Bisbing 19—98.

Claymont Gun Club: Capt. J. Hooper 19, L. Casey 20, Wm. Bird 11, A. S. Edwards 19, H. Jackson 14, T. Williams 13—96.

Glen Willow Gun Club: J. McFalls 16, Capt. J. Cowan 19, C. Wyman 9, F. Winkle 14, H. Taney 18, Wilson 14—90.

Wayne Gun Club: Davis 22, Capt. Scargle 10, Soistman 13, Brown 14, Sterling 14, Hack 17—90.

Radnor Gun Club: Capt. Johnson 17, Williams 13, G. Huber 24, Wendell 17, Toopy 17, Haley 1—89.

Ritter Gun Club: Capt. F. White 9, J. Sullivan 9, G. Hahn 20, D. Bonnier 11, P. Morrison 11, A. Marker 8—68.

Worcester Tournament.

WORCESTER, Mass., Aug. 1.—The two days' tournament held on the grounds of the Sportsman's Club was poorly attended. On the first day, July 29, but 14 shooters took part in the events; on the second day, July 30, still less. But there was some of the best shooting done that Worcester has ever witnessed. The shooting of Dickey, Tucker and Van Dyke was of the gilt edge order. Scores:

WEDNESDAY, JULY 29.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Dickey	275	259	94	Whitin	225	194	86

H. N. K., New York.—The best book on building log cabins is "Log Cabins: How to Build and Furnish Them." We publish it. Price $1.50

R. H. B., Jamestown, N. Y.—The close season for black and gray squirrels, hares and rabbits in New York is Oct. 15 to Feb. 15, both dates inclusive. For woodcock and ruffed grouse the old law still holds, viz., open season Aug. 16 to Dec. 31.

W. T. J., Boston,—1. Do you regard the .45-82-405 solid bullet cartridge as a desirable one for moose and caribou? 2. Is it as accurate at 200yds. as the .45-90-300 solid? 3. What is your opinion of the hollow point .45-85-330 cartridge for big game? Ans. 1. Yes. 2. Yes. 3. Many expert hunters use it for large game.

C. R. B., Mechanicsville.—1. On my Irish setter dog, about two years old, there are coming all over his back little sores. The hair is falling out in places. I think it is mange; please tell me what to do for him. 2. How will I break a dog of gunshyness? Ans. 1. Treat for worms. Give two compound sulphur tablets twice a day. To the sores and bare places apply the following ointment twice a day: Creosote, 3drs.; precipitated sulphur, 1oz.; lard, 4oz. 2. To give all the different methods would require a small volume. If you shoot light loads every day, your dog near by, where he cannot conceal himself, he will in time become habituated to the reports. Or fire a light load at feeding time, to announce that the meal is ready. He will in time learn to associate it with his meals, and it will then be a pleasant sound to him. If a rabbit can be shot ahead of him it may cure him at once. "Training vs. Breaking," or "Modern

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 22, 1896.

VOL. XLVII.—No. 8. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FOREST AND STREAM OFFICE

346 Broadway

NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

Readers accustomed to buying the FOREST AND STREAM *at news stands, and who are going out of town to points where they cannot purchase from newsdealers, may have the paper mailed from this office for any length of time at the rate of forty cents per month.*

A GOOD EXAMPLE.

THE Provincial Museum of British Columbia is a purely local institution and is devoted to the exhibition of the natural history and resources of the Province. It was established only about a dozen years ago, and had its first beginnings in the collections made by Mr. John Fannin, an old resident of the Province. Mr. Fannin was and is an accomplished field naturalist—a close observer and an enthusiastic lover of nature. His studies and his writings had made his name well known in the Province long before the project of establishing a museum had been considered. When the Government determined to found a Natural History Museum at the capital, the choice of a curator for the institution naturally fell upon Mr. Fannin, who has managed it with great success from the beginning.

For the first few years of its existence the exhibition rooms at Victoria were few and small, but as time went on, the growing collections demanded more and more space, until the whole building was occupied. Still the collections increased, and at length it became evident that to properly show them, and to provide for their growth in the future, a new building must be furnished. This is now in course of erection. It is a fireproof building of stone and will cost $80,000.

The Government of British Columbia having set on foot this good work, wished to have its museum thoroughly modern and up to the times. Within the last few years great changes have taken place in museum furnishings, and the methods of exhibiting specimens. Realizing this, the authorities this summer sent Mr. Fannin to England and the East, in order that he might inform himself on all essential points, so that the Provincial Museum of British Columbia should in no respect be behind the first museums of the world in its equipments.

Mr. Fannin visited London, and saw there the collections of the British and South Kensington Museums, and is now in New York studying the exhibits at the American Museum of Natural History. From here he will go to Washington to examine the National Museum there. The trip has been very successful up to the present time, and Mr. Fannin has accumulated a large fund of information which will be of great value in fitting up the new museum. When at length the new building shall have been completed and the collections moved in, the Provincial Museum of British Columbia may challenge comparison with the best modern museums of the world in respect to its equipment and its methods.

Every State and Territory of the United States ought to have in its capital or principal city such a local museum as British Columbia is now building—one which shall show the mammals, birds and fishes of the neighboring country, amid their natural surroundings, all so clearly and fully labeled that the whole story of a species, its distribution, life habits and history can be seen at a glance. The day has passed when a museum was a mere curiosity shop in which strange and unknown and unexplained objects were displayed to make visitors stare and wonder. The museum of to-day is, or ought to be, a great volume, whose illustrations are actual natural objects, each one explained by enough text—the label—to render the picture's meaning clear to the most ignorant.

The establishment of such local museums in all the chief cities of the country will vastly increase public interest in the study of nature; people will begin to learn how to observe, to see what is going on all about them; their interests in life will be broadened and a great deal will be added to their pleasures.

SNAP SHOTS.

Here is a letter which comes to us from an esteemed correspondent in Texas:

VICTORIA, Texas, Aug. 10.—*Editor Forest and Stream:* We have in this section of the country a party who is a member of a firm or an agent of a firm in your city, who is buying game from the local hunters and shipping to New York. He averages about five barrels of plover a day, each barrel containing 300 birds.

Our game laws are in such an unsatisfactory condition that we have no way to prevent this action at present, though we are making strenuous efforts to pass a bill in our next Legislature to prevent the shipping of game.

I hear that he ships quail among his plover, although the open season does not begin until Oct. 1 of this year.

This we could prevent could we substantiate it. I am not familiar with the laws of your State, but would be glad to know from your office whether there is any way to stop the business at your end of the line.

If New York has a non-shipping law, I should think it would be an offense to ship them in as well as out.

In the event you believe that anything can be done from that end, I can in all probability get you name and address of the firm.

If you believe that publication of this will do any good, publish it.

W. M. PETICOLAS.

It is a humiliation to be forced to acknowledge in response to this plea that there is no practicable way of doing anything whatever at this end of the line to interrupt the traffic in Texas plover and quail.

The New York law permits at all seasons sale of game killed beyond a certain distance from the State; the line of protection for New York is drawn at 300 miles; the injustice to other States may be limited only by the lines of the continent. The iniquity of this open market law extends 2,000 miles to Texas; it promotes the wholesale slaughter of Texas plover and immature quail for shipment to market here.

It is a reproach to every citizen of New York that his State encourages such butchery not only beyond the 300-mile limit, but within her own borders as well. That 300-mile provision is a farcical Schomburgk line, which is all well enough for theorizing about, but which has no meaning when we come actually to fixing boundaries. The protection sought to be secured by distance is not provided. For just here is illustrated anew what has been demonstrated over and over again, that a State may not set up successfully a scheme of protecting its own game while robbing other States of theirs. New York declares that game killed within its borders may be sold only in certain specified seasons, while game killed elsewhere may be marketed the year around. Beautiful theory this, to protect one's own while destroying others. But how does it work? The ink of Gov. Morton's pen of approval had hardly dried when under cover of this measure the market hunters set out to take the immature game in New York covers for New York markets. From that day to this, wherever there wa New York game to kill for market, the New York market shooters have been trafficking in it; and the industry will continue so long as the game shall be worth the candle Such a law always works in this way. Witness Massachusetts, witness every State where game selling is unrestricted.

As the situation is now, Texas must protect her own game and look out for her own interests and defend them from the blight of the metropolitan markets. He sportsmen have a right to demand the co-operation of their fellows elsewhere; they reasonably may ask that other States shall not act as receivers of illicit goods. But failing this, they must work out their own salvation. The only game protective system yet devised worth the paper it is printed on is that which limits the sale of game in local markets and forbids the exportation to other markets. This system is what is proving effectual in Michigan, Minnesota and other States where it is in force.

Such a system would prove equally efficacious in Texas; but we confess that there appears to be slight ground for confidence that Texas will very soon have a law of this character. For one thing, her own sportsmen are by no means agreed as to what they want, nor united to achieve it if they could agree. The market hunters there have things pretty much their own way; they are making money right along, and money talks.

Summer woodcock shooting is still extensively practiced, and the reason urged for it is that the game must be had then or not at all. This is the plea of New Jersey summer woodcock shooters. A correspondent wrote in our game columns the other day that, although he had long contended for a summer woodcock season, he was now converted to oppose it because of what he had seen of indiscriminate game killing by those who were out ostensibly for woodcock only. This rule prevails generally. If men are permitted to go afield with guns in the summer season they will kill whatever game rises before them. Some of them may have the very best of intentions, and shoot to kill if it's a bear and miss if it's a calf; but they do and will shoot, and the game will be killed, and will be just as dead if it's a grouse or a quail. The ideal game season is one which opens for all upland game on the same date. If under such conditions some shall be deprived of their sport, they should accept the deprivation with philosophy and be content to give and take, for the common advantage and the greatest good to the greatest number.

Some one has been giving to the *Youths' Companion* a weird tale of walrus hunting by members of the Peary Relief Expedition of 1892. It is a fearsome story of walruses drawn up in ranks, "bearing their heads high, with white tusks gleaming fiercely, and great red disks of eyes gleaming balefully through the smother of foam churned up around their breasts," as they come from afar dashing at the boats. It is all madly exciting, and quite as well written as one of De Quincey's opium dreams. But will some one who knows the ways of walruses tell us whether they do charge in dress-parade array with baleful eyes and other accoutrements? The walrus inhabited seas of the Arctic are far away, and of distant lands and their unfamiliar denizens we are always prone to accept the wonderful tales of returning explorers, but the walrus story taxes credulity. Let us hear from some of the walrus experienced readers of FOREST AND STREAM.

Will international yacht races be sailed on wheels? We have had in recent years many radical modifications of yacht forms; shall we now have something more radical still, and roll along over the course instead of ploughing the main? A French engineer, M. Bazin, has designed an entirely novel craft. The main part of the structure consists of a strong deck or platform entirely above water, the buoyancy being supplied by a number of hollow wheels in the form of very short cylinders. The wheels are not fitted with blades like a paddle wheel; they are smooth and are designed only as supports and to roll over and through the water as a wagon wheel rolls upon the ground. Propulsion is afforded by a propeller. The inventor has constructed a model on a scale large enough to test the practicability of his theories. If the experiment shall prove a success, it may open up a new line of development in yacht racing that will entirely throw into the shade all recent efforts at evading waterline measurement. It must be evident that the waterline of such a craft, no matter how long she may be, cannot be as great as the added diameters of the wheels, or very much less than of the whole hull. No doubt the old fogy element and the stupid and illiberal measurers may attempt to block the wheels of progress by measuring the length on the waterline of all the wheels, on both sides; but no such unfair and illibera measure can permanently succeed.

Given such a craft as this, what a vista of renewed youth to yacht racing opens before us, the pleasures of the yacht and the wheel combined in one marvelous creation of human ingenuity. The time may come when international yacht racing will be a contest between two such great multi-aqua-cycles, moving at speeds thus fa unheard of.

The Sportsman Tourist.

MUNISING BAY.

On the south coast of Lake Superior, about forty miles east of Marquette and just west of the famous "Pictured Rocks," the shore curves in sharply, making a deep and broad harbor, across the mouth of which lies Grand Island. The bay is almost completely landlocked, gives shelter from all winds, and is well known as a refuge for vessels from Lake Superior's gales. In size, outline of shores and character of vegetation on them, it singularly resembles an Adirondack lake, and is as beautiful as any of them, peerless Placid perhaps excepted.

Back in the fifties the charcoal iron industry flourished here, and quite a town sprang up on the east side; but the industry ceased to be profitable, the furnaces were abandoned, the houses deserted one by one, and for over thirty years no one has lived there but a few fishermen and the keeper of the Government light. Within the last year, however, parties owning large tracts of timber lands have determined to develop their resources; a railroad has been organized and is under construction; large tanneries, stave and hoop mills, and other manufactories are being erected; docks, switches, a bank, stores and dwellings are rapidly taking shape; a daily paper has been established, a city organized, and the vigorous tide of life has invaded this once peaceful region. I suppose all this is in the line of progress, and it certainly is for the good of the land owners; but it is now only a question of time when much of the peculiar charm must vanish, never to return.

The Anna River Club, an organization largely composed of Marquette gentlemen, has been established for several years at the south end of the bay, just where the little Anna River joins it, and has built a cosy and comfortable log house for their accommodation and that of the happy mortals who are invited to partake of their well-known hospitality and share their peculiar privileges. It was my good fortune to be one of those favored individuals on the invitation of Mr. Fayette Brown, of Cleveland, well known as a thorough business men, expert fisherman and naturalist, and the best of good fellows; and on one of the golden days of early September of last year I began an experience not soon to be forgotten.

AN AFTERNOON CATCH AT MUNISING BAY. TEN FISH, 10½LBS.

The bay is bordered by a belt of shallow water, exquisitely clear and clean, and deepens very gradually for about 75yds. from shore, when it is 10 or 12ft. to the bottom. Thence it plunges off very rapidly, reaching a depth of 50 to 100ft. within a few rods. Along this ridge or shoulder flourishes a growth of water weeds, rising nearly to the surface and broken into clumps, promontories and depressions, in and around which the trout lie. The fisherman, anchoring his boat according to the direction of the wind on one side or the other of the belt of weeds, lets it drift within good casting distance and then uses his fly or bait with perfect convenience.

A favorite and fatal method of fishing is to use rather a large hook, well covered with angle worms, and with a split shot at the base; make a long cast with a strong fly-rod and then gradually draw in the line through the rings. When the line tightens a strike is apt to develop a very big trout, and considerable sport will ensue before he gets near the landing net. Although a fly-fisherman by predisposition and inheritance, it seemed to me best to follow the local customs; but, after having messed with worms, strained my rod and nearly put a hook through my ear, I determined to catch those trout on the fly or go without. The hated worms and bullet came off, and a leader rigged with a coachman, Montreal and Parmachenee on No. 4 hooks took its place, and I began diligent work. Several spots were tried without success, but finally, near the mouth of the little river, a place was found where the weeds were much broken into clumps and there I took my first trout on the fly. After this I always began fishing at this point and moved only when nothing developed, and this was not uncommon, for these trout were especially freaky and uncertain in their tastes. Many a time I have cast diligently for hours without a rise, while the surface around me showed no sign. Suddenly there would be a great splash as a 2-pounder left the water close by, and then for an hour fish would rise all about me, while never a one would touch the fly. But patient waiting and work, such as my old friend Fuller, of Meacham Lake, calls "stick-to-it-iveness," would always win in the end, and when success came it was always very satisfactory and generally abundant.

By far the most successful fly, though I tried about every usual pattern, was the plain coachman. This would be selected from the cast by fully four fish out of five, and they generally seemed to prefer the upper dropper of my three flies, I suppose because this fly was most on the surface and moved most naturally. When trout would not come to the surface at all I sometimes caught them by making a long cast, letting the flies sink quite deeply, and then very slowly and jerkily reeling them in. I saw almost no small fish, rarely taking one of less than 1lb., while the usual size was rather larger, and fish of 2 or 3lbs., or even more, are common. They seem to gain a certain size before venturing out into the open water of the bay. All of these fish, even the largest I took, which weighed 8¾lbs. and rose fairly, were slim and shapely, and most magnificently vigorous, instead of being comparatively heavy and loggy, as I have found most large trout to be in comparison with fish of 1lb. or under. Evidently the normal size of the Lake Superior trout is very large, and he does not begin to grow thick and heavy until he reaches 4 or 5lbs. at least, if then. Of course the open water, abundance of room and absence of obstructions give a great advantage to the rod, and with patience and care one should land almost every fish hooked, no matter how heavy and strong.

I send herewith a few of the products of my camera, taken on the spot, and can only wish my fellow sportsmen the luck to see and fish the same waters before progress ruins them.

A. St. J. Newberry.

Cleveland, O.

IN THE FAR NORTH LAND.—I.

While journeying in the far north lands of British America I was impressed by the comparative scarcity of the "big game" which once abounded there. Great herds of buffalo formerly lived on the southern shores of Great Slave Lake and even as far north as the Liard River. Moose were plentiful throughout the whole Mackenzie Basin, and immense herds of reindeer had their feeding grounds close to the Mackenzie River.

When the Hudson Bay Company ceased to have exclusive right to trade in the country an indiscriminate slaughter of fur-bearing animals began, which at the present time bids fair to repeat the old story of the destruction of game on our side of the border. The company has always before this refused to buy furs out of season, but their wise protective policy is of no avail when fur traders are ready to purchase furs in any condition at any time of year.

The plains buffalo in its wild state has entirely disappeared from Canada, only a few tame animals remaining in the hands of private owners. A small number of wood buffalo still live in the great triangle formed by the Peace River on the south, the Liard on the north, and Great Slave Lake and the Mackenzie on the east. Estimates of the size of this band vary from 180 to 300. Sometimes five or six animals, detachments from the main band, are heard of near Fort Vermillion on the Peace, or Forts Smith and Resolution on Great Slave Lake.

The country is exceedingly difficult of access; the muskegs, widely separated water courses, and, above all, the mosquitoes, forming insurmountable obstacles to summer travel, while the great distances and uncertain food supply protect it from invasion in the winter. Still, should there come a winter of deep snows, when the buffalo were within hunting distance, the Indians on their snowshoes could easily pursue and slaughter the helpless animals.

The Indians of the Southern Mackenzie district are not mighty hunters; they prefer to fish and hunt rabbits and reindeer, rather than incur many hardships in the pursuit of big game. They possess few rifles, and their short guns cannot be used for long range shooting. These facts, and the one that the Hudson Bay Company does not encourage the killing of the buffalo, have served to protect the animals from extermination. But the opposition fur traders have no scruples about the matter. They snap up eagerly every robe brought in, and with the increasing number of traders the wood buffalo will soon be a thing of the past, unless the Canadian Government takes immediate measures for its preservation. The Canadian National Park at Banff is well suited for a game preserve, and a small band of wood buffalo once introduced and protected would no doubt increase rapidly, like our little herd of plains buffalo in Yellowstone Park. The wood buffalo seems more alert and timid than that of the plains. If a shot is fired at a band, it is away at a sharp pace, and does not rest till a great distance is placed between it and the hunter. The animal is larger, has longer legs, and the fur is darker and finer than that of the plains buffalo; but these differences are no doubt caused by its environment, and are not important enough for it to be classed as a separate species.

The next animal in size is the moose, which is found throughout the Mackenzie Basin to tree limit near the Arctic Sea. It forms an important part of the food supply in the far north; most of the Indians along the Mackenzie being classed as "moose eaters," in distinction from the "caribou eaters" of the Barren Grounds and the country east and north of Great Slave Lake. The skin makes the best winter moccasins, and the meat, dried or fresh, is always in demand at the company's posts. But during the last few years the moose has become comparatively scarce, except in very inaccessible hunting grounds, a fact which renders more serious the important question of living in that severe climate. We saw only five moose on the journey to the Delta, two being killed by members of the brigade.

In 1885-6 Mr. Wm. Ogilvie explored the country between the Alaska boundary and the Peel and Mackenzie rivers. At one point, in latitude 65° 25′, and at an altitude of 3,000ft. above the sea, he found a fine, rolling country covered with a stunted and scattered growth of trees and fine short grasses. No Indians had visited that part of the country for many years; moose were abundant and remarkably fearless, and caribou abounded in great numbers. Bighorn sheep and mountain goats lived on the rocky heights and many beaver were seen, a significant fact to the hunter, who knows that the beaver is the first animal to leave the districts invaded by white men.

This district and a portion of the wood buffalo country already alluded to are probably the best game districts now remaining in the north.

Both bighorn sheep and mountain goats are fairly numerous in the mountain ranges almost to the coast. The flesh of the latter animal is especially good in the north, and the Indians who trade at Forts Simpson, Good Hope, Norman and Peel's River often bring it in, fresh and dried, to the posts. Neither the sheep nor the goat is found in the spurs of the Rockies east of the Mackenzie. The mountain sheep is a variety of the bighorn of the more southern portion of the range, and has been recently named *Ovis montana dallii*, or Dall's mountain sheep. It is rather darker and smaller than the southern variety, a fact which seems strange when we consider that it is an Arctic animal. But the snowfall of the north is small compared with that of the Selkirks or more southern Rockies. No glaciers are found north of latitude 54°, the air being clear and intensely cold. The slight snowfall disappears rapidly in the spring under the continued action of the sun's rays, and even at the Delta I found the last spurs of the Rockies almost bare on July 15.

The grizzly bear is found in the Peace River country, but in the extreme north its place is taken by the smaller fiercer *Ursus arctos*, the silver tip or Barren Ground bear. Mr. Macfarlane, of the Hudson Bay Company, reports the latter animal not uncommon in the Anderson and Wilmot Horton River neighborhoods and in the mountain ranges of the lower Peel and Mackenzie rivers. It is said to resemble the brown bear of Europe, but Mr. Ogilvie speaks of its gray color, with white throat and beard. The Esquimaux and Indians generally avoid it unless hunting with a large, well-armed party, for it is as fierce as a grizzly, and is said to attack a hunter without provocation.

THE ANNA RIVER.

Black bears are especially numerous in the Peace River country, but are found throughout the whole Mackenzie Basin in good numbers.

The woodland reindeer or caribou lives permanently in wooded or mountainous districts on both sides of the Mackenzie and its tributaries. It is more numerous, however, and attains a larger size to the west of the Mackenzie, where it probably finds more abundant food. Mr. Ogilvie found it in Alaska while passing from Chilkat Inlet to the upper Peel River. The other species, the Barren Ground reindeer, is the animal which furnishes food for thousands of Esquimaux, Dog Ribs, Hare, Slavey and Coppermine Indians. From Hudson's Bay, in latitude 59°, the line which marks tree limit bends in a northwesterly direction till it reaches the Arctic Ocean, a short distance east of the Mackenzie Delta. Between this line and the sea lie the Barren Grounds inhabited by the reindeer, musk ox, wolves, wolverines, foxes, hares, and in the summer many species of wildfowl and smaller birds. It is not, as the name implies, a true barren ground. For some distance from the so-called tree limit stunted spruces and willows are found in sheltered hollows and along the water courses, and even in the more exposed places one can often find a growth of dwarf birch and willow only a few inches high. Sweet short grasses too grow in the interior, and in some places to the very shores of the Arctic Sea.

The Barren Ground reindeer is a distinct species from the woodland deer. They may meet in the wooded country during the winter, but they never interbreed. The Barren Ground deer during the latter part of October seek the shelter of the tree country, but as early as February the females and younger males start on their long journey to the shores of the Arctic Sea, arriving in April. There the fawns are born, and remain till in September, the herd begins its return journey to the south.

In October they join the males and stay with them until it is time to regain their winter quarters.

The lives of the natives depend on these migrations, and should the herds fail to pass by their accustomed routes north and south, great suffering and many deaths from starvation will follow. The deer skins furnish tents, clothing, bedding, material for nets, thread, snowshoe lacings and dog harness, while the flesh is the great staple of food for themselves and their dogs, and is bartered at the Hudson Bay Co.'s posts for tea, tobacco, ammunition and other necessaries.

While in the north I met Mr. McKinley, a Hudson Bay Co.'s officer, who accompanied Mr. Warburton Pike on a hunting excursion four years ago. They went some distance down Back's Fish River, but did not reach the Arctic Circle, as the season was late and their Indians afraid of Esquimaux.

Mr. McKinley told me that on leaving the north shore of Great Slave Lake the trees rapidly became stunted, and after a dozen miles only scrubby specimens a few feet high are seen. Here the country presents a most desolate appearance. In the hollows are grasses, dwarf willows and a few dwarfed spruces, but looking across country one sees only sharply tilted, rocky ridges, making traveling a painful and arduous task. Going still further, the land becomes more level and the soil better, and one often sees a beautiful growth of Arctic plants in among the grasses and on the mossy slopes.

The Barren Grounds have no permanent inhabitants, even the hardy Indians making only hunting excursions from its western borders for musk ox and reindeer, but never reaching the heart of the country. In summer the women can go with the men part of the way, for even beyond the forest country they can find turf, dwarf willows, and the *Andromeda polifolia* or crowberry, which serves as fuel; but in the winter, when the snow covers all, only the men venture in. They take with them on sledges as much fuel as the dogs can draw; the wood is cut in pieces 3 or 4in. in diameter and 2ft. long. One of these is used at a meal, and ten or twelve men will cook their dinner at the same fire for economy's sake. The dried meat is shredded very fine, put in a kettle of water and held close to the tiny fire. When the kettle boils it is removed, and the contents eaten, half cooked as they are.

Formerly the reindeer was found abundantly near Great Slave Lake, but for the last six or seven years they have been very scarce, and the hunters must go further to the east and northeast. Forest fires have burned the hanging moss which drapes the spruces in the north, and which is a favorite food of the reindeer, and the marshy feeding grounds have been destroyed. When a fire once starts in the beds of peat moss it may burn a long time, smouldering even under the winter snow.

Mr. Warburton Pike had much trouble evidently with his Indians and half-breeds, who served as guides and assistants on his journey. They charged him big prices, were insubordinate, quarrelsome, and must have been very disagreeable traveling companions. The usual price paid by the Hudson Bay Company to men acting as guides is "a skin" (about 50 cents) a day. Rations also must be provided: about three fish a day for each man or 3lbs. of dried meat, and 1lb. of tobacco and 1lb. of tea a month. For bedding in summer one good company's blanket is all that is necessary for a hardy man, and in winter a deerskin robe or two will be needed in addition.

Mr. Ogilvie describes one native method of killing the reindeer in Alaska. A ravine where the snow lies deep is selected, and around it on the lower side is built a brush fence, which is extended upward and backward to the uplands on each side, diverging until the ends are some miles apart. The fence consists merely of crotched sticks stuck into the snow at suitable distances, with poles laid horizontally in the crotches, due care being taken to cut and mark them so that the agency of man in its erection is made very evident. A party then scours the country around the mouth of the trap all the time, gradually approaching it, and driving any animal in the vicinity between the arms, which the deer avoid. They are thus slowly driven to the snow pit at the end, where they are easily dispatched. Had the reindeer sense enough they could easily dash through the fence, but they will not approach it.

In a similar way the Barren Ground Indians guide the deer to a narrow place in the wooded country or to some body of water where hunters are in hiding with their canoes. When the herd takes to the water the hunter darts out from the shore and spears the animals as they swim, the spear entering back of the ribs. The thrust must be given from behind, for if the canoe comes further forward the animal in dying will turn over and kick, upsetting the canoe. A long spear tipped with metal is used in hunting the reindeer. The back angles are cut sharp, so that the weapon can be easily withdrawn. The victims are left to die in the water and the hunter follows the flying herd, spearing another and another as he goes.

An intelligent Hare Indian at the Delta spoke to me in favor of the old mode of hunting with bows and arrows. He said that guns frightened the deer from the country and that the Indians fare no better now than in former times, when more primitive weapons were used. If one of a band is shot with bows and arrows the others will look at it and perhaps run to and fro in a confused way, but will not become thoroughly alarmed and leave the neighborhood; but when they are once well frightened by the reports of guns the herd will run for a long distance beyond the reach of the Indians. Bows and arrows are used now by the Indians only for wildfowl and small game. The Esquimaux still hunt reindeer with them, but during the last few years rifles have been obtained by some of the Esquimaux from American whalers west of the Mackenzie.

The skin of the reindeer is in best condition in July, when the old coat has fallen and the new one is dark and thick. I was given while in the north a beautiful albino skin, that of a yearling. It was snowy white except for a few brown specks on the throat—a great rarity in America. The tame deer of Norway, Lapland and Siberia are more varied in color than those of America, and many of the Siberian skins are piebald. These are considered especially desirable for native dresses, as it is said that the hair does not fall out as soon as that of the wild animals.

A Hudson Bay Company officer told me that from Herschell Island, 100 miles west of the Delta, piebald skins were sometimes bought by the Indians; but I am inclined

MR. NEWBERY'S LARGEST TROUT, 3¾LBS.

to think that these skins had found their way there from the Asiatic tribes across Behring Straits. In former times there was a brisk trade between the natives of the two continents.

Although the musk ox and reindeer occupy the same region during the summer months, the musk ox seldom migrates as far south in the winter as tree limit, remaining north of latitude 60°. Nor is its range as wide as that of the reindeer, and it is not found at the present time west of the Mackenzie, though fossil remains show that it once inhabited Alaska. The easiest route to the musk ox country is to start from Fort Rae; or going first to Fort Resolution, on Great Slave Lake, strike northward from that point. This was the course taken by Mr. Warburton Pike and Mr. McKinley on Mr. Pike's first expedition. They went in on the last snow, leaving the lake May 7 and returning Aug. 23. In about eight days they reached the land of the musk ox.

The animals are usually seen in small bands ranging from five to fifty, but there may be many bands within a short distance. One Indian, who had been down the Coppermine River the spring before I visited the far north, reported that he had seen the musk ox in immense numbers, as he said, "They were as the buffalo."

There seems to be little danger of the speedy extermination of the musk ox. The difficulty of bringing out the meat and robes to the posts is very great, and the severe climate and rough country prove a protection. The animals, as they are hunted more and more, will retire further to the interior, until they will reach a point where it will be almost impossible for the Indians to pursue them.

Only within the last twenty years have the musk ox robes been "made fur" of; that is bought by the Hudson Bay Co. other companies. With the disappearance of the buffalo arose a demand for musk ox skins, for sleigh robes and for rugs. Fort Rae is the post from which the greatest number of musk ox robes are sent to the outside world. About 1,000 left the district the year I was there, but some passed through the hands of opposition traders—those not connected with the Hudson Bay Company.

The best skin is that of a three-year-old cow, fine, uniform and not too tufty or hairy. At Winnipeg a robe can sometimes be bought for $25, but often in London twice that amount is charged for a good skin. Most of the robes sold in the fashionable Regent street shops are sold to Canadians and find their way eventually to our side of the ocean. The skin of a young calf a few days old is really beautiful, the hair being soft and silky with a close inner growth of wool. Often the dusky brown hair is interspersed with gray, suggesting the fur of a silver fox. These baby musk ox skins are beginning to be in demand in the market. Two of the smallest will make a muff and long boa, and are very pretty, though rather odd. The fur is much more durable than lynx, but does not wear as well as that of the black bear.

The Barren Grounds are well suited to the capture of reindeer and musk ox. Over the summits of the rocky ridges one can often see the antlers of the deer, and by creeping along cautiously come within easy shooting range. In the spring and autumn heavy fogs are frequent, and at such seasons the Indians always hunt in couples. These fogs come suddenly upon the hunter; a gray advancing cloud is seen, a chill in the air is felt, and one is enveloped in the mist and unable to see the half of canoe's length in front.

Mr. McKinley told me that he had never seen the musk ox show fight; even when wounded they would try to escape. However, they defend their young valiantly from the wolves, putting the calves and the females within a circle and presenting their formidable horns to the enemy.

One of the hunters at Fort Rae—Antoine—agreed with Mr. McKinley in saying that the mother covers her calf with snow immediately after birth, and it remains there under shelter for several days.

In Antoine's broken English, "The mother paw snow over baby musk ox, making like a little house. The warm makes like a roof over the baby musk ox, as the snow melts a little. The baby lie there quiet and does not drink milk. Then in two, three days, the baby grow strong and comes out and drinks milk of its mother. After that if anything come near to frighten the mother she runs to baby musk ox and paws snow all over him to hide him. The hunters shoot the mother and the baby comes out from snow and is afraid of dogs and runs to hunters. They cut its throat with knives and knock it in the head, and sometimes dogs run and pull it down and bite its throat."

Mr. McKinley corroborated this, and described the little brown head rising up out of the snow where it had been hidden, and the poor little thing hurrying to them for protection from the dogs.

The young animals accompany the mother for several months, and if the latter is killed the calf will linger near and can easily be run down and captured with the help of dogs. Lieut. Greely succeeded in taking several calves his first winter in the Arctic regions; they became tame in a few days and would no doubt have thrived had they been given roomy quarters and exercise; but the Esquimau dogs made it necessary to confine the calves closely, and they died after a few months.

Sir Donald A. Smith, governor of the Hudson Bay Co., has offered a large reward for two young musk ox, but so far no one has claimed the reward. The food on which the animal lives, mosses, lichens and grasses, is abundant from the true Barren lands almost to civilization. By taking a young animal just weaned from its mother the undertaking could no doubt be carried out successfully. An eight or ten days' journey would bring it to Fort Rae, on Great Slave Lake, and from that point the little Hudson Bay Co. steamers that make one trip a year to the far north and the "brigade" of open boats manned by Indians would bring the Arctic *voyageur* within 100 miles of Edmonton, the most northern town in Canada. From Edmonton there would be no trouble (wagons and the railway being the mode of travel), and in about a week more the young musk ox would reach Montreal, the home of Sir Donald. ELIZABETH TAYLOR.

SPORT IN INDIA.—III.

Central India.

GOING again southward we found Central India a rough, hilly country, only partially cleared and settled. In some sections there are very extensive stretches of populated open country, while in others there are equally extensive masses of untouched forest, but generally speaking there is a scattered intermixture of forest and clearing which is a state of things very favorable for sport. Deer of all kinds are usually more plentiful along the edges of the woods and round about clearings than in the midst of extensive forest. They like to get out on to the open at night and they come after the crops. Tiger and leopard follow the deer and also prey on the villager's cattle. Thus the sportsman can camp in a convenient way within easy reach of villages and supplies, and following main lines of road, and yet have plenty of game round about. In the open stretches there are plenty of black antelope, nylgau, bustard, florican partridges, sand grouse, etc., and the gazelle is here abundant. The country abounds with artificial sheets of water formed by damming up rivers for the purpose of irrigating the land and getting a water supply, which would otherwise be very deficient in this dry, rocky country. On these are to be found wild duck, teal, snipe, etc. The forests contain all the kinds of game before mentioned and in addition the Indian bison, which is not found in the north. This is the largest of the bovine tribe, standing 6ft. at the shoulder, of huge bulk and carrying massive horns. The stalking of these great beasts on the wooded hillsides is one of the most interesting of Indian field sports.

A great deal of the shooting in Central India is effected by driving the game with the aid of a large body of beaters. A piece of forest perhaps half a mile wide and a mile or more long having been selected, as known or likely to hold some game, the sportsmen take their positions across one end and the beaters forming a line across the far end advance gradually, making a hideous din with yells and drums and driving everything before them. Tigers, leopards, bears, hogs and deer are thus shot. In the case of tigers the arrangements are usually rather elaborate.

In addition to the beaters men are posted in trees at short intervals down each side of the beat to prevent the tiger from escaping to one side, so that the animal is surrounded and forced to go down to the guns. The sportsmen in this case are posted on rough platforms of boughs and poles in trees some 12 or 14ft. above the ground. As it is not worth while to make all these preparations on the mere chance of a tiger being there, preliminary measures are taken by tieing up calves every night as baits in likely places round about camp. These are visited early every morning, fed and watered for the day and again tied out for the night. When one is killed it is easy for practiced professional hunters to decide pretty accurately where the tiger has laid up. Being gorged, he will lie up for the day in the nearest suitable stretch of thick covert, and then the drive is organized and carried out.

The climate of Central India is rather hotter than [that of Northern India, but still there is a very fine pleasant winter season from November to March. Owing to the rocky nature of the land the forests dry up after the rainy season more quickly than the denser northern forest under the Himalayas, and they can be entered by December without any fear of jungle fever.

Southern India resembles the central portion in its general character, and the same kinds of game are found there. It has a milder and more equable climate, owing to the proximity of the sea on either hand as the peninsula tapers off. The best sporting regions in Southern India are the hill ranges of the Neilgherries and the wooded hills above the west coast. These enjoy a perfect climate and contain abundance of game in their slopes.

Indian Fishing.

A word may be said about Indian fishing. The celebrated mahseer is a species of carp running up to 80lbs. or more in weight, a very handsome large-scaled fish. He inhabits rushing rivers, and the fishing in all respects resembles salmon fishing, "but more so." The mahseer has great power in the water and makes a tremendous fight for it. In the greater rivers, where he attains his full size, and his struggles are aided by a deep, swift and wide current, it is necessary to use a very powerful salmon rod with 200yds. of the strongest line, and it is often a hard job to check his rush before he runs out all the line. Then comes a long and severe piece of playing; inch by inch and foot by foot he has to be reeled in, and then off he goes with another rush, taking nearly as much line out as at first. This work is enough to tire the arms. Two or three hours are sometimes taken up before a big mahseer succumbs, and I know of one case where the angler's interview with his fish was prolonged for over eight hours, and he had to send to camp for his supper and a lantern before he could come to conclusions.

Every Indian river, except the sluggish sandy ones flowing through the great northern plains, holds mahseer in abundance, so that fishing can nearly always be had as well as shooting.

An Expedition to India.

A sporting expedition to India for one winter season or for a whole year, including a summer in the Himalayan Mountains, could be arranged and carried out without much difficulty, even without being led by some one experienced in Indian field sports and in the languages and manners and customs of the country. There must be many who would like to see something of the sport as well as of the people and the ancient cities and temples and other wonders of India, which the regular winter tourist goes to see. I inquired from FOREST AND STREAM some years ago and was informed that several sporting expeditions to India had been projected, but had fallen through. I was then thinking of organizing and leading a party, but I think I can show how a small party of four or six could get along very well by themselves.

The first thing to do on landing in Bombay or Calcutta would be to hire the services of a respectable English-speaking native, who would accompany the party throughout, act as interpreter and boss the servants. A suitable man ought to be obtained easily enough (perhaps through Cook & Co.'s agency). Also some servants would be engaged who had a little smattering of English. It would be as well to have one of these to each member of the party. He would be your personal attendant and could be around with you at all times. Thus the party could go into the country and get along very well. A great many of the British army officers, whose duties do not make it necessary for them to study the language, have a very slight knowledge of it, and yet with the aid of a servant who knows a little broken English they go out on shooting trips and get along all right.

Being provided then with a respectable English-speaking interpreter and a few servants as above said, the party would go by rail to some outfitting point in the interior and there fit out and make a start into camp.

In such a large country of course hundreds of different tours might be marked out, but by way of a sample I will describe one tour which would prove satisfactory and would take in a great variety of Indian country and game.

Landing in Bombay at the end of September, go by rail to Jubbulpore, a large station in Central India, and there fit out. (All the places I shall mention will be found in any atlas.)

It will be in order here to explain that the whole of British India is divided up into "districts" averaging say eighty miles by forty in size, and each district has a headquarters "station." Some of these are only "civil stations," the residence of the group of officials who manage the district. At the smaller stations there is always a "Europe shop" or two where canned provisions, liquors, powder and shot, etc., can be got. Thus in marching about the country supplies of this kind can be renewed pretty frequently. The larger stations, such as Jubbulpore, are also military centers, and the shops contain a considerable variety of goods. At this place tents are also made, and it is therefore a good outfitting point. The outfit to be bought would be somewhat as follows. I will suppose a party of four.

	Rupees.
Four ponies at 75 rupees	300
Four saddles and bridles at 30 rupees	120
One light driving rig with harness	200
Two sleeping tents at 40 rupees	80
One general tent	50
One kitchen tent	30
Camp furniture, cooking utensils, bedding, enameled plates and dishes, etc., etc., say	150
Total	930

Or, say 1,000 rupees. At present rates of exchange this would equal about $350. And supposing that the whole was sold off at only half price (though you would probably do better), at the end of the trip the loss would be $175, which is not much divided by four.

Then the following servants would be enlisted: one cook and an assistant, two table servants, four grooms, two grass cutters, a couple of "coolies" as helps in pitching tents and tending camp, and a couple of "shikarees" or native hunters, a water man, a washer man and a sweeper. These with your four personal servants make up twenty-one men, which of course in this country seems an absurdly large number, but they are necessary in India, and their pay is a mere trifle. The lower servants, such as grass cutters and coolies, would get only 6 rupees (equal to about $2) a month and find themselves. The upper servants and cook would get some 10 or 12 rupees (say $4) a month. I have put these rates higher than the wages ordinarily paid by residents, because servants hired for a camp and having to leave their homes and go into the jungles expect a little more. The above rates are very liberal and would insure content and keep the men with you. At an average of say 9 rupees, the twenty-one servants would cost you about $63 a month. Your respectable English-speaking head man might expect 20 or even 30 rupees a month, and it would be worth while to pay him well, say 30 rupees (equal to $10) a month.

For the conveyance of the camp two bullock carts would be hired at about 15 rupees a month each, 30 rupees, or $10 a month.

The cost of living may be put at 2 rupees a day per head, equals 8 rupees, or say $3 a day, for the party of four, and this is a very liberal estimate.

The commissariat arrangements are as follows: ordinary provisions, such as flour, rice, fowls, eggs and milk, can be bought all over the country in the larger villages and markets, which would never be far out of reach of the camp; also a few common kinds of native vegetables. The better class of garden vegetables and potatoes can only be had at the English stations, as well as canned provisions and liquors.

The above calculation shows that running expenses would be about 360 rupees or $120 a month—only $1 a day per head. In addition to this there would be some little expense in hiring villagers occasionally as beaters or to carry in game, etc., but since a villager thinks himself well paid with about 10 cents for a day's work, this cannot come to much. Even a big "drive" as before described, using 100 men, will only cost $10 and that would only be an occasional occurrence. If you put down $50 each per month as all the expenses you will be a long way on the safe ride.

Having fitted out at Jubbulpore and laid in enough canned provisions, liquors, etc., a route would be laid out of 200 miles northward along the "Great Deccan Road." This is one of the great metaled highways of the country, formerly constantly traveled by stages, carriages, etc., but now thrown out of use by the railway. It runs through a good sample of Central Indian country partly cleared, partly wooded, and almost every variety of Central Indian game will be found along it (except bison). This route of 200 miles would be only twenty short marches, but the progress along it could easily be made to cover say three months, October, November and December, by halting for a week or two at good places and by occasionally branching off. Every two or three weeks while making a halt the light driving rig would be sent back to Jubbulpore to get your mail and a fresh supply of canned and bottled goods, until the distance became too great, when you would find some other center nearer. A very large map of India would be used, showing all the districts and stations, post offices, etc. One hundred miles would bring you to the native city of Rewah, and a march or two beyond that the great river Sone is found to be near the road running in a deep-forested valley full of game. There is probably no cart road down into this valley. In such cases leaving carts and heavy goods behind and hiring a gang of villagers to carry a light camp, you would penetrate a day's march into the Sone valley, camp by the river for a week or so and then return to the main road.

The end of this 200-mile route brings you to the large station of Mirzapore, on the river Ganges, and you have now passed out of the Central Indian country and reached the great northern plain.

It would be well here to take the rail for Bareilly, and from that station lay out a route of 150 miles to the sacred city of Hurdwar. The march should be along the Grand Trunk road, and by branching off and making halts two months could well be spent. Here you have a good sample of the sport to be had on the northern plains.

Hurdwar stands at the foot of the Himalayan outer ranges or foothills, and here the river Ganges issues from the hills and affords the very finest of mahseer fishing. Beyond Hurdwar and behind the foothills lies the celebrated valley of Dehra Doon, about fifteen miles wide, thickly wooded and affording an excellent sample of the sub-Himalayan forest. The month of March and part of April could be spent here to great advantage. When April is fairly in the weather gets pretty warm and the visitors will be ready to make their retreat. If it is intended to spend the summer in the mountains the party should ascend to the neighboring hill station of Mussoorie and there arrange for marching in the Himalayas, or they will take the rail for Bombay or Calcutta.

Such is an outline of how an Indian sporting tour could be conducted, and I do not think that any serious difficulty would be experienced. I shall be happy to give further details to any one who may contemplate the trip and who may require to know about some points which I may have omitted to mention. Of course all information as to how to get from America to Bombay or Calcutta can be found out from any travelers' agency such as Cook & Co.

At Bombay and Calcutta there are firms of general agents who are also bankers, and will do anything for you, such as forwarding your mails, etc. I can especially mention the firm of King & Co. at both of these ports. The traveler should have his mails sent to their care and redirected by them as he moves about, and he should deposit his funds with them and have them send him drafts from time to time, which can be cashed at the up-country banks or at the Government treasury at stations where there is no bank, thus avoiding carrying about too much cash at one time.

A Winchester rifle of the more powerful models, such as the Winchester express .45 or .50 gauge, would answer quite well for all Indian sport except the three heavy beasts, rhinoceros, buffalo and bison, which require a heavy, large bore. But the visitor would have little chance of seeing buffalo or rhino, which can only be got at on elephants. Bison may be shot with an express if the bullet is well placed in the head or neck, but there is much chance of only wounding and losing.

Winchester ammunition is not generally on sale in India, so a good supply should be taken along.

An ordinary 12-bore is the best gun. It is an advantage to have it hard hitting and long ranging, as a large proportion of the shooting is at wildfowl, geese, cranes, sand grouse, etc. A pea rifle is also very handy for shooting bustard, pea fowl, cranes, otters, etc.

The dress for camping in India is much the same as one would wear in the Southern States of this country.

MAJOR G. M. BELLASIS,
Bengal Staff Corps (retired).

YOUNG'S POINT, Ontario, Can.

Natural History.

RATTLESNAKE AND HORSE.

ON Sunday, Aug. 9, Noel E. Money was riding on horseback in the Ramapo Mountains back of his home, Oakland, N. J. While on his way down one of the roads that thread these mountains, he happened to look upon the ground directly beneath his horse and saw a rattlesnake stretched out across the road immediately beneath him. He dug his heels into his horse's sides, the animal responding by a quick leap forward, landing horse and rider in some pretty rocky country. Looking back at the snake, Mr. Money saw that it had not moved, but was still stretched out in a straight line across the road. This made him think that some one had killed the snake and placed it there; wanting to examine it more closely, he dismounted, tied his horse to a tree and went back to look at the snake.

When within a few feet of it he saw a short, quick movement of its head as it turned toward him. This showed that it was alive, and he made haste to get a stick with which to kill it. On approaching it again, this time with a stick, he poked the stick at it, whereupon the snake struck at the stick, the extreme length of the "strike" being apparently about 6in. The reptile did not coil nor rattle until thoroughly aroused by being teased with the stick. Killing the snake, Mr. Money cut off the rattles, which were incomplete, a certain number of them, together with the button, being missing. The portion he secured showed eight rattles.

Mr. Money heard another snake rattling somewhere close by (or fancied that he did so) and searched for it. Returning to his horse after an absence of about ten minutes, he found it with a badly swollen off-hind fetlock, and at once surmised that the injury was due to a sprain as a result of the leap onto the rocky road. On his arrival home, three-quarters of an hour later, he accordingly put hot fomentations on the injured limb to reduce the swelling. It was not until the poison had begun to work in its system, and an examination had been instituted, that it was discovered that the animal had been bitten by the snake in the off-hind fetlock. Everything was done for the horse, a skilled veterinary surgeon being called, while Mr. Money informed me on Saturday, Aug. 15, six days after the occurrence, that he was afraid he would find the horse dead on his return home, as it was in a very bad way when he left Oakland that morning.

Several times the horse had showed great improvement, eating and drinking well. The latter part of the week, however, the poison seemed to have reached the head, producing a sort of blind staggers. These became so violent on Saturday, and there being apparently no chance of saving the animal's life, its sufferings were ended by a bullet from a .38caliber Colt in the hand of Capt. Money.

There are some curious features about this occurrence. In the first place it is a popular belief that a rattlesnake cannot strike unless previously coiled, but Mr. Money's statement shows plainly that the snake did strike at a stick, the length of the strike being about 6in., and that, too, while the snake was stretched out perfectly straight. It is also generally supposed that a rattlesnake will always give warning when it can that it is going to do mischief, yet this one gave no such warning when it struck at the stick, it only coiled and rattled when thoroughly aroused by being teased with the stick. The fact that the horse was bitten in the fetlock of one of its hind-legs is pretty conclusive proof that the blow was administered while the horse was jumping over it.

Mr. E. Hough, of Chicago, and myself had an experience with a good-sized old rattler in the Alleghany Mountains about Aug. 28 or 29, 1894. Mr. Hough graphically described our encounter in a later issue of FOREST AND STREAM; he also told what fun Dick, the pet coon at the Wopsononock Hotel, near Altoona, Pa., had with the body of the snake when presented with it. As I remember it, this snake rattled before we got within 15yds. of him. He was not coiled, but was slowly retreating over some rocks at the side of the road at the time. We used rocks on him and he struck at the first one, which, badly aimed, fell close to him. The second rock hit him fairly, and then he tried to coil, but could not do so owing to his backbone being shattered.

The point of similarity between Mr. Money's snake and ours is that both struck when stretched out; the difference was that ours rattled long before we either saw it or got near it, while Mr. Money's did not rattle at all until it had done the mischief.

EDWARD BANKS.

HOW BIRDS AFFECT THE FARM AND GARDEN.

BY FLORENCE A. MERRIAM.

[*Concluded from page 124.*]

Hawks and Owls.

IN speaking of the injustice which has been done to many of the best friends of the farm and garden, Dr. Fisher says: "The birds of prey, the majority of which labor night and day to destroy the enemies of the husbandmen, are persecuted unceasingly." There are only three common inland hawks in the United States that do harm, and when this is understood it becomes most important that they should be distinguished from those whose services are of value in order that the beneficial ones may not be killed by mistake. They are the goshawk, Cooper's hawk, and sharp-shinned hawk. Of these, fortunately, the goshawk is rare in the United States except in winter. Cooper's hawk, or the chicken hawk, is the most destructive, especially to doves; and the sharp-shinned hawk is very destructive to small birds, 96 per cent. of its stomach contents consisting of birds. But about two-thirds of the birds of prey in the United States are mainly beneficial.

Marsh Hawk.

The marsh hawk is one of the most valuable of the num-

ber. It can be easily distinguished by its white rump and its habit of beating low over the meadows, for it is an indefatigable mouser. Meadow mice, rabbits and squirrels are its favorite quarry.

Red-Tailed Hawk, Hen Hawk.

This name, which the bird does not deserve, is probably responsible for much of the false opinion regarding it. Dr. Fisher says: "While fully 66 per cent. of the red-tail's food consists of mammals, not more than 7 per cent. consists of poultry, and it is possible that a large proportion of the poultry and game captured by it and the other buzzard hawks is made up of old, diseased or otherwise disabled fowls, so preventing their interbreeding with the sound stock and hindering the spread of fatal epidemics." Among other things, the red-tail eats ground squirrels, rabbits, mice and rats.

Red-Shouldered Hawk.

This useful bird's list of food includes mice, snakes, grasshoppers, earthworms, snails, spiders and centipedes. Ninety per cent. of its food is composed of injurious mammals and insects.

Sparrow Hawk.

Grasshoppers, crickets and other insects form the chief food of the sparrow hawk during the warm months, and mice during the rest of the year.

Swainson's Hawk.

This bird is the great grasshopper destroyer of the West. It is estimated that in a month 300 of these birds—and they go in large flocks—save sixty tons of produce that the grasshoppers would have destroyed.

Long-Eared Owl.

The long-eared owl is an industrious mouser and molests comparatively few birds. As it is one of the commonest owls, the good it does must be very great.

Barred Owl.

Although this bird has a bad reputation, only 4½ per cent. of its food is poultry and game, and if the chickens were shut up at night it would not do even this amount of harm. Most of its food is made up of small mammals, many of them the worst enemies we have. It also eats large numbers of injurious insects.

Screech Owl.

Nearly three-fourths of its food is of injurious mammals and insects, including grasshoppers, crickets and cutworms, mice and rats.

Barn Owl.

The food of the barn owl consists almost exclusively of mammals, such as gophers, the common rat and cotton rat, mice and shrews. From the nest of one pair of owls 454 skulls were taken, of which 225 were meadow mice and 179 house mice. Six hundred and seventy-five "pellets" or rejects of the barn owl, taken from one of the towers of the Smithsonian Institution by Dr. A. K. Fisher, contained the remains of 1,821 mammals, birds and batrachians, as follows: Rabbits 1, rats 134, mice 1,596, short-tailed shrews 54, moles 1, bats 1, small birds 32, frogs 2. In other words, mice constituted 93 per cent. of the food of these owls.

English Sparrow.

It seems remarkable that the sparrow should ever have been introduced into the United States, for the English had already been fifty years in trying to destroy the pest; and in Australia the injury done by the sparrow had been so serious that the bird became the dominant factor in politics, an election hanging on the question of its extermination, and the leaders who stood for its active destruction winning the day.

In the United States we are reaping the results of our own ignorance and folly. Since the bird was introduced in 1850 it has become established in thirty-five States and five Territories, and has done its worst in driving away our native birds and destroying buds, blossoms, fruit and grain.

It has been shown to interfere with seventy kinds of our own birds, most of which nest about houses and gardens and are beneficial to the farm and garden. The examination of 522 stomachs shows that, while it eats wheat, oats and corn, it has little interest in insects. Of the insects which it has been found to eat, forty-seven kinds are harmful, while fifty are beneficial, which shows how much good is to be expected from it in destroying pests to counterbalance what it does in driving away our own birds that live on insects.

It is clear that the English sparrow should be exterminated, that laws protecting him should be repealed, and that some intelligent, systematic action should be taken to rid the United States of his obnoxious presence. Bounty laws cannot do this, for, as has been clearly demonstrated, they do more mischief than can easily be remedied, as money is usually spent on the heads of the valuable birds that have been mistaken for the injurious ones. But the work might be effectively done by State boards or commissioners, who should hire trained assistants to destroy the birds and their nests.

Conclusion.

So far as it has gone, the examination of the stomach contents of birds has proved that, except in rare cases, where individuals attack cultivated fruits and grains, our native birds merely preserve the balance of nature by destroying weeds that plague the farmer and by checking the insects that destroy the produce of the agriculturist. The great value of birds is demonstrated. The question is first how to attract them where they have disappeared, and then how to protect the crops from their occasional depredations. Mr. Forbush, who has experimented in the matter in Massachusetts, both fed the birds and planted bushes to attract them. He says: "It is evident that a diversity of plants which encourages diversified insect life and assures an abundance of fruits and seeds as an attraction to birds will insure their presence."

The cultivated crops can be protected in two ways: either by mechanical devices that frighten the birds away from the fruit or grain fields, or by the substitution of wild or cultivated kinds. To frighten the birds away, white twine can be strung across berry beds, string hung with bits of glittering waste tin over fields, while stuffed hawks and cats can be kept in orchards. To attract the birds from cultivated fruit it is well to plant some wild fruit that will bear during the weeks when the birds eat the garden or orchard crops. In this connection Mr. Forbush says: "I wish particularly to note the fact that the mulberry trees, which ripen their berries in June, proved to be a protection to the cultivated cherries, as the fruit-eating birds seem to prefer them to the cultivated cherries, perhaps because they ripen somewhat earlier"; and he adds, "I believe it would be wise for the farmer to plant rows of these trees near his orchard, and it is possible that the early June berry or shadberry might also be useful in this respect."

Prof. Beal suggests planting berry bushes along the roads and fences and between grain fields.

To protect strawberries and cherries (May and June), plant Russian mulberry and June berry or shadberry.

SPARROW HAWKS.

To protect raspberries and blackberries (July and August), plant mulberry, buckthorn, elder and choke cherry.

To protect apples, peaches, grapes (September and October), plant choke cherries, elder, wild black cherry and Virginia creeper.

To protect winter fruits, plant Virginia creeper, dogwood, mountain ash, bittersweet, viburnum, hackberry, bayberry and pokeberry.

Birds that eat mulberries are the flycatchers, warblers, vireos, cuckoos, blackbirds, orioles, finches, sparrows, tanagers, waxwings, catbirds, bluebirds and thrushes.

RED-TAILED HAWK.

Birds that eat the potato beetle are the rose-breasted grosbeak, cuckoo and quail.

Birds that eat the tent caterpillar (which does most harm to apple and cherry trees) are the crow, chickadee, oriole, red-eyed vireo, yellow-billed cuckoo, black-billed cuckoo, chipping sparrow and yellow warbler.

Birds that eat the cut worm (which eats off corn, etc., before it is fairly started in the spring, and is very destructive to grass) are the robin, crow, catbird, loggerhead shrike, house wren, meadow lark, cowbird, Baltimore oriole, brown thrasher and red-winged blackbird.

Ants (which spread plant-lice, destroy timber and infest houses) are the favorite food of the catbird, thrasher, house wren and woodpeckers; and are eaten by almost all land birds except birds of prey.

Scale insects (which are a fruit-tree pest, injure oranges, olives, etc.) are eaten by the bush tit, woodpeckers and cedar bird.

The May beetle (which ravages forest trees, also injures grain and grass lands) is eaten by the hermit thrush, wood thrush, robin, meadow lark, brown thrasher, bluebird, catbird, bluejay, crow blackbird, crow, loggerhead shrike, mockingbird and gray-cheeked thrush.

Weevils (which injure grain, forage and market gardens) are eaten by the crow blackbird, red-winged blackbird, Baltimore oriole, catbird, brown thrasher, house wren, meadow lark, cowbird, bluebird, robin, swallows, flycatchers, mockingbird, woodpeckers, wood thrush, Alice's thrush and scarlet tanager.

The chinch bug (which eats grain and wheat) is eaten by the brown thrasher, meadow lark, catbird, red-eyed vireo, robin and Bob White.

The wire worm (which causes heavy losses in the cornfield) is eaten by the red-winged blackbird, crow blackbird, crow, woodpeckers, brown thrasher, scarlet tanager, robin, catbird, Baltimore oriole, meadow lark and cowbird.

Crane flies (which eat grass roots in the hay fields) are eaten by the robin, catbird, wood thrush, gray-cheeked thrush, olive-backed thrush, crow, crow blackbird and red-winged blackbird.

The soldier bug is eaten by the robin, bluebird, crow blackbird, crow, catbird, house wren, red-winged blackbird, Baltimore oriole and meadow lark.

Birds that eat the cotton worm are the bluebird, bluejay, red-winged blackbird, thrush, prairie chicken, quail, killdee, bobolink, mockingbird, cardinal and cuckoo.

Gypsy Moth.—Mr. Forbush, ornithologist of the Massachusetts State Board of Agriculture, gives the following list of birds seen to feed on the gypsy moth: Yellow-billed cuckoo, black-billed cuckoo, hairy woodpecker, downy woodpecker, pigeon woodpecker, kingbird, great crested flycatcher, phœbe, wood pewee, least flycatcher, bluejay, crow, Baltimore oriole, purple grackle or crow blackbird, chipping sparrow, chewink, rose breasted grosbeak, indigo bird, scarlet tanager, red-eyed vireo, yellow-throated vireo, white-eyed vireo, black-and-white warbler, yellow warbler, chestnut-sided warbler, black-throated green warbler, oven bird, Maryland yellow-throated warbler, American redstart, catbird, brown thrasher, house wren, white-breasted nuthatch, chickadee, wood thrush, American robin, bluebird and English sparrow.

Birds that eat grasshoppers and crickets are the mockingbird, thrasher, bluebird, wrens, shore lark, goldfinch, longspur, grasshopper sparrow, song sparrow, junco, lark sparrow, dickcissel, rose-breasted grosbeak, blue grosbeak, indigo bunting, cardinal, chewink, bobolink, cow bird, red-winged blackbird, meadow lark, Baltimore oriole, orchard oriole, rusty blackbird, crow, bluejay, kingbird, crow blackbird, whippoorwill, night hawk, swift, cuckoo, red-headed woodpecker, flicker, barn owl, great-horned owl, marsh hawk, sparrow hawk, gulls, Swainson's hawk, quail, shrikes, swallows, vireos, robin and catbird.

In the Massachusetts Crop Report for July, 1896, Mr. William R. Sessions gives a list of the birds he has seen feeding on the army worm during the present summer: Kingbird, phœbe, bobolink, cowbird, red-winged blackbird, Baltimore oriole, crow blackbird, chipping sparrow, robin.

BREEDING BEAVER IN WASHINGTON.

It will be remembered that about one and a half years ago Mr. Elwood Hofer brought on from the Yellowstone National Park a number of beaver for the National Zoölogical Park in Washington, which were afterward turned loose there in a pen especially provided for them. Through this inclosure a little stream of water runs and the beaver make themselves very much at home, building dams and houses and seeming to thrive there. The story of the capture of these beaver was written up by Mr. Hofer and published in FOREST AND STREAM not many months ago.

It is extremely gratifying to learn that these beaver bred this spring and that the young ones now are to be seen almost daily. This was anticipated, for at the time of the rut the beaver fought more or less and one of them subsequently died from injuries received in fighting.

For a long time Mr. W. H. Blackburne, the head keeper at the Park, has been on the watch for young beaver, but it was not until the latter part of July that any were seen. In fact Mr. Blackburne has been looking so long that he became pretty much discouraged and had almost given up the belief that he had held that the beaver had bred. However, one evening about 7 o'clock in the latter part of July, just as Mr. Blackburne was about to leave for home, he saw a small animal dart out into the stream from the bank and begin to swim around in a circle as fast as it could. At first Mr. Blackburne thought it a muskrat, which animals are very abundant about the dams, but two or three minutes later a second animal like the first darted out and both swam around as fast as they could, dashing along as if they did not know which way to go or what to do. After circling about for a moment they would slap the water with their little tails, dive down, come up, circle around again and then again slap the water and dive. This play they kept up for some time, in fact until it got quite dusky.

These little beaver are about half as large as a muskrat, and each little tail is slightly larger than a tablespoon. When they were first seen they did not attempt to leave the water. Now they are becoming quite tame and come with the old ones after their bread every evening about 7 o'clock.

Wolf and Coyote Habits.

Editor Forest and Stream:

The $3 bounty which this State is paying for wolves and coyotes has thinned the ranks of these animals in the past two years and furnishes a lucrative business to a great many wolfers, some of them making $500 and $600 a season.

The old method of poisoning these animals has practically been abandoned, as they seem to avoid bait which has been strychnined, or—if they do occasionally eat it—the poison seems to have no effect on them. Now, the most successful way to capture them is to dig out their dens and knock the young in the head.

Conversing with some professional wolfers the other day, they informed me that while coyotes den up anywhere on the prairie, often five or more miles from water, the wolves never make their den more than 200 or 300yds. from it; that one den suffices the coyotes in which to rear their young, but that wolves move two and three times, digging new holes for their young.

The offal about the coyote dens consists solely of prairie dogs, ground squirrels and an occasional rabbit or bird. The wolves, however, feed their young on calves and colts, and the stench of the decaying meat is said to be the cause of their moving their dens. J. W. SCHULTZ.

KIPP, Montana.

Game Bag and Gun.

RAINBOW LAKE, ADIRONDACKS.

New York, Aug. 12.—No man likes hunting for deer and fishing for trout more than I, and the pictures which I send you illustrate the place and home of the deer and where the speckled beauties can be caught—a place wherever you row and wherever you walk you are sure to meet streams, ponds and springs, some of the loveliest of scenery.

Rainbow Lake is situated midway between St. Regis and Loon lakes, in the heart of the Adirondacks. The place is best reached by way of Utica over the Adirondack & St. Lawrence R. R. (a branch of the New York Central R. R.). The proprietor of Rainbow Inn is James M. Wardner; a better hearted man in the Adirondacks cannot be found, an educated gentleman, an accomplished and enthusiastic fisherman and hunter, well acquainted with the habits of birds, insects and game in these woods for the past forty years, he having come to Rainbow in the year 1856.

In the earlier days Rainbow was a howling wilderness and then the panther, wolf and bear were plentiful. Mr. Wardner has hunted and killed many of them. And if one has an opportunity to go to Rainbow and go a-hunting or fishing with Mr. Wardner, he will find himself listening with wonder to this grand old gentleman's stories, founded on facts, of how he has hunted and fished. I have hunted and fished at Rainbow many times. I have been with all the guides there. They are all like their master, good-hearted fellows, well versed in the art of handling the gun and rod.

I recall to my memory an incident I can never forget. A few years ago, while hunting for deer up the stream called the Big Inlet, a lovely, still, moonlight night, my boat lying with my guide and myself within the shadows of some overhanging boughs, I beheld within a very short distance a lovely full-grown doe feeding among the lilypads, unconscious of any danger at hand, while her fawn on the bank close by was crying for its mother to return to its offspring. The fawn had evidently got the scent of us, while its mother had not. After a while the doe turned to its fawn and together they went back into the woods. It was a grand sight and it was one of those times in a hunter's life when nothing would induce him to draw up his rifle and shoot. I remember at the time my faithful guide saying, "Don't shoot." Such scenes are rare. No artist could do justice to that grand sight.

The waters around Rainbow are full of trout. I know of no better place to fish, and I have caught many trout there. I once caught a mess weighing all the way from ¼lb. to 1lb. each. It was one of my best fishing times. The place selected was the stream up by Pay Dam, beyond Rainbow River. I can see now those beauties jump for the flies I cast, and when my guide would place the net under the water to carefully land them, new life would come to them and they would dodge the net here and there with great vim. It was great sport.

I have just returned from a fishing trip to Rainbow. I caught a good many weighing ¼lb. each. I fished up Rainbow River and Lilypad Pond, and a friend, the same day, fishing up the Big Inlet, came in with a number weighing over 1lb. each. Mr. Wardner was so pleased with our day's catch that he too, thorough sportsman as he is, could not resist the temptation to go that very evening up the stream to try his luck. I left for home that evening, and so did not learn what he caught. My friends who are fond of the gun and rod (good fellows such men are), if you want to go somewhere to build up the tired and worn-out constitution, to better fit yourselves to take up anew your business pursuits, and you don't care how you rough it, then I tell you the place is Rainbow; a place where they will take good care of you, and a place where you will associate with good people. W. W. B.

MAINE DEER MULTITUDINOUS.

Brewer, Me., Aug. 7.—*Editor Forest and Stream:* In your last issue Special says: "Thirty deer seen in one day at Big Spencer Lake were none too many for a guide to write me about. But he signed no name to his postal card except A Guide. Of course he wants me to believe the story and publish it." In the same issue Mr. Hough writes: "Mr. A. H. Weed, of Anderson, Md., is just back from a vacation trip in Maine, and says he saw more deer than he ever did. He saw over 100 in a day, and they were so tame that he often paddled up to within 25 to 75yds. of them as they stood near the shore."

A few years ago if I had been told that any one had seen thirty deer in one day I should have been as doubtful as Special seems to be, but now any one who thinks it anything strange to see as many around many of our lakes and streams is decidedly a "back number." I have not the least doubt that Mr. Weed told Mr. Hough the truth when he claimed that he saw over 100 in one day. Wednesday, July 8, I started to visit my old friend Louis Ketchum, who has a fine hunting camp at the head of Nahmakunta Lake, some twenty-eight miles from Norcross. While on the way up I met a guide of my acquaintance who told me that the week before he sat in his canoe and counted twenty-six deer in one place. Shortly after arriving at Ketchum's camp he came in with a party he had been guiding, Mr. Ignatius Sargent, wife and son, from Massachusetts. They had been up to Rainbow Lake photographing deer. Louis told me that at one time he counted twenty-three from his canoe.

Two days after, while fishing on Rainbow dead water, where there is little chance for deer to feed, we could see them on all sides, often six or eight being in sight at once. They were so tame that they paid no attention to our talking, and would allow us to go very near them. We saw one doe with a fawn and another with two. Two old bucks met while wading round a point of bushes, and as neither would yield the right of way, one raised his forefoot very handily and struck the other over the head, causing him to turn out.

Shortly after this I went with Louis overland to some ponds where he had another canoe. There was good feeding ground in this country, but as we went up with a strong wind, most of the deer left the water before we saw them, but when coming back I kept accurate count, and we saw thirty-four deer in not over two hours. At one time I saw sixteen. Six of them were all together. Many of them, which were feeding on points or grassy islands, took to the water and swam, and we paddled very near to some of them. We did not see a single doe with a fawn among these thirty-four, although probably many of them had fawns which they had left back in the woods. Fully three-fourths were does or yearlings.

Most people greatly overestimate the natural increase of deer. They usually reckon that, as a doe has two fawns, the stock of deer doubles annually. They do not take into the account the many barren does and the large number of fawns which are destroyed by animals. Besides bears, lynx and wildcats, fishers destroy many. It may seem incredible that an animal weighing but from 10 to 12lbs. can kill a fawn, but fishers not only kill fawns but full-grown deer. Louis told me of finding two full-grown deer at different times which had been killed by fishers. Even the common red fox sometimes kills fawns, I think that an increase of 50 per cent. is fully large enough to reckon on for the natural increase of unprotected deer.

During my short stay I saw over seventy deer, and my son, who went across the country by way of the Debskeneay ponds to climb Katahdin, saw over fifty in four days, and also saw two moose, one an old bull with large horns. I also saw numerous fresh signs of moose. People visiting this same country in the open season will see very few deer from a canoe, as they will then have left the vicinity of the water, but they will be abundant in the woods.

I think there is very little illegal killing done in this country this season. I heard of three cow moose which had been killed near Schoodic and Sebois lakes, and one or two of the offenders had been arrested before my return. But I did not hear of a moose being killed south of Katahdin, above Norcross, and did not hear a gun fired by anyone while in that country. All the guides I met spoke decidedly against killing moose in close time. One guide had a theory as to how to cause an increase of bull moose. He contends that as the bulls are growing scarce they should be protected for a term of years, but that people should be permitted to kill the cows and so allow the bulls to increase. His theory is certainly original.

M. Hardy.

NEW ZEALAND'S INTRODUCED GAME.

The annual report of the Wellington, New Zealand, Acclimatization Society for the year 1896 is a pamphlet of very great interest, for it treats of the introduction into a country quite without game animals of species brought from the old world and the new.

Of these species the European red deer (*Cervus elaphus*) is easily the most important, and New Zealand has proved itself in all respects a most suitable home for deer, the climate being all that can be desired, and pasturage, water and shelter abundant. Starting with three individuals, the red deer have multiplied, thriven and increased in such a way that they now roam in hundreds over a considerable area of territory. The progenitors of this herd were introduced into the Province of Wellington in the year 1862, through the kindness of the late Prince Consort, who furnished six deer to be forwarded to New Zealand: three for the Province of Wellington and three for Canterbury. These deer were captured in Windsor Park and were kept there for a short time to prepare them for their sea voyage. One stag and two hinds were shipped to Wellington, where, on June 6, after a passage of 127 days, one stag and one hind arrived safely. Of the three deer shipped for Canterbury only one hind lived to be landed, and this one was sent to Wellington and kept there with the other two.

After some time these deer were conveyed to Mr. Carter's station on the Taratahi Plains, and early in 1863 were liberated there, and crossing Ruamahanga River began to range on the Maungaraki ranges. These mountains consist of limestone formation, and much of the soil has been sown with English grass, which is supposed in a measure to account for the extraordinary growth of the antlers developed by the deer in that locality. From this place deer have spread into various other valleys and seem to be working their way annually into sections where none have hitherto been found.

In New Zealand the red deer shed their antlers in September, which corresponds to our month of March, the new horns beginning to grow almost at once. The antlers harden toward the end of January and soon the velvet is rubbed off and the animal is in an incomplete condition. The rut is said to occur from March 20 to about April 14. Females breed the third year and each year thereafter.

Considerable difference of opinion exists in the Colony as to when stags ought to be shot. Of course, they are in their prime during the months of February and March, but the Council have thought it best to fix the date for the beginning of the killing of these stags not earlier than the latter part of the rutting season.

It is reported that the sambur deer (*Rusa aristotelis*) which have been introduced in the Carnarvon district are increasing, and it is suggested that steps be taken to introduce the roe, fallow and other varieties of deer in the Wellington district.

Birds.

Continued efforts to rear pheasants have been made during the past year, and Mr. Knowlton, of Greytown, has been the most successful of those attempting this. He has reared about forty fine birds, and altogether about sixty have been turned out as the result of the year's operations. Mr. R. Campbell Grant, of London, recently purchased for the Society two pairs of Elliott pheasants, which arrived in February, but one of the cocks died shortly before landing. The remaining birds are now in charge of Mr. Knowlton and are in excellent condition. A number of wild ducks, chiefly mallards, have been hatched during the year, and a preserve for English wild ducks has been set aside near Martinborough.

A shipment of Virginia quail from America had not arrived at the publication of this report.

The game protective act of 1895 provides for a close season for native pigeons during 1896 and every succeeding sixth year, and also repeals the clause in the act of 1890 which allows the sale of game by holders of shooting licenses. A number of additional game wardens have been appointed during the year, and a number of prosecutions instituted for breaches of the law. In most of these cases convictions were obtained and substantial fines inflicted. The Council find the work of protecting game difficult on account of the thoughtlessness and selfishness of many people.

CHICAGO AND THE WEST.

Chicago, Ill., Aug. 8.—Mr. Tom Callender, of Nashville, Tenn., while in Chicago this week was good enough to give me an invitation to join in a sport which I imagine to be somewhat peculiar. "Come down to Nashville," said he, "and I will take you out for a day of convict chasing with the hounds."

"What is that?" I asked him, supposing that he probably meant trailing an escaped prisoner with bloodhounds. He explained that the chase was not exactly *bona fide*, although the hounds really chase an actual convict. It seems that there are forty or fifty hounds, not bloodhounds, but foxhounds, which are owned by the State and used at different points where the convict labor is employed. The main penitentiary is located at Nashville, and a number of convicts are engaged there now on one of the new buildings. It is desirable to train the dogs on human quarry, so that when they are actually used to trail an escaping prisoner their work may be more efficient. For a dollar or two it is easy to discover some healthy negro convict who would rather run ahead of the dogs than to work all day. He is given a couple of hours' start, and the dogs are then put on the trail. They never fail to put their man up a tree, and a man never fails to climb a tree when he sees them coming. Mr. Callender says he once saw a convict who had been a little slow, lazy, ahead of the dogs, get chased for nearly a quarter of a mile at hot speed across the gun club grounds to the nearest tree, which was not a very big one at that. The foxhounds would certainly pull down their man if he did not take to a tree. In this way the dogs are kept trained for the frequent use needful in the camps, where the convicts are continually jumping their guards and escaping into the swamps and thickets, where they could never be recovered by any other means. I am not quite clear that I would be used to this sort of hunting at first, though I recall that I was once called upon to help chase a horse thief, and have a vague recollection that we caught him.

Mr. Callender also asks me to share in another singular sport, that of shooting wild hogs, of which there are many not far from Nashville. These are the domestic hogs gone wild, but they make a rather dangerous game. Mr. Callender uses for them a .25-30 rifle with nitro load, which he has found very effective. He killed a number last spring.

I recall that there is a place in the Mississippi bottoms near Dubuque, Ia., where wild hogs are often hunted. That is an open country, where riding is possible, and the chase is on horseback after dogs. I do not know whether or not the spear could be used here, but I think it would be a lot of fun with the dogs and rifle. There are numbers of wild hogs in the swamps of the Mississippi Delta, and the veteran, Bob Bobo, always said that they were the most dangerous animal that ran in the canebrakes.

Mr. Ben Bush, of Kalamazoo, Mich., tells me a fairy story, which he, however, declares is not a fairy story, about a new sort of fish that they have in a lake called Birch Lake, in the Michigan southern peninsula. He says that they have the large and the small mouth bass, and also a red-eyed slimmish bass whose meat is red or salmon color. They call the latter the "salmon-bass." Is it possible that I am to take upon my string the salmon-bass as well as the fantail deer and pine nut bear?

Doves and Sangaree.

Mr. T. A. Divine, of Memphis, has finally kept his promise of coming to Chicago, and has returned to his home. Dog owners of this city have not yet had time to check up their losses.

Mr. Divine says that the dove shooting around Memphis is phenomenal this year. "The way to do," said he, "is to find a wheat field where the birds are feeding. Then you find a nice shady tree where the breeze is good, and you sit there in a chair. You have your shell box open on one side of you, and on the other you have a nice big bucket of sangaree, not too strong and not too weak. Of course you have a fan. Then you have a little nigger boy to run out and pick up your dead birds for you. It doesn't take him long to learn to keep down low when the birds are coming in over him, and sometimes he will bring four or five birds in at once. This is the way we shoot doves in our country, and it is my notion of the way all shooting ought to be done."

This idea certainly should appeal to Chicago shooters during this torrid week.

The other day I discovered something which my informant told me I ought to have learned long ago in my camping experience. We were boiling a pot of coffee over an open fire, and of course the coffee boiled over, grounds and all. My companion laid two or three twigs across the foaming grounds on the top of the coffee pot, and the latter subsided and ceased to spill over. "Didn't you ever know that?" said he.

I have recently found that chiggers, chigres or jiggers are to be found in Northern woods as well as in the Southern country. I long ago discovered in the Indian nations that bacon rind was a speedy remedy for these invisible little red spiders that bore into the skin and raise bumps on a fellow.

It was Hungry.

Mr. J. S. Dumser, of Elgin, Ill., is an old-time contributor to Forest and Stream, and wrote for the paper twenty years ago. During a pleasant call at this office this week Mr. Dumser, who is a member of the Leather-Stocking Club, who are sworn to moderation in fish stories, told me of a recent incident that happened on the Fox River. Two friends were fishing for bass, with soft crawfish for bait. One had a bite and the fish carried off his line, but he did not strike it, thinking it had dropped the bait. Some moments later the second man had a bite and hooked his fish. Pulling it out, it was discovered that the fish had the first angler's hook swallowed as well as that of the second man. It was evidently hungry and knew when it didn't have enough. This is further argument for the belief in the insensibility to pain possessed by fishes. The environment which makes it necessary to swallow perch and bullheads ought to be equal to a fish hook or two now and then. E. Hough.

1206 Boyce Building, Chicago.

A Three-Barreled Hammerless.

Why do not some gun manufacturers put on the market a hammerless three-barreled gun, two barrels shot and the third rifle? No sportsman goes to the woods that he does not want the three barrels, also never a-duck-hunting that he doesn't need the three barrels. A. F. Nims.

From a Shaky Perch.

PLACE: a railroad in the pine forest, 245 miles north of Milwaukee, Wisconsin. TIME: evening, October, '94. A deer trail leading from the railroad over a burnt ridge separating a cedar swamp from a marsh. Golden rod waist high covering the uneven ground.

The trail leads under the body and between the limbs of a small spruce, which at this point is about 6in. in diameter and about 5ft. from the ground, having been turned out of root and left resting on the larger branches. I clamber on to this unsteady trunk and, balancing myself, inspect the forest beyond. Presently I see a weed shake about 100yds. distant. All is quiet for some seconds, then more agitation among the weeds; something is moving—a deer probably. It is difficult to keep my position. One small limb near the upper part of the trunk suffices to steady me somewhat by placing one foot partially on it, and I watch the weeds intently.

There it is, a deer's head just showing above the golden rod. My! but this is a shaky perch to shoot a rifle from. Bang! goes my .38 Winchester, and out comes the deer jumping wildly toward me, then turning to the right, tries to recover the woods. My gun speaks again, but on flies the deer over logs and through hollows, making a very uncertain mark. A third shot at about an even 100yds. and I saw my ball strike amidships, and the beautiful creature lay dead in the edge of the cover it strove to reach. I saw it was a fawn not yet full grown, and naturally looked back over the weed patch to see if it had a mate. Yes, the weeds were shaking; up comes another head, followed by the report of my rifle. Here he comes! bounding off this time to the right of me, and causing me to twist my body into a rope, for I could not change the position of my feet without falling. My! what uneven ground; now above my gun, now below it and hidden in the weeds. Two misses that serve only to locate his danger and accelerate his speed, and then he comes out on open ground and shows his side in an effort to return to the swamp over the ridge. This is truly a race for life, and the issue is doubtful.

To the southwest lies his mate. My toes point to the northwest, while he is northeast of me. Just over the narrow ridge is cover and safety. But I see a spot just back of his shoulder as my rifle speaks again, and I found him some 50ft. beyond. My first shot went under the skin at the base of the jaw, while the second, fourth, fifth and sixth were misses. Seven shots for two deer; but considering the conditions it was one of my experiences I will long remember.

G. W. CUNNINGHAM.

The Maine Capercailzie.

AUGUSTA, Aug. 15.—*Editor Forest and Stream:* Inclosed find a note from our daily paper: "All efforts to trace the capercailzie and black game imported into Aroostook from Old Sweden last spring have proved in vain. Now and then some one spreads the rumor that they have been heard or seen. The last report is by a Swede who asserts that he saw and heard them in Ontario, Can. If they have gone to the pine forests of that section we will never see them again in Maine, says the New Sweden correspondent of the Aroostook *Republican*."

It is also reported that there is a herd of over 100 caribou on Mt. Katahdin, and several people visiting there have seen them all together. One man succeeded in getting a photograph of them, and then lost camera and plates by capsizing his canoe.

CUSHNOC.

It Educates.

PHILADELPHIA, Aug. 14.—*Editor Forest and Stream:* I feel as if I must write and tell you how much I appreciate your valuable paper. The FOREST AND STREAM is the most interesting paper I ever read, and I am always on hand Thursday at the Reading Railroad depot to get a copy every week. If all hunters pretending to be sportsmen would read its columns we would soon be rid of the game hogs that shoot and fish for quantities and not sport.

C. A. Y.

Game in Wayne County, Pa.

DYBERRY, Pa., Aug. 7.—Trout were scarce this spring on account of dry weather last fall and in May this year. We caught a small pailful (dressed) the last day of the season; water very low then and the fish wild and shy. It is too early to look for game yet; woodcock scarce; some broods of young partridges (ruffed grouse) reported; very few squirrels seen yet.

G. M. D.

The Birds in Iowa.

BRIGHTON, Ia.—In this locality quail are abundant; more seen than for years before. Prairie chickens also are doing fine, and a great many are reported where they breed. Squirrels are found without number and rabbits are too numerous to mention.

SINGLE SHOT.

Currituck Bay Birds.

WE know of a party going from New York to Currituck this week for bay bird shooting, in which there is room for another person; and we believe this to be an excellent opportunity for one who can take advantage of it.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

VIII.—Col. Charles H. Raymond.

THE only fishing companion of earliest boyhood with whom I have kept in touch throughout life, and who is living to-day, is the subject of this sketch. He was born in Albany, N. Y., in January, 1834, and is near my own age. He frequently visited me across the river, and we hunted turtles in the creeks from the red mill to Quackendary Hollow—pond turtles, snapping turtles and box turtles—and the point was to collect as many as possible and try to train them to race. We fished a little once in a while, but to Raymond it was too slow and lacked the excitement of grabbing turtles, and this was characteristic of his life throughout. As a fisherman pure and simple he would never have achieved fame. He lacked that quality of patience which is not strained, but droppeth like the gentle worm overboard when it is the last in the bait box. I cared little to fish with him because of this lack of patience. He was of the class who say, "Yes, I like to fish if they bite fast." But he was a born hunter, wing, rifle shot and "bird-dog" man, and took to setters as ducks go to a mill pond.

We would watch old John Chase lift his fyke nets in the creek and he would give us the turtles that he caught. We would stroll down the Greenbush bank, past old Fort Cralo, where I went to school, and watch the sturgeon jump in the river. Then a big one would jump every few minutes, now there are few, if any, in the Hudson. We went back of the nut orchard and drank the strong sulphur water from Harrowgate Spring, which we often talk of to-day. It is singular that we never went shooting together, perhaps because his ideas of sportsmanship were

COL. CHARLES H. RAYMOND.

higher than mine, and he could go to more distant and better places than I; but whatever the reason, we often talked of shooting, but never shot in company, yet I kept track of him and of his shooting trips in various parts of the country.

While still a small boy, too small to carry the smallest arms, he followed afield such sportsmen as the late Dr. Judson and his pupil Alexander Bullock, of West Sandlake, Rensselaer county, N. Y., in admiration of their skillful handling of the Doctor's slashing English setters, of which I heard much at that time. The masterful way in which those adepts in the art of wing shooting grassed the plump brown woodcock, which they flushed in front of their dogs in the rich coverts that lined the banks of the Wynantskill, taught him lessons in that "deliberate promptitude," so dear to Frank Forrester, that have never been forgotten. As he grew older he was permitted to accompany these sportsmen and shoot with them, and I heard a great deal of these trips after I became his school-mate at Prof. Anthony's, with the late Major George S. Dawson, the subject of sketch No. VI. of this series.

The first field dog that young Raymond owned was a setter bred by Doctor Judson, called Prince, a very good dog for a boy because he knew the ways of the birds, and, as I remember, had a way as well as a will of his own. His next, and a rare good one it grew to be, was a pointer from my Nell, who was described in the article on Port Tyler as a pointer whose father was a setter. She was stolen from me and recovered by my father after I left Albany, and he bred her to the famous old Pumpelly pointer of Albany and gave the choice of the litter to his nephew, young Raymond, who named him Don and trained him to a perfection that was rare in those days, took him to Michigan and shot over him to the surprise of the shooters there, who had never seen a field dog work on feathered game and had no experience of wing shooting. These things to hear I, like Desdemona, would seriously incline in after years and the fame of my Nell and her progeny seemed partly mine. Young Raymond gave Don to his friend Harry Palmer in 1856, and shot over him again two years later. After Mr. Palmer's death Don was sold at auction for $50, a very high price for a bird dog in Michigan at that time. I had given Nell such training as she had. My boyish knowledge of dog training must have been crude, although I did not suspect it at the time, for I had read Youatt, Frank Forrester and other authors, and had seen some bird dogs work, and thought, boy-like, that I knew it all; but Nell was not broken to suit the fastidious taste of Master Raymond. He bred her again to the Pumpelly pointer and one of the litter was a beautifully coated liver-colored setter, the first one in four litters that showed the blood of her sire, James Bleecker's well-known setter. This puppy, Fifine, Mr. Raymond gave to Monsieur Pierre Delpit, his fencing master, in 1859.

It was in Jackson county, Michigan, where Mr. Raymond and Don surprised the natives, and the woodcock and game of all kinds abounded there. Mr. R. learned to track the deer amid the oak openings, through the mossy swamps around Vineyard Lake and along the windings of Raisin River. Here the early lessons of old "Uncle Henry" Harris, the famous hunter of Lake George, who taught the boy to "shute rifil," found their academy of graduation, and thereafter, so long as eyes held their own, Charles could look with confidence along the sights of a rifle at moving game. We had drifted far apart until my return in 1860 from a six years' tramp, and we no more lured the sunfish from the creeks, nor held disputes over the species, age or other things appertaining to turtles and tortoises. We left the frogs to be stoned by younger boys and contented ourselves with reminiscences of our mighty deeds, the only difference of opinion, then and to-day, being the question which of us it was that attempted to jump a stream and changed his mind when halfway across and stuck in the mud. I still believe it was Charles.

In the meantime he had undertaken long journeyings abroad, and save a chamois hunt in Switzerland, with its climbing, sliding, crevass leaping and glacier scrambling, there was no shooting for two years. After wandering through Germany and Italy, living on foot for months along the valleys and on the mountains of Switzerland, he went back to France and made his home in the Latin Quarter of Paris, along about in Trilby's time; and if he failed to meet Little Billee I know by what he has told me that he must have been on friendly terms with Zoo Zou and the Laird, for he knew all the pretty songs mentioned, or hinted at, in Mr. Du Maurier's truthful recital of life "in the Quarter," and from conversation with him within the year I gained the impression that he even knows the fourth and expurgated verse of *Au clair de la lune*. Be that as it may, he returned to his native land with the ripened experience of a man of the world and a mind well stored not only with the literature of various countries, but enriched by that contact with the people of those lands which only travel afoot can give.

After his return the Insurance Department of the State of New York was being organized by the Hon. William Barnes, superintendent. Mr. Raymond was appointed to a clerkship in that office, from which he rose to succeed the Hon. James W. Husted as deputy superintendent of the department. While thus engaged he became a member of the Albany Zouave Cadets, a fine body of citizen soldiers which was afterward merged into the Tenth Regiment New York State National Guard, as Company A. Then came the war, when men left the farm, the store and the workshop to hasten to preserve the Union. The Tenth Regiment volunteered, was recruited to the full standard and mustered into the U. S. service as the 177th N. Y. Volunteers, and on its rolls was "Charles H. Raymond, First Lieutenant, Company A." The regiment was assigned to the Department of the Gulf, under General N. P. Banks. Just before the siege of Port Hudson he was appointed Aid-de-Camp on the staff of General F. S. Nickerson and later was made Assistant Adjutant-General on the brigade staff.

All through that weary siege, lying in the trenches in a swampy country which filled the hospitals with miasmatic patients, Col. Raymond was at his post of duty, even when, as his comrade, Col. David A. Teller, told me last month, he had been positively ordered to the hospital, and in the first assault on the works, May 27, 1863, was again at his post, although hardly able to stand. Looking over one of his war time letters this sentence is found: "This campaigning with field men and field guns, but without field dogs; *Inter arma silent canes*, which being interpreted means that when men go afield to shoot each other, pointers are no longer to the point, and setters get a set-back. These are not the dogs of war."

While in the field Col. Raymond could not entirely sink the sportsman in the soldier, for in writing me of the second assault on Port Hudson he said: "You cannot think how sad and strange sounded the whistling of the quail in the fields over which our brigade charged on that fateful June 14, and how that weird whistle seemed to exult over men who with empty guns were rushing forward to glory and the grave." A little more than a year ago he again visited that battlefield; again heard the whistling of the merry Bob Whites, descendants of those birds of 1863, and received from the proprietor of the plantation, the son of the owner at the time of the battle, a cordial invitation to come down when the season opened and shoot in peace over the field where his men had shot in war some thirty years before. Verily, the whirligig of time brings wondrous changes, as well as revenges!

With the return of peace the colonel went back to his former position in the Insurance Department of the State, and to the dogs. He bred a good and serviceable line of setters from the native strains of Mr. Truax, of Albany, N. Y., and of Gen. William J. Sewell, of Cape May; Col. E. M. Quimby, of Morristown, and Mr. Theodore Morford, of Newton, all in the sporting State of New Jersey. With these dogs he established the kennels of Fox Farm, near Morristown, N. J.

In the early '70s Mr. Raymond entered into partnership with Mr. John A. Little, the General Agent of the Mutual Life Insurance Company for New York City. Later on, when Mr. Little retired from business, Mr. R. assumed sole charge of the Mutual Life's Metropolitan Agency, which includes Long Island and Staten Island, a position which he retains to-day. In 1890 he was elected to the presidency of the National Association of Life Underwriters, and few men are wider known or have more warm personal friends than the genial and cultured gentleman who is the subject of this sketch, of whom a writer once said: "The fine and distinctive personality of Mr. Raymond is what makes him what he is. We might sweep away all business details, and all that men know and value in him would remain ineradicably stamped upon the memory and embalmed in the affections of those who call him friend. A joyous temperament, luminous intellect, almost inerrant sagacity, forceful initiative, womanly tenderness, brilliancy, wit, cour-

age and generosity were blended in the alembic from which his nature was evolved. Learned in the literature of books and in the lore of field sports and the natural kingdom; a poet, a sportsman, a soldier and a mathematician; suggestive, inventive, steadfast and true, such is the man as he is known to the editor of this journal and to those who know him better." As the editor of the *Insurance Times* has described Col. Raymond so much better than I could, and in fewer words, I am content to quote him and not to attempt to improve on his concise and truthful description.

In 1874 Mr. Edward Laverack, of Shropshire, England, offered for sale two of his most famous setters, Pride of the Border and Fairy. These were sought for by several sportsmen both here and abroad, and after some correspondence their breeder decided to sell them to Col. Raymond, who at once arranged for their importation and transportation to Fox Farm. This was the first pair of that renowned and highly bred strain of setters sent from Mr. Laverack's kennels to America, and their presence in this country excited much attention among sportsmen and in the sportsmen's press, both here and abroad, in England and on the continent. Fairy was a great beauty and a natural fielder, staunch on the point and at backing, with great pace, fine nose and grand staying qualities. Pride of the Border at first seemed puzzled at both the scent and the habits of our quail and ruffed grouse, but after a short experience on both he showed extraordinary intelligence and brain power in working on his birds and was a most admirable and satisfactory field dog, working on game as closely and knowingly as a man could do if he had a dog's form and faculties. Neither of these Laverack setters retrieved game, but they made a rattling brace on a snipe meadow, backing on sight at any distance, absolutely staunch on point and dropping in good old-fashioned style to wing or shot. They still live in loving memory of many human hearts, and their strain, crossed with the Morford stock, is still carefully bred; its inherited physical and mental qualities and capabilities, the resultants of generations of selection, training and association, making these canines as thorough workers in the field as they are affectionate and intelligent friends and companions at home. They are so human that it is often said of them, "They think themselves folks," and the best in the house, be it window-seat, lounge or hearth rug, is never too good in their own way of taking it for these two comprehensive and comprehending members of the family. Nevertheless, unlike Squire Kayses, famous pointer Lee, of Sussex county, N. J., these setters can't catch fish with hook and line, and if they have occupied much space in this narrative it is because they deserve it. No sketch of Col. Raymond would be complete without an extended notice of this importation of some of the best blooded setters of England and of their having been bred to some of the native stock, for which American lovers of high-class setters will ever be under obligations to Col. Charles H. Raymond.

During the period that the Fox Farm Kennels were in existence it was my fortune to be a guest of the proprietor and to talk bird dog as well as turtles with him, while picking the wing of a partridge at his table. I have long since forgiven him for saying that Nell was imperfectly broken and would not "back a point." Of course she would not back, because she never hunted with another dog until he had her. How could she? That is not just what troubled me. There was an insinuation that at eighteen years old I could not train a bird dog to perfection. That thing tasted sour forty years ago, but to-day it looks as if my cousin Charles may have been right.

It is many years since I have cared to shoot anything except ducks, which come to hand dead. I have grown tender-hearted and say, with Iago, "Though in the trade of war I have slain men," yet I have cried over a doe whose fore-shoulders I had broken, and refused to shoot more when my retriever brought a live quail to be killed by hand. Therefore fishing came to be the more enjoyable sport, because there was no regret when the lower form of life was taken, no keen suffering because of a lower nervous system, but there is always a latent interest in any kind of sport in which a man has once engaged. To prove this it is only necessary to point to the fact that Col. Raymond still has a faint liking for fishing. Not for the kind which we had in boyhood, for it is possible that a pond full of painted and spotted tortoises, or a pool full of frogs with an assortment of stones at hand, would hardly be attractive to him to-day. He is *blasé* on turtles, frogs and sunfish, and needs more exciting game and a broader field. He fishes occasionally, incidentally, as it were, when nothing better offers in the way of sport. Every June he visits, as a guest, Camp Albany on the Restigouche River, and there he occasionally casts for, and even occasionally lands, a fine salmon; but I fancy he does this in a perfunctory way, because there is nothing else to be done. How I would like to stand on the bank and criticise his fly-casting, and thereby get revenge for his remarks on the training of Nell!

The owners of Camp Albany are Messrs. Dudley Olcutt and Abram Lansing, of Albany, N. Y., two skilled and accomplished salmon anglers, learned in all the intricate lore of that grand art; but it can hardly be possible that Col. Raymond, lacking as he is in that virtue of patience which alone bears good results to the angler, can profit by their precepts and example, yet he occasionally sends a fine salmon to a friend, and as Col. Olcutt and Mr. Lansing both say that he actually catches them, I am certain that he does; and the fact that there are no bullet holes in them proves that his Jock-Scott, silver-doctor, or other combination of hair, fur, feathers and steel can be cast by my friend with occasional effect.

Later, in November, and on the ducking shore it is different. Then the gallant colonel is himself again, and no doubt returns the compliment to his friends of Camp Albany, and sets them a pace which may worry them to follow. Shooting from a blind, over decoys, that truly presidential sport, the great delight of the sportsman of or past middle age, when the long tramp over hill and through marsh after pointer or setter seems now to require more exertion than it did in youth, has a fascination for Mr. Raymond, and a better appointed shooting box than his at San Domingo, on the Gunpowder River, I fancy would be hard to find, and few indeed are the places where better sport has been found. But duck shooting, like all other earthly joys, must have its day and fade away. Each year the ducks are fewer and their flights further between, so that ere many more years in their turn shall have flown the canvasbacks and redheads will have gone to join the once countless flocks of passenger pigeons and the innumerable caravans of the bisons, "and the places that knew them," throughout our broad land, from Alaska to Florida, "shall know them no more, forever."

FRED MATHER.

THE McCLOUD RIVER.

SHASTA MOUNTAINS, Cal.—*Editor Forest and Stream:* The principal river of California, the Sacramento, drains a vast scope of country with varied and wonderful resources. The main tributaries of the Sacramento have their sources in the northern and eastern parts of the State, and are fed by the melting snow in the Sierras. Among these tributaries are the McCloud, the Pit, the Feather and the American rivers.

Besides the rivers mentioned there are numerous fine streams that flow from the crystal springs of the Sierras, many of which would be designated and dignified by the name of rivers in most States. In California there are streams from 50 to 100 miles in length known by such names as Clear Creek, North Cow Creek, Old Cow Creek, South Cow Creek, Battle Creek, Deer Creek, Bear Creek and many others less romantic. However the white man may outrank the Indian, even the Digger tribes of California, in the refinements of civilization, he is not noted for his taste in naming the streams and other natural provisions in this State. I shall refer to at least one specific instance in this paper.

Of the streams mentioned all of them are notorious for their trout, either their entire length or in their upper waters. Aside from trout, however, and the periodical run of salmon the fine streams of the State and the Pacific coast are notably scantily supplied with food fishes. The Sacramento, adapted as it is to most all kinds of freshwater fish, had but the trout, a kind of riffle pike, the sturgeon and the sucker. The alleged propagators of food fishes, the Fish Commissioners, took the matter in hand some years ago. They supplied the stream with carp and catfish, and wherever they got such worthless and prolific varieties is one of the problems no one seems able to solve. At present the main Sacramento is swarming with carp and catfish. They are taken by boatloads and fed to hogs and used as fertilizers. Neither of them are game fish or fit for the table except as a last resort in city restaurants. In the winter, when the river overflows into sloughs and ponds, these fish go out to browse in the fields along the river, and it is a fact that they are eating up the grass and starving out the wild ducks and geese.

The carp and catfish have not as yet reached Mount Shasta and the higher Sierras to browse on the mountain sides and starve out sheep, cattle and deer; but they are getting up well into the cañons and cold water, and it is believed they are destroying the trout and salmon spawn. I was told recently that black bass have been planted in the river and that they will destroy the carp. It is my opinion that the bass have been given a huge contract, and that they will have to be constantly reinforced. Even then I think I would bet on the carp surviving the bass.

I intended to devote this paper to the northern tributaries of the Sacramento, notably those that are now designated as the Sacramento, McCloud and Pit rivers. The three streams were in our early maps called the East, Middle and West forks of the Sacramento. Now the West Fork is known as the Sacramento proper, the Middle Fork the McCloud, and the East Branch the Pit. The McCloud and the Pit join about twenty miles from the Sacramento, and the two combined make much the larger stream.

Following their windings, the three streams above their confluence are each nearly 100 miles in length, flow chiefly through broken and mountainous country, and are splendidly adapted to and are well supplied with trout, salmon trout and (in season) with salmon. Of the trout there are several kinds and every size ranging under 5-pounders.

The Sacramento or West Fork is most accessible, the California & Oregon Railroad having numerous stations along its course. The upper waters of the McCloud and Pit are reached by wagon road, the easiest route being twenty miles from Redding. Probably the fishing is best in the McCloud, as it receives the least attention. This stream was named by the Indians Winnemim (Clear Water), and that is, in the opinion of those least dull or prosaic, the most significant, graceful and appropriate name. Ross McCloud was an early mountaineer, and doubtless worthy of remembrance; but why, after usurping their territory, should we not permit a few Indian names to survive, especially when as applicable and beautiful as Winnemim?

About twenty-five years ago, or in 1871, the Government established a trout hatchery on the Winnemim (or St. Cloud), and later a salmon hatchery. Some years ago the trout hatchery was abandoned, having fulfilled its mission, and the State having gone into the business on the Sacramento. Now only salmon eggs are taken on the Winnemim.

I visited this hatchery or, as it is commonly called, the fishery—or Baird—the latter being the post office name, about the middle of July. The fishery is located in the cañon of the river, surrounded by rugged mountain scenery. The station consists of a store, boardinghouse, the hatching houses and the residence of the superintendent, Mr. Livingston Stone. Mr. Stone has been in charge for many years. The store is supplied with the necessaries of life, among them being fishing tackle adapted to the stream. The boardinghouse is ample for the accommodation of guests and is at present in charge of Mrs. Derby, who thoroughly understands the science of fixing up trout and salmon for her table.

The salmon reach the fishery early in the spring, while the water is yet running high, and they keep coming up throughout the summer. About the first of July the crib dam is put in the river. This dam extends entirely across the river and is made of slats with interstices 1½in. These slats are made in sections about 8ft. wide, so that they can be removed during high water. About the middle of the stream a trap, also made of slats 1½in. square, is placed. This trap is about 16ft. square and is let down into the water 12 or 16in. In its lower side there is a A-shaped trap door through which the salmon enter going up stream, and then they find themselves caged.

When the writer was there only a few fish were being taken, for table use, as the eggs were not yet mature for hatching purposes. When the trap was left open salmon were constantly crowding into it and the fishery people, after selecting those they wanted, put the others back into the river. Their manner of doing this is open to criticism.

The trap often contained forty or fifty fish, ranging in weight from those of 2 or 3lbs. to those of 40 or 50lbs. weight. The male fish were taken to supply the fishery or an occasional visitor, and the females were scooped up in a hand net, like a landing net, and thrown over the dam. The immense fish floundered and struggled, often bruising and mangling themselves in their struggles in the trap and when taken up in the nets. They were frequently tumbled out over the dam to fall upon rocks, and otherwise roughly used. It would seem to be a simple matter to release them from the trap in some easier and more humane manner.

The salmon, however, are perhaps handled as considerately as they handle themselves. They are constantly jumping and floundering about in the stream upon rocky riffles and other obstructions. They leap over the dam occasionally, and to do this they must rise about 6ft. and flounder over the planks and cribs 6 or 8ft. more. Even as early as this in the season many were bruised, torn and cut, and now and then could be seen a dead one.

When these wonderful fish reach the head tributaries of the Sacramento they are 300 to 400 miles from their home, the ocean. They have had to pass the muddy waters of the lower Sacramento, dodge the many seines there, climb for many miles up rocky cañons, where the waters are white with spray and foam, with their incessant thunder upon the great broken fragments of mountains, huge boulders, and sharp and jagged ledges of quartz and slate. No wonder some of them are bruised and cut.

The foreman of the fishery informed me that it is the belief there that very few if any of the salmon return to the sea. He said they could judge very nearly by the fact that of the thousands known to be above the dam few of them came down stream alive. Late in the summer the river is lined with the dead fish, and the few that come down stream again seem to be exhausted and dying. If it is true that the salmon do not return to the sea, then they must spawn but once, and that function is the fulfilment of their mission and the climax of their lives.

At the fishery they begin to take the eggs or spawn early in August. When this is done in conjunction with the trap in the dam, a large seine is used. The seine is drawn immediately below the dam, and most of the spawning fish are secured by that means. A number of native Indians are employed in the taking and handling of the fish.

A large proportion of the spawn taken is sent abroad to other States, and some to foreign countries. The State hatchery takes many of the eggs from this one. Last season the product of the hatchery was 600,000 young salmon. The foreman stated that the eggs were hatched in the hatching houses and kept until the water became too warm to keep them longer. They were then liberated in the river.

It seemed to me that there should be facilities here to regulate the water and keep it at the proper temperature as long as desired. It would also seem that 600,000 young fish was a comparatively small number for a season's product. Indeed, Uncle Sam does not evidently bestow the attention and support here that so important an establishment should receive.

The McCloud, or Winnemim, is doubtless one of the favorite streams of the salmon, and it is one of the few on the Pacific Coast that are likely to remain unmolested, unobstructed and unpolluted. It seems in every natural advantage peculiarly adapted to the propagation of this valuable fish, and, upon the principle that what is worth doing is worth doing well, it would seem that such an establishment conducted by this Government should incubate many times 600,000 salmon eggs.

After the middle of July the Winnemim trout do not rise often to the fly. Earlier the fly-fishing is good. I tried for a couple of hours without a nibble. Then an Indian came along and showed me how to fish to catch some. He had some salted salmon roe for bait, an ordinary small hook and sinker was used, and the hook let to the bottom in the eddies and deep holes. When hooked the trout were game enough, and I got several from 1 to 2lbs., and numerous smaller ones. A young salmon was caught by one of the party on a fly.

Probably there is no finer stream on the coast than this one. While we caught all the trout we had use for in the few hours we fished, we could have enjoyed many days in the locality and along the river, but our time was limited. A few days before our visit the foreman at the fishery, Mr. Seymour Bass, took a trout on a fly-rod which weighed 4lbs. 15oz.

RANSACKER.

ANGLING NOTES.

Another Big Bass.

THE note concerning the capture of a small-mouth black bass from Lake George weighing 7½lbs. had scarcely been written when I was informed of the capture of another big bass of the same species from the same lake. Mr. Edward P. Moore, a market man, tells me that a bass was brought to his market in Lake George to be weighed on the evening of Aug. 10. He weighed the fish himself and the weight was 7lbs. 2oz. When first taken from the water the fish weighed 2oz. more, or 7¼lbs., and it was taken to the market to have the weight confirmed.

So long as any living man can remember no black bass of more than 6½lbs., or thereabouts, in weight has been taken from this lake until this season, when two bass of over 7lbs. each were taken only a few days apart. It may be said that such big fish have always been there, but no one has been fortunate enough to catch them previous to this season. On the other hand, is it not fully as reasonable to say that the greater weight comes from the introduced food?

Lake George contained no crayfish until they were introduced by the State as bass food, and now the lake is well stocked with this crustacean. The introduction of the big lake whitefish which now swarms the lake with the native "frost fish," and are not caught except as bait for lake trout, has doubtless added greatly to the food supply of the so-called game fishes.

Black bass from Lake George, when introduced into other waters where food abounds in unlimited quantities, have grown to 10lbs. in weight, so the food supply must exert an influence upon the fish in the lake which must

not be overlooked when accounting for the great size of the bass in these latter days.

Ouananiche of Lake Champlain.

Since my last note was written about the ouananiche of Lake Champlain an examination was made of one of the streams in Essex county where the fingerling fish have been planted for two years past, and the result is most encouraging. Mr. Walter C. Witherbee, of Port Henry, who has taken an active interest in the efforts to stock the lake with ouananiche, tells me that, in order to find out positively how the fingerlings were doing that were planted last October in one of the streams near where he lives, a minnow net was dipped in a pool below a fall, and at one dip twenty young ouananiche were taken and returned at once to the water. There was no opportunity for protracted examination, as the fish had to go back before they suffered injury; but they appeared to be from 4 or 5in. long to ¼lb. in weight. The net was dipped but once, and that was sufficient to show a fine lot of vigorous, growing young ouananiche, extremely lively and very handsome. The unusual growth must be attributed to an abundance of food, the State having added to the natural supply by planting a large number of fresh-water shrimp in the stream.

Marston's-Fancy.

The more I use the artificial fly called the Marston's-fancy the more it suits my fancy, because it seems to suit the fancy of the fish that I seek with it. I began to use it about eight years ago, as near as I can now recollect, and my faith in it has been growing as the years pass by. The first specimens were sent to me by Mr. Marston and I soon discovered their killing qualities, and in this I was not alone, for friends who tried the flies found them successful trout lures. I tried the flies recently in the Adirondacks upon trout that I am positive never saw their like before, and I found them as killing as I have found them elsewhere.

I was acting as chaperon for my friend, Col. Ashley W. Cole, who was to represent Gov. Morton at the ceremony at John Brown's Farm when the property was turned over to the Fisheries, Game and Forest Commission, and he would persist in asking certain questions at inopportune moments. For instance, he wished to know why I had a rod case as part of my baggage and what use I expected to make of the rods it contained. As we were a party of about thirty people, the Fisheries, Game and Forest Commission, a special legislative committee, with the sergeant-at-arms and other Assembly officials, the Excise Commissioner of the State, who was to deliver the oration at John Brown's grave; Gen. Merritt, who was to preside at the ceremony, and ten guides, and as we were hurrying through the lakes and over the carries from early morning until well into the evening to reach the Brown Farm at a fixed time, the fish rods did seem to be unnecessary for the purpose of catching fish. At Loon Lake we had a little breathing time one day while the Assembly committee was taking testimony in regard to forest lands, and the colonel again asked if the rods were for ornament or for use, and if they had ever been used to take trout. It was quite evident that he would have to try the trout if I was to preserve my reputation as a first-class chaperon to a private secretary. About three miles from the Loon Lake Hotel there is a small trout pond made by throwing a dam across a trout brook, and Mr. Chase provided a carriage to take us to the pond. We started at 4:40 and were back at the hotel at 8:30 with trout enough for the whole party for breakfast. We took a man with us from the hotel, Charles Stickney, to paddle the boat, as the Colonel and I both wished to fish. When I saw the boat I wished that I had left my watch in my room at the hotel, for after a watch has been to the bottom of a pond in its owner's pocket it is not reliable as a time-keeper.

The boat may have been built for three originally, but a great many cold winters and hot summers have not improved its carrying capacity, and it leaked badly, but it was that or nothing. As I was putting a fly on my leader the Colonel wished to know what kind of a fly it was, and I told him a Marston's-fancy. Then he said very flatly that that was what he wanted, as he did not propose to have me take any advantage of him in the matter of flies. He was provided with the desired fly for a stretcher, and very carefully we got into the boat. By virtue of my weight I was in the middle, seated very near the bottom on a piece of fence board, and the Colonel was in one end on what looked like a discarded scrubbing board or the tread of a dog churn. He and the guide were several inches higher than I was, so when the water came in through the leaky boat it would strike me first. When we had made a few casts we forgot all about the boat, for there were plenty of trout in the pond and they rose readily to our flies. We each had three flies on the leader, and almost without exception the trout would take the Marston-fancy first. Several times we caught two trout at a cast, and once Col. Cole hooked and landed three trout at once, one on each of his flies, but we noticed that in case of doubles it was the Marston-fancy that took the first trout. The guide became interested in the killing qualities of the fly and said he had never seen a fly in the Adirondacks that was such a prime favorite with the trout when they had the opportunity to take other flies, which to the human eye looked just as good. Once the Colonel in his ardor of landing trout by the brace turned the boat to the northeast, when it should have been turned to the southwest, and the water came over the gunwale in a small flood. At least he said it was but a little water; as it came above my seat and I was sitting in it, I did not fully agree with his measure of quantity. Except for going ashore three times to turn the water out of the boat it served us well, and I should not perhaps have written disparagingly of it at the outset. We returned to the water a number of trout too small to keep, and told the guide when he thought we had enough for breakfast for our party we would cease fishing, but he did not keep any count of the fish, and finally we guessed we had forty and that would be sufficient. A count developed forty-five fair trout, from 7 to 10in. long. We could have made the number 100 or even more if we had continued to cast our flies, for the trout were rising as eagerly when we left the pond as when we arrived. That night when the Colonel came in and sat on the edge of my bed, as I was going to sleep, he asked no questions about what I brought the rod case for, nor did he mention the rods the next morning before I was fairly awake, and thereafter his questions related to other matters than fishing except when he alluded to fishing in a respectful manner, as becoming a young man when addressing his chaperon.

Fly-Fishing at Night.

It is quite possible that I was over cautious when I hesitated about admitting that I had fished for trout with the fly at night, in the face of the admonition that it was not ethical angling. I have just read a note written by "Halcyon," a well-known Scotch angler and writer who is acknowledged to be way up in G in the ethics of angling, and I begin to feel that I am not a very great offender after all. He says: "I have often been asked in the Leeds *Mercury* how fish can distinguish the different colors in the dark. That I cannot say, but the fact remains that they can, for I have invariably found that the brown and red take the best. The angler ought to be thoroughly well acquainted with the river that he is fishing on before he ventures to wade in the dark. The best place is to select a long, level flat, about 18in. deep, and stick to it. Such a piece of water, say 100yds. in length, is ample for a night's fishing, for if the angler wades carefully he can fish it over and over again without disturbing the fish. There is a kind of fascination about night fishing which must be experienced before it can be realized. Not a sound can be heard except the hoot of an owl or the croak of a nightjar. Suddenly you feel a tug at your line, and the next moment the splash of a trout breaks the silence and so on through the night, until the first gray streaks of dawn appear in the eastern sky, and the birds begin to carol their morning song, and then you count your spoil and wend your homeward way."

Who knows but fly-fishing at night is the poetry of fishing? Certainly Halcyon is inclined to be poetical in describing it, and he tells of a friend whom he invited to fish with him one night, and who became absolutely frightened at the solemn weirdness and stillness of night fishing, and begged to go home.

The most famous trout stream in this State boasted of a fishing club whose members were expert fly-fishers—none better in the land, none more scrupulous about the ethics of fishing, and yet all their fishing, done from their club house after the middle of July, was done at night. That is another admission, and I expect gradnally I will make a full confession and admit that I am fond of night fishing, and that it requires a peculiar skill to be successful at it.

One word about the color of flies. When Owen told me the trout in Chapel Pond would take nothing but a white miller at night I was skeptical, for I have heard the same statement on previous occasions when it was not so. It seems to be generally understood that a trout must have a white fly presented at night if one is to be successful in night fishing. While a light-colored fly is perhaps desirable, I have known trout to take a black fly at night—a fly as black as any made.

As a rule flies that are good during the day will serve the purpose at night on the same water the same season.

Lobsters.

The Fisheries, Game and Forest Commission of the State has finished its lobster work for this year, and as a result 4,414,000 have been hatched and planted in the waters of Richmond, Queens, Suffolk and Westchester counties.

A. N. Cheney.

FLY-FISHING

On the North Shore of Lake Superior.

[*Continued from page 89.*]

The next morning we were delighted to find a southwest wind prevailing and the lake in an excellent condition for the angle, the ripples being just right for casting.

I was satisfied that Ned's success with his red-headed "dusting brush" was more the result of the bushment of his new creation than aught else. It had been quite warm for the past month and the trout during that time had grown somewhat indolent, and it required, I thought, a good-sized morsel to bring them to the surface. I therefore concluded that I would add an extra red feather or two to my red-ibis, as well as puff out the body a little. While engaged at this addition before breakfast, Ned came along and inquired what I was doing with my fly.

"Repairing a broken wing," I answered, in equivocation.

"It seems to me that you are struck on my color."

"Red is a favorite color in fly making."

"Admitted, but don't try to imitate the fly you have so long been cynically snarling at."

"Whenever I desire to copy your wonderfully created gob of scarlet it will be when I am disposed to make a retrograde step in the gentle art."

"Still you are striving by degrees to approximate it. You have already increased the body of your red-ibis and then shingled it with some extra red feathers. Another addition and it will really be a 'dusting brush.'"

Ned's sharp eyes had taken in the annexes I had made, and was fully satisfied that I was trying to grow a red-headed devil myself. Not wishing to have it that way, I made bold denial of it, stating that I had used nothing but feathers, with a little red silk in the enlargement of the body.

"It is an infringement, anyhow, and under the patent laws of Uncle Sam you would be found guilty."

With this he smilingly stalked away and inquired of the boatmen as to the near approach of breakfast. The boys announced it about ready to serve, and then we prepared for the table.

We were both anxious that morning to be afloat delivering our flies, and it was but a short time before we were on the water and seeking an angler's rapture. We went about a mile before we attempted to cast a fly. Ned proposed, when we had reached a favorite spot overlooked by a large and projecting cone of rock, that I mount it with Jo as netter and try for a trout, while he took the boat and Kenosh and skirted along the shore just above it. It was just what I desired, and when I stepped from the craft with Jo and got in position on a little rocky parapet, he says, "We git 'em here."

The first cast brought no response, but the second brought a terrible snapper of the crimson stars that rapidly ran into deep water with my red-ibis. Being confident that he was well hooked, I let the silver spool sing till it reached its pianissimo notes; then I stopped the music and played the tune backward. My notes were not at all agreeable to him, so he started in again for his own melody. I humored him awhile, and then I made him take back tracks toward his foeman of the wizard wand. At last, depressed, broken-hearted and exhausted, he surrendered and was taken to another element, where he had the smiling earth and the roseate sky for his imperial shroud.

Again go out the feathery ambassadors, and again on the second cast a trout followed the dancing flies, but no attempt to devour was made. Jo said I should have halted the flies, but I thought otherwise, for a trout will take no quiet lure. Once more the counterfeits circle and kiss the water, and then an electric gleam of shining jewels greets my vision, while a terrible tumult of the waters fell upon my tympanum; but no trout went racing away with the red object he sought when I tried the sudden twitch of the wrist as a retainer. Disappointed, I immediately lift my flies from the racing ripples, and again drop them with snowflake lightness at the same place from whence the response came. Like an enraged tiger in a jungle sprang a *fontinalis* upon the red-ibis, and this time there was music in the air "as sweet as Apollo's lyre," with a speeding *fontinalis* seeking his liberty and an angler in deep delight. He was a wary warrior and gave me a battle that was long in doubt; but, wearying of his frantic leaps and dashes, in sheer desperation I refused him further line from the rod.

"And then it bends from tip to butt,
While through the pool the ripples cut,
And close and closer yet is shut;
Then upward flies,
As, drawn from his pebbly hold,
Brightly against the forest mold,
Vermilion, silver, black and gold,
The brook trout lies."

Ned, at the termination of this strife, appears with the boat minus a fin, and proposes a trip to Blind River, a mile or two above. I at once acquiesced, and then with my tawny netter clamber over the smooth and weatherbeaten rocks and into the boat, and away for the sparkling river with a blind name, where spangled trout like Indian shafts have flashed. This was one of our old haunts, "where o'er white gravel and the sand the rushing waters foam and glide," and

"Where oft the angler with his fly
Takes the tinted rovers where they lie."

As we progress along the wooded and rocky shores the ragged spurs and retreating ravines stand out to the eye with wonderful distinctness, and the play of sunshine and shade upon the igneous cliffs and trap rock and varied foliage is a "thing of beauty and a joy forever."

We arrive at last at a sandy beach, which lies each side of the stream we seek, and then wonder if the water at the mouth of it will permit our entering with the boat. If not, our trip has been fruitless, for it can only be fished from a boat with any degree of comfort. Landing at the mouth, the boatmen jump ashore, and taking a view of the sinuous channel along its glistening bank ascertain that we can just about get into the river. Again we are afloat, and on using the oars for pushing the boatmen soon have us over the shallows. The pool is but a short distance from the mouth, and the west side of it discloses a sunny stretch, with a few bushes on the margin and one solitary tree which is just opposite the desired waters. Carefully we approach it, and when we are within casting distance Ned, who is in the bow, sends his fiery messenger whizzing through the air, while I, with a longer line, being in the stern, follow suit; but when making my second cast with a still longer thread I fasten to the tree behind me, and then I am set upon by both Ned and the boatman for my awkwardness.

"I cut 'em down next time," says Kenosh with anything but a pleasant smile.

"Release my flies," I replied, in no great good humor, and then the boat neared the shore and the flies freed from the branches.

"Shorten line next time," says the half-breed.

"Push the boat up then and give me a fair field with that red devil."

"All right."

"Well, don't shove too far," says Ned, a little irritated.

Once more we are at the pool, and the "dusting brush" secures the first trout and on the first fall of the flies.

While Ned was playing his captive I motioned to Kenosh to move a little closer, and then I hung one, but he ran into some snags at the bottom and made my line fast, and there it had to remain till Ned had skillfully slaughtered his 3-pound beauty. After that we had to go over to the pool, which serenely reposed in the shade of overhanging trees, and worked around long enough to save my trout and also drive all the rest away.

"A bungling piece of business," says Ned, and he was correct. I was the bungler, and, as defendant in the case, made no pleading, but turning to him I said with a paraphrase of but a single word:

"Wynken, Blynken and Ned one night
Sailed off in a wooden shoe—
Sailed on a river of misty light
Into a sea of dew.
'Where are you going and what do you wish?'
The old man asked the three.
'We have come to fish for the herring fish
That live in the beautiful sea;
Nets of silver and gold have we,'
Said Wynken,
Blynken
And Ned."

"That's delicious," said Ned, forgetting all about my *faux pas*. "Is there not more of it?"

"Yes, three more verses."

"Do you know them?"

"Do I know them? Of course. I would never let such a gem as that escape me. A thousand times have I recited it to juveniles, a thousand times have I gone over it on these shores, and a thousand times more I expect to repeat it. It is evidently the best child poem in the English language, and so declared by Andrew Lang."

"It is a child's poem, is it? Then consider me a child. I could ever live on such beautiful stanzas."

The half-breeds were also eager for it, as Wynken, Blynken and Ned seemed to strike their ear with a pleasing rhythm.

"Come, come," said Ned, growing impatient, "let us have the remainder."

And there amid the wild anarchy of nature, with the note of the wood-robin, the pipe and thrill of the sweet whistler, the luscious gurgle of hidden rills, and the flash and music of merry cascades, and under a sky fretted with golden tints, I stood up in the brave old boat eager to recite the remainder of Eugene Field's masterpiece, with all the tender eloquence I could summon, but without the paraphrase. All eyes were now intent upon me, and even a golden-winged butterfly fluttering over a wild flower and a red-wing swaying on a bulrush also gave me close attention, as if they could realize from its rhythmic rapture.

"Go on," again cried Ned in over-anxiety, and then on catching the spirit of the lovely gem I let my voice in modulated tones ring out on the whispering breeze that stirred the streamlet's ripples as I recited that:

"The old moon laughed and sang a song
As they rocked in the wooden shoe,
And the wind that sped them all night long
Ruffled the waves of dew.
The little stars were the herring fish
That lived in that beautiful sea.
'Now cast your nets wherever you wish,
But never afeared are we—'
So cried the stars to the fishermen three,
Wynken,
Blynken
And Nod.

"All night long their nets they threw
For the fish in the twinkling foam.
Then down from the sky came the wooden shoe
Bringing the fishermen home.
'Twas all so pretty a sail, it seemed
As if it could not be,
And some folks thought 'twas a dream they'd dreamed
Of sailing that beautiful sea.
But I shall name you the fishermen three:
Wynken,
Blynken
And Nod.

"Wynken and Blynken are two little eyes,
And Nod is a little head,
And the wooden shoe that sailed the skies
Is a wee one's trundle-bed;
So shut your eyes while mother sings
Of the wonderful sights that be,
And you shall see the beautiful things
As you rock in the misty sea
Where the old shoe rocked the fishermen three—
Wynken,
Blynken
And Nod."

The trout having all been chased away from the shady pool as stated, we concluded to ascend the stream to its first ripple, and then Kenosh and I as per agreement were to make a detour through the forest to the upper waters, while Ned and Jo waited in the boat or returned to fish the pool again after it had sufficiently rested.

I thought before we started that there was a footpath leading to the pools, and that it would be a delightful walk through the umbrageous forest, but it proved a disappointment, for Kenosh either lost his way or no path existed. We went through the worst tangle imaginable and over steep hills that were fatiguing to climb, and that had much fallen timber which was provocative of emphatic Saxon. At last we struck the stream and found it but little better than a mountain rill, shrunken yet more after the snow had disappeared, but it made up in beauty what it lacked in strength. It is never for a moment at rest, as it moves in white foam at every turn over fallen logs or under moss-grown banks, or over boulders that toss its spray to the four winds and yet fail to arrest its course. It is the busiest of rivulets. When it comes to the point of a plunge through the openings between ledges it is aroused to its utmost passion, and reminds one of Southey's description of how the waters come down from the Lodore.

As we came for trout and not poetic reverie, we began the search; but not one did we raise to the surface or see gleaming in the little rippling shallows. We were both disgusted with the venture and moved a speedy adjournment to the boat. Kenosh recommended returning by the stream, which would result in some wading, but preferring it to the arduous tramp over the hill and down dale, I ordered the advance. It was fully a mile, and very rough and damp walking; but we realized much in the beautiful from the rolling clouds, impending rocks, verdant woods, gentle rills, rushing torrents, and the warbles of birds that lined the banks of the wandering and tinkling brook.

On reaching the boat I was completely worn out, but not so much so as to prevent me from catching the odd trout as we passed our favorite pool, and which gave me the majority of the spoils. I was aggravating enough to remind Ned of it and advised him to retire his "dusting brush" of the flaming hue.

He said it was simply a case of infringement, and declared it the ruination of inventive genius. I was not for argument on the question, and, being victor, allowed him all the privileges of accounting for his defeat. It was the fly maker's day, and, say what he would, he had to grin and endure it.

With my capture of the gamy trout we started for camp, and were well pleased to reach it and the grateful shade.

The afternoon found us in the bay, and the result was the capture of four more fine trout. We had worked incessantly with the flies during the day, and after adding thereto my tramp for trout in the morning, I assure you I sought my bed quite early that night, without any attempt to divert the camp.

The morning disclosed a southeast wind and patches of fog coming and going. A while we would be covered with mist, and then again there would be a mingling of half-exhausted rain clouds and rolling piles of cumuli near the sun, with their deep, though transparent, colors, their wild dashes of gorgeous tertiaries, and jagged breaks of flaming orange and crinkling gold showed me from what studies Rubens colored the "Judgment of Paris" and the "Plague of the Fiery Serpents." The most beautiful in the breaks of fog came a little later, when the sun had withdrawn his fire from a large mass of the lower clouds, which, now being purified, gathered into towering form of priestly vapor, unsulled white, rising high above the murkiness and splendid impurity around the tender golden blue of the upper sky. The most striking peculiarity about it, however, was the seemingly perfect whiteness of the great mass in shade, while the narrow edging of sunshine appeared white again in flame. Such a skyscape frequently reveals itself in such weather, and language is found inadequate to describe its matchless beauty.

We did nothing in a piscatorial way in the morning, but when the afternoon came, with the sky in rosy radiance, we went to Sand River, some six miles below, for a frolic with the adolescents of "mottled sides and shapely mould."

We went along a serrated shore, diversified with thickets of blooming bushes, low-crowned and retiring walls, infinitely varied in form and sculpture, and fringed with ferns and other plants that find anchorage in the narrow ledges and fissures, the result of the warring elements of bygone ages.

A ribbon-like rivulet that comes dancing and foaming over the radiant bows of ragged rocks we found in a little bay hidden among the splintered and recessed rocks, and here we stop and make a cast or two; but nothing comes to the surface, although among the old anglers of this shore it has a reputation of being generously populated with the iridescent beauties. What has been here is of the past, for the lovely little retreat, fit abode for a Naiad, pays no tinted dividends now. This is our second visitation to this concealed brook, and but one baby trout is all we ever captured here.

No further stop is now made till we reach Sand River and draw our boat up on the bright sandy beach at its mouth. From here we all start for an advance up the river. Ned and Jo preferred the shores near the mouth and where the rocks form a sort of barricade, among and around which the current with foamy ripples seeks the sea.

Kenosh and I take to the rocky parapets and pools above, and consequently have the fatiguing work and catch less trout, as it is evident at every toilsome step we take that we are the late comers to the picturesque river.

Kenosh with the agility of a cat goes climbing over the misshapen and declivitous rocks, and through the thick bushes that line the bank, leaving me to follow at will. I finally tire of the painful work, and seating myself upon a commanding parapet above the racing and foaming river, drink in the surrounding landscape, a picture of perfect loveliness rendered lovelier by the bright beams of the refulgent sun. As I gazed below at the frolicking river, waking with its sea-like voice fairy echoes in the forest, I was deeply impressed with what Henry Van Dyke says of a river in his preface to "Little Rivers," and, by the way, a most admirable work. It is so charming, so apropos for the occasion, that I heartily join him in saying that "A river is the most human and companionable of all inanimate things. It has a life, a character, a voice of its own, and is as full of good fellowship as a sugar maple is of sap. It can talk in varied tones, loud or low, and of many subjects grave or gay. Under favorable circumstances it will even make a shift to sing, not in a fashion that can be reduced to notes and set down in black and white on a sheet of paper, but in a vague and refreshing manner and to a wandering air that goes

'Over the hills and far away.'

"For real company and friendship there is nothing outside of the animal kingdom that is comparable to a river.

"It is by a river that I would choose to make love, and to revive old friendships, and to play with the children, and to confess my faults and escape from vain, selfish desires, and to cleanse my mind from all the false and foolish things that mar the joy and peace of living. Like David's hart, I pant for the water brooks, and would follow the advice of Seneca, who says, 'Where a spring rises, or a river flows, there should we build altars and offer sacrifices.'"

Too well do I know the beauties and charms of rivers to not feelingly indorse every line above. It is there I have found the enduring love of the angle, it is there I have drank of the most enrapturing scenery, it is there with frosted locks that I have renewed the vigor of life, it is there with my three score and ten that I now look for anticipated sport, and therefore I say, to slightly paraphrase Longfellow, "The river! the river! a blessing on the river."

Having rested sufficiently and not captured a single trophy, I once more tramp along over the sun-touched rocks that gleamed like burnished steel. Dwarf pines and hemlocks and birch crowd the shore line, and frequently a detour from the river is made necessary as I advance. I finally strike a lovely pool that is almost cut off from the river, and which sleeps in a granite basin overhung by bending bushes and sensitive ferns, as if it were the abode of some lovely sea nymph. Passing down an opposing sea wall of flint, I reach a position on a shelving rock commanding the entire limit of the pool. From here I send out my tiny flies and at last succeed in landing a baby trout that made me blush at its immature size. I was about to return it to its element when it struck me that it was a dish of the innocents we came for. That thought sealed the fate of the little cherub of the rosy cheeks and so the greed of man had a black mark to his discredit. There is nothing like it for a pair, or for triplets, as they say in the great American game, and so my flies rained once more o'er that translucent pool,

"— where the eddies, so pearly white,
Sink away into gloom or wheel into light."

Drop and dance, drag and skitter, with the gnat-like flies till the arm grows weary and then a disgusted angler reels up, turns and faces the rocks, and then ascends the bold and ragged route till he clutches at the roots of some scarlet maple and mounts to the upper terrace that looks upon the flowing river.

We care not for fish, such tiny fish, I mean; and with the little trophy stowed away in my back pocket I saunter back to the boat, drinking in the rapturous beauties of the flower-enameled river, the fragrance of the air, the lovely banks of pearly clouds and the towering and rugged mountains that hem in with their foothills the rushing currents that have worn their way through these scarred and gray rocks that face you at every step.

I felt as I idled along like a royal vagabond of nature's realms, who would ever live with the blue canopy above for his covering, the soft tufts of grass for his couch, the whispering forests, warbling birds and wandering streams for his companions.

How satisfying, how delightful, all this was; but when the romance of wood and river began to fade as I neared the lake and my companions, I felt that I was leaving behind me my very, very dearest friends. Like Jeffries, I ever wanted the things I was parting from—the wild flowers, the yellow hummer and the tinkling brooks.

After a toilsome tramp through tangled bushes and over dismembered rocks I reach the lake and my associates, among whom was Kenosh, who had passed me while I was holding gentle converse with nature.

"What luck?" says Ned, as I approached him.

"A small piece of rainbow," I answered, and then taking the tiny trout from my pocket tossed it on the shining sands at his feet.

"Is that all you caught?"

"No, I caught a heartful of inspiration and a deeper shade of bronze on my furrowed face."

"You must have been napping or idling to return with but a single trout."

"How often have I told you that I cared nothing for this baby trouting."

"What we do with the trout?" now inquired Kenosh, looking at the pretty babe with a sort of pleasurable contempt.

Ned picked it up, and taking in its diminutive dimensions as he critically eyed it, said, with a smile stealing from his lips, "Boys, it is the smallest of the lot of sixteen, and I guess we had better keep it to grease the frying pan or hang it up in camp as a sample of what a gilt-edge fly-tosser can do in river trouting when he is in deep earnest."

"Rather say when he prefers a grand talk with nature in preference to robbing a stream of its ruby-tinted innocents."

With this the playful talk ended and an embarkation ensued which sent us flying over the rippling lake, with the mainsail catching the evening breeze, which was rapidly on the increase.

We had a pleasant sail of the six miles to camp, with the red light of a descending sun shimmering on the sobbing water and giving it a half tone of somberness, while a gleaming background up among the mountain peaks that caught the fullness of the sun shone like smooth and gleaming gold. The night was advancing with flying footsteps, shadows creep out from rocky ramparts, and the myriad air spray of the wind struck the dense woods on the shore and whistled through them as if arousing the nocturnal wanderers of wing and of foot for their night forays.

Reaching our quarters, the boatmen soon serve a meal, and after a rousing fire, for the nights here are always cool, came the story, the song and general pow-wow of matters miscellaneous.

Just before retiring Kenosh showed signs of mental disturbance, and at last relieved himself of the strain by inquiring if we would not tell a hunting story before seeking our blankets.

"You want bear, or snake story, or a fairy romance?" I asked the uneasy half-breed.

"Anything but bear."

"Well, then, what do you say for a deer story?"

"All right, he do."

"Any reservation about it?" asks Ned with a significant smile as he looked at Kenosh, thinking doubtless of the fox and geese story where the half-breed fell into a trap.

"Not a bit. It is an all-round, open-faced and remarkable adventure."

"Let her off then."

"Well, here goes. A friend of mine a few years ago, who was out hunting in the upper peninsula of Michigan with an old-time partner, was going down a steep hill when tracking a bear, saw a deer get up from behind a log and lazily stretch himself. He immediately fired, and when the smoke cleared away there, much to his amazement, stood the deer. Having a double-barreled gun, he pulled up and fired again, as before; when the smoke had wafted away there stood the deer, innocently gazing around. By this time his friend was near and asked what he was shooting at. He beckoned him to approach, and, pointing to the shapely animal, told him that he had shot twice and the deer never moved, and that he should try his luck. The second man shot and the deer dropped. Then the two went down to see their game, and what was their surprise on arriving at the spot to find, instead of one animal, three fine deer. It seemed that they had been sleeping there, and as the first one was shot down, another got up, and so on until the three were killed."

Kenosh gave a long and loud whistle when I had ended and then looking intently at me said:

"He go with the three burnt bears."

"Don't you believe it?"

"Too much shoot, too much deer."

"Well, Kenosh, you asked for a story and you got it."

"It all story. You tell fish talk at home that way?"

"Worse than that, Kenosh," says Ned with a laugh.

"Oh, you both big chief in talk. Half-breed fool sometime, not all the time."

"Then you think I romance?"

"What is a romance?"

"An exaggeration, or, to be more distinct, a flat-footed lie."

"You stretchee that way some."

"All right, Kenosh, no more stories from me then."

"Then we have no—what you call 'ems?"

"Romance."

"Yes, that it; no more romance."

"Well, good night."

"Good night."

Then pale face and bronze face arose and sought their respective tents and soon were in sound slumber, oblivious to all triple slaughter of bear and deer by fire and shot.

Alex. Starbuck.

[To be continued.]

Lake Crescent Trout.

O. O. S. sends us this note from a Washington (State) paper: "Mrs. George E. Mitchell, of Lake Crescent, has landed a 16lb. trout this summer, thus breaking Admiral Beardslee's record of last year with his 11½lb. trout. The season is young yet, and the Philadelphia is now at Port Angeles, and if there is a trout in that matchless lake bigger than 16 to 1, Admiral Beardslee intends getting it on his own hook."

New Jersey Coast Fishing.

ASBURY PARK, N. J., Aug. 14.—Conditions for surf fishing are improving with each day now. The intense heat of the past two weeks, coupled with the very low tides, have held the sport in abeyance. The improved weather and what is known as "harvest moon" tides are welcomed as the forerunners of some results. Bluefish have been plentiful during the past few days, and some excellent catches have been made both at sea and in the bays. Assemblyman Abraham Lower on Tuesday of this week took thirty-eight fine bluefish and eight bonitos trolling at Barnegat Inlet. Never before have menhaden been more plentiful in that body of water, and weakfish as well as the bluefish and bonito find a superabundance of food. The outlook for fishing there is of the best until Oct. 1 at least, and if the weather holds good it may be prolonged until the 10th of that month. September and October are always the best months of the year for fishing direct from the beach if weather is favorable. It is then that the bass, weakfish and bluefish crowd in along the beach shores in quest of mullet and spearing, and are taken in abundance where the pound nets will admit of their so doing. To the angler who intends trying his skill at any of the points mentioned I would say procure shedder crabs for bait in the cities, as never has that commodity been so scarce as the present season, local streams supplying but little and not nearly enough to meet the demand.

The snapper season will soon open now and that will be a signal for a general rush to all points where they resort. Perhaps no branch of angling has received a greater impetus than has been given snapper fishing during the past three years. The reason is obvious and I will have something to say in the near future concerning the methods employed and its delights. LEONARD HULIT.

The Giant and the Beetle.

Editor Forest and Stream:

I was early trained to quote correctly, and to insure this never to make a quotation without first verifying it. This habit possibly makes me sensitive to a misquotation, as I notice in the very pleasant article by Mr. Mather (FOREST AND STREAM, Aug. 8, page 108), as follows: "The smallest worm when trodden under foot feels pang as great as when a giant dies." But the sense of this passage, I take it, is the direct contrary to that given by Mr. Mather. Shakespeare intended to convey the idea that the pangs of death are more in the fear than in the act of it, and that the giant feels it no more than does the poor beetle (not the worm). This seems to be so from the exact quotation, which runs thus:

"The sense of death is most in apprehension,
And the poor beetle that we tread upon
In corporal sufferance finds a pang as great
As when a giant dies."

Does not this convey the idea that in the act of death we humans feel no more than the poor beetle? But that the pang is intellectual and not physical. Physicians agree that at the moment of death, and for some time before, the physical pain is deadened and lost by the exhaustion of the nervous system. Certainly, fishermen know that the sense of pain in fish is so slight that when one escapes from the hook it may be taken at the very next cast. I once caught a large codfish who swallowed a part of his own cheek, which was torn off at the first hooking, and was seized by the fish the instant it fell into the water. H. STEWART.

Boston Fishermen.

MR. RICHARD O. HARDING is back from Mr. D. H. Blanchard's salmon river, the northeast branch of the St. Marguerite. He got into camp Saturday noon. That very afternoon he took a 16lb. salmon. On Monday he beat that record, taking a fish that weighed 26lbs. Tuesday he caught none, but on Wednesday he made the catch of his life, and one that any salmon angler would go far and stay out long to accomplish. He took a salmon weighing 30½lbs. Since that time he has taken one other weighing 17lbs., for up to the time the above information was written he had taken four salmon, weighing unitedly 90lbs. Such is great salmon luck, and there is scarcely an angler in Boston that will not rejoice with Dick, including Mr. D. H. Blanchard, than whom there is not another angler in the world with a truer heart. Mr. Blanchard has long been anxious that Dick should have a streak of salmon success, and now his wish is gratified. Mr. Harding has doubtless caught other salmon since; but at the time of this writing he had not arrived in Boston to tell of his full success. SPECIAL.

Northern Range of Tarpon.

MR. EDWARD VOM HOFE, in the course of a conversation on his favorite game fish, the tarpon, mentioned an interesting fact in regard to its northern range. Thirty years ago, he said, a dead tarpon was washed ashore at Huguenot, Staten Island, on the shores of New York's Lower Bay.

It was discovered by a gentleman named Saulpaugh, a member of the Excelsior Fishing Club, who took several of its scales as mementos. These scales were tacked up on the walls of the club house at Huguenot for many years, and may be there to-day.

At the time of its discovery the fish was unidentified, for tarpon were not then known to the rod fishermen. After one of his Southern fishing trips, however, Mr. Vom Hofe saw the scales and at once recognized them as belonging to the tarpon. According to the Fisheries Industries of the United States tarpon range northward to Cape Cod. J. B. B.

"That reminds me."

A Parlin Pond Stake-Driver.

PARLIN POND, Me., Aug. 10.—The fly-fishing in this section has been very good this year. One of the prettiest catches of the season was taken Friday morning from Parlin Pond, by Prof. James C. Graham, of Massachusetts. In about two hours' fishing he brought in twelve trout. Two of them weighed 3¾lbs. and 2¾lbs. respectively. He had several more weighing from ½lb. to 1½lbs. each. All were taken on a fly. Those fishermen who have visited Grace and Lang ponds have been very successful.

One of the attractions at Parlin this year is a milk-white deer, which occasionally makes its appearance. It was seen on the shore of the pond Friday last. The deer seem to be unusually thick this year. Hardly a day passes without several being seen in the field near the house.

A good story is told at the expense of a Boston gentleman who, with a friend, summered at Parlin Pond last year. The first morning he was here he was awakened at 4 o'clock by a stake-driver down on the shore of the pond. He listened a while and woke up his friend. "George," he said, "Murphy must be a brute to work for." "Why?" asked his friend. "Well, don't you hear his men out cutting wood and it's only 4 o'clock?" His friend knew the noise at once, but only laughed to himself.

The next morning Mr. —— complained to the landlord that he could not sleep after 4 o'clock on account of his men out cutting wood. The landlord was at a loss to know what he meant until some one suggested it might be a stake-driver. "Well," said Mr. ——, "what have you got your men out driving stakes as early as that for?" Everyone burst out laughing, and Mr. —— joined in when he found it was a bird that had disturbed him. But his friend cannot resist the temptation of occasionally reminding him of the stake-driver.

The hunting car owned by Messrs. Busiel, Estes and Richardson, which has been stored here since last fall, has been removed to Jackman, on Moose River. The owners propose to set the body of the car on a boat built for the purpose, and use it as a house-boat.

E. T. MURPHY.

[Stake-driver is a name given to the bittern because of its note, which sounds like the strokes of a mallet on a stake. The bird is also called the bog-bull.]

FIXTURES.

BENCH SHOWS.

Sept. 1 to 4.—Kingston Kennel Club's bench show. H. C. Bates. Cor. Sec'y, Kingston, Ont.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

Sept. 8 to 11.—Binghampton Industrial Exhibition's sixth annual bench show. C. H. Barrett, Supt.

Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.

Sept. 15-18.—Orange County bench show, Newburgh, N. Y. Robt. Johnston, Sec'y.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee Louis Steffen, Sec'y.

Sept. 22 to 25.—Queens County Agricultural Society's bench show, Mineola, L. I. J. Mortimer, Manager, Hempstead, L. I.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y, Manitou, Man.

Sept 7.—Kennedy, Minn.—Coutinental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 19.—Brunswick Fur Club's annual hound trials, Barre, Mass. Bradford S. Turpin, Sec'y.

Oct. 26.—Hempstead, L. I.—Natioonal Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 10.—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Greene County, Pa.—Central Beagle Club's trials. L. O. Seidel, Sec'y.

Nov. 16.—National Fox Hunting Association's third annual trials Bardstown, Ky. F. J. Hagan, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

COURSING.

Sept. 22.—Cheyenne Valley Coursing Club's meeting, Sheldon, S. D, Dr. J. P. Aylen, Pres.

Sept. 29.—Aberdeen Coursing Club's annual meeting, Aberdeen, S. D. Dr. F. W. Haragan, Sec'y.

Oct. 6.—Mitchell Coursing Club's meeting, Mitchell, S. D.

Oct. 21.—Altcar Coursing Club's meeting, Great Bend, Kan. T. W. Bartels, Sec'y.

Oct. 28.—Kenmore Coursing Club's annual meeting, Herrington, Kan. C. A. Robinson, Sec'y.

Continental Trials.

INDIANAPOLIS, Ind., Aug. 9.—*Editor Forest and Stream:* The chicken trials of the Continental Field Trials Club will be run at Kennedy, Minn., according to programme, beginning Monday, Sept. 7. I will start for the trial grounds about Aug. 30 or 31.

I will be pleased to have as many as can go at that time accompany me on the trip.

The club's quail trials will be run about the last week in January at or as near to West Point, Miss., as suitable grounds can be had and satisfactory arrangments made. Entry blanks for the quail Derby will be ready for mailing this week. The entries to the Derby will close Sept. 1 with $10 forfeit and $10 to start, starting fee to be paid at time of drawing. There will be no second forfeit in this Derby. The entries to the All-Age stake will close Oct. 1 with $10 forfeit and $10 to start. The purses in each are $500, divided $200 to first, $150 to second, $100 to third, $50 to fourth.

On my return from the chicken trials I will likely make a trip South, and look at the grounds at Tupelo, Okolona, West Point and one or two other places in the immediate vicinity, and make a selection. I will then notify all by mail who have made entries and will also give the public notice through FOREST AND STREAM.

P. T. MADISON, Sec'y-Treas.

INDIANAPOLIS, Ind., Aug. 10.—*Editor Forest and Stream:* The entry blank naming Mr. S. P. Jones's b., w. and t. English setter for our chicken Derby was pigeonholed by me through mistake, and his name did not appear in the published list. You will confer a favor by giving this publicity: S. P. Jones's b., w. and t. English setter Hurstburn Zip (Tony Boy—Dimple).

P. T. MADISON, Sec'y-Treas.
Continental F. T. Club.

MONONGAHELA FIELD TRIALS.

PITTSBURG, Pa., Aug. 10.—*Editor Forest and Stream:* Inclosed please find the entries for the second annual field trials of the Monongahela Valley Game and Fish Protective Association.

The All-Age Stake closed with nineteen nominations: twelve English setters, six pointers and one Irish setter, an increase of two over last year. The Derby closed with fifteen nominations: ten English setters, three pointers and two Irish setters, an increase of ten over last year.

S. B. CUMMINGS.

Derby Entries.

ENGLISH SETTERS.

ALLIE B.—W. H. Beazell's b., w. and t. bitch, July, 1895 (Whyte B.—Rosa Bevan); breeder, H. S. Bevan.

DOCTOR C.—S. B. Cummings's b., w. and t. dog, May 17, 1895 (Galert C.—Nan C.); breeder, owner.

SLIGO—F. H. Beall's b., w. and t. dog, March, 1895 (Brighton Dick—Galatier); breeder, C. Peebles.

CLIFFORD—F. H. Beall's b., w. and t. dog, March, 1895 (Brighton Dick—Galatier); breeder, C. Peebles.

LORETTA—K. P. Beattie's b., w. and t. bitch, Feb. 18, 1895 (Gladstone's Boy—Rill Ray); breeder, Eldrid Kennels.

DON—G. Mesta's b., w. and t. dog, Aug. 5, 1895 (Wordsley Ben—Amy Robsart); breeder, Harry Northwood.

ROGER'S PRIDE—George Battison's b., w. and t. dog, May 22, 1895 (Roger Boy—Daisy B. II.); breeder, owner.

FANNY ALLEN—Dr. S. W. Hartt's b., w. and t. bitch, June 15, 1895 (Beaconsfield—Bessie); breeder, W. S. Caldwell.

—— —Dr. George Gladden's liv. and w. bitch, June, 1895 (Hoosier Boy—Paterson's Nellie); breeder, Joseph Maiden.

DICK BERWYNE—G. O. Smith's b., w. and t. dog, June 19, 1895 (Bert Noble—Topsy Berwyne); breeder, owner.

IRISH SETTERS.

MOLLIE GIBSON—F. E. White's red bitch (Dakin—Jessie Fremont).

Augusta Show.

AUGUSTA, Ga., Aug. 11.—Please place in your list of bench shows to occur that of the Georgia Poultry and Pet Stock Association, Dec. 8 to 11. John Davidson, Monroe, Mich., will judge. J. W. KILLINGSWORTH, Sec'y.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE HAULING DOG IN CANADA.

Dogs are used as draft animals in the northwest of Canada, on the Labrador coast, and in the vicinity of Quebec. Dog teams are used during winter in the Northwest by the wood Indians and the Hudson Bay Company's men. The detachments of the Northwest Mounted Police also made use of them in the northernmost divisions of the Territory. Butler, in his "Great Lone Land" and "Wild North Land," gives an excellent description of the *huskies* (as the dogs are called by the half-breeds and Indians out there) and of the work done by them.

Along the Labrador coast, where there are few horses, dogs are used as draft animals in winter. In summer all traveling and freighting is done by water. In the former season the mails are carried along the coast by dog teams.

The Labrador dog is really an Esquimau when he is not a Newfoundland or a nondescript, and the Esquimau dog is almost exactly like the *huskie*. It has a pointed nose, sharp, upright ears, long hair and a bushy tail, and looks the picture of his first cousin, the wolf. These Esquimau dogs are very savage, have exceedingly powerful jaws, and will eat anything and snap at everything. So ferocious and destructive are they that the people down there, who are beginning to devote themselves to agriculture more than they did before, under the auspices of the Government of the Province of Quebec, which has spared no pains to promote the development of agricultural interests, have petitioned to have all the Esquimau dogs destroyed which are not required for the mail service, because they kill the cattle and sheep.

They get an immense amount of punishment, but do not seem to mind it, and will snap at and bite their masters whenever they get a chance. In summer they skirmish around for food, eating the offal of the fish and seals caught by their masters, gorging themselves on some stranded whale or porpoise, or they hunt for themselves in the woods. In winter they live on the stores of dried caplin and whale or seal flesh which their masters have kept for the purpose, with the additional treat of the dish water in which the greasy plates have been washed.

Dogs in Labrador are harnessed differently from those in the Northwest. There, where they drive over plains or through open woods, they are harnessed tandem fashion, one in front of the other, and always retain that position. In Labrador each dog is harnessed to the sleigh by a separate thong, so that when the team gets on ice, as it frequently does, going over the bays from point to point to shorten the distance, the dogs spread out like a fan. This does not interfere with the draft, is safer when going over thin ice and a dog can fall out to satisfy the demands of nature or to scratch his fleas without stopping the remainder of the team. These thongs are of various lengths, so that when the team comes to a narrow road between trees the dogs can fall into Indian file, one behind the other. The leading dog always has the longest thong, so as to easily keep ahead of the others. This he is always anxious to do for many reasons. In the first place he is very proud of the position and is always ready to fight all comers for the privilege, and to retain the post he must be top dog in all combats. Then he is generally petted, made much of, better cared for and better fed than the others, and sometimes kept in the house while they have to rough it outside, the result being that he is proportionately hated by all the others, who, in their anxiety to get a snap at him, pull with all their might, while he does the same to keep away from them. This is pretty much like the idea of holding a carrot on a pole in front of a donkey's nose to induce him to go fast.

The harness is all made of sealskin; a broad strap rests on the chest, being retained in position by another over the neck; a piece over the back joins the top of the breast piece to another around the body and from this the thong leads back to the sleigh.

The Labrador sleigh is the regular Esquimau sleigh described in books of Arctic travel, the *kometik*, built of driftwood, fastened by thongs of sealskin, not a nail or piece of iron or steel entering its composition, whereby it is much more elastic and can better resist hard shocks. The runners are made of whale ribs in pieces about 4ft. long by 3in. wide, the total length being about 8ft. These are fastened to the woodwork in a very ingenious manner, small holes are countersunk in the whalebone and through these are passed thin but strong thongs of sealskin or seal sinews, which are lashed tightly. The advantage of whalebone over iron or steel is that it does not get clogged or adhere to wet snow.

The driver, as a rule, runs behind the sleigh when loaded, but when the snow is soft he puts on his snowshoes to beat it down, and the dogs follow in his tracks. When the dogs lag the driver uses the Esquimau dog-whip—a terrible instrument, the mere crack of which makes every dog jump into his collar and settle down to work. It is made entirely of sealskin thongs plaited together till they reach a sharp point. The handle, made of the same material, is about as thick as a man's wrist and only 18in. long, while the lash is from 20 to 30ft. in length. It requires a great deal of practice to wield this properly, and a novice in trying to snap it is just as likely as not to hit himself in the face, generally. It is no wonder that the dogs dread it, for an expert can take a piece of skin off every time.

When a dog is in disgrace for some misbehavior, or if he will not stop fighting, he is hobbled. A thong is put around his neck, the two ends are knotted together, and one of his front paws is passed through it so that he cannot pull it out; thus hobbled he generally limps off on three legs into a corner, where he keeps quiet and shows by the expression of his countenance that he feels the disgrace.

The members of the Laurentides Fish and Game Club, to which I belong, had, like myself, many opportunities of observing the habits, training, etc., of Labrador dogs. One of our guardians, who came from that part of the country, had for many years the contract for driving the mails along the north shore, and owned a fine team. This he was allowed by the club to bring with him, as there was a good deal of hauling to be done from the railway station to the club house, and, moreover, the members proposed to have grand rides over the frozen lakes, and also to be able to bring a larger quantity of supplies with them when they went to the more distant camps to hunt or to fish through the ice, which was allowed in those days. They had no end of fun with these dogs for a while, but in the end they died off and were not replaced. They were found to be a nuisance in summer time, as they would devour the trout caught by the members unless constantly watched, and their barking, which was more like the howling of wolves, frightened the game away. They were always in a state of semi-starvation, owing to the difficulty of keeping them supplied with food, and if anyone was rash enough to hand them a piece of bread or meat instead of throwing it to them, he generally had some trouble in rescuing his hand. It was wonderful to see them open cans of preserved meat with their strong fangs. The leader was a very fine brute, but a very savage one, which no one dared to handle but the guardian, who ruled it more by fear than love, and who was bitten by it pretty badly sometimes.

We had some very amusing experiences with these dogs. On one occasion several of us resolved to go and spend a few days up at the club grounds, seventy miles north of Quebec, to shake the cobwebs out of our heads by walking through the spruce woods on snowshoes, breathing the ozone of the mountain air, driving over the ice on the lakes with the dog team, winding up the day's exertions and amusements by quiet games of cards or chess or by spinning yarns, and eating our meals with an appetite which would have driven a boardinghouse keeper to despair. Charlie B. and I went on the day before as an advance guard to get everything ready. On our arrival at our station on the Lake St. John Railway, we found Hébert, the guardian, with his dog team all decorated for the occasion. The dogs wagged their tails at us, looking forward evidently to the prospect of having some preserved meat cans to open, besides other tidbits. Leaving the guardian and the men we had brought with us to bring on the commissariat supplies, we put on our snowshoes, crossed the Batiscan River and climbed up the gorge leading to the first lake of our main chain, on which the club house is built. As we walked on we took deep breaths of the bracing air whose exhilarating effect it is impossible to describe, and admired the wonderful shapes assumed by the snow as it had fallen on trees and stumps. Having made all our arrangements, we started next day down to the station with the guardian and the dogs to meet our friends. Sitting on the *kometik*, we drove quickly over the road on the ice and also the road through the woods, but when we began to go down hill our troubles began. To keep the sleigh from coming on the dogs Hébert turned himself into a brake, digging his heels into the snow, and did very well until, at a sharp turn, he rolled off and the brake was gone. Of course the sleigh came upon the dogs' heels, and they with a howl rushed madly on to keep ahead of it. We clung on awaiting events, and fairly flew. Suddenly one dog made a spring to one side, got his thong across a stump, upon which he pulled the sleigh, bringing the outfit to an abrupt stop. Charlie and I flew up in the air like stones from a catapult, he landing head first in a snowdrift, I across a fallen tree, fortunately thickly covered with snow, while the dogs, sleigh, stump and thongs were all tangled up, and the biggest dog fight was going on that I had ever seen. Having pulled my friend out by the heels, we watched the fight, unable even to bet on any one dog, they were so much mixed up, and too wise to interfere until the driver came down with his whip and separated and disentangled the dogs. We considered that we had had enough driving down hill for one day, so we walked the remainder of the way, the guardian walking also, and, with a thong fastened to the rear of the sleigh, kept it from overrunning the dogs. We had a very pleasant time, and on the day before we came away had quite an adventure. A thaw had been followed by a frost and the snow covering the ice on the lakes was frozen hard, so four of our party got on the sleigh to have a final drive. They started in great glee, and just as they rounded the first point they saw a fine young caribou buck about 500yds. ahead. As soon as the dogs saw it they gave a yelp like a pack of wolves and started like an arrow from a bow after the caribou, which looked round on hearing the yelp, saw its pursuers and flew over the ice, keeping in the middle of the lake. When the dogs started with a jerk one of the party was thrown off violently and slid a long way on the hard snow before he could pull up, feeling red hot from the friction and gazing wistfully after his fast disappearing comrades, who clung to the sleigh like grim death and enjoyed this novel hunt. Of course there was not the slightest chance of their catching the animal, which, instead of making for the bush on the nearest shore, held on in the middle of the lake right up to the end, where it took to the woods. The impromptu hunters soon found themselves in a difficulty, for it was impossible to stop the dogs, who could not realize that they had a sleigh with passengers behind them. The driver tried in vain to stop them, and there was every probability of broken limbs or necks when they would strike the bush. However, they soon made up their minds and dropped off one by one, rolling over and over in the snow or sliding some distance away, with much damage to their nether garments and much abrasion of the cuticle. Meanwhile the dogs, relieved of the weight, rushed after the deer and, entering the woods, got tangled up among the trees and, as usual on such occasions, wound up with a free fight among themselves. After extricating them the party re-embarked and drove quietly back to the house, where they repaired damages, related their adventure and wrote it down in the club's log-book.

These dogs are very hardy and always sleep outside in the coldest weather. However, they have no objection to heat and always try to get it when they can. Once we were in one of the remote camps and were lying on our bed of boughs, smoking our evening pipe, when one of us got up suddenly with an imprecation, his eyes full of earth. Soon we were all threatened with the same thing and at the same time heard a sound of scratching. Catching up the lantern, we turned out to investigate and found that the sleigh had been placed upright against the side of the log hut and that the dogs had used it as a ladder to climb up into the small space between the sloping roof of gouged troughs and the earth-covered ceiling of small, round logs and birch bark to get near the warm stovepipe, and, in settling down, had caused the earth to fall through the interstices. We sent Hébert to dislodge them and take their ladder away, and next morning we found them all curled up and covered with snow which had fallen during the night.

Crawford Lindsay.

[To be continued.]

Collie Club Specials.

Editor Forest and Stream:

The Toronto premium list contains an error regarding he Collie Club specials offered to Canadian members. In lace of two, as specified in the premium list, I advised Mr. Stone that the Collie Club would, in addition to the two medals open to all members, give a silver medal, confined to Canadian members provided their number was increased to five. Mr. Stone announces two medals, which is wrong. We now have four Canadian members and it will be strange if they do not bestir themselves and get another member in in time.

James Watson, Secretary.

203 Broadway, New York.

POINTS AND FLUSHES.

The matter of the Field Trial Champion Association Stake will not be considered till the meeting of the U. S. F. T. C. is held at Newton, in November next.

From the Manitoba *Free Press* we learn that the regular monthly meeting of the Manitoba Dog Owners' Association was held on the evening of Aug. 3 at the Manitoba Hotel. The meeting was a large and enthusiastic one, and several new members were elected. Some cases of violations of the game laws were reported and considered by the meeting, but as the evidence was not complete nothing could be done. The Association will do everything in its power to see that the game laws are enforced. The committee appointed to consider the advisability of holding amateur field trials this fall submitted their report. After considerable discussion it was decided to hold trials under the auspices of the Association, and Messrs. W. C. Lee, G. B. Borrodaile, R. J. Gallaugher, C. W. Graham and Dr. M. C. Clarke were appointed a committee to make full arrangements in connection therewith. The events will be open only to dogs owned by members of the Association. The trials will be held near Winnipeg early in September.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

G. B. W.—I have an English setter who is subject to fits after running any short distance. I have been told that splitting his tail would cure him of this. Is this so? If not, will you give a cure? Ans. Treat for worms. Syringe the ears out well with warm water. Then use the following lotion twice a day: Citrine oint., 1 drachm; almond oil, 1oz. Mix together. A little to be poured into the ear twice a day. Give 10grs. of chloral hydra in a tablespoonful of water twice a day.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

PLOVER SHOOTING WITH THE BICYCLE.

Lockport, N. Y., Aug. 8.—*Editor Forest and Stream:* As you now have a Wheeling department, I feel at liberty to give my sporting experience in that manner. Four years ago my sons were anxious that I should ride the wheel, so as to be able to get into the country with my gun more readily, and easier than by walking. At that time I had my doubts about its being easier, although I knew it was more speedy, and as I was well on to the three-score line I did not take well to the idea of learning to ride, but two years later I changed my mind and have since been a devotee of the silent steed. A year ago this month I commenced making it my sporting companion.

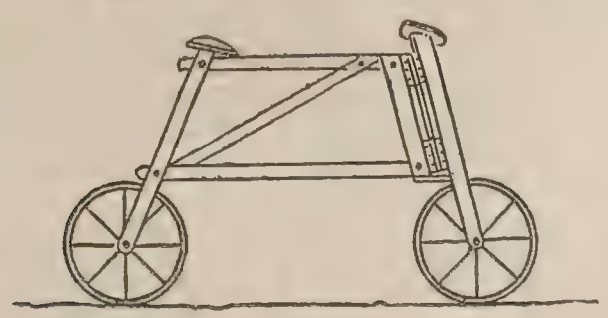
My first experience was in plover shooting, and I found it was much easier to get to and from the fields where for the past thirty years I have done nearly all my shooting of this erratic game bird. These fields are between two and three miles from my home, and I find it an easy matter to strap my gun on the wheel between saddle and pedals, and get there by the time the sun is high enough to show the birds flying over the fields of the newly-sown wheat or close-cropped pasture. I had been out a few times with more or less success (generally less) in the mornings, when I concluded that I would try them toward evening, as sometimes a few of the birds remain through the day.

On my first afternoon visit, after sitting in the fence corner for some time without seeing any birds on the wing, I saw something on the further side of the field that looked like birds on the ground, and after watching a long time I saw a movement, and on going toward them saw three plover some distance apart. As I got within long shooting distance of the nearest one it got up and I shot it, and the others, seeing it drop, also alighted. In walking toward them I passed the one I had shot and might have picked it up, but thought it would be better to leave it until I had flushed the others, though in passing it I noticed that it fluttered a short distance from me. Just then the other two got up and I shot them. On turning to pick up the first bird I was surprised to see it flying away seemingly as well as ever, and before I could get another shell in the gun it was a long way out of range, and finally disappeared from view in the distance. Finding no more birds, I returned home.

After a few more unsuccessful trips to these fields I concluded to leave my gun at home when I next went in that direction, which I did on the Saturday following, and when four miles out on the same road I saw a flock of about thirty plover feeding in a field near the road. After watching them for some time in an unpleasant frame of mind because I had not brought my gun, I concluded that I would go and get it and return and get some of those birds.

Before seeing the birds that road did not seem to be good wheeling, but after I got started for the gun it seemed to be the best road I had ridden for some time, and I was not long in getting home and changing my wheeling suit for shooting clothes and strapping the gun on the wheel. On the return trip the road seemed better than ever, and I was soon back to that field, but did not find the birds where I had left them. In the further corner I saw what I thought were a part of them, and on getting nearer them put up a whole flock and got a double shot into them, securing five birds. On looking at my watch I found it was fifty-five minutes from the time I started for the gun, and that I was about halfway between the third and fourth mile post, and had made pretty good time for a sixty-two-year-old boy.

In another week shooting time will be on again, and I shall again try plover shooting on a bicycle.



J. L. Davison.

The Celerette.

The "celeripedes and "drasines" on which the Frenchmen of 1816 used to wheel are forcibly called to mind by a machine which is beginning to appear on the streets of Paris. According to the *American Wheelman*,

"One of the latest sights in Paris is a long string of men, each astride on a couple of wheels which they push along at a fairly rapid rate, with their feet on the ground. This centipede-looking instrument is an advertisement of the Celerette invented by M. Paul Leclerc, or perhaps it would be better to say resuscitated, for the machine is nothing but a modernized version of the old hobby horse.

"It is made of a rhomboidal framework of wood nailed or bolted together, and running on two small wooden wheels, the steering wheel being carried by a head piece which is hinged on to the fame. A piece of wood is nailed across the top of the steering post, a leather saddle is fixed to the rear, and there you have the Celerette in the simplest form possible. Of course, the inventor does not think

THE CELERETTE.

that this is going to compete with the bicycle, but he claims that it will be found very useful for people learning to ride, or to those who cannot go to the expense of buying an ordinary wheel. Moreover, the fact that it will enable anyone to cover long distances without tiring themselves and at almost infinitesimal cost makes the Celerette a practical instrument, even if it is hardly likely to be taken up by the general body of cyclists.

"It may be used by workmen, children and others who do not mind about sacrificing a little dignity for the sake of the exercise or for going their daily rounds. The Celerette does not weigh more than about 5lbs. and it can be pushed at the rate of eight or twelve miles an hour, which is a speed not to be despised by any means.

"Its cost is less than $2, and if you want one fitted up with pneumatic tired wheels running on ball bearings you have to pay $17, while there are intermediate prices for ordinary rubber tires. Besides its cheapness and lightness the maker claims that it has certain advantages over the bicycle. He says that it is not so tiring as the bicycle, because the legs are not constantly at work, and in going down hill you lift the feet and "thus taste the joys of speed acquired without effort." No doubt the experienced wheeler will smile at the claims held out for the Celerette, but undeniably it is a worthy invention, if only for the fact that everyone can now take exercise and travel at a pretty good speed at the cost of a dollar or two."

BICYCLE QUALITY.

New York, July 24.—*Editor Forest and Stream:* In selecting a bicycle the question of price should always be of secondary consideration. Genuine bargains are extremely rare, and an examination of many of the $39.99 or $49.49 kind of bicycles, which are described as being "strictly high-grade $100 bicycles," proves them to be of the most inferior quality. These wheels in most cases have been built to sell on their appearance, and as the better class of bicycle agencies, who value their reputations, cannot be induced to handle them, they find their way into the hands of firms who deal solely in "bargain wheels," and who conduct their business on the principle that the crop of fools is perennial.

Even among the bicycles with reputations, that honestly sell at catalogue prices, there are some that for one reason or another are little, if any, better than the bargain bicycles. Sometimes a new or even an old firm makes the fatal mistake of cheapening the cost of production as a means of increasing their profit. As a case in point, a wheelman of my acquaintance exchanged his 1895 bicycle for a '96 model of a certain supposedly standard make, selling for $100. The '95 wheel had been eminently satisfactory and had carried the rider some thousands of miles without any repairs whatever. Within two weeks of ordinary service, however, the new wheel broke down completely. One spoke snapped, and on examination the agents who made the exchange acknowledged that there was not a sound spoke in either wheel. The bearings wore so that, to quote the owner, "you could stick a lead pencil in among them." And to cap the climax, an important part of the frame came unbrazed and the whole wheel seemed on the point of disintegration. The rider is a light man, weighing only 120lbs., and though he covers a great deal of ground during the course of a week, his riding is all over smooth roads and his wheel is put to no unusual strain.

Another man, who took his trial trip on Riverside Drive on a wheel he had bought at a bargain price, learned the quality of his mount when eight spokes in the front wheel suddenly snapped, and becoming entangled with the fork brought him to a sudden stop. Fortunately for his neck, the rider was going along very slowly on level ground. Had he been going down hill or with any speed nothing could have saved him from a bad header.

But the two bicycles just mentioned are not representative of the majority of wheels ridden by American cyclists. Poor wheels, except at very low prices, are the exception, else the sport would never have gained its universal popularity. A good wheel, if properly cared for, will run thousands of miles without once going to the repair shops, and the essential parts of such bicycles are practically indestructible. Even in the case of accident these wheels, by reason of their all-round honesty and excellence of constuction, frequently escape without damage. Recently a friend of mine weighing 240lbs., who, by the way, was just learning to ride, lost control of his bicycle on a hill, at the bottom of which, while going at a tremendous gait, he came in contact with a pile of Belgian paving blocks.

As luck would have it, the rider was not seriously injured, but judging from the force of the impact he imagined his wheel would be smashed into its thousand and one original component parts. When he came to examine it, however, he was unable to find that any part was broken. The front wheel was bent backward till it touched the rear wheel, but when the fork was put in a vise and straightened into position the bicycle seemed in as good condition as ever.

A subsequent examination by an expert proved that not a part was broken—a spoke or bearing—and the only suggestion he could offer was the substitution of a new fork, though he said this was not absolutely essential.

All the incidents quoted are actual facts from the personal experience of the writer, who is of the opinion that a good wheel is worth the price asked, while anything else is dear as a gift. There is as much difference in quality between a good bicycle and a poor one built to imitate it as there is between a brass filled case premium offer watch and a $100 Waltham, or as there is between a cheap imported rattletrap gun and a Smith, a Parker or a Lefever. The bargain bicycle stores are in the habit of giving premiums to help sell their wheels, but they have failed to hit on the most appropriate, which would be a life insurance policy.

Quality tells, and the smash in prices this year is the best possible indication of the process that is going on of separating the good wheels from the bad. If you want to buy a bicycle, ask some one in whom you have confidence to name half a dozen of the best makes, and then make your selection from these. Let your personal inclination guide you as to the details of construction, but never buy a wheel that an experienced man will not recommend.

J. A. C.

NOTES.

Mr. J. L. Davison, who goes plover shooting with a bicycle, finds the new way vastly better than the old. He rides seven miles over a poor road, changes his clothes, and shoots five plover. all in less than an hour. We think this is a record—at least for men who are beyond the sixty year mark.

If Mr. Davison had been on foot when he saw the plover in all probability he would never have taken the trouble to go back home for his gun. As it was the plover suffered. The bicycle is only another link in the chain of nineteenth century improvements that is threatening our game with extinction.

The game is brought closer to the shooter—or the shooter to the game, whichever way you choose to put it—and the result is bound to be a lessening of the supply.

One of the notable figures at the annual meets of the Western Massachusetts Fox Club is Benjamin Babb, of Southfield, who for a number of years has hunted foxes with a bicycle.

How he manages to get his wheel over the rough mountain roads and through woodland and swamp is a mystery, but nothing seems to stop him, and when the fox has distanced everything else he frequently finds Mr. Babb and his repeating shotgun waiting for him.

The manner of carrying a gun on a bicycle varies. Mr. Davison says he straps his gun "on the wheel between saddle and pedals," but he does not say whether the gun is in the case or put together, though he probably means the latter. Babb carries his Winchester shotgun strapped to the frame between his legs, with the barrel projecting ahead of his wheel like the bowsprit of a boat. Other sportsmen carry their guns in the cases hung from the shoulder. What is the best way to carry a gun on a bicycle?

Down on Long Island they used to hunt deer on horseback, just as they hunt foxes in other parts of the country. The sportsman carried his gun and endeavored to head the deer at well-known crossings, where he could get a close shot.

Sometimes these chases covered a great many miles in the aggregate, and dogs and horses were completely fagged out before the deer was bagged.

After two years of close season deer will be hunted again on Long Island this fall. The roads through the deer country are fairly good and strategically distributed, and were it not for the number of hunters and the danger of being taken for a deer and shot, no doubt bicycles could be used to advantage, as the horses were in former days.

A little incident will serve to explain to those not familiar with the Long Island deer hunting conditions why it would not be safe to ride a bicycle through the deer country.

Two years ago, just at sunrise, two deer were driven by the dogs around the base of a hill on which were assembled thirty or forty hunters. A perfect cannonade ensued; but the deer were too far off and it was too dark to shoot well, and they escaped the men on the hill, only to fall to the guns of some others, where they attempted to cross the main road a little beyond.

Just as the smoke began to clear away, a hunter in a light colored shooting coat ran directly across the opening where the deer had passed a moment before. The effect was something like a deer bounding in and out among the scrub oaks, and one of the hunters on the hill evidently was deceived by the resemblance; for he raised his rifle, and before he could be stopped had fired several shots at the man, each one as carefully sighted as possible under the conditions. Fortunately homicide did not result; but those who saw the incident took good care after that to move about as little as possible, and not one of them would have run to get a shot at the biggest buck on the island.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Works on Sunday—

Talks business seven days in the week—a "Forest and Stream" Kennel Special advertisement.

Yachting.

As the races for the America's Cup are at least nominally governed by the third deed of gift, it would naturally be supposed that the inventors of the wild rumors of impending challenges launched from time to time would at least take the trouble to read that precious document and conform their stories to it. Such has not been the case, however, with two recent rumors, one to the effect that the Emperor William will challenge next year with Meteor II., and the other that Mr. James Ross, commodore of the Royal St. Lawrence Y. C., intends to build a yacht and challenge in the name of his club. As far as a challenge from the Emperor is concerned, it would be possible only in one way, and that is practically an impossibility. In the last deed, as in the first and second, it is positively stated that the challenging yacht must be constructed in the country to which the challenging club belongs, which makes it impossible for Meteor II. to sail as the representative of the Imperial Y. C. of Germany, the chosen club of the Emperor. Of course he is also a member of the Squadron and other British clubs, and thus might legally secure one of them to back his challenge, or the yacht might be transferred to the nominal ownership of the Earl of Lonsdale, or some other English yachtsman, for the same purpose. Such courses as these, however, are hardly within the bounds of probability; the whole effort of the Emperor has been to build up a system of yachting in Germany, whether for mere love of the sport or for the advantages which result to every great nation from a general love of water sports and sailing. To challenge in the name of a British club with a yacht of British design and build would be, in the event of winning, merely helping England to accomplish what she has so long failed in, and would in no way advance the interests of German yachting, as the Cup would necessarily go to England and not to Germany. We can hardly believe that the Emperor's love for his British cousins is so strong as such a course would imply.

The report about Mr. Ross is even more absurd. The New York Y. C. long ago decided most emphatically that it would receive no more challenges from Canada; in fact, the second deed of gift was made in 1882 mainly to stop all further attempts on the part of Canadians to win the Cup, and it has been thoroughly understood by them as such. The Royal St. Lawrence Y. C., like all the other Canadian clubs, is purely a fresh-water organization, and has no racing course on the sea or an arm of the sea, as called for by the second and third deeds, and is not qualified to issue a challenge for the America's Cup. The only way in which Mr. Ross could challenge would be by joining the Royal Nova Scotia Yacht Squadron and sailing as its representative. At the present time we can see no prospect whatever of a challenge for the Cup; in fact, the general circulation of such absurd stories as these two is in itself an indication that there is nothing more probable and reliable in the air.

YACHTS OF THE PACIFIC COAST.

Apropos of the discussion over yachts and yachting about San Francisco, we clip the following from the San Francisco *Chronicle* of Aug. 1. It would seem to be pretty strong corroboration of the position of our correspondent, W. B. Collier, Jr. The attempt to modernize an old boat is one of the most useless ways of wasting money ever devised by yachtsmen. For one thing alone, the old hull has, in nearly every case, a needlessly heavy construction, which is a fatal handicap to speed when opposed to modern craft, and this weight of construction is necessarily increased by the addition of misfit ends of extreme length. Such efforts as this to improve a fleet are likely to do much more harm than good to yachting.

Interest is keen in yachting just now, as some of the principal regattas of the year are about to take place. The first will be the postponed race of the California Y. C. for the Wallace challenge trophy. The original race was declared void, as the yachts did not finish in the time prescribed by the deed gift, and another race had to be called for. The date set is Aug. 9. According to the deed of gift the race for 1896 must be sailed on an ebb tide. The start will be from the southerly side of the narrow-gauge mole, and thence around Presidio Shoal Buoy and back to the starting point. As the club has postponed another of its races, the past month or so has been used in cruising, giving the members a good chance to rest and get in shape for the regatta.

The event for the month of August will be the race between the Catherine and the Fawn for the San Francisco challenge cup. The Catherine represents the San Francisco Yacht Club, while the Fawn is the defender placed in the field by the Encinal Yacht Club, the holder of the cup. Both clubs have gone to a great deal of trouble getting their representatives in fine shape. The Catherine had an overhang bow and stern put on this spring and the good work she did led to the challenge. The addition at the bow is 1ft. 7½in. and the stern overhang is 5ft. 9½in. Up to a week or so ago she had the old ballast, but when the reports of the extensive changes that were being made in the Fawn reached Sausalito the officers of the San Francisco Club got together and decided that everything must be done to have the Catherine in the best possible shape. Therefore she was at once sent to Capt. Matthew Turner's yard at Benicia, where she has had all her ballast taken out and replaced by a lead keel weighing 1,220lbs. Only enough will be carried inside to trim her. In place of the wooden centerboard she will carry one made of steel weighing 875lbs. While at the yard she has had the paint burnt off and the hull planed and sand-papered. Before leaving a new set of spars will be placed on her, as the old ones were found to be too light. Her new measurements are 32ft. 7in. over all and 25ft. 2in. on the load waterline. The spars measure: Boom, 26ft. 9in.; gaff, 15ft. 5in., and bowsprit, 6ft. outboard. The hoist of the mainsail is 19ft., and of the jib perpendicular, 20ft. 6in. The principal change in the sail area was bringing the jib inboard 1ft.

On the Fawn there has been just as much changing as on the Catherine. The old sharp bow has been taken off and a modern spoon bow substituted. The old iron keel and inside ballast have been replaced by an iron shoe. The stern has been left with a small overhang. The sail plan was somewhat changed, necessitating making a new suit of sails, which were bent on this week, and she was out for a spin to stretch them. The Fawn has always been a heavy weather boat, and as the course is noted for its light winds, the odds are against the Encinals.

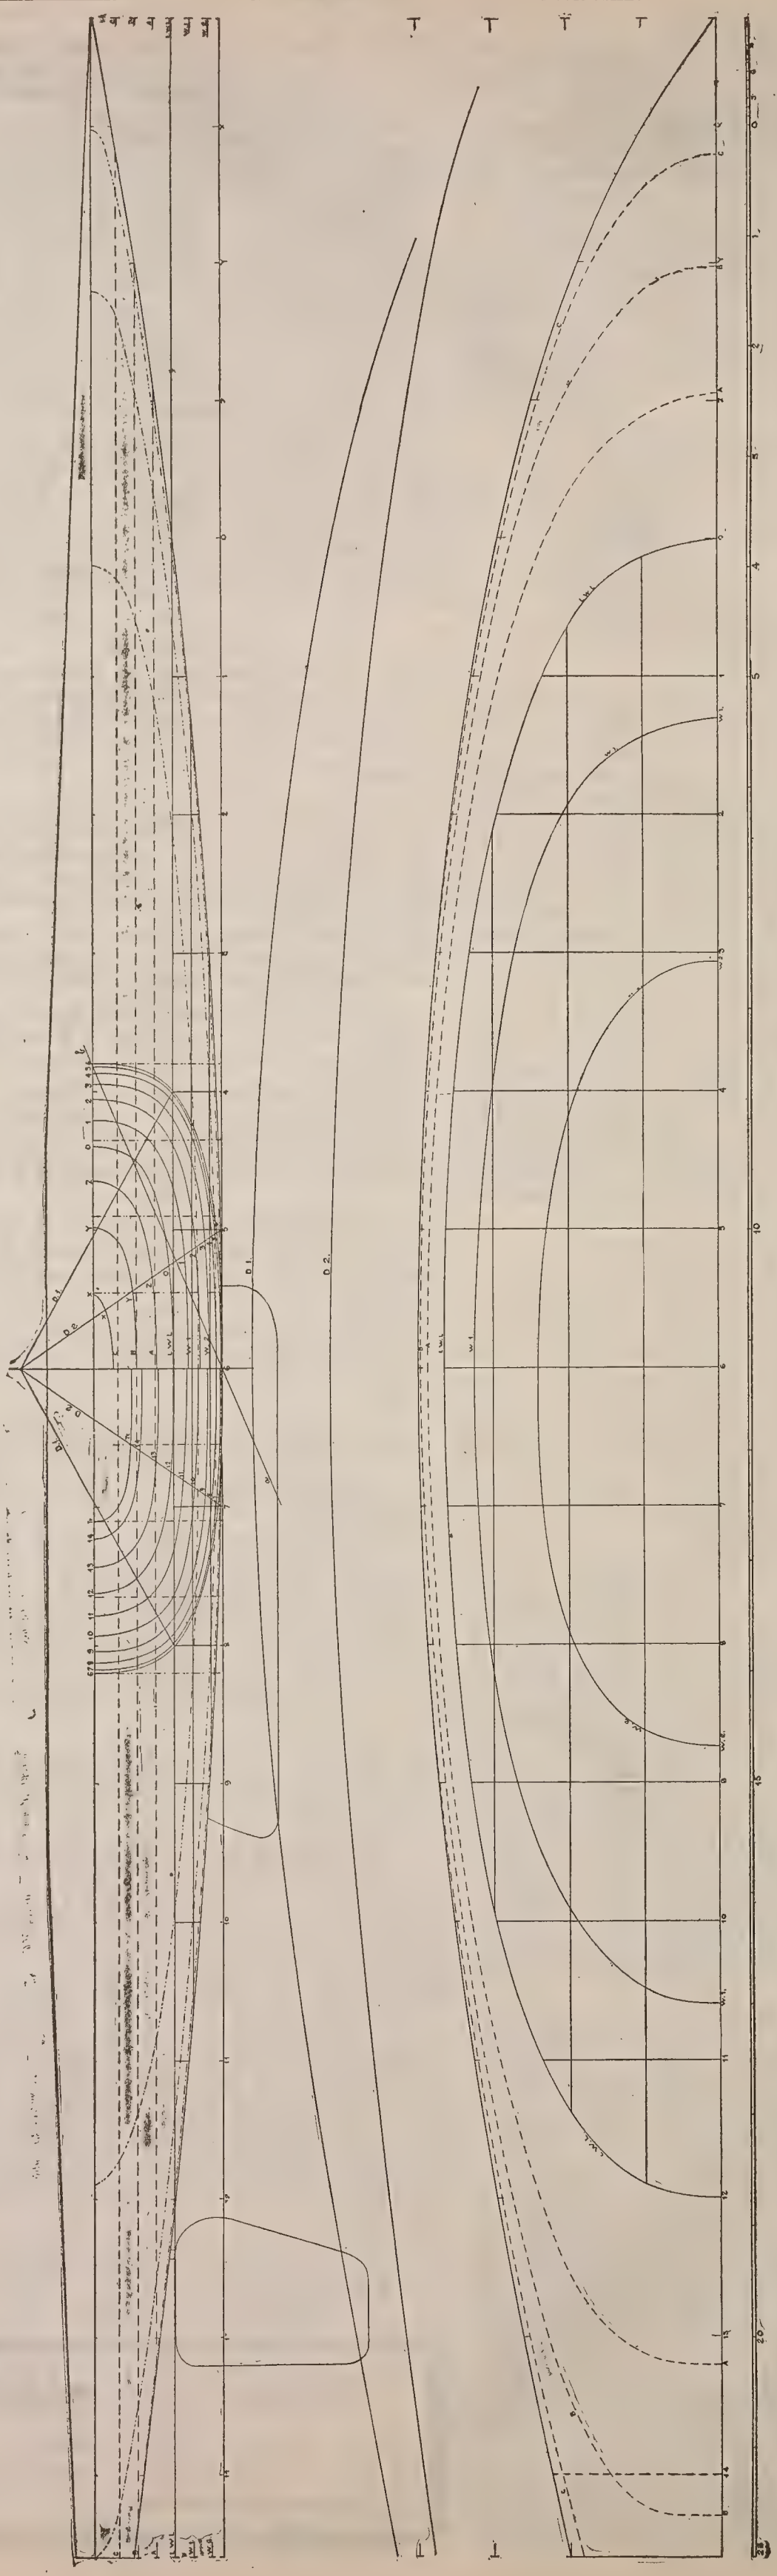
EL HEIRIE.

THROUGH the kindness of her designer, owner and skipper, Mr. Clinton H. Crane, we are enabled to present to our readers one of the notable yachts of the year, a craft that in spite of her exceptionally small size is worth every consideration from practical yachtsmen as the embodiment in practical and useful shape of certain new principles. The history of El Heirie's success in the Seawanhaka trial races over other yachts of both normal and extreme form, as well as her subsequent defeat by a craft of similar form to herself, but of greater power, is too new to need to be recounted here; it has all appeared in our pages within the past two months, and we need only concern ourselves with the yacht herself.

El Heirie was designed by Mr. Crane expressly for the Seawanhaka C. Y. C. international races, the design being completed in the winter and placed in the hands of the Lawley & Son Co., of South Boston. It his selection of the very peculiar form shown in the design Mr. Crane was influenced by the various reports published last season of the phenomenal speed of the 15-footer Question. Instead, however, of resting content with the mere copying of the external features of this odd craft, Mr. Crane has evidently gone much further; he has studied thoroughly the underlying principles of the scow type, as embodied in Question, and has applied them in a way of his own to produce a much faster craft. The leading dimensions of El Heirie are as follows; the original design was made on a basis of 14ft. 6in. l.w.l., and the yacht as officially measured was 14ft. 8in.; for the sake of comparison with other designs in the same class, the design has been redrawn on a basis of 15ft. l.w.l., or about ¼in. greater draft than appropriate to her measured length. The displacement is consequently a little greater than that of the yacht in racing trim.

Length over all	23ft.
l.w.l.	15ft.
Overhang, bow	4ft. 9in.
stern	3ft. 3in.
Beam, extreme	5ft. 6in.
l.w.l.	5ft.
Draft, hull	5¼in.
with board	5ft.
Freeboard	8¾in.
Displacement	987lbs.
Sail area	240sq. ft.

At first sight the relationship of El Heirie to the scow type is not closely apparent; the form is rounded throughout, with no approach to a flat side or angular bilge. The sheer is perfectly straight, but this in itself is not an essential feature of the design. A look at the waterlines, especially forward, will show, however, the radical difference between her and such a craft, for instance, as Ethelwynn. On the same length of waterline, 15ft., Ethelwynn has a length on the load waterline plane along the middle buttock line of but 10ft.; El Heirie has at the same point a length of 13ft. 5in.



In the normal type of vessel, Ethelwynn, Gloriana, Volunteer, Minerva, America, all more or less of the V type of section, the load waterline as measured at rest in smooth water represents a great length for the size of the yacht; this is so even in the modern Herreshoff type with an exeessive area of load water plane. When one of these vessels is heeled to the average sailing angle, the waterline actually shortens forward, though gaining something aft by the long full counter. The middle waterline, the distance measured in practically all measurement rules, is very long in comparison with the area of load waterline plane, and also with the longitudinal element of that plane at the quarter beam of the vessel or along the middle buttock line.

In El Heirie, and to a still greater extent in Glencairn, the measured waterline is reduced to a minimum as compared with the size of the yacht and the area of the l.w.l. plane by the cutting away of the rib or V represented by the stem and keel of an ordinary vessel, and the adoption of the flat scow bottom carried right up to the stemhead. That such a form necessitates a waterline that is but an ellipse, with other lines that no designer would accept as capable of high speed, is a fact that must be discussed later; the main point is that this peculiar variation of the scow form permits such a successful evasion of waterline length as has never been achieved before.

This idea of cheating the waterline measurement has always been most alluring to the racing yachtsman and over-keen designer, and an amount of work has been wasted on it that would have produced excellent results if applied in more reasonable channels of investigation. All sorts of devices have been tried, from the crude and clumsy ones of sawing square notches in the stem and counter up to others that, while less effectual, at least show some little ingenuity. A great deal of utter nonsense was written when Gloriana first appeared over the way in which her designer had cheated the waterline measurement by providing her with long ends far out of water; but it is to-day generally recognized that the evasion of length possible on a yacht of this kind, more or less of the V type, is very small indeed. In the same line of so-called improvement are the recent unsuccessful attempts to build one hull on top of another, the one to fool the measurer, the other to carry sail and develop speed.

In all yachts of the normal type the designer works on the assumption that the hull is to be sailed as nearly upright as possible, that the true l.w.l. plane of the yacht when under way in a race shall coincide as closely as possible with the l.w.l. plane of the design. In the scow type, including El Heirie and Glencairn, a very different principle is involved. It is never expected or desired that the yacht when under sail shall have the same lines indicated by a model, but the designer starts out in a very different manner. While the design is made, as a matter of conventionality and convenience, in the ordinary upright position, the designer assumes from the start that the yacht is to do her best work to windward and reaching in a very different position, heeled intentionally to a good angle, and with an immersed form that bears no relation whatever to the form when at anchor. In the case of El Heirie the effective sailing angle is probably somewhere near that indicated by the line a b, or with deck just awash and center of keel about at the surface of the water. In this position there is still displacement enough in the hard round bilge; the immersed portion of the hull becomes of the canoe form, with a beam of but 3ft. and a depth of but 7in.; and, what is still more important, the length on the new waterline is as great or even greater than that upon the measured waterline.

Long, narrow, shoal and of very easy form, this portion of the hull has all the speed elements of the canoe; but like the canoe, it lacks power. This however is supplied, just as in the canoe, by mechanical means entirely outside of the natural stability of the hull itself. The weather bilge and

EL HEIRIE. Designed and sailed by Clinton H. Crane, S. C. Y. C. Defender of Seawanhaka International Cup.

deck are both out of water and serve a double purpose, first, through their own weight acting as the weather hull of a catamaran to windward, and secondly, again as in the catamaran, as a seat for the crew far out to windward.

It may be said that there is nothing new in all this, that it is as true of the common scow as of El Heirie; but the scow has found many friends and exponents in the past, who have proclaimed its advantages; at the same time we have yet to hear of one who has pointed out this peculiar advantage in the way of successfully evading the measurement of waterline, or who has employed it in a way which indicated any comprehension of it. In both El Heirie and Glencairn this same idea, derived independently and at different times, has been elaborated in a thoroughly careful and scientifical manner, which shows that the designers were not, as is so often the case, misled by the color and texture of the husk, but have faithfully sought the truth in the kernel. Compared with these two yachts the more primitive scow models have been far from successful, mainly in lack of light weather speed, there being no trouble about speed in a strong breeze. In the case of Glencairn a comparison is difficult, owing to the great discrepancy in waterline and sail area between her and the rest of the fleet; but there were a number of the scow type in the trial races of about the same waterline and sail area as El Heirie, but nowhere near her in point of speed.

The experiment of 1891, in cutting off the fore end of the waterline of Gloriana, was a most radical one, but it really involved no new principle, dealing merely with the reduction of deadwood, which, as it proved, was useless, though it had always been considered essential. The experiment of 1896, in El Heirie, in cutting away with one bold stroke what Mr. Herreshoff had left in Gloriana, is still more radical and goes beyond a mere detail in amounting to a clear and well defined principle heretofore unknown in designing. Just how far upward in the list of classes this principle may be employed is as yet doubtful; probably the 25ft. class will mark the extreme limit. It can only be employed where the crew constitutes a large portion or in fact all of the ballast, and in craft so small that the risk of capsize amounts to nothing and they may in racing be heeled to a dangerous angle. It is in no way probable that El Heirie's model would succeed in a yacht of 30 to 40ft. l.w.l., which must of necessity be sailed as nearly upright as possible, and even in the 25ft. class the allowance of crew, five in all, is probably too small to make such an experiment successful. Whatever class be selected for the contest of 1897 for the Seawanhaka cup, there can be no question that this new type of yacht will play an important part, and much more in regard to its capabilities may be looked for. We hope later on to give further particulars as to the rig and fittings of El Heirie.

EXPENSIVE SPORT.

We reprint the following timely editorial from *The Yachtsman* of July 30:

It will be remembered that a few weeks since we lifted up our voice in protest against the millionaire yachtsman racing aught save an "unrestricted class" yacht. The case of the Niagara's crew is quite to the point; but in calling attention to the absurdity it must not be supposed that Mr. Howard Gould is one whit more guilty of spoiling sport, in our opinion, than many other very wealthy owners of small class racing yachts. We are indeed fully persuaded that he, in common with many "earls and such like," as we once expressed it, sins in utter unconsciousness. That he does great harm to yacht racing by a too good-natured use of a long purse will be acknowledged by all would-be builders for the 52ft. class—outside the pale of earls and millionaires—when they hear that Niagara's ordinary paid hands, six in all, excluding that thorough good skipper, John Barr, receive no less than 30 shillings per week. Besides this standing wage, the men are found in clothes, food, etc., the latter item running to about £1 per week per abdomen; and to more fully recognize the value of a berth aboard Niagara, it must be said that the usual prize money is freely given by Mr. Gould, viz.: £1 per man for every first prize, 10s. for each second prize, and 5s. for third prizes. The salary of the naturalized American-Scotch skipper is not, of course, included in the foregoing, nor have we attempted to pry into the perquisities of his high office, but J. B. can take care of himself full well, and he is not likely to be undervalued by Mr. Howard Gould. Why should he be, for a better sailing master never sailed such a good boat as Niagara? It will be seen that Mr. Gould is unwittingly a spoil-sport through being too generous a governor. We should like to see Mr. Gould the owner of a first-class racing yacht, with John Barr as his captain, and all his present crew in the vessel, at perhaps a reduced rate of emolument. But this example of a 20-rater's or 52-footer's working expenses clearly shows that a move on the part of the Y. R. A. in the matter of fixing a scale of wages and the number of paid hands in all the restricted classes is imperative for the sake of "the promotion of the interests of yacht racing."

The instance above quoted is but one of many modern extravagances which together form a powerful contributory cause against the best interests of yachting. The evil of extravagant expenditure afflicts most impartially all sizes and classes, and is rapidly making the sport too expensive for the very class of men who should be its most powerful patrons. As yachting is conducted to-day, the captain of an ocean-going yacht does not cross the Atlantic in her, but goes, like his master, in the first cabin of a liner; the racing of a 60 or 70ft. schooner requires at least two of the most experienced racing skippers; the 30ft. special class, a Corinthian class if ever there was one, monopolizes the services of such racing cracks as Watson and Crocker, and even a 15-footer must have a professional as crew. It is this sort of yachting which is doing infinitely more harm to the sport than the presence of a poor rule or the absence of a perfect one. It is, for the time being, profitable to the few expert skippers, but we doubt whether in the end it is to the benefit of the professional yacht sailor as a class, both skipper and crew; as long as the boom is on in a particular class it is beneficial to a certain limited number, but on the other hand one need only look through the yards and basins in midsummer and note the number of large yachts out of commission to appreciate the effect on sailor men as a body.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE MEASUREMENT RULE.

Cobourg, Aug. 8.—*Editor Forest and Stream:* In the current issue of the Forest and Stream there appears a letter from a correspondent, Sextant, on the measurement question, which seems to be pertinent at the present time, for I think every one, even the designers of Sothis and Glencairn, is disappointed that the tendency of the length and sail area rule has been to force upon us boats partaking more or less of the nature of brutes with exaggerated sail plans and sawed-off waterlines. It seems to be acknowledged that sail area measurement alone would produce a canoe-shaped boat, long and slim, and almost equally undesirable from a cruiser's point of view, and Sextant as well as the length and sail area men propose to restrain the tendency of the rule by arbitrary restrictions in the dimensions of the hull in the one case and in the sail area in the other.

The proposition to restrict is tantamount to a confession that the existing rule is bad in its tendencies, as also the proposed one, and if so why perpetuate the one and initiate the other? Length as giving finer lines and lessening the tendency to pitch and scend in a seaway is a speed-giving element in itself independent of its contributing to greater power, and should evidently be taxed to some extent, but the present tax is obviously too heavy as compared with that on sail. Why not then, if the existing rule tends to unduly short boats, and that proposed by Sextant to unduly long and slim ones, adopt some mean between them, such as $\frac{L. + 2\sqrt{S.A.}}{3}$? Such a rule is equally simple in its practical application with the present one, and would have the further advantage of bringing some of the older and more moderately rigged craft into more hopeful competition with the brutes by compelling the latter to reduce their sail plans in order to get into the class at all, while the more snugly rigged boats would need no alteration.

It does not seem to me that direct restrictions are in any way desirable as regards the cardinal dimensions, and if they are applied at all it should be as has been done in several cases to the form of midship section, sheer plan, etc., and not to the dimensions of the circumscribing block or to the driving power. If the sail area, for instance, were restricted in a 15-footer to 250ft. the result would probably be that every boat in the fleet would carry exactly this amount on 14ft. waterline, and the only differences would be some trifling ones in shape of midship section and rig; it would be to all intents and purposes a one-design class, with victory depending upon the personal equation of the crew and to a small extent upon the purse of the owner in enabling him to procure a saving of a few pounds in weight.

And here I think is an element of speed to which some limit might be with propriety applied as discouraging a boat built either at extreme cost or unduly weak and unfit for rough and tumble work. Let us restrict the weight or rather the absence of weight of a 15 footer to that which can be obtained by a skillful builder working with ordinary materials consistently with the production of a reasonably strong and durable boat. I say durable advisedly; for a boat, as has been already proved this season in more than one case, may be quite equal to withstanding the strains of sailing even in a rough sea, but may be almost ruined by being hauled up and exposed to sun and dry air for a few days, or even by exposure to changeable weather at her moorings.

H. K. Wicksteed.

Corinthian Y. C. Midsummer Series.

MARBLEHEAD—MASSACHUSETTS BAY.

Aug. 12, 13, 14, 15.

The first race of the Corinthian Y. C. midsummer series was sailed on Aug. 12 in a very light air. The course was shortened to 6½ miles and then the knockabouts did not finish in time. The times were:

The Lake Erie Regattas.

The two days' racing of the Erie Y. C. resulted greatly to the advantage of the Canadian yachts. The first day, Aug. 6, was devoted to the larger classes, there being a fine S W. breeze. The result was:

FIRST CLASS.

Canada	2 11 00	Scorpion	2 49 00

40FT. CLASS.

Dinah	2 31 00	Iris	2 42 00
Vivia	2 33 00		

35FT. CLASS.

Eve	Withdrew	Puritan	Withdrew
Miriam	Withdrew		

30FT. CLASS.

Hiawatha	2 28 00	Dowkey	2 48 00
Myrna	2 34 00	Nox	2 51 00

On the second day, Aug. 7, the races for the 25ft. and 15ft. classes were sailed. Sybil, of Buffalo, won, with Rogue, of Erie, second, in the 25ft. class. Arab, of Erie, won the 15ft. class.

On Aug. 8 Vencedor arrived at Cleveland after a hard passage from Chicago, and next morning Canada arrived from Erie and anchored near her. On Aug. 10 a reception was tendered to the visiting yachtsmen by the Cleveland Y. C., with a review of the fleet by Com. Worthington from the schooner Priscilla. After the review and when many of the ninety yachts in harbor were left partly unattended, a very violent squall broke over the harbor and swept through the fleet. The schooner Clipper, of Cleveland, was capsized and sunk; Sprite, of Toledo, capsized, with Volant and Pearl; Eva and Dinah, of Hamilton, were swept up on the beach; Nox, of Rochester, lost her bowsprit, and many other yachts were damaged. When the squall struck Vencedor had her clubtopsail aloft in order that a photo might be taken, and she was caught with this sail up and the wire halyards jammed in the block. The sail could not be lowered for some time, but the yacht went through the squall safely.

The first races of the Cleveland Y. C. regatta were set for Aug. 11, but the wind fell soon after the start, and the races were postponed On the next day there was a good breeze and the races of the 46, 40 and 25ft. classes were sailed, the times being:

46-FOOTERS.

	Elapsed.	Corrected.
Canada	2 35 13	2 35 00
Zelma	2 38 21	2 37 30
Surprise	2 51 05	2 50 14
Czarina	2 51 47	2 51 47

40-FOOTERS.

Vivia	2 41 16	2 40 02
Dinah	2 42 37	2 40 15
Sultana	2 46 53	2 46 53

25-FOOTERS.

Sybil	2 38 37	2 38 37

The 30ft. Class at Newport.

The last day of the New York Y. C. cruise, Aug. 11, was devoted to the 30ft. class, Fleet Capt. Griswold having presented a handsome silver cup as a prize for a special race. The course was from Brenton's Cove around Dyer's Island and return, 16 miles. The morning was very calm and quiet, but when the start was made at 1:55 there was a light S.W. wind, making a run to first mark. The times at the turn were:

	Turn.	Elapsed.
Asahi	3 10 30	1 10 30
Hera	3 11 45	1 11 45
Esperanza	3 12 35	1 12 35
Puck	3 12 58	1 12 58
Carolina	3 13 00	1 13 00
Raccoon	3 14 02	1 14 02
Wawa	3 14 30	1 14 30
Musme	3 14 45	1 14 45
Rosemary	3 14 50	1 14 50
Vaquero	3 15 03	1 15 03

On the return to windward Asahi improved her position and won very easily, in spite of touching a rock off the Conanicut shore. The new Sibbick boat, Rosemary, did very poorly. The final times were:

	Finish.	Elapsed.
Asahi	4 45 00	2 45 00
Hera	4 50 10	2 50 10
Esperanza	4 52 30	2 52 30
Musme	4 54 35	2 54 35
Carolina	4 54 58	2 54 58
Vaquero	4 56 50	2 56 50
Puck	4 59 10	2 59 10
Raccoon	5 02 25	3 02 25
Wawa	Not timed.	
Rosemary	Not timed.	

On Aug. 12 a race was sailed over the same course for the Duryea cup, the wind being moderate from S.W. After a start at 2:30 and a run down wind the times at the turn were:

Asahi	3 44 10	Raccoon	3 45 50
Carolina	3 45 12	Esperanza	3 45 55
Puck	3 45 25	Musme	3 46 02
Hera	3 45 30	Wawa	3 46 15
Vaquero	3 45 42	Dorothy	3 47 45

On the beat home Hera did very good work, but Asahi again won, the times being:

	Finish.	Elapsed.
Asahi, Bayard Thayer	5 07 00	2 30 07
Hera, R. N. Ellis	5 00 55	2 30 55
Vaquero, H. B. Duryea	5 01 55	2 31 55
Carolina, P. Jones	5 02 20	2 32 20
Musme, J. McDonough	5 03 40	2 33 40
Raccoon, Mr. Hostetter	5 04 25	2 34 25
Esperanza, A. Van Winkle	5 05 07	2 35 07
Puck, E. D. Morgan	5 06 20	2 36 20
Wawa, J. A. Stillman	5 12 40	2 42 40
Dorothy, H. P. Whitney	Did not finish.	

On Aug. 13 a sweepstakes race was arranged over the triangular course, two rounds, the wind being light S.W. Dorothy led over the first round, but Hera won, the times being:

	Finish.	Elapsed.
Hera	4 52 55	2 02 55
Vaquero III	4 54 45	2 04 45
Dorothy II	4 55 15	2 05 15
Esperanza	4 57 18	2 07 18
Wawa	4 58 30	2 08 30
Asahi	4 58 55	2 08 55
Musme	4 59 10	2 09 00
Raccoon	Did not finish.	
Carolina	Did not finish.	

On Aug. 14 the yachts sailed for a cup given by Mr. Thayer, the Dyers Island course being sailed, to windward and return. The times were:

	Finish.	Elapsed.
Asahi	5 31 58	2 46 58
Vaquero	5 36 12	2 51 12
Hera	5 47 00	2 51 00
Musme	5 41 57	2 56 57
Carolina	5 45 55	3 00 55
Wawa	5 49 02	3 04 02
Esperanza	Did not finish.	
Dorothy	Did not finish.	
Raccoon	Did not finish.	

On Aug. 15 the fleet raced at Bristol for a cup given by Mr. Van Winkle, the race being sailed in a good breeze. Vaquero won, with Hera second, and Musme third.

Minnetonka Y. C.

LAKE MINNETONKA.

Saturday, Aug. 8.

The Minnetonka Y. C. spent Aug. 8 most pleasantly with a combined cruise and race, the members turning out for the cruise in steam yachts and sailing craft; a number of the latter being entered for the race to the picnic ground on one of the islands. The times were:

CLASS A—SLOOPS.

	Start.	Finish.	Corrected.

After a couple of hours on the island the party sailed home on the yachts.

The Sinking of Hawthorne.

The schooner yacht Hawthorne, owned by Messrs. B. F. and John McConnell, of Chicago, the largest yacht on Lake Michigan with the exception of the old Idler, was sunk in collision with a lake steamer on the night of Aug. 5, the yacht proving a total loss, though all hands were saved. The story of the disaster, as told by Capt. M. Henderson, the yacht's skipper, is as follows:

I am the captain of the schooner yacht Hawthorne, owned by Messrs. B. F. and John McConnell. She was about four years old, 70ft. long, 14ft. 10in. beam, and with a tonnage of about 28 tons.

We had started out about 9 or 10 o'clock A. M. for a day's sail, and we had as passengers Mr. and Mrs. John McConnell, a couple of their friends, and about eleven children. We cruised up and down the lake all day, and about 6 o'clock we landed the passengers at Grace street and at Hawthorne place, when we started back for Chicago and our anchorage.

The wind, as I remember it, was about S.W., and just at the east end of the Government pier we were sailing W.S.W., standing in toward the river on a port tack. I am sure our light was burning, and that we had our light screens up.

We had seen the Iowa standing out from the mouth of the river and supposed that, of course, she had seen us, for we had been on the port tack for six or seven minutes, lying only four points off the wind. It seemed, as we approached her, that she had intended to cross our bow, and she certainly threw her helm to the starboard. That made her swing to port and she struck us square in the port side and we sunk in three minutes. If she had kept her course it seems to me almost certain that she would have passed us astern.

Our men were all on deck and we jumped for the fender streaks and one of us caught on the anchor chains. A moment or so later they threw us a line and we climbed on deck.

The steamer Iowa is a new boat, a powerful wooden propeller; she was off the breakwater heading out from Chicago naturally the steamboat men lay the blame entirely on the yacht.

American Y. C. Regatta.

MILTON POINT—LONG ISLAND SOUND.

Saturday, Aug. 15.

The American Y. C. held a special regatta for the classes of 30ft. and under on Aug. 15, sailing over the triangle marked by Parsonage Point, Red Springs Point and Larchmont. The start was given at 12:30 in a light easterly air and very strong tide, only four yachts, Acushla, Departure, Zelica and Quantuck, being able to cross the line on time, over twenty others being handicapped. The race was very fluky and uneven. The final times were:

Manchester Y. C.

MANCHESTER—MASSACHUSETTS BAY.

Monday, Aug. 10.

The Manchester Y. C. sailed its annual open regatta on Aug. 10 in a very light breeze, the times being:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Anoatok, J. Owens, Jr.	....	3 07 35	2 30 15
Handsel, G. R. Hooper	....	3 09 00	2 34 07
Mabelle F. Swift, C. E. Bruce	....	3 06 40	2 36 20
FIRST CLASS.			
Beatrice, J. Cavanaugh	25.06	3 08 43	2 43 29
Emma C., P. A. Coupal	29.05	3 11 24	2 52 13
Elvira, Bartlett Bros.	25.04	3 53 27	3 10 05
SECOND CLASS.			
Tacoma, S. N. Small	21.08	3 02 56	2 34 04
Cleopatra, H. M. Faxon	22.02	3 00 06	2 39 42
Rex, J. B. Farrell	24.00	3 17 25	2 50 51

The third, fourth and knockabout classes were unable to finish within limit.

On Aug. 11 the special invitation race of the club was sailed, but failed for lack of wind, and was postponed to Aug. 28.

Winthrop Y. C.

WINTHROP—BOSTON HARBOR.

Saturday, Aug. 15.

The Winthrop Y. C. sailed its fourth club race on Aug. 15 in a very light easterly breeze, the times being:

	Start.	Finish.	Elapsed.
SECOND CLASS.			
Harolde	3 10 00	6 11 50	2 37 42
Clara	3 10 00	6 12 10	2 37 43
Alma	3 10 00	6 23 23	2 48 17

Ridgeway	3 25 00	4 38 00	1 13 00
S. J. Wild	3 25 00	5 05 00	1 40 00
L. S. Weston	3 25 00	4 52 30	1 32 00

The final race will be sailed on Labor Day.

Beverly Y. C.

The attempt to sail the 238th race at Marblehead resulted in a great disappointment. Almost every boat of reputation was entered and forty of the best of them were on hand and started, but except for a breath on starting line there was no wind whatever, and not a boat made the race in time; the race will be resailed Aug. 29. Following boats started:

Special Class: Anaotok, Handsel, Mabel F. Swift.

First Class Sloops: Ida J., Beatrice, Emma C.

Second Class Cats: Clara, Marena, Susie, Elvira, Rex and Moondyne.

Third Class Cats: Koorali, Egeria, Magpie, Cleopatra, Arab.

Third Class Sloops: Gleaner, Rooster, Tacoma, Exit, Wawanda and Romance.

Knockabouts: Torpedo, Water Lily, Dorathy, Cock Robin, Bo Peep, Sally, Maia, Alruna, Ruth and Comet.

Fourth Class: Sunbeam, Fantasy, Bonita, Circe, Alpine.

Sothis at Ogdensburgh.

Cobourg, Aug. 8.—*Editor Forest and Stream:* I notice that in the current issue of your paper, commenting on the Ogdensburgh races, you say that the principal wonder is that Sothis did not dispose more easily of her opponent, Vesper, and in a delicate manner you insinuate that the "green hand" forward (that's me) was partially responsible. In justice to Mr. Duggan, Sothis and the foremast hand, allow me to say that the latter found on dismantling the boat that she had picked up quite a bunch of weeds on her rudder, on the shoal off the Oswegatchie River, which was probably more detrimental to her speed than even the prolonged struggle of the crew with the balloon jib, on a deck sloping off at an angle of 40 degrees with the horizontal. No offense, old fellow, but I would like to stand on the deck of the judges' boat myself and see the editor of Forest and Stream in a similar position.

Green Hand.

Fox Lake Y. C.

FOX LAKE, ILL.

Saturday, Aug. 8.

The fifth regatta of the Fox Lake Y. C. was sailed on Saturday, Aug. 8, the times being:

FIRST CLASS.

	Start.	Finish.	Corrected.
Hornet	3 16 06	4 28 56	1 12 05
Windward	3 14 35	4 39 22	1 24 47
Joker	3 11 05	4 30 57	1 17 07
Frances M.	3 12 58	4 27 48	1 12 22
Anna	3 13 18	4 26 34	1 08 05
Marcella	3 14 02	4 30 19	1 11 11
Sleepy Tom	3 12 02	4 23 29	1 03 46
Gold Bug	3 11 18	4 26 53	1 06 03
Nellie G.	3 13 25	4 37 28	1 24 03
SECOND CLASS.

Try, Harding	1 50 34	1 50 28
Florence, Ferris	1 54 23	1 54 05

Stamford Y. C.

STAMFORD—LONG ISLAND SOUND.

Saturday, Aug. 15.

The special regatta of the Stamford Y. C. for catboats brought ou only four starters out of eleven entries. The race was sailed in a ligh easterly wind, the times being:

	Start.	Finish.	Elapsed.	Corrected.
30-FOOTERS.				
Dosoris II.	11 35 00	3 45 00	4 10 00	
Narda	11 35 00	3 50 17	4 15 17	4 07 47
25-FOOTERS.				
Nan	11 40 00	3 47 48	4 07 48	. .. ..
20-FOOTERS.				
Gosbird	11 45 00	Did not finish.		

Newport Kat Bote Klub.

The Kat Bote Klub, of Newport, sailed a race for catboats on Aug with three starters: Iris, formerly Mucilage, R. L. Gerry; Infanta, W. T. Davies, and Victor, Alfred Vanderbilt. The course was from off Goat Island, around Beaver Tail, thence around Brenton's Reef Lightship and home, sailed in a fresh breeze. Iris won and Infanta was disqualified for fouling Victor. The times were:

	Start.	Finish.	Elapsed.
Iris	2 34 00	4 41 31	2 07 31
Victor	2 34 00	4 46 02	2 14 02
Infanta	2 34 00	4 47 48	2 13 42

Messrs. Stephen Peabody and W. J. Henderson acted as judges.

Charlotte R. and Sadie.

On Aug. 8 a match race was sailed between the two Chicago yachts, Charlotte R., owned by George Middleton, and Sadie, owned by C. M. Smalley; the course being 15 miles on the lake. The wind was fresh from the south and the times were:

	Start.	Finish.	Time.	Allowance.	Corrected.
Charlotte R.	2 05 41	4 24 55	2 19 14	Scratch	2 19 14
Sadie	2 03 14	4 28 21	2 25 07	0 02 38	2 22 09

Charlottte R. wins by 2:55, corrected time. Valiant has challenged Charlotte R. for a similar match.

Canoeing.

Grindstone Island.

The opening of the camp on Aug. 14 was signalized by the arrival of a number of well-known canoeists, and since then every day has brought increased arrivals, with a promise of a large attendance and pleasant camp. There is still plenty of time for those who have decided to stay home to change their minds, a night in the train and at camp early next morning. The races begin on Aug. 20.

A. C. A. Membership.

Applications for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the Forest and Stream.

Late News from Bisley.

LONDON, England, Aug. 7.—Owing to a delay in the statistics department, we were unable previously to give the result of the Whitehead Revolver Challenge Cup competition which took place on the last day of the Bisley meeting. It was instituted three years ago, for teams of eight men from the army, the navy, the volunteers and all comers, as they call the civilian team. Mr. Walter Winans has captained the civilian team each year, but this is the first year the team has won it, owing to his being able to get eight good shots; he has always had the best four or five shots at Bisley in his team, but the rest were such bad shots that they spoilt the team. This year he was able to get together a better lot, and they won the cup.

In 1894 the volunteers won it, and in 1895 the army; so it will be the turn for the navy next year.

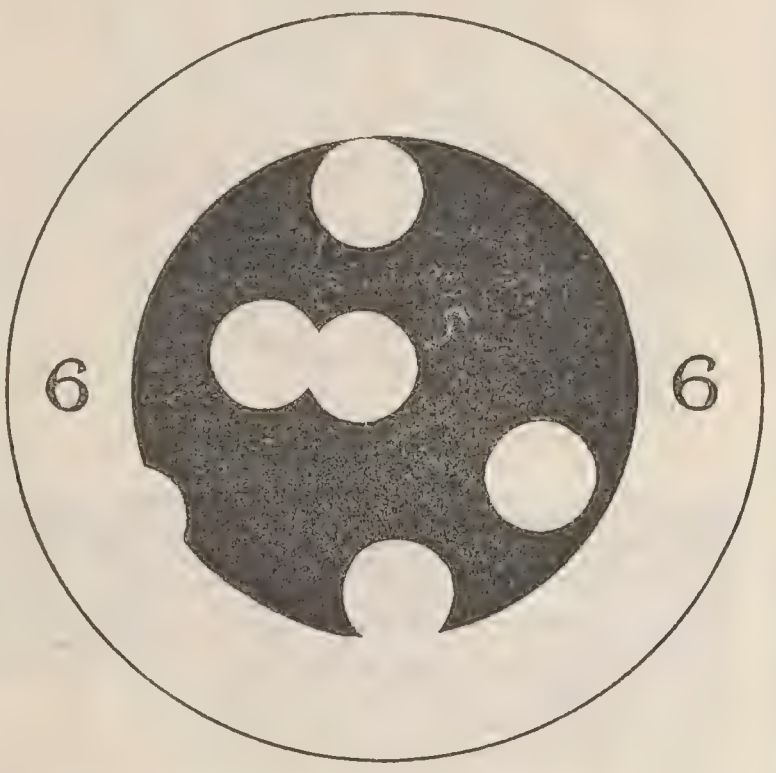
Conditions: 12 shots at 20yds., stationary target, and 12 shots at 50yds., stationary target.

All Comers' team: Capt. Walter Winans, W. R. Joynt, A. Rosling, P. A. Morris, Lord Cairns, H. Andrews and Dudley Wilson.

Volunteer team: Capt. Col. MacKerrell, J. Muirhead, J. E. Martin, J. H. Scott, Capt. Heath, Maj. Palmer, Lieut. Clemence, Maj. Munday and Capt. Gripper. (Col. MacKerrell did not shoot, but only captained.)

Army team: Capt. Dutton Hunt (did not shoot), Capt. Lloyd, Capt. Pritchard, Lieut. Staunton, Maj. Cowan, Lieut. Bonham, Lieut. Etches, Wallingford and Capt. Stuart.

Navy team: Capt Bumbery (did not shoot), Thompson, Bumbery, Beale, Hall, Eade, Pickard, Bedford and Sullivan.



At the North London Rifle Club shooting was resumed on July 29 at the 20yds. stationary target; the following scores were made: Walter Winans 40, Capt. Evans 38, Lieut. Curley 38, W. B. Thompson 38, Holmes 37, W. Luff 35, Chicken 34, Andrews 32, T. H. Howe 31, Lieut. Curley 30, Knapp 37, Britton 27.

Carrying a Revolver.

HINTS FOR SHERIFFS, POLICE, EXPRESS MESSENGERS, MINE GUARDS AND OTHERS WHO CARRY A GUN.

DENVER, Col.—*Editor Forest and Stream:* As revolvers and revolver shooting seem to be claiming quite a little attention in your valuable paper, a few words as to the different ways a revolver can be carried on the person to the best advantage may be of interest. Of course the usual way is to carry one in the right hip pocket. A large heavy gun pulls the pants down on that side, however, and is rather uncomfortable. If one is carrying a Colt's, throw out the lever which is just behind the cylinder, as it is when one puts cartridges into the gun, and then slip the gun down between the pants and waistband, letting the lever catch on the waistband. If one has on a short-tail coat it is better to slip the gun in between the back of the vest and the waistband on the vest. This way the gun does not show so plainly and its weight is not felt so much. By using the same lever for a "catch" one can also carry the gun between the inside of the pants and the drawers, just under the left-hand vest pocket. This way it can be gotten at much more quickly than when carried behind if one is bundled up with a heavy, buttoned-up overcoat, or is driving or sitting down anywhere, such as at a table. The lever catches in this case on the top rim of one's pants and holds the gun from slipping down

The best way to carry a gun that I know of, so as to have it ready for instant use, is to wear an overcoat with a long, full cape and have breast pockets convenient to put the hands into under the cape. The gun can then be carried in the hand, the barrel pointing upward along the shoulder, ready for instant use, but still perfectly concealed beneath the cape. If one wishes to use his hand, the gun is easily slipped into the pocket beneath the cape. This way one can carry a gun in either hand, ready for instant use, but still perfectly concealed.

A TARGET BY MR. WALTER WINANS.

Bisley Revolver "Any" Series No. 2, disappearing target, 20yds., intervals of 3 seconds. Score 42, best on record.

For any one guarding the transportation of money or valuables on a street, or in any case where a gun may be needed at once, but still one wishes to avoid attracting any attention, the above way will be found handy.

Another trick about carrying and using a gun worth knowing is as follows: Buckle on a large .45 six-shooter, two are still better, and wear them out in front in plain sight (for the benefit of our "tenderfoot" friends I will say in open holsters of course) where every one can see them. If you are in a dispute or are waiting a chance to put a man under arrest and have to "get the drop on him" to do it, he will keep his eye on your guns rather than on you, knowing that as long as you keep your hand off of them he is all right. Keep your hands carelessly behind you or in your side coat pockets. At the first bad break he makes you have him "covered" with a little short-barreled, blued .38, or a "sawed-off" .45, which you have had tucked into your waist band out of sight behind or else in your pocket. It is a flank movement that is usually wholly unexpected, and being so is almost always successful in "giving you the drop."

Another way to carry a gun, or a pair of them, so that they can be gotten at at once, and when exposure is preferred to concealment, such as in guarding a mine in dispute, or in the transporting of a large miner's pay roll, or rich "tailings" or "concentrates" to the express office, is to wear each gun on the leg in an open holster just above the knee, so that when standing and the arms are hanging at ease, the hands rest naturally on the butts of the six-shooters. They can be pulled this way much more quickly than from holsters on the hips. A belt of cartridges is of course worn around the waist (loosely), and buckskin strings reach from the belt to the holsters on the legs to hold them up. Another buckskin string around both holster and leg just above the knee holds the gun in place. Guns carried this way are more easily gotten at, both standing, sitting, and on horseback, than any other way I know of. This way, with a little blue .38 concealed somewhere within easy reach, as described above, is a combination hard to beat in the way of carrying six-shooters.

Another excellent way to carry a large six-shooter when one has neither belt nor holster handy is to carry it in one's boot. This no doubt excites a smile among those who have never seen a gun carried this way and who are thinking of certain long-haired gentlemen pictured in *Puck* and *Judge*, but nevertheless it is the best place to slip one out of in a hurry when sitting at a table. Try it and see. It is also easily gotten at on horseback and even when standing, and the weight of it is not noticed after a few days. Of course, one is speaking of boots worn outside of the pants instead of inside. It is also an excellent place to carry a skinning knife when hunting, as a belt is sometimes irritating in hot weather. The day of the six-shooter is slowly but surely passing in the West, and no one is more glad of it than the true-born Western man, but nevertheless the above facts may not be without interest to some.

SIX-SHOOTER.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 22.—PASSAIC, N. J.—Third tournament of the New Jersey Amateur Trap-Shooters' League. Sweepstakes at 10 A. M.; team race at 2 P. M.

Aug. 25-27.—BINGHAMTON, N. Y.—Binghampton Gun Club's tournament for amateurs; two days targets, one day live birds. Money divided under the Rose system. H. W. Brown, Manager.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Aug. 26-27.—KALAMAZOO, Mich.—Tournament of the Celery City Gun Club, in connection with Michigan Trap-Shooters' League.

Aug. 31-Sept. 2.—ATLANTIC CITY, N. J.—Tournament of the Atlantic City Gun Club, on Young & McShae's pier. For programmes address Harry Thurman, Germantown, Philadelphia, Pa.

Aug. 31-Sept. 2.—ST. PAUL, Minn.—Annual tournament of the St. Paul Gun Club, at State Fair Grounds. B. F. Schurmeier, Sec'y.

Sept. 1-5.—BUFFALO, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 7.—WELLINGTON, Mass.—Tournament of the Massachusetts State Shooting Association, under the auspices of the Boston Shooting Association.

Sept. 8-9.—MARION, N. J.—Tournament of the Interstate Association, under the auspices of the Endeavor Gun Club of Jersey City, N. J.; $150 added money.

Sept. 8-10.—GALT, Ont.—First annual tournament of the Ontario Rod and Gun Club; $800 to $1,000 added money.

Sept. 11.—WEST LEBANON, N. H.—All-day shoot of the West Lebanon Gun Club.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Sept. 29.-Oct. 2.—HARRISBURG, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct. 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

1897.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Some effort should be made to clear up the muddle that surrounds the title of "Champion of the United States at live birds." The trophy won by B. W. Claridge at the Chicago shoot is the "Du Pont Smokeless Powder Company's handicap championship trophy." O. R. Dickey, of Wellington, Mass., won the Daly cup at this year's Grand American Handicap, defeating 102 competitors, and was hailed as a champion by the daily press, notwithstanding the fact that the Grand American was a handicap event. Again, the Missouri State Sportsmen's Association at its annual tournament this year gave a cup that was to be emblematic of the championship of the United States at live birds. This was a 25-bird event, and the cup was won by J. Riley after a tie with H. J. Whittier. But after all, what has become of the "Cast Iron Badge" won by George Kleinman at Watson's Park on Oct. 16, 1894? This badge was shot for by eight of the best live-bird shots in the United States, the conditions being truly championship ones: 100 live birds per man, $100 a side, all at 30yds. rise. Kleinman's score was 91. The names of his opponents and their scores were: J. L. Brewer 89, Dr. Carver 86, Charlie Grimm 85, J. A. R. Elliott 67 out of 78, Eddie Bingham 51 out of 64, "Robin" 48 out of 63, Charlie Budd 47 out of 63. Since Kleinman won the badge there has been only one challenge for it so far as the records show. That challenge was issued by Dr. Carver, and all details were completed for the match, the date being set. When the day for the match came round Kleinman was unable, through sickness, to defend his title and the badge, and, as we understand it, both badge and title were forfeited to Dr. Carver. Any way, either Dr. Carver or George Kleinman is at present holder of that badge and whatever title went with it; and it should be borne in mind that at the time the badge was first shot for the statement was made that the contest was promoted for the purpose of settling the vexed question as to who was champion of the United States, and the quality of the entry for that event certainly seemed to warrant the assertion. Who then is champion of the United States at live birds if it is not the holder of the cast iron badge?

On Saturday last, Aug. 15, while attending the Endeavor-Dunellen team race at Marion, N. J., we had the pleasure of hearing the opinions of Noel E. Money and L. H. Schortemeier as to the merits of the Rose system. Both the above shooters took part in the recent Interstate shoot at Portland, Me., and both of them would probably have reaped more benefit had the purses been divided under the old system. Notwithstanding that fact, Noel Money says that he is satisfied that "*it is the only system for dividing purses.*" Schorty has been a strong advocate of the system ever since FOREST AND STREAM first noticed the system under the head of the "Straight Out" system; as secretary-treasurer of the New York County Gun Club, and as captain of the Rockaway Point Gun Club, he introduced and secured the adoption of the system at all the shoots of the above clubs since the winter of 1894-5. It is only due to the above clubs to state that they were the first in the East, so far as we are aware, to adopt the Rose system.

When L. T. Duryea and Jack Winston were first matched to shoot a 100-bird race, at John Watson's park, Burnside, Ill., on Aug. 10, the general impression in this city was that Winston would win, but that Duryea would make him work hard to do so. In and around New York Louis Duryea has hundreds of admirers, owing to his consistently good shooting form. He is without doubt one of the very best live-bird shots in this vicinity. Jack Winston, however, is a rattling good shot also, and is generally supposed to have no nerves, while he apparently delights to play upon the nerves of those with whom he is shooting. He goes through more motions when preparing to shoot at either a live bird or a target than any other shooter whom we can name. The result of the above match, therefore, came in somewhat of the nature of a pleasant surprise to those who rooted for Duryea. The scores were: Duryea 94, Winston 89. The stakes were $100 a side.

A canvass was made of the shooters at the Du Pont tournament prior to the trophy event; 146 shooters in all were spoken to with the following result: L. C. Smith 43, Greener 26, Parker 24, Lefever 11, Scott 7, Winchester 7, Francotte 4, Cashmore 4, Baker 3, Colt 3, and 1 each of the following makes: Daly, Purdey, Riley, Wesley Richards, Manhattan and Barclay. Of the above 146 shooters, 141 gave their powders as below: Du Pont Smokeless 102, E. C. 18, Schultze 13, King's Smokeless 3, Hazard 2, and one each of the following brands: W-A, Gold Dust, Robinhood. The shells used were largely U. M. C. goods, as the following figures will show: U. M. C. Co. 106, Winchester 33, U. S. C. Co. 1, U. M. C. and Winchester shells being used by the other six shooters.

The programme for the third annual tournament of the J. M. Schmelzer & Sons Arms Co., Kansas City, Mo., has been issued. There will be three consecutive days of target shooting at this tournament, the dates being Sept. 16-18. The main feature will be the Schmelzer trophy, won last year by Jack Parker, who is at present holder of the cup. The conditions are 100 targets, reversed order. Besides a good programme of merchandise events there will be several open events each day, $150 being added to the purses in these events.

At the date of writing, Tom Morfey has two matches on hand. The first takes place on Wednesday, Aug. 19, his opponent being Phil. Daly, Jr. The conditions are 50 live birds, $50 a side, 30yds. rise, 21yds. boundary. The second is with Edgar G. Murphy; the conditions of this race are 200 birds per man, $250 a side, 30yds. rise, 21yds. boundary. The date set for this match is Wednesday, Aug. 26. Both matches will be shot on the Hollywood, N. J., grounds, near Long Branch.

The first tournament in aid of the Massachusetts State Shooting Association will be held on the grounds of the Boston Shooting Association, Wellington, Mass., on Monday, Sept. 7. Shooting commences at 9 A. M. President Wadsworth and Secretary O. R. Dickey have arranged a popular programme of nineteen 10 target events and three 20-target events.

The Interstate Association's tournament at Marion, N. J., Sept. 8-9, held under the auspices of the Endeavor Gun Club, of Jersey City, will be managed entirely by Elmer E. Shaner, the manager of the Association. The tents, traps, etc, of the Association will be shipped direct from Burlington, Vt., at the conclusion of the tournament in that city, Aug. 26-27.

Judging from the results in the 5 and 7-bird races at the Du Pont shoot in Chicago, the most popular way of dividing purses in such events would be high guns. In another column we give the financial results of the 5, 7, 10 and 15-bird races so far as the shooters were concerned.

FOREST AND STREAM stated over a year ago that it would not open its columns to any challenge unaccompanied by a forfeit, and it has firmly adhered to that principle. Others have said the same thing; quite recently, too. Yet forfeitless challenges are quite numerous in their columns just now.

Fred Hoey conceded Phil Daly, Jr., a yard on Aug. 11 and beat him by 1 bird in a 50-bird race. The match was shot on the Hollywood grounds, with the usual Hollywood boundary of 21yds. On the first 25 birds Hoey led by 2—22 to 20; in the second half Daly gained a bird, scoring 21 to 20. Total scores for the 50 birds were: Hoey 42, Daly 41.

Mr. Briere, secretary of the West Lebanon, N. H., Gun Club, writes us that the date of the shoot to be held by that club in September is changed to Sept. 11 instead of Sept. 10. The change was made to avoid a conflict of dates with the State fair.

Jack Parker's sixth annual tournament might be termed "Jack Parker's sixth annual success." Like all its predecessors, Jack's shoot was a rattling good one, notwithstanding the depressing effects of the extremely hot weather.

Of the five men who went straight in the Du Pont trophy shoot, Claridge, the winner, shot a Daly gun; Kirkover, a Parker; G. Roll and Gottlieb, an L. C. Smith, and Wallace Miller, a Winchester repeater.

The third contest of the New Jersey Amateur Trap-Shooters' League will be held on the grounds of the Passaic City Gun Club, Saturday, Aug. 22. Sweepstake shooting will commence at 10 A. M.

Heikes and McMurchy did some great work on the last day of the Detroit shoot. Heikes broke 199 out of 205; McMurchy was close after him with 198 breaks.

B. F. Smith did a great deal of work in the way of booming the Buffalo shoot, Sept. 1-5, both at the Du Pont tournament and at Detroit last week.

L. H. Schortemeier was in good form at Marion, N. J., on Saturday afternoon last. During the afternoon he broke 131 out of 140 targets.

Aug. 18. EDWARD BANKS.

In New Jersey.

ENDEAVOR GUN CLUB.

Aug. 8.—Below are the scores made by members of the Endeavor Gun Club, of Jersey City, at their Marion grounds this afternoon:

Prize shoot, 25 targets, unknown angles:

Eddie Collins	1111111111111111101101111—23
G Piercy	1111111111111011101111011—22
L Piercy	1110101111101111010011111—19
E Ingram	1101111001111110100111001—17
H P Fessenden	1011100111010001011101111—16
Mulvaney	0111100011011110101011011—16

Other sweeps were shot as follows, all events being at 10 targets, except the last, No. 11, which was at 20 targets:

Events:	1	2	3	4	5	6	7	8	9	10	11
Fessenden	6	8	7	8	..	..	6	6	6	..	14

Collins	..	..	9	9	10	7	..	..	8	10	..

J. A. CREVELING, Sec'y.

FORESTER GUN CLUB, OF NEWARK.

Aug. 8.—The Forester Gun Club held its monthly shoot this afternoon. Despite the extremely hot weather there was a fair attendance and some fairly good scores made. Nos. 1, 3, 5, 6, 7 and 8 were shot under expert rules; No. 2 at reversed order, and No. 4 at known traps and angles. Scores were as below:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

H. E. WINANS, Sec'y.

ENDEAVOR VS. DUNELLEN.

Aug 15.—The third and final match of the series arranged between the Dunellen Gun Club and the Endeavor Gun Club, of Jersey City, was decided to-day on the grounds of the latter club at Marion. The result was an easy win for the home club by 24 breaks. The scores made by both teams were not up to their standard. The percentage of the winning team was only 75, while the losers averaged 67 per cent. These low percentages are rather remarkable from the fact that the targets were thrown from known traps with known angles. There was a deliciously cool breeze blowing that made every one feel good, coming as it did after such a hot spell as we have had in this vicinity; but that same breeze played havoc with the totals, left-quartering targets going down wind at a rate of speed that made it necessary to get well ahead of them. In addition to the trouble caused by the wind, nearly everybody complained of "that tired feeling," due entirely to the sultry nature of the past ten days. They knew they were slow in their swing, but seemed unable to rectify the error.

Among those present were Noel E. Money, secretary of the American E. C. Powder Company, and his younger brother, H. Money, who has never done anything at targets previous to Saturday, Aug. 8; he is, however, a chip of the old block and a good game shot, and therefore took to targets much as a young duck takes to water. In one or two sweeps he taught his elder brother a thing or two, making 10 straight in one event. Noel retrieved some of his lost laurels by pounding out 25 straight for the Endeavors in the team race. Other visitors were Platt Adams, a member of the Boiling Springs Gun Club and of the New Utrecht Gun Club; there is not a more enthusiastic trap-shooter in the country than Mr. Adams, and when he is shooting in his true form he can make the best of them hustle. Another visitor was Mr. James Blauvelt, also a member of the Boiling Springs Gun Club; it is a matter of record that no one has ever seen Mr. "James" one whit worried over the loss of a target. "Lemuel" was another visitor; were it known who Lemuel was his scores would be scanned with greater interest than ordinary, for Lemuel has been, and is still, a wonderful hand with a gun, particularly on live birds.

The Endeavor Gun Club has done a great deal for trap-shooting in the vicinity of New York by reason of its always being ready to meet any other club in a series of team races. Its activity in this respect has done more to increase its membership, its popularity, and better marksmanship among its members than even its most sanguine admirers had hoped for. The Dunellen club, though only a very recent organization, has made rapid strides in trap-shooting; less than six months ago it would have been nearly impossible for it to have gotten together a team of six men to tackle any club with hopes of victory; it has, however, recently defeated the Endeavor Gun Club in one out of the three matches of this series, and that with 12-men teams. That its team to-day was composed of sportsmen who knew how to take a defeat was evidenced by the rousing cheers they gave for the victors when the result of the race was announced; the volume of sound that came from their throats put to shame the previous puny efforts of the Endeavors when cheering for the losers.

The Endeavor Gun Club is busily preparing for the Interstate shoot, scheduled for Sept. 8-9; its annual shoot, held the day previous, Sept. 7, is also not being neglected. There should be three good days' shooting at Marion on the above dates.

An optional sweep was shot in connection with the team race, the purse in this event, as in all the sweepstakes, being divided under the Rose system. Scores in the team race were as follows:

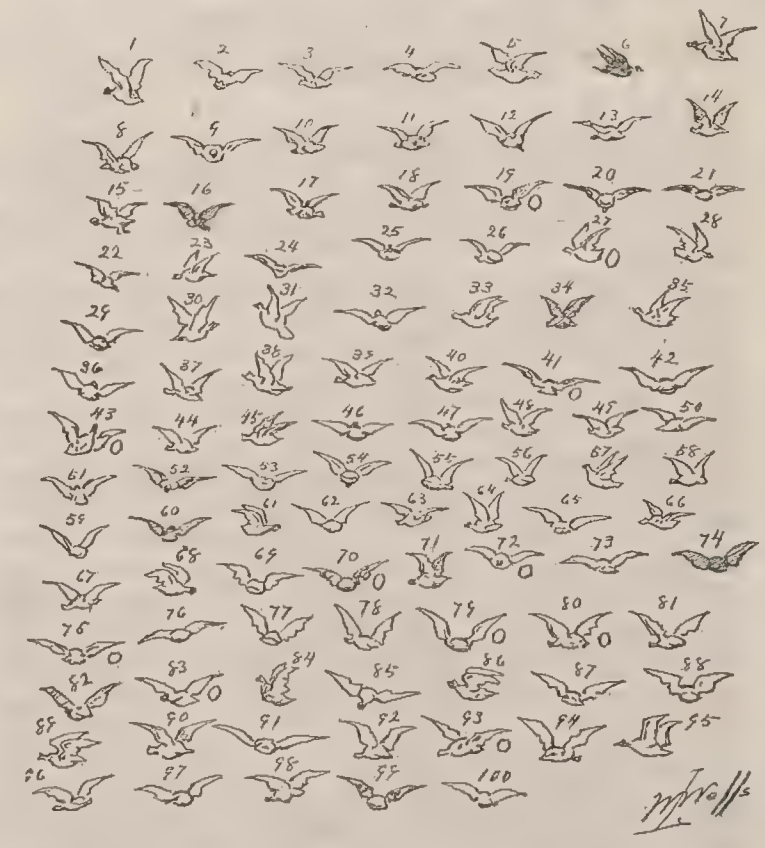
Claridge Accepts Malone's Challenge.

BALTIMORE, Md., Aug. 17.—*Editor Forest and Stream:* I accept the challenge of Mr. John R. Malone, of this city, for the Du Pont trophy, and name Tuesday, Oct. 6, as the date; the match to be shot on the grounds of the Baltimore Shooting Association. Conditions: 50 birds.

BERT W. CLARIDGE.

The Duryea-Winston Match.

CHICAGO, Ill., Aug. 10.—The art of picture-writing is an older one and in some ways a better one than that of writing with letters, because all men can read pictures. I don't know whether Mr. Duryea or Mr. Winston can read print or not, but it is quite sure that either they or anybody else could read the story of the Duryea-Winston race, which was shot at Watson's Park, Chicago, on Monday, Aug. 10, by simply looking at the pictures of the birds they shot at, and without reading a word of descriptive matter about the race. It is the prettiest, most complete and most concise report of a pigeon shoot ever published.



This race was a very interesting one, barring the fact that the birds were about the poorest lot ever trapped at Watson's Park. There was little air moving and the heated term was still on, so that birds as well as men were fairly exhausted. Many birds were flagged and many flew very dull, though a few birds were sharp and hard enough for any season. Winston was the favorite in the odds among the Chicago shooters, many of whom, remembering the past, believed that he could not be defeated in a match made to his own liking. Winston is always a puzzle. At targets he is a bad man to beat at his own sort of game, and he is a known pigeon shot, although he admitted that he had not shot 6 birds in two years previous to this match. He does no practicing, never experiments with guns or loads, never speaks of being in or out of form. He is apparently sincere in his belief that he can always shoot a race and win over anybody. He is a good banterer in making a match, but granted all his peculiarities, no one who knows him doubts that if he had $100,000 he would double it or lose it in a year shooting pigeon races. He has lately won a few target races, defeating among others the Eastern crack Sim Glover, who is not so slow himself. Winston's

MR. DURYEA'S BIRDS AS THEY APPEARED IN FLIGHT.

peculiarities have been earlier described in these columns. He is apparently as superstitious as a gambler, and a believer in fetichism, but no one knows whether this is real or feigned. Against Winston was a shooter not so well known in Chicago personally, though of course Mr. Duryea was known as an Eastern club shooter and a winner of many hot matches. It is not enough to say that Mr. Duryea made a favorable impression upon the Western shooters. His dignified and gentlemanly conduct in the race, his plucky and brilliant shooting and his magnanimous conduct after the race, made for him at once a high place in the esteem of the Western shooters, who would like to see him and others like him just as often as possible.

Mr. Duryea shot a Francotte gun and Schultze powder in U. L. & D. U. M. C. shells, his opponent using Frank Parmelee's Greener gun with Du Pont powder in U. M. C green trap shells. The race began

MR. WINSTON'S BIRDS AS THEY APPEARED IN FLIGHT.

at 2 P. M., with Winston up, who killed his first bird. Duryea lost his first bird. Winston ran 18 straight, and at the 25 turn was 2 birds in the lead. It was considered Winston's race, for although he shot slow and in the raggedest sort of time, he was centering his birds with shot and cutting them to pieces with what was evidently a killing gun and load. He dropped several at unconscionable distances, and lost his first bird by a wait which seemed intentionally long.

Before going to the score Winston began in a mild way his usual hypnotic experiments. He tacked a piece of box lid up on the rail in front of the shooters' chairs, and just back of the firing stand placed an empty shell, with the top end pointing back. At the score he was very slow, wiping his hands regularly on his handkerchief, waiting, sighting his gun, "keying up" his nerves (apparently, for really he wasn't), and at length calling "Pull!" loudly and with a sharp jerk of the gun to the face. This may have been part of his tactics or part of his system, or part of his religion. Nobody knows Jack Winston or pretends to, so no one can tell. But it is certain that if any of this was intended to disconcert his opponent it failed of its purpose. Mr. Duryea did not look at the hypnotic data, but sat and pleasantly talked with Mr. Parmelee or with his brother, Mr. Frank Duryea, who handled his gun for him. He always stepped quickly and firmly to the score, and lost no time, shooting with the speed and system of the practiced pigeon shot, and never betraying concern by word or gesture. He shot a model race. He did not even smile when Winston called out to Chan. Powers from the score, "Powers, bring me ten shells, five in each hand."

The race was shot Hurlingham rules, Winston's invariable conditions, and under these rules a singular instance arose on Duryea's 28th bird. He got a red incomer which fell close to his feet, apparently about to get over the dead line. "Catch him, Louis!" cried out some one, and in the excitement Mr. Duryea stepped from the score and stopped the bird. "Dead bird," decided John Watson, referee. "I challenge the bird," cried Winston. "Dead bird," repeated the referee. "Then I protest the bird, under Rule 14," said Winston (he always has all the rules in his head, but this time it was Rule 15 he should have named). "The shooter can't gather his own birds under Hurlingham rules." The referee then ordered Mr. Duryea to shoot another bird, which he killed. Winston was right in the protest, but it is hard to tell where the protest could have been carried, especially since the rules say the referee's decision must be final.

Duryea's 40th bird came from No. 4 trap, and he dropped it dead on top of No. 3 trap, where it hung. This was apparently a hoodoo for Winston. He began to go out of all form and was very slow. Winston was very slow with his first on his 41st bird, and let it twist out and over. His 43d was an incomer, and he waited till he got the sun in his eyes and could not see to shoot his second except by guess, close at the dead line. Meantime Duryea was steadily getting them down, and at the 50 hole had tied the score, each man standing 46 out of 50. At this stage of the race Winston laboriously pounded down 25 straight, and Duryea easily cut down 30 straight. They drew into the three quarters stretch, but just before the 75 hole Winston lost 3 out of 6. Duryea was thus 2 in the lead at 75, and was never headed. He made a second run of 26, and gained in speed and brilliance. He lost his 87th and then ran out straight, shooting in a form which would have puzzled any man to beat, and winning his race with the best score (I am advised) that he ever made in his life. After turning into the home stretch past 75 Winston became duller and slower, losing his 79th, 80th and 83d birds. Then, singularly enough, he pulled together, quickened his time and shot like a fiend on out, slap-bang, making a lot of brilliant kills, and losing only his 93d bird, which was hit hard, but too far back.

Winston's 51st was a hard cinnamon, scored far out in the deep field. His 53d, a big white, was also stopped, but made observers doubtful, as he was slow in getting on. His 69th twisted out of the first, but the second was used with care and stopped it. His 70th was a twisting driver that was not hurt; his 72d fell dead just over, and he lost his 75th, a bob-tailed white, not getting on full with either barrel. His 80th was hit full, but was too far and got over. His 83d was a big blue slate, dead out of bounds, hit too far back. His 90th bird was a screamer, and killed handsomely to applause. His 93d was well centered, but wobbled over. His 94th was dropped on a long kill. There was merit also in the killing of Winston's 45th, 47th and 59th birds.

Mr. Duryea shot better and better all through the race, and killed his birds so cleanly and quickly that he did not leave much room to kill them over again for him. His 44th was a lightning kill on a fast bird, and was applauded. His 60th was only feathered with the first, and he was not quick enough with his second to stop it. His 64th was a long, hot, hard bird ahead of No. 4 trap, and was scored amid applause. His 79th was a hard driver, but was killed in fine fashion. His 81st was hard and fast. His 82d sprang high and was only feathered. His 92d was the star bird of the day, and rarely does one see a harder at any season, or on any grounds. A small blue, it tailed away like lightning, offering the hardest sort of target. He cut it down with lightning rapidity. "No one can beat him if he can kill that sort," said the bystanders. And no one did that day.

Winston's poor form was matter of surprise to his backers, and he himself was a bit cast down over losing the race. As he walked along the platform going home some one asked him how it happened he lost the race. Winston thought for a moment and then replied suddenly, "Blame me if I don't believe the other man is a better pigeon shooter than I am."

This was an unusual admission for Jack Winston to make, but it forms a not ungraceful finish to one of the most interesting little matches the shooters of Chicago have recently had opportunity of witnessing. They would like to see some more as good and as pleasant. Score, 100 live birds, $100, Hurlingham rules:

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Purses at the Du Pont Tournament.

THE amount of money handled in the cashier's office at the Du Pont shoot during the first week of August was extremely large. The winners in the team race and in the trophy shoot received good returns for their investments. Outside of those two races, however, the purses were so cut up that the amounts paid out to individual shooters were only small.

In event No. 1, 122 out of 133 entries drew out money. In No. 2 a still larger proportion—115 out of 120—were interested in the division of the purse. In event No. 3, the 10-bird race, 169 out of 175 drew money, and in the 15-bird race 115 out of 122 took out something. (Our figures are, of course, based on the scores which appeared last week.)

Below is a brief statement of the division of the purses:

No. 1: 5 birds, $5, birds included at 25 cents each, $75 added, three moneys, 133 entries. Gross purse $740, less $166.25 for birds; net purse $573.75:

49 men with 5 kills each received $5.85.
51 men with 4 kills each received $3.37.
22 men with 3 kills each received $5.21.

No 2: 7 birds, $7, birds included at 25 cents each, $100 added, four moneys, 120 entries. Gross purse $940, less $210 for birds; net purse $730:

34 men with 7 kills, each received $8 58.
37 men with 6 kills, each received $5 91.
31 men with 5 kills, each received $4 70.
13 men with 4 kills, each received $5.61.

No. 3: 10 birds, $10, birds included at 25 cents each, $150 added, four moneys, 175 entries. Gross purse $1,900, less $437.50 for birds; net purse $1,462.50:

37 men with 10 kills, each received $15.81.
61 men with 9 kills, each received $7.19.
35 men with 8 kills, each received $8 35.
22 men with 7 kills, each received $6.66.

No. 4: 15 birds, $15, birds included at 25 cents each, $200 added, five moneys, 122 entries (G. Jack's entry fee being returned to him). Gross purse $2,030, less $457.50 for birds; net purse $1,572.50:

28 men with 15 kills, each received $16.84.
37 men with 14 kills, each received $10 62.
28 men with 13 kills, each received $11.23.
16 men with 12 kills, each received $14.74.
6 men with 11 kills, each received $26.20.

The above figures are decidedly interesting. They show plainly that the old system of dividing purses, in live-bird races as in target events, is worse than faulty. There is no equity in the division of a purse where a man who kills 11 out of 15 birds receives $26 20 for $15, when a man who kills all his birds only receives $16.84 and a man who scores 14 out of 15 takes down $10 62! Is it any wonder that dropping for place still exists? The system itself is to blame.

Chicago Trap-Shooters and Sparrows.

CHICAGO, Ill., Aug. 8.—I herewith hand you score of Winnetka Gun Club, made at English sparrows to-day. On account of the small size and rapid flight, the sparrow is a favorite bird at the trap for all the clubs that have used them so far, and especially for those shooters who do not care so much for big scores as for something that takes quick and accurate shooting. The scores in the two 10-bird sweeps were as follows:

Events:	1	2	Events:	1	2
Richardson	7	9	Hester	7	..
Madsen	9	..	Royce	8	5
McConnell	5	6	Maynard	8	8
P Hoyt	9	9	Albright	4	2
L Hoyt	9	9	Buckbee	9	9
R Daggett	5	10	J Daggett	..	7

BERT HAMPTON.

Conny Furgueson Challenged.

ROCHESTER, N. Y., Aug. 10.—*Editor Forest and Stream:* I would like to match Master Charles Skinner, of Rochester, N. Y., against Master Clarence Ferguson, of New York city, to shoot a race at 50 live birds under American Association rules, $100 a side. The shoot to take place at the Rochester Driving Park on or about Sept. 9, 1896. I inclose check for $25 as forfeit. The balance of $75 to be posted day of match.

DR. J. L. WELLER.

[Check for $25 received. We presume Dr. Weller refers to Master Cornelius Furgueson, a member of the New Utrecht Gun Club.]

Jack Parker's Sixth Annual.

ONE OF THE STANDBYS.

DETROIT, Mich., Aug. 14.—The annual tournament given by Jack Parker at Detroit is one of the regular standbys of the year, and is always looked forward to with interest by the shooting fraternity. Jack has the reputation of originality in management, and each year thinks out some new scheme whose object is to draw a crowd of expert and amateur shooters. He always has a project which looks well to the expert—at a distance. His famous shoot when the boys "didn't do a thing to him" still rankles in the minds of some of the shooters who packed their guns and went home on that occasion.

This year Jack Parker came out with another programme showing the close note he keeps on developments in trap-shooting. He announced a good programme, with some added money for the crackerjacks, and some for that vast class of patient humanity who may for want of a better name be called the sucker-jacks, they being the producers, much beloved, but perhaps a trifle misunderstood. He announced also that the Rose system of dividing purses would be used, to insure fairness in the shooting, and that there would be five moneys. More than this, to further protect the low shooter, all men below 85 per cent. class were to be allowed 1 bird in 20, 2 in 25-bird events, to shoot at beside the regular number. The programme further showed such notable events as the three-men State team championship of the United States; the two-men team championship of United States and Canada; the expert championship of United States and Canada, each of these large events signalized by appropriate and valuable emblems and trophies and by added moneys.

The cracker-jack class looked at the glittering bait thrown out by Jack this year, eyed it over, edged up to it, sniffed at it, then most of them backed away and went back to their holes. Some thought they would go to Duluth, or some place where it "was a leetle easier." A few went to Jack's place, and shortly sorrowfully packed their guns and went home again. Once more Jack had got up too much of a combination for them. Then, at the end of the first day, there arose a prolonged and mournful wail by the banks of the River Rouge, and the Rose system was suspended. Jack smiled and agreed to this, as he always does, after taking his annual fall out of the "perfesh" of the trap. But the handicaps continued their deadly work, even after the "double-header" was taken off. Heikes won $1.35 the first day, $6 the second day, and 85 cents the last day, shooting on the last day a gait of 96.2 per cent. Trimble shot 92 per cent. the first day and lost $4.50; 90 per cent. the second day and won $2; 93 per cent. the third day and lost $4. Winston, who led in average up to the third day, thought he had won about 50 cents. Heikes on the third day broke 48 in the E. C. cup race and 48 in the tie, 96 out of 100, and the handicap shut him out of place! Verily, there is frost in the air by the banks of the River Rouge. Occasionally Jack Parker unbuttons his shirt sleeve and laughs into it, and the local amateurs go home to their wives and families and push out their chests and remark casually that they are something of a fellow their own self. The handicap committee who aided in these nefarious designs were Messrs. H. McMurchy, R. O. Heikes, Ed. Bingham, Ralph Trimble and Jack Parker. All these men took their own medicine, smiled and said they liked it. (Nit.)

The weather was for the most part favorable for the shoot, and the arrangements of the grounds, with tents, club house, covered scores, etc., were highly conducive to the comfort of the shooters. The background of the grounds is exceedingly good, being sky or water. The grounds lie on the banks of the Detroit River, along which the endless line of shipping passed in full view. The office of the shoot was presided over by Mr. W. W. Bock, cashier, and Mr. E. C. Hauson, who took care of the scores and averages. Both these young men were courteous and obliging to a degree. Everything was well conducted, and the shoot was good-humored and smooth, with no kicker in sight.

Another new feature in trap shown at Jack Parker's shoot was the use of the magautrap of the Cleveland Target Co. There were two of these magazine, always-ready traps in use. Each took the place of a set of traps, and the shooting was thus simple, rapid and inexpensive. The shooters went to the score in squads of five, each man shooting 5 birds at each firing station instead of 1 in the walk-around. The two magautraps were kept busy, the continuous ringing of the little bells having some of the whistling notes of a bunch of plover flying over. Of course bluerocks were used in the magautraps.

FEATURES OF INTEREST.

The main interest of the first day's shooting centered about the two-men team championship of the United States and Canada, which called out fifteen strong teams. Heikes and Graham, of Rosedale, Mich., won first with 92, each getting a handsome gold watch thereby. Five teams tied on 91, and the tie was shot out and won by McMurchy and Fanning. Jack Winston was high average for the day, 177 out of 185.

On the second day the 50-bird event was for the Gillman & Barnes gold medal and the individual expert championship of the United States and Canada, an event possessing a much greater sporting interest than the monotonous 20-bird sweeps common at tournaments. This medal was won last year by J. H. Bortle, of Detroit. The conditions being 21yds. rise, use of both barrels, one man up, 5 traps, the game was exactly to the liking of Jack Winston. The latter bet with several shooters that 45 would be beaten. The race took all the afternoon to shoot. Winston went in to win his wagers, and broke 23 out of his first 25, using only his first barrel. Then his gun went wrong, the right barrel lock refusing to stand cocked. Endless balks and waits and arguing over rules followed, enough to rattle almost any shooter. Much of the time Winston was firing a powder charge with his right barrel, or trying to, and breaking his birds with the left. At the 49 hole Winston had missed 10, and was one ahead of McMurchy and Parker. He broke his last bird away out in the field, and went out high gun with 40. It had been forgotten, however, that Tom Latham, of the Norwalk (O) Gun Club, was yet to shoot his last 25 birds. Mr. Latham was a bit of a dark horse, for he finished his 50 with a run of 23 out of 25, going out with 42, thus winning the handsome medal, and incidentally inflicting on Winston the double penalty of beating him and yet losing him his wagers on high gun! At this Winston, who had been shooting under the name of "Mead," changed his name to the mystic number of "147." Heikes and Latham tied on average for the day, with 168 out of 185; Winston second average, 166 out of 185.

On the third day of the shoot the dark horses had another surprise for the experts, this as usual in the 50-bird event. In the E. C. cup contest for the handicap championship, U. S. and Canada, Mr. R. H. Hall, of Detroit, another member of the hard-shooting River Rouge Gun Club, was allowed 3 extra birds to shoot at. To the surprise of all, he ran up to 47 straight and made 49 out of 50, with 3 allowance birds to shoot. Of these he broke 1, putting him out with 50 all alone. There was no 49, and Burrill, who had still to shoot, with much *insouciance* openly announced that he would try to so use his big allowance of birds as to drop into the 49 hole. His friend back of the score, however, unfortunately coached him wrong in his little attempt at dropping for place, and when he came to figure out his total he discovered that he was 46 instead of 49, and missed his last 3 birds to very bad purpose. The 48 hole had several hot ones in it. Winston insisted on shooting the tie, declaring that he would of course win the prize, a Mullins manganese bronze ducking boat, and that he had already given it to a friend! It was here that Heikes ran 96 out of his 100, losing nevertheless to H. E Norton, of Ironton, O., who scored 46 and broke also his 3 allowance birds, netting 49. Winston lost 2 birds out of his first 6, to his disgust. High gun for third day was Heikes, 183 out of 190; McMurchy second, 181; Winston third, 180.

TWO PHENOMENAL SCORES.

The most interesting event of the entire tournament was the three-men State team championship of the U. S., the conditions of which asked for 100 bluerocks. Interested groups stood along the rails as some of the finest and best known trap shots of the country stepped to the score, under conditions promising something like a bit of sport. The air was cool and clear with no wind, and the birds were not especially difficult, so it was expected that there would be good scores. But no one was looking for what actually happened. It was soon reported about that McMurchy had gone out with 97 out of his 100. It was not dreamed that this would be surpassed, though Heikes was still to shoot. The latter went placidly to sawing wood in his usual steady manner, and at 50 remained straight. He lost 1 bird at No. 1 score after running 71 straight, and dropped another at No. 2; but scored 98 out of 100, with 97 to beat! It is not often that one sees two such scores on the same blackboard. Mr. McMurchy said that he had never personally seen so high a score in a 100-bird match or sweep. Winston once beat Frank Parmelee with 100 straight (one man up, 5 traps). Heikes once ran 100 straight in the Western team at Corry, Pa., but to get within 2 and 3 birds of these records is something rare enough to be held phenomenal even in these days of high scores. Heikes shot his historic Winchester pump, with 42grs. of E. C. powder in Leader shells. McMurchy used his L. C. Smith ejector, but shot a job lot of shells to clean out his box, some of E. C., some W. A. and some Schultze. It was a singular fact that these two great scores in each case failed to land a team in first place, the New York team (McMurchy, Smith and Fanning) taking second place, the Ohio team (Heikes, Norton and Weaver), third. Michigan team (Parker, Woods and Graham) won first, as see scores for Friday. The fourth day's high average, $10, was won by Heikes, 199 out of 205; McMurchy second, 198. The consolation race had only one entry, Mr. Scotten, the only programme shooter with average below 80 per cent.

The tournament closed early Friday afternoon. It was a very pleasant and enjoyable affair, and one which was full of surprises and abounding in sporting interest. It was unanimously agreed that it takes Jack Parker to get up a shooters' shoot which is too swift for the shooters.

TUESDAY, FIRST DAY.

[Men marked * shot at scratch.]

† Event No. 5 was for the E. C. Powder Co.'s handicap championship cup. Open to United States and Canada. Scratch men, 50 bluerocks, $1.50. First prize: E. C. Cup, donated by E. C. Powder Co., and emblematic of handicap championship of U. S. and Canada; second prize: One of Mullins' safety copper duck boats, value $55; third prize: One Martin safety take-down rifle, any caliber; fourth prize: One of Fred Devine's best rods; fifth prize: One expert bluerock trap.

The scores of this event in the table above show the number of birds actually killed by each man out of 50, also his handicap allowance and his total score of birds shot at.

The E. C. cup was won by R. H. Hall, of Detroit, who ran 47 straight and scored 49 out of his 50. He was allowed 4 birds handicap by the committee, and of these broke 1 out of 3 shot at, placing him with a total of 50.

There was no 49. Ties on 48 shot at 50 birds: Heikes scoring 48, Herbst 43, Bingham 44, Norton 49, Marks 42. "147" (Winston) fell out in his first 6 birds. The same handicap applied in the tie, and Norton's allowance of 3 was added to his actual score of 46 out of 50 in the tie, he killing his 3 allowance birds.

Ties on 47 shot at 50 tie birds. Horton had 6 birds allowance and killed 52 out of 56, or equivalent of 50 straight. C. Daniels, 49 out of 57; H. Smith dropped out at 43d bird; Matthews killed 45 out of 58; Taylor 44 out of 53; Horton won. Other ties shot, split and bought out.

FRIDAY, FOURTH DAY.

NOTES AND INCIDENTS.

Mr. and Mrs. Milt F. Lindsley were present, and had in view a handsome case and banners bearing the samples and signs of King's Smokeless powder. Mrs. Lindsley shot in events on Thursday and Friday very nicely, and was watched with interest by a large assemblage.

Matters were enlivened Thursday by the appearance on the grounds of Wm. Genicke's Vaterland orchestra, composed of two eminent composers disguised as fat Dutchmen, and playing respectively a violin and an accordeon. They played almost altogether by ear.

On Friday afternoon, after the big State team race, a sparring match was held before the kinetoscope; Mr. R. O. Heikes, the Dayton diamond, and Mr. Jack Parker, the Detroit strong boy, going four rounds with 4oz gloves until stopped by exhaustion and the police. McMurchy was timekeeper and referee.

Paul North would have been glad to stay longer, but had to leave the second day.

Capt. Du Bray, of the Parker gun, was present only to say good morning and good-bye.

The Old Reliable, Ed. Taylor, of Cincinnati, was out at a shoot for the first time in a long while. He shot like a colt, although much troubled with his gold teeth, which ached badly. He has sixteen gold teeth to one plain tooth and believes in free gold.

Mr. C. D. Hagerman, of Lincoln, Neb., was at the shoot. Detroit was his former home.

Ralph Trimble was taken seriously ill Friday evening, and while on the car on his way home to town suffered such pain that he sprang from the car and ran away, almost out of his head. Friends followed him and took care of him.

Mr. Oren Scotten, the wealthy and liberal Detroit sportsman who gave the three handsome diamond badges for the State team championship contest, was present all through the shoot and shot through. On Saturday Mr. Scotten took a large number of the visiting shooters on a boating party to the St. Clair flats on his handsome yacht Wanda.

Mr. M. Herrington, special agent at New York city of the smokeless powder department of the Laflin & Rand Powder Co., shot practically through the programme, and shot very nicely.

Dr. E. M. Waters, of Columbus, O., was on hand for a short time.

Eddie Bingham stayed with them till Friday noon, when he was obliged to return to his home in Chicago.

The muskrats of the River Rouge are very large and fat, and they eat them tails and all.

Mr. R. H. Hall had a great chance to beat McMurchy and Heikes, for he came near getting 51 out of 50. Even the Old Guard can't do that.

It is too bad the Rose system does not cover the case of a man trying to drop into a metal boat.

Handicaps are good—sometimes too good.

A few of the Old Guard stayed through the programme and lost, in the way "producers" do. They made many friends and did their employers good, but it was a poor place to lay up money.

Paul Weise, Jack Parker's right bower, hustled squads four days inimitably, and all for love of Jack.

All the employees on the grounds were well posted, courteous and efficient. It was a very businesslike shoot.

The big Du Pont shoot and the hot weather hurt the attendance considerably, but the shoot was a rattler just the same.

The shooters all thought the grounds very pleasant to shoot on. There is no better background in the country.

There is some speculation as to what sort of game Jack Parker will spring on the boys next year.

They didn't do a thing to Jack this year, either.

A few long races liven up a programme wonderfully.

1206 BOYCE BUILDING, Chicago. E. HOUGH.

Our Du Pont Tournament Sketches.

MR. HOUGH writes in appreciation of the artists whose services were enlisted by FOREST AND STREAM at the Du Pont tournament:

Mr. W. L. Wells, who did most of the sketches for the report, is perhaps the best known artist of Chicago, and has no superior in his profession here. He has always been especially fond of sporting topics, and has done some fine colored work in wildfowl scenes. His "Mallards" and "Teal" have been seen all over the country. Mr. Wells's facile pencil had a great deal asked of it this week, and on the briefest notice he was called on to make two-minute portraits for a reporter always in a hurry to catch a mail East. He was equal to the task. His portraits are admirable. The portrait of Mr. Francis G. Du Pont was pronounced by daily newspaper men who looked at it to be the best pen-and-ink portrait they had ever seen. He caught the shooters as they were, not as they pose to appear.

Mr. W. S. Phillips is a Western artist of wide experience and rapid pencil. If he hadn't been rapid he would not have done. His bits of shooting life show what he can see and do in about seventeen minutes, and on the dead jump. FOREST AND STREAM had to overcome 1,000 miles of geography and a vacant business day in handling this report, so the artists had no time to eat or sleep. While Mr. Wells and Mr. Phillips were tending to their knitting at the grounds, Mr. Louis Braunhold was finishing up a scene or two that had been put in outline. At the close of the shoot, when both Mr. Wells and Mr. Phillips and Mr. Braunhold were away, Mr. Coppernoll and his board had to be pressed into service. Had Mr. Coppernoll failed, it had been discovered that one of the boys who sold ginger pop at the soda water stand could make a stagger at a drawing if held up with a gun. His name was Coffee. Had Mr. Coffee failed, FOREST AND STREAM would have gotten some one else.

Arendtsville Gun Club.

ARENDTSVILLE, Pa., Aug. 8.—There were six events at targets and five live-bird events shot to-day on the grounds of the Arendtsville Gun Club. Scores in the target events were as follows, all events being at 10 targets:

Events:	1	2	3	4	5	6
C D Wisler	10	8	8	..	..	..
S M Eaholtz	10	10	9	9	10	8
A Kane	..	..	9	9	8	10
E Wisler, Jr.	10	..	..	..	..	..
J C Thomas	8	..	9	..	8	..
A Schlosser	10	6	8	7	7	8
C E Crum	8	6	..	..	..	..
A Lerew	..	..	9	6	7	8

Events:	1	2	3	4	5	6
W McCann	..	..	..	7	8	..
Geo McCann	..	..	..	5	3	..
E Carson	..	..	..	9	..	..
J Hoffman	..	..	..	8	7	..
J F Taylor	..	..	..	..	7	..
C P Arendt	..	..	..	..	8	..
W Winans	..	..	..	..	5	..

The live-bird scores were:

Events:	1	2	3	4	5
Birds:	5	5	10	5	6
C D Wisler	4	5	9	5	..
Eaholtz	5	5	9	3	..
Thomas	5	5	9	3	..
Kane	..	..	10	5	5
Lerew	..	..	9	5	6
Schlosser	3	3	6	3	..
Beamer	5	3	..	..	..

Events:	1	2	3	4	5
Birds:	5	5	10	5	6
Carson	..	..	7	5	..
Taylor	..	..	5	5	..
Arendt	..	..	..	..	4
Livingston	..	..	..	4	..
J C Lower	..	..	..	..	5
Crum	..	..	..	..	5

All the contestants in the live-bird events, except Taylor, used Schultze powder loaded by C. D. Wisler.

C.

Programme for the Interstate Shoot at Marion, N. J.

The programme gotten out for the Interstate Association's tournament at Marion, N. J., Sept. 8-9, has been received, and deserves special comment. In "Drivers and Twisters" last week we made an error in stating that the Novelty rule would be revived at this shoot. The statement was made on the strength of information which we considered reliable, but the fact remains that it was an error. The Novelty will not be used according to the programme.

There are, however, plenty of interesting features in the programme, the main one being the four extra events shot at expert rule, one man up. These events will be 15-target events, $1.50 entrance, four moneys. The programme events scheduled for each day are precisely similar. They are ten in number and call for 190 targets at an average entry fee of 10 cents per target, or $19 for the whole day. There are four 15-target events, four 20-target events and two 25-target events each day. All events are at unknown angles with the exception of No. 9 each day, 25 targets; this is at known angles, but has no money added to its purse. The club adds $75 a day, as follows: $5 to each purse in the 15-target events; $10 to each of the four 20-target purses, and $15 to the other 25-target event.

Another special feature is the division of the purses. Around New York we have not had much opportunity for testing the practical workings of the Rose system, but the Endeavor Gun Club has requested that that system be adopted at this shoot. Accordingly all purses will be divided under that system, and we do not hesitate to say that all who come to Marion, N. J., on the above dates, and who take part in the sweepstakes shooting, will go away thoroughly satisfied that at last a really equitable system of dividing purses has been devised. Forest and Stream was the first paper to advocate the general adoption of this system, and for many months it fought the fight alone. The good work done in this behalf is now bearing fruit far in excess of what was hoped for. Come to Marion and see how the Rose system works.

"Preparation day" for this shoot is merged into the annual Labor Day shoot of the Endeavor Gun Club. There will be shooting all day on Monday, Sept. 7, and in order that the Endeavor's club members and their visitors, who generally throng the traps on this occasion, many of whom cannot hope to compete with their more expert brothers, may be able to get a bit of cheap practice, the club announces in the programme that anyone who wishes to do so may "shoot for birds only" on that date.

The grounds at Marion are easily reached from New York city; they are, perhaps, best known to shooters as "Al Heritage's grounds." Many important matches have been shot on these grounds in days gone by, and many thousands of dollars have changed hands on the result of those matches. "Uncle Al" knew good birds, and knew where to get them; hence the popularity of these grounds for match shooting. To reach Marion from this city, take either of the P. R. R. ferries at Cortlandt or Desbrosses streets. Frequent trains run to Marion station, P. R. R., where stages will be in waiting to convey shooters and their shells, etc., to the grounds, which are located about three-quarters of a mile from the depot. The time occupied by the train journey is about five minutes—short enough. The trip can also be made by trolley cars from the Jersey City side of the above ferries. These electric cars can make the run to Marion station in about twenty minutes, and are run on a headway of about ten minutes. Lunch will be provided on the grounds, of course.

All shells and guns shipped in care of Von Lengerke & Detmold, 8 Murray street, New York city, will be delivered at the grounds. The same firm will also have plenty of hand-loaded shells for sale on the grounds at $2 50 per 100. Information relative to the tournament will be cheerfully furnished by A. R. Strader, 371 New York avenue, Jersey City, N. J.

The Rose System.

Chicago, Ill., Aug. 4.—*Editor Forest and Stream:* The Rose system of dividing purses at tournaments has always seemed to me to be about the only one of the whole lot that really "touches the spot." It was naturally with great pleasure that I noted how Forest and Stream was doing yeoman service to the sport of trap-shooting by publishing a simple example of how the Rose system worked. I am not much of a figurer myself, but even I could go to work now and in our club shoots at home pay out the purses promptly. Your trap editor, Mr. Banks, explained the system very thoroughly to me at the Memphis tournament, but I must say it is far easier to understand when one has a simple case placed in front of one, as you did in Forest and Stream of July 11.

When I first learned of the system, which was through your columns some months ago, I did not take much stock in it; in fact, I did not bother about it at all. Then I went to the Charleston, S. C., tournament, where I met some very pleasant gentlemen, had a good time, thanks to the members of the Palmetto Gun Club, and also made a practical acquaintance with the mysteries of the Rose system. It was tried on the first day of the shoot, and we all liked it very much. Yet I did not quite understand how it worked, and was not able to explain it to my friends at home as I wanted to do. Now that I do understand it, you have made all further explanation unnecessary at least down where I live, because we all take Forest and Stream.

In the last two days I have had quite a talk with many of the shooters who, like myself, are here not for our health, but to shoot live birds at John Watson's, and also to win the Du Pont cup. From what I can learn, there seems to be no opposition to the Rose system from any shooter who has tried it; while those who have not tried it merely express hazy doubts as to whether it is the right thing. Such being the case, I felt like writing to Forest and Stream and letting it know just how I and hundreds of others think on this matter.

Go ahead; the Rose system is all right. Corn Cob.

It is really a shame that Corn Cob does not want his name to appear at the close of such a capital letter as the above. It would be a fitting climax to an honest expression of opinion, while the reputation of the writer as a trap-shot and as a square up-and-up shooter would add considerable weight to the sentiments he has expressed above.

By this time he will have noticed that we gave in our issue of Aug. 8 a reproduction of the example he refers to as appearing in our issue of July 11. Unfortunately, owing to carelessness on the part of somebody connected with the presswork, a portion of the example was left out, causing probably a little confusion in the minds of persons who were studying the workings of the Rose system as therein set forth. To right the error we once more give the explanation of the system to be found in the programmes issued by the Interstate Association, and also an example of an actual sweep worked out on the plan adopted by the cashier of the Binghamton (N. Y.) Gun Club's tournaments:

(1) Decide upon the number of moneys into which the purse is to be divided, and then find the ratio into which it will be divided from the following table:

If into
2 moneys—at the ratio of 5 to 3.
3 moneys—at the ratio of 5 and 3 to 2.
4 moneys—at the ratio of 5, 3 and 2 to 1.
5 moneys—at the ratio of 8, 5, 3 and 2 to 1.
6 moneys—at the ratio of 13, 8, 5, 3 and 2 to 1.

(2) For the sake of example in working out this system, let us take a 15-target event, $1.50 entrance, 4 moneys, 24 entries, $10 added to the purses, targets at 3 cents each. This will give us a net purse of $35.20, targets taking $10.80 out of the total purse. Suppose when the event has been shot there are three straight scores: one 14, four 13s and one 12. Under the old percentage system of 40, 30, 20 and 10 per cent. class shooting, it is manifest that the single 14 would have the best of the four men with straight scores, while the man with 12 would also be better off financially than either of the four men who broke one more target than he did. Under the Rose system this temptation to drop for place is done away with. Proof of this is given below:

The ratio points are 5, 3 and 2 to 1. Therefore,

No. of ties for 1st money 3×5=15
No. of ties for 2d money 1×3= 3
No. of ties for 3d money 4×2= 8
No. of ties for 4th money 1×1= 1

27)$35.20($1.30
27 per ratio point.
82
81
10 cents over

Therefore,
each man with 15 receives $1.30×5=$6.50
each man with 14 receives 1.30×3= 3 90
each man with 13 receives 1.30×2= 2.60
each man with 12 receives 1.30×1= 1 30

Under the system usually adopted at tournaments, the three men in for first money would have received $4.69 each; the man with 14 alone taking second money, $10.56; the four men in for third money would have drawn down $1.76 each, but the shooter who had the luck to drop one more target would have received fourth money, $3.52, or just double their share.

It may seem from the above that the system is a complicated one, and would involve a great deal of work in the cashier's department. To disabuse one of this idea, we give an example of an event, the third event on the second day of the Iowa State tournament, working out the example by a system learned from the cashier at the Binghamton, N. Y., tournament. It will be noticed that he rules each page off into five columns; in the first he enters the names of the shooters: in the second he places their respective scores. He then ascertains the place obtained by each man and puts in the third column the number of points due to him. At the bottom of this column he figures up the total number of points, dividing the net purse by that sum. In the fourth column he places the amount due each man, checks it off as soon as the amount is paid, or the cash equivalent placed in the pay envelope. The fifth column is utilized for figuring the net purse and for finding the value of each point.

Event No. 3. 15 targets. Entrance $1.50. Added money ——. No. of entries, 27. Price of targets, 2 cents. No. of moneys, 4.

	Score.	Points.	Amount due.

24 cents over.

* Divide net purse by sum of the points.

A more striking example of the curse of the old system was never afforded us than that which is mentioned by Mr. Hough in his able report of the Du Pont tournament, which appeared in our last issue. In his account of the team contest Mr. Hough gives us a capital idea of the situation when Powers went to the score for the last few birds. Had Mr. Powers been unfortunate to lose his last bird, and had there been the slightest expression of opinion that the bird had been lost on purpose, it would have been the fault of the system in use. We have heard several people say, when shooting under the Rose system: "I like this way of dividing purses, because if I do miss my last target the boys won't accuse me of 'dropping for place.'"

In his letter to us, which appeared in our issue of Aug. 1, Push It makes a statement which is well worthy of further consideration: "In the many arguments against the dropper and denunciations of him, I never noted any denunciation of a dishonest system; for if it was dishonest for the dropper to shoot for the place which resulted in the most profit and not shoot at his best, it was equally dishonest to force a shooter to compete under a system which beat him out of his just rewards."

Audubon Gun Club, of Buffalo.

Buffalo, N. Y., Aug. 8.—The scores made to-day at the weekly shoot of the Audubon Gun Club were as follows:

Events:	1	2	3	4	5	6	7	8
Targets:	25	10	10	15	15	25	15	15
Forrester	..	8	6	13	11	21	13	..
Bennett	20	..	9	13	11	..	..	..
P G Myers	14	7	6	6	7	22	14	..
Bird	17	8	5	9	11	..	..	..
Norris	23	6	8	14	12	..	..	..

J J Reid	13	..	..	7	13	17	8	8
A Coombs	13	..	..	..	..	..	..	..
T Tiddler	23	..	..	13	8	18	..	11

Events:	1	2	3	4	5	6	7	8
Targets:	25	10	10	15	15	25	15	15
Johnsing	22	..	..	..	8	..	..	..
W A Eaton	18	9	7	8	8	13	..	..
U E Storey	12	..	..	7	..	..	15	6
Middaugh	20	..	..	10	..	..	..	..
Brandle	21	6	..	..	..	..	..	..
Eiss	..	..	..	..	5	5	..	..
Dr Daniels	..	..	..	..	..	..	9	14
Sandy	..	..	..	..	..	..	12	10
Rossiter	19	..	..	..	..	..	19	7

Norris won A class badge; Brandle and Tiddler tied for B class; Middaugh won in C class badge. No. 1 event was badge shoot; all other events were at unknown angles; No. 7 was gun below elbow.

Aug. 12.—The following scores were made to-day at Audubon Park:

Events:	1	2	3	4	5	6	7
Targets:	50	15	15	10	15	10	15
Alexander	45	11	11	10	11	6	12
Charles	44	15	12	10	12	8	14
Sam Jones	40	11	10	10	9	8	7
McArthur	36	10	11	9	13	8	14
Kirkover	48	15	13	..	14	7	15

Events:	1	2	3	4	5	6	7
Targets:	50	15	15	10	15	10	15
Warren	44	..	..	10	13	..	..
Norris	47	..	12	8	10	6	14
McCarney	28	..	10	..	10	..	10
Chamberlain	38	..	12	..	11	..	..
Daniels	..	..	..	..	7	..	..

No. 1 event was the second series of championship events; Kirkover won with 48 out of 50. Alexander was handicapped 1 bird by winning first series. No. 3 event was at 15 targets, expert rules; all others were at unknown angles, except No. 6, which was at 5 pairs. B.

Omaha Gun Club.

Omaha, Neb., Aug. 1.—Below are the scores made to-day by members of the Omaha Gun Club at the club's regular shoot:

Hughes ..... 111111111111111111111111—25

B. W., Des Moines, Ia.—We do not know of any firm supplying designs for tattooing.

New York Squirrel and Rabbit Season.—It was stated in our Answers last week that the "close" season for squirrels, hares and rabbits in New York was from Oct. 15 to Feb. 15. Of course, for "close" was meant "open."

T. S. B., Elba, O.—In the game laws of Ohio our native ruffed grouse or pheasant is not mentioned. Can we kill them from Sept. 1 to Dec. 15 or not? Ans. Reference to the *Game Laws in Brief* shows that the Ohio law has been amended this year so that there is no close time whatever on ruffed grouse as to shooting them; but it is forbidden to have ruffed grouse in possession except between Nov. 10 and Dec. 15. We presume that the omission of the ruffed grouse in the section prescribing shooting seasons was unintentional.

J. H. B., Tacoma, Wash.—Are there many reptiles in the United States of similar construction to the glass snake of Texas? I recently found a small lizard whose tail came apart in the same way as that of the glass snake, having similar joints in the flesh. Ans. Many, if not most small lizards, have this protective weakness of the tail, and if seized by this member it breaks off and the animal escapes. About midway between the two extremities of each caudal vertebra there is a point of feeble ossification, and the exertion of any slight force will break the bone off. A lizard that has thus lost its tail usually grows a new one, but usually not so long as the original tail.

PUBLISHERS' DEPARTMENT.

Rifles and Riflemen.

"Practical Pointers" for rifle and pistol shooters is an interesting little book of artistic construction which is sent free for the asking by the J. Stevens Arms and Tool Company, P. O. Box 4102, Chicopee Falls, Mass. This book is illustrated with sketches of field incidents and photos showing proper shooting positions, and in addition to the useful hints which are given, rules governing rifle and pistol competitions are included, as well as the measurements of the principal targets.

The Stevens Company has long been known for the excellence of its product, and its list of firearms includes specialties which almost any sportsman will find of service.—*Adv.*

The Savage Rifle.

The catalogue of the Savage Repeating Arms Co., Utica, N. Y., contains much of interest relative to the modern small-bore smokeless powder rifle. It reproduces a number of very creditable targets made with Savage rifles, and prints letters from hunters who have used the .30cal. on game, including the account of Lieut. Von Honel's two rhinoceros at one shot with the full-mantled bullet, as narrated by Wm. Astor Chandler. The Savage ammunition is reloadable, and powder and tools are furnished.—*Adv.*

Dissolution of Partnership.

The partnership existing between Lawrence & Lichtenstein, 39 Beekman street, New York, has been dissolved, Mr. P. Lichtenstein having purchased the Lawrence interest. Mr. Lichtenstein will continue in the business at 218 Fulton street, and will collect all outstanding accounts and settle all bills against the firm.—*Adv.*

Trout for Stocking.

The Plymouth Rock Trout Co., of Plymouth, Mass., issues an interesting little circular which gives instructions for hatching trout fry cheaply, so that any one may stock streams or lakes without going to the expense of a hatching house or elaborate outfit. It will be sent free for the asking.—*Adv.*

Notice to Gun Clubs.

Shooting matches supplied with live pigeons at shortest notice at reasonable prices. Write to Louis C. Kistner, 213 South Howard street, Baltimore, Md.—*Adv.*

The Acme Shell.

The Union Metallic Cartridge Co. announce that the "Acme" shell replaces the "Walsrode," not the "Smokeless," as has been stated.—*Adv.*

Reminissensez ov Scul Lif. By C. W. Larson. Ringoz Publishing House, Ringos, N. J. Price $1.50.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 29, 1896.

VOL. XLVII.—No. 9. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FOREST AND STREAM OFFICE
346 Broadway
NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

SNAP SHOTS.

Otto Lilienthal, the German aeronaut, who was killed by a fall from the air with one of his flying machines the other day, was a firm believer in the practicable adoption of flying as a sport, and in the speedy development of flying apparatus which would not fail to follow from competition in the sport. The only way to learn to swim is to get into the water and swim. The only way to fly, said Lilienthal, is to take to the air and fly; the theories have been worked out; what is needed is practical experience, systematic and energetic practice in actual flying experiments. The way in which he hoped to bring this about was by inducing sport-loving men to take up as a sport that phase of flying which he had demonstrated by personal experience to be practicable, and which under certain observed restrictions he contended should be ranked as a safe amusement.

Lilienthal had devised and brought to a high state of perfection an apparatus of wings for soaring or sailing over inclined surfaces, launching himself into the air from the summit of a hill, and sustaining his flight for long distances. "It is in the wind," he wrote in the *Aeronautical Annual*, "that this practice becomes so exciting and bears the character of a sport, for all the flights differ from each other and the adroitness of the sailing man has the largest field for showing itself. Just as it is in sports on the water, so it is in sports in the air, that the greatest aim will be to work the most startling results. The machines themselves, as well as the adroitness of their operators, will vie with each other. He who succeeds in flying furthest from a certain starting point will come forth from the contest as conqueror. This fact will necessarily lead to the production of more and more improved flying apparatus. In a short time we shall have improvements of which to-day we have not the faintest idea." Competitive flying races, he suggested, would excite intense public interest; the enthusiasm with which successful runners and riders and yachtsmen are greeted would be not less in the case of the sportsmen flapping their wings and balancing their soaring machines in the air. There was no fallacy in this reasoning. Encourage flying competitions, and you stimulate experiment, gain the experience which teaches, and secure development and perfection of the implements of the sport.

Lilienthal's indorsement of flying as a perfectly safe sport is to be considered anew in the light of the unfortunate aeronaut's own fate. Men in quest of a new amusement will accept with caution claims for its harmlessness put forth by one who in the end meets his death by it. There are some, however, who affect to believe that a dangerous sport is more manly and more to be commended than one which is perfectly safe, and who give added honor to a sportsman if he has risked his neck. To such we commend the sport of flying.

Senator Quay is credited in the press dispatches with the capture of a 263lb. tarpon at St. Lucie, Fla., on Aug. 17. If the reporter who sent the dispatch did not add a hundred pounds, this is the biggest tarpon on record, not only for this year, but for all years and for all fishermen and fisherwomen. Up to this time Mrs. George T. Stagg, of Louisville, Ky., has been high hook with the fish caught in May of 1891 and weighing 205lbs., which was shown in the FOREST AND STREAM's exhibit at the World's Fair. Mrs. Stagg took the fish with rod and reel; from the description a correspondent sends of the fishing at St. Lucie we infer that Senator Quay took his fish with a hand line.

As to mere bulk, bigness and ponderosity, this Florida fish is outclassed by the California jewfish of 405lbs., taken by Mr. Frank S. Daggett, who tells us of the feat and sends us a photograph of the monster as a specimen of what Pacific waters have to offer. But if we are to have a big fish rivalry between the Atlantic and the Pacific, California with her 405lb. jewfish must yield to Florida with her 625lb. swordfish, taken in the Caloosahatchie River last winter by Mr. N. M. George, of Connecticut. The fish was caught with tarpon tackle, rod and reel, and was brought to gaff in one hour and twenty minutes. Shall we count this as the largest fish on record taken with hook and line? If any claimant has a larger one to his credit, he should not be modest about claiming high hook.

The Maine game season has not opened yet, but already the papers are reporting from the Maine woods the killing of men for bears and deer. Last Saturday on the banks of the East Branch of the Penobscot a sportsman making his first trip into the woods, and the veteran guide, Charles Potter, were making up their camp for the night. The tent had been pitched and the guide stepped into the surrounding woods to collect balsam for the bed. The sportsman saw the movement in the woods made by the guide, took it into his foolish noddle that it was caused by a bear and blazed away with his rifle, killing Potter. This is one of those cases in which comment cannot add much to the bald facts. The only safe rule for a man armed with a death-dealing weapon is to hold his fire until he actually knows—not guesses—what it is he proposes to shoot at, in other words to kill. One might better by holding his fire lose a million bears and deer and moose and wild turkeys than by premature shooting to kill one of his human kind.

Does it "just happen so" that so many of those distressing casualties are chronicled in the open season? Most human beings killed by mistake for game are sacrificed at the hands of ignoramuses, or reckless, wanton shooters, or men actually engaged in violating the law as to close time. That is to say, the man-target is less frequently shot at by actual sportsmen, for actual sportsmen are not afield with guns in the close season. A correspondent suggests that we might well adopt as a new platform plank the declaration that firearms should be kept out of the woods in the close season. Undoubtedly such a rule would prove a most excellent system, and would accomplish wonders for game preservation as well as for the saving of scores of human lives. We may come to it some day, or to something approaching it. The way in which such a system would work is well illustrated in the Yellowstone National Park. When one goes into the Park his gun is either retained by the authorities or is sealed and subject to frequent inspection to insure that the seal shall not be broken within the Park limits. The result is that the Park game is safe, and more than that, a member of a camping party may venture into the woods without running the risk of being killed for a bear by the man who shoots at a rustling in the cover.

A law forbidding the carrying of guns in the game country in close time would be capital in theory, but in actual practice it would not amount to any more than any other theoretically excellent law now a dead letter on the books. We said last week that the bird seasons of a State should open on one and the same date for the several species of game. But even so good a system as that means nothing, if every Tom, Dick and Harry is left to work his own sweet will and shoot when inclined, without respect to open dates. Th Connecticut season on upland game begins on Oct. 1. What does the law-abiding sportsman find when he gets out early on the morning of the long looked for opening day? A scarcity of game with abundant evidence that some one has been there before him. Who is it that has been there? The thrifty Yankee gunner who has for a month been shipping grouse and quail to New York markets. This traffic goes on in spite of close seasons and of a non-export game law. The New York market is consuming the game birds of Connecticut; hunting for export to this city is a well organized industry, and it appears to move without hindrance or interruption. Most of the exported grouse are killed in September, and no special effort is made to keep the business secret; indeed as to shipping to market, there appears to be a belief in some localities that the last Legislature of Connecticut repealed the law forbidding the export of game. What has become of the farmers' and sportsmen's game protective society which once did such excellent work in Connecticut? It is to be hoped that the members have not given up the fight for good.

After the torrid heat of early August come now the cool breezes which suggest the approach of the changing season. It will not be long now before the ripening leaves begin to turn yellow, and the grass each morning is whitened with light rime. Already men have polished up their guns and set off to make war on the woodcock, the rail, the prairie chicken and—in this State alas!—on the ruffed grouse. The chicken trials soon begin in the Western States and in a very short time the shooting season will be in full blast. The reports which come in from all sides indicate that this season birds will be more than usually plenty. From some localities, where for years no game birds have been known, we hear of broods which now promise something like the old time plenty. We must not let this make us too hopeful, however, for we know how often this promise of the late summer fails of fulfillment when the law is off, and the gunner tramps in vain covers which only a few weeks before were noisy with rising birds. There seems a promise, however, that in many places the shooting this year will be better than for some seasons past.

The death of Henry C. Ford, President of the Pennsylvania Fish Commission, removes one who has long been identified with fishcultural and angling interests. Mr. Ford died in Philadelphia on Tuesday of last week, Aug. 18, aged sixty years. From boyhood he was a fisherman; and in the course of his life he had fished for every kind of game fish and in most of the well-known angling waters of the continent. In 1887 he was appointed to the Fish Commission and was made its president, an office which he held to the day of his death. His experience as a practical fisherman, knowledge of ichthyology, and ability as a man of affairs and pronounced public spirit, combined to give him a peculiar equipment for the place. It is not saying too much to affirm that the development and usefulness of the work of the Commission were primarily due to his administration. He was devoted to the work, he had such means that he could afford to devote himself to these public interests, and he served not only devotedly, but honestly and well. His death means a distinct loss to fishculture in Pennsylvania. Mr. Ford was one of the founders of the Pennsylvania Fish Protective Association and always one of its most loyal members; he was for a term treasurer of the American Fisheries Society, and again its president.

The sale of fishing tackle by the great department stores of this city appears to have proved not a marked business success. The prices which the dry goods men put on their tackle were extremely low; they offered the people an opportunity to buy fishing rods at exceedingly cheap figures. The trouble was, as the customers soon discovered, that the tackle itself was cheap, cheaper, in fact, than the price. We heard of a case the other day where one buyer of department store tackle had exchanged his first cheap and worthless purchase for one slightly more expensive and superior, this one in turn for another, and so on until in the end he had expended enough money to have bought a legitimate rod in a legitimate tackle store. And with it all, he did not get a rod he could use, so he went into another department of the same store and traded the fishing tackle for a baby carriage

The Sportsman Tourist.

BEAR CHIEF, THE BLACKFOOT.

Inscribed to Natoye, Forest and Stream's Blackfoot baby, of the Forest and Stream's Indian Camp, at New York Sportsmen's Exposition, March, 1896.

The Blackfoot Chief, from native wilds and ways,
Borne to the white man's mightiest town,
Complacently withstood the curious gaze
Of eager thousands; up and down
"The place of many houses" flash'd his eyes—
Too pure an Indian to betray surprise.

Confronted with the wonders wrought by man,
The triumphs of the thousand years,
The "long results" of science, and the span—
The arch of art that genius rears,
Straining beyond the natural to ideals—
Beyond the simpler needs an Indian feels.

"It is a strange and fearful place," said he;
What cultured scholar might say more
With all his words and sage philosophy?
A strange and fearful place! The roar
Of ceaseless traffic in a maze of art
Dazed not his brain, but chill'd his Indian heart!

With dignity and pride he strode among
The great, the stately, rich and grand,
To him an alien race, with alien tongue—
Usurpers of his native land—
Yet, with a spirit that few Christians know,
He smiled to all, whate'er might sleep below,

A master of brief speeches, what he said
Was tersely eloquent and clear;
Each gesture apt, as though a bowstring sped
An arrow's message to the deer.
When he had finish'd (note, Paroles, pray)
He closed with "This is all I have to say."

Bear Chief had slain in wars some twenty men—
So read the record of his life—
And these of hostile tribes when, now and then
He used his rifle or his knife;
A record fairly good, though something spare
Compar'd with that of many a white chief there!

But then he was not bred to church and state,
To commerce and the trend of trade—
Nor yet enlightened how to speculate
And hoard the ducats shrewdly "made."
Nor was he civilized enough to know
Just how to batten on his nation's woe!

He nothing knew of individual right,
Sanctioned "conditions" and the laws
By which a thrifty few may blast and blight
The lives of millions or the cause
Of nations, of humanity, and mar
Until the mass revolts and Reason shrieks for War!

His soul was kept to narrower ways, and pent
Within the circle of his needs;
His avarice to his arms, a horse and tent,
Ambition to heroic deeds;
Beyond immediate use the lust for pelf
Roused not the demon Ego, fiend of Self.

His passions, such as nature's plans, conform
Quite unabridged, untrammel'd, free—
Might like the tempest burst! but, minus storm,
All life would stagnate with the sea;
And his affections, potent as his hate,
Fix'd in his soul the constancy of fate.

The Blackfoot warrior saw, but envied not,
The treasures of the white man's mart;
No word of his regretful for his lot
Came from his lips; his loyal heart
Turned always back to nature and the West—
His land, his people seem'd to him the best.

Mark well the features of the Indian chief—
How few are nobler in the throng!
Nay, turn from it to him, and feel relief—
Few faces there more true or strong.
By want oppress'd, or if by foes assail'd,
The chief a friend, think you his aid had fail'd?

There are no terrors could appall that brow,
No dangers that he would not scorn;
Long years of hazard have not made him bow.
To peril and privation born,
Deceived, betrayed, his nation feebly few,
And tried by all the vanquished ever knew—

Fidelity in his firm visage glows,
True manhood dignified his form!
From those dark eyes, so placid in repose,
What gleams might flash in passion's storm!
Would he desert a friend, a failing cause,
Though life and death combined to bid him pause?

Not he! His heart, once set upon a cast,
"Would stand the hazard of the die"—
His blows would be the fiercest and the last,
Or death alone the reason why!
"A touch of nature makes the world akin"—
But all the arts can never make such men!

And Antelope—a princess of a line
Older than heraldry can trace—
Her parent tree coeval with the pine
That plumes her ancient hills; her race
Emblazons not its pride in fire-new charms—
Her strain, her lineage, needs no coat-of-arms.

'Tis told of by the aged ancient of her tribe,
Antique traditions, legends old,
Where history lives and breathes—without a scribe—
Is cherished still, though not enscroll'd,
Where gray old mothers, scarr'd and wrinkled sires
Murmur their memories by their smouldering fires.

A princess she by every sacred right,
Ignored but by the white man's law;
Dethroned but by the soulless force of might
And human greed's insatiate maw!
The fittest will survive (perchance of men),
The proverb sayeth not of where, or when.

Ay, every inch a princess, yet a waif,
Clasping Natoye to her breast—
Wee simile of herself! Heav'n keep them safe
Amid the perils of the West—
Where Indian babes and mothers, like the braves,
Are swept from "reservations" to their graves!

As all the thousand tribes have gone before,
These stragglers follow fleetly on
To that far place, that happy, mystic shore,
Beyond the sunset and the dawn—
Beyond the dreary winters, famines, woes,
To vanished Blackfoot hosts and buffaloes.

California. Charles L. Paige.

ONE DAY IN THE TROPICS.

That long neck of land known as the Malay Peninsula, which juts out from southeastern Asia, reaching a thousand miles into the archipelago beyond, is but indifferently known to Europe and scarcely at all to America.

Though it is now more than 300 years since the Portuguese flag was first unfurled along its shores, and England has had possessions there since the beginning of the century, yet it is only recently that anything has been done toward its exploration and development. The country itself is interesting. Its vegetation has all the luxuriance of the valley of the Amazon. Here we see the peculiar and varied flora of the far east mingled with the less tropical, but quite as interesting, forms of Siam and India.

It is a romantic land. One has no trouble to detect in the brown-skinned inhabitants those qualities of mind and body which their ancestors before them used against the hated European—"infidel," as they delight to call them—invaders. As a race they are proud and independent. They do not forget how their *rajahs* once ruled over powerful kingdoms, and their soft, musical language was the medium of diplomacy in the capitals of Siam and China. In their *cheritas* they have the stories of their ancient greatness, and they cling to them as the Greeks did to the ballads of Homer.

I spent a few days on the peninsula for recreation and collecting, and count among my many experiences a ride in a bullock cart from our bungalow to the hot springs at Ayer Panas, or "hot water," as the natives say, the most interesting.

We were staying at a Chinese house back in the foothills in the midst of a pepper plantation. My companion was a man born and raised in the East and used to all the ups and downs of outdoor life. He was delighted with our location; I was enthusiastic over it. All was strange and new, and we had nothing to do but enjoy it. The neighboring *ladaugs* we explored completely; we climbed hills covered with massive granite boulders, where the tall *lalang* grass waved breast high.

While wandering about in the forest near the house, I met an old Malay and asked him if there were tigers about. "*Ada*" ("there are") was his nonchalant reply, and then seeing that I expressed some surprise at the stolidly imparted information asked: "*Tuan lakut?*" ("Is master afraid?") When I ventured to assure him that I should climb a tree at the first sight of a tiger he smiled commiseratingly and remarked, "No use, master." However, I never met with any of the dreaded "grandfathers" of the forest, though I penetrated every thicket in quest of flowers or insects.

Our journey to the springs was to be the crowning glory of our visit, and our minds were full of specu ation and anticipation concerning it.

The night before the promised excursion was fine. The moonlight had the peculiar golden splendor common to nights in the tropics. With the settling down of night came a sense of peaceful quiet which was only broken by the creaking of the belated *kretas* in the road below, or the chirping of the *chinkarets* in the trees behind.

We were up at the breaking of day to begin preparations for our start. A carriage had been left for our service, but we preferred to undertake the ride in a native bullock cart and enjoy for once a taste of primitive locomotion. At 8 o'clock one drew up before our door. Not till then did the wonders and beauties of the vehicle dawn upon us. It was a long, low affair, hung between two huge wheels, which were held on to the axle by pins; above the cart itself, elevated perhaps 2ft., was the long *cajang*-leaf cover hung over a crescent-bent pole for the ridge. This projected high enough for one to sit under without touching the head. On a board nailed to the tongue sat the Malay driver, with a towel wound around his head and a flowing *sarong* reaching to his ankles. He was to be our Jehu.

Two wiry-looking, gray-colored bullocks, with ropes through their noses, completed our turnout. True, it was not stylish, nor even comfortable, but it was ancient, and so we were satisfied.

We packed in our traps—first a bark matting and then our blankets, for we had to sit on the bottom of the cart; my butterfly net was hung upon a peg. The Chinese cook brought out a teapot, packed nicely in a basket, and a loaf of bread. For the rest of our provisions we were to trust to the natives.

All at last was ready; we were off. The driver jerked upon the reins and the bullocks plunged down the hill, over washouts and heaps of dirt, and finally turned into the road. During the descent we had taken our first lesson in this new method of oriental traveling. When the cart bounced over stones our heads bobbed up into the *cajang*, and as we turned the corner we were thrown into each other's arms. The box of the cart was fastened directly to the axle, and every movement of the bullocks made it dance and swing like an old-fashioned see-saw.

The road for the first two miles led along the edges of worn-out *ladaugs*, covered with grass and shrubbery; then it turned off into a more hilly region. The bullocks seemed accustomed to such excursions, for they plodded leisurely along except when goaded by the driver, and then, if on the downhill, would go at breakneck speed. How the cart rattled and jumped! After one such descent we found the teapot overturned. We righted it with care, for the noon lunch depended upon it.

The country now became rougher and more interesting. From the tops of high hills we could catch glimpses of blue, smoky peaks off to the eastward. The grass was higher in the neglected plantations and flowers more frequently peeped from the shadows. The road itself was magnificent. All over the peninsula the important thoroughfares are kept in good repair. We left the deserted fields and entered a region known as the Forest Reserve—a large tract of virgin forest as yet untouched by the axe.

At first the forest skirted only one side of the road and on the other stretched the undulating *lalang*-covered hills. Up above our heads rose a great, impenetrable wall of green, so high indeed as to overshadow the road. The undergrowth was dark, dense and so tangled that one could not enter it; gigantic tree trunks rose from out this base of green and lifted their naked stems, straight as sentinels, far into the sky. One old giant in particular, fully 7ft. in diameter, must have been 150ft. high or even more, and without a branch to the very top. What a connecting link is such a tree between the past and present!

It was a pleasing relief to turn from looking at this great tree and gaze out over the wooded ravines and grassy slopes to the haze of the mountains. Another turn of the road brought us directly into the forest and we had to content ourselves with views nearer at hand.

For the first, I noticed strange butterflies flitting about from one shadow to another. One beautiful one, which I afterward learned was the *Euthalia asoka*, interested me especially. The under side of its wings was of a beautiful bronze-ash color, and when it lazily folded them together the colors danced and shimmered dazzlingly. But on the wing it appeared to the best advantage. From the body outward two-thirds of the upper side of each primary was glossy, brownish black, set in a circle of rich plum purple, which shaded into bronze on the upper edge. I took my net and quietly dropped down behind the cart. The Malay stopped the bullocks inquiringly. No doubt he wondered what the *tuan* was chasing the poor, harmless *koopoo-koopoos* for. The butterfly rested on the bristling point of a grass blade, gently flapping its wings. Stealthily I drew near, with the net poised for the swoop, and then, frightened by some stumbling step of mine, the butterfly sailed away like an aggravating sprite. Not daunted by one failure, I followed and was successful. As the folds of my net settled down over the little beauty I experienced the same thrill of satisfaction that a sportsman does when he lands a gamy fish. Carefully I extricated my capture, and it is now labeled in my collection, "Caught on the road to Ayer Panas." A number of fine specimens I caught that day, but none which gave me more delight than my *Euthalia*.

The road which had led over hills and lowlands now turned around the base of a long slope and disclosed an open meadow off to the right, and two bungalows among the palm trees. Our driver, pointing with the whip, said: "Ayer Panas," and we knew we had reached the Mecca of our pilgrimage. We had covered the nine miles in three hours, which, considering the roads and the conveyance, was good traveling. Down on the edge of the open meadow a large number of carts like our own were drawn up in line, and the bullocks in care of their drivers were grazing a little way off.

Three or four Chinese families had come out from Malacca for a day's outing, lured perhaps by the medicinal properties of the springs. With characteristic politeness they greeted us cordially in Malay, which is the common language of the country. Our Jehu unyoked the oxen; guided by an old Malay, who acted as keeper of the bungalows and man-of-all-work, we were off for the springs.

At the end of a short causeway leading out into the lowland a small building had been erected for the accommodation of any one wishing a bath. The Government has made considerable attempt at improvement, but the place will never be popular till the country is under cultivation. Our guide opened the door of the cottage and admitted us. In the middle of the room was a large concrete tank divided by a partition of brick. This partition was pierced in one or two places, and a conduit connected the tank with the main spring, which was under the end of the building, some 10ft. away. The atmosphere was hot and oppressive and heavily charged with moisture. I dipped my finger into the water and found it nearly boiling. In the passage of the water through the porous pipe to the tank it must lose two or three degrees of heat, so that in the spring itself the water is at the boiling point. A certain scientific doctor, who made an examination of the spring, reported that none of the famed springs of Europe had better claim to healing virtues than this. Consequently we deemed ourselves fortunate, for, while we never could have visited Carlsbad, here, 10,000 miles away in the jungles of an unknown land, we were at liberty to enjoy all the benefits of a peaceful sanitarium, with the addition of more beautiful scenery than the *einwohner* of Carlsbad ever dreamed of.

The vertical sun over the palm trees suggested lunch time. We carried our teapot and solitary loaf to the veranda of the bungalow and there coaxed the old Malay to try to get us some fruit. He went away and was gone so long we thought he had played "hookey," but at last we saw him coming up the path with a basket out of which were sticking long yellow plantains with mangosteens piled in below. We gave him 25 cents, which made him happy for one day at least. But disaster shadowed us; when we opened our tea-basket the pot was empty.

That ill-fated fall in the morning had drained out every drop. Next we unwrapped the bread, but *horribile dictu*, it was like putty. My friend remarked that the tea was still there, soaked into that lone piece of bread, but I could get no satisfaction from his philosophy. The combination did not tempt the appetite of a hungry man. Had it not been for the fruit which the bounty of the old Malay had provided we should have fared sadly indeed.

To while away the time we talked with him, much to his surprise, for why should two white travelers deign to converse with him, a copper-colored native? This is a question which orientals are not called upon often to answer.

We asked him where the hot water in the spring came from. He looked up with a smile and shaking his head answered: "*Itu tuhan allah punia tahu*"—"That is the knowledge of God."

We bathed and then strolled down the road over beyond a bridge where I saw a rare and beautiful butterfly, but my efforts to catch it only drove it into the thicket. The sun was beginning to sink into the west. It was the time of day when, as the natives say, the buffalo go down to the water. The herons were flying noiselessly homeward over the stretch of meadow, and the monkeys began to chatter in the woods. Our driver "poked" the bullocks and we clambered into the cart and rolled away into the "Reserve." The meadow was shut out by the jungle, the bungalows and palm trees faded next, and then nothing

was left but the narrow road, hedged in by the silent forest. The rain began to fall, and dripped drowsily on the *cajang*. I could not resist its influence, and so dropped off to sleep. The tree tops and creepers waved a last farewell, seeming to say in the mellow language of the people who live forever in their shadows, "*Salamat jalan*"—a peaceful journey. Just as the twilight was falling over hill and valley, converting the *ladaugs* into vast expanses of somber gloom and the thickets into fantastic shadow forms, we turned off from the big road and saw the welcome bungalow before us. The day's experiences were done. R. C. F.

A MOOSE HUNT IN MAINE.

BY CAPT. TAYLOR.

WHILE attending the Sportsmen's Exposition in Madison Square Garden last May, and there viewing the exhibits of the United States Cartridge Co., I had the pleasure of meeting the noted Indian guide and moose caller, Joseph Francis, of Oldtown, Me., and I then made up my mind that I would take a trip in the Maine wilderness the next October with Mr. Francis.

The month of September at last came, and on the 26th I left Albany bound to Bangor, where I met Mr. Francis. We were going to take the trip alone, into the very best game country in the State of Maine, and as we were to be gone over a month my pack was large, for I had to take clothing enough to get through some cold weather. I carried all my duffle in an Adirondack pack basket. Arrived at Kineo, we spent the evening down at the Kineo store and there bought as provisions for the woods one loaf of bread, 2lbs. Kineo pilot bread, one-half bushel of potatoes, 10lbs. pork, 5lbs. bacon, 5lbs. butter, ¼lb. pepper, 20lbs. salt, 20lbs. sugar, 25lbs. flour, one box rolled oats, half peck onions, three dozen eggs, 5lbs. lard, 1lb. candles, four bars soap, one box matches, 1lb. tea, 2lbs. coffee, 2lbs. dried apples, 2lbs. prunes, four cans condensed milk, 1lb. baking powder, two cans baked beans, two quarts maple syrup, two cans tomatoes, two cans corn, two cans peas, one bottle mixed pickles, one cake chocolate, two cans corned beef, a flour sieve and some crash for toweling.

The next morning, Saturday, Sept. 28, our canoe, cooking utensils and tent arrived on the little boat Twilight; and putting our provisions aboard also, we took the little boat to Northeast Carry, eighteen miles distant. At 10:30 A. M. we arrived at the carry, took dinner at Luce's house, then piled the duffle into one of Luce's wagons and the canoe on top, and crossed the two-mile carry to the west branch of the Penobscot River. Placing the duffle in the canoe, we were soon paddling down the stream to our first camp, at the mouth of Moose-horn stream.

This was a delightful sail of eight miles, and at 3:30 P. M. we were on the camping ground. In less than an hour we had the tent pitched and the fire built, and Joe was soon mixing some bread. At 6 P. M. we sat down to our first meal in camp. Supper over, we built up the camp-fire and spread out our blankets for the night. As I sat before the big camp-fire of birch logs and listened to Joe tell of the moose he had called, we could hear a partridge drumming on a log just in front of the tent. By 9:30 we were rolled up, I in a Kenwood sleeping bag and Joe in his double quilted blanket. As we lay in the tent, the cracking of the burning birch logs and the sparks floating to the starlit sky told us that the night was to be a cold one, but we were soon asleep and had forgotten the moose stories and bear tales. This camp we named Camp Moose-horn.

Sept. 29.—Sunday morning dawned and I was the first to arise. At 5 o'clock I crawled out of the tent and taking up the pail found 1in. of ice in it. I lit the fire and when Joe heard me chopping he arose and we were soon preparing breakfast. Of course, we had no game, for the law was not yet off for two days, so we had to live on city food. After breakfast we set out for a cruise up Moose-horn stream in the canoe. We paddled up the stream as far as possible and then took to the old wood road. We followed this for four miles, and were delighted to see the great number of moose tracks, some old and others quite fresh. We branched off this road and followed a trail which brought us right into a moose yard, and we could see where a moose had lain down. We followed the trail on for a mile further and came into another moose yard, which had as many tracks as a barnyard, and we could see where a bull, a cow and calf had gone along together. It was now noon, so we traced our steps back to camp and dinner.

Sept. 30.—The night had not been as cold as the previous one, and I did not awake until I heard Joe make the first stroke of the axe. We soon had our camp-fire roaring, and while Joe started to make some partridge I put my fly-rod together and, placing brown hackles on the leader, started in the canoe for the mouth of the little stream, just opposite our camp ground. I had not cast more than two or three times when a 1½lb. trout struck, and I soon had him in the canoe. By this time it was raining very hard and I had to give up fishing, for Joe was calling breakfast. How good that coffee smelled! and we were soon seated in the tent around the table, which was made out of our camp-box. After dinner we paddled up stream to see if there were any more fresh moose tracks, but not finding any fresh ones we returned to camp, and the rain drove us to the tent. After supper we paddled up the stream again. It was bright moonlight, and we heard and saw a number of deer. It was great sport to sit noiselessly in the canoe and see the deer come down to the water and drink, and while listening we suddenly heard a buck break through the bushes and come down to the water's edge, when he suddenly saw us in the moonlight, and he whistled and started back in the brush. There was a doe along with him, but she did not see us, and came right on the shore and began to drink. The canoe was moving slowly and noiselessly and we got within 10ft. of her, and there we sat. It was a fine sight, for I could have touched her with the paddle. She had not seen us yet, but the old buck was eyeing u from the bushes, and evidently fearing the doe in danger he whistled, and she started to run along the shore and again stopped to drink. We then floated out in the stream and left the lovely animal to feed in peace.

We were nearly back to camp when we heard a large buck in the bushes, so Joe pushed the canoe up on shore and there we waited, and for nearly half an hour that buck was within 20ft. of us, and when he came down to drink he nearly stepped into the canoe, and he at last scented us and made off into the woods snorting and stamping.

Now this made me think of the hours that I had spent in the canoe with a beastly jack-light in the bow, while I in my earlier hunting experience had floated the waters of the Adirondack Mountains, and how the shining eyeballs of the deer had sent the thrill of butchery through my veins. In this lovely game country one has not to do this beastly work, and I hope the time will soon come when it will be placed in the game laws of New York that the jack-light and hound will be allowed no more.

Oct. 1.—We sat down to a hasty breakfast of bread, fried partridge, fried potatoes and tea, for we were in a hurry to visit again the trail where a few days before we had seen fresh deer tracks. At 9:30 we were on the trail, and we had not gone far before we saw fresh moose tracks. While we were noiselessly walking along the road we were keeping our eyes open for moose. Joe suddenly stopped and pointed to a little thicket not 60yds. distant. I looked and there saw the hindquarters of a deer, and taking aim fired. A bound in the bushes told that I had hit. I ran up to where I had seen the deer disappear, and there it had toppled over, a fine deer. We stopped and dressed it and laid it in the bushes and proceeded on, for we were looking for a small pond at the head of the stream, which we thought would be a fine place to call for moose. We followed this road for three miles and then a small trail, and from there some blazed trees. These blazes soon stopped, and we were not near the pond; so Joe said I had better return to camp and he would go alone and try and find

SWAPPING YARNS.

it and would return some time in the afternoon. At 4:30 P. M. he returned to camp, bringing the hindquarters of the deer with him, and said he had found the pond, and that the signs for moose were very good, but there was no trail to it, and it would be impossible to carry a canoe into it. We decided to break camp the next day.

Oct. 2.—Bright and early we broke camp and were on our way down the West Branch toward the rocky rips. We had the pleasure of meeting Mr. Smith, of Pittsfield, Mass., and his guide, Steve Stenisslaus, and gave some deer meat to them. We went through the rocky rips and now were on our way to Pine Stream Falls. We soon reached the falls and Joe dropped over them and I walked over the carry, for the water in the West Branch was very low. We wished to reach the Chesuncook House before nightfall, and just as the moon was peeping over the eastern mountains arrived at the hotel and were glad to be where we would get a good night's sleep, so as to be fresh for our sixteen-mile paddle the next day down Suncook Lake to the dam.

Oct. 3.—At 10:30 A. M. we were on our way once more. The wind began to blow very hard, so we had to cross the lake to get into smooth water. When near the mouth of Red Brook two little buck deer came out of the woods and watched us, and when they saw we did not molest them quietly walked along the shore and into the woods, and were soon lost to view.

We reached the dam at 4 P. M. and pitched camp near the carry to Brighton Dam. After supper we paddled down the lake to find the man who with the aid of his team and jumper carries over the trail to Brighton Dam. There was no one at home, so I sat and waited in the moonlight, while Joe took the lantern and traveled over the carry to the other end looking for the teamster. While I was sitting on the old jumper sleigh the rabbits would run by me, and it afforded me great pleasure to watch them run and sit up and peer at me, and wonder what I was. I could also hear deer come down to the water and break brush not far behind me. Joe soon returned and we made our arrangements to be carried the next morning at 9 o'clock.

We then went down the lake to Suncook Cove and called for moose, but did not get an answer, so we paddled down to the south end of the lake and called once. Without an answer, a large bull moose came tearing through the woods. He must have been nearly a mile away. On and on he came and when within about 200yds. of us suddenly stopped. Joe called again, and we could hear him in the woods very near us, but no inducement could get him to come out. We soon knew the reason why, for some campers had left a fire burning when they went away; it was smoldering, and the wind carried the smoke close to the ground, and right between the moose and us; he smelt it and would not pass through it.

It was now 3 A. M. and we set out for camp, thinking that we would return before daylight and call again. In half an hour we were in camp and before the blazing camp-fire, and after drinking some warm tea were ready to return to the place where we had left the moose. At 4 o'clock we were on our way again back to the bog to wait until daylight and see if we could call him out. It was not long before gray day appeared, and we called, but the moose was not around. We were very sorry to lose him; he was a very large one, for we could hear his antlers strike the trees for a long distance off. We returned to camp and breakfast, for we were hungry and cold, and had not had a wink of sleep all night. This camp I named Camp No Camp, for we pitched tent, but did not sleep in it.

Oct. 4.—After breakfast the teamster arrived and we soon had the luggage on the old jumper, and were on the way over the carry to Brighton Dam. Joe and I went ahead of the team, looking for partridges. When we had gone a little over a mile I happened to look down a side trail, and there stood a large buck looking straight toward me, and only about 60yds. distant. I took aim and fired; the buck turned, reeled, and fell dead in his tracks. Joe soon caught up with me with the camera he was carrying, and we took a picture of him just as he fell; also one more view, with Joe and myself in it. At the dam we pitched the tent and prepared for the night. At 4 P. M. we took the canoe and made a cruise up the dead water of the stream. Here we saw plenty of fresh moose tracks, but no moose, and at dark left the canoe at the lower end of the dead water and proceeded over the trail back to the camp by moonlight. We turned in early, as we had had no sleep in the past thirty-six hours. This camp I named Camp Good Luck, for we had good luck in felling the big buck deer.

Oct. 5.—We broke camp and the team had come from 'Suncook Lake to carry our luggage and canoe over the Harrington Lake carry, for we next intended to camp on Harrington Lake for a few days. We reached the lake at 12 o'clock, and there met a party waiting for the team that carried us to the lake to take them back to Chesuncook Lake. They had been camping on the lake for three weeks, and had a fine moose head and skin, a caribou and a deer. We paddled across the lake and occupied the camp site they had just left, and named it Home Camp. Harrington Lake is a fine sheet of water nearly three miles long by a half mile wide, surrounded by mountains on one side and high ledges on the other. We sat down to supper at 4 P. M.; and, supper over, took a cruise around the lake to see if the big game was plenty, but the wind was blowing quite hard and we had to return to camp, and busied ourselves taking flash-light pictures of camp life at night, and we prize two pictures entitled "Swapping Yarns" and "Pleasant Dreams."

Oct. 6.—Sunday morning dawned and we had nothing to do, as we did not intend to hunt on Sunday. The night had been a cold one, and the water in the pail outside the tent was frozen nearly to the bottom. We ate our breakfast of fried venison, potatoes, bread and coffee, and went to work chopping wood enough for the day and night, for in the afternoon we wanted to cruise the country round about. At 1 o'clock we paddled down the lake, and Joe carried the canoe over the trail to a small piece of dead water. We paddled up the stream in search of fresh moose tracks. We had not paddled far before we saw a very fresh caribou track, and Joe got out of the canoe and followed it up on a ridge of rocks. While he was standing looking down in the swamp beyond I sat in the canoe, and I happened to look over on a high ridge of rocks about 150yds. away and there ran along a cow moose and a calf. They stopped for a moment, looked down at me and then trotted on down in the swamp out of sight. In not more than a minute a small, two-spiked bull moose came running over the same ridge, stopped and looked around, but did not happen to see me, and then started in the direction the cow and calf had gone. By this time Joe had returned to the canoe. I considered this quite a treat to see three moose in the daytime. We thought it would be a fine place to call moose the next fine night, so we pulled the canoe up on shore and returned to camp much pleased with our afternoon cruise. It was dark when we arrived at camp, but a big camp-fire soon lit up the scene, and we were once more seated around the blazing fire. The moon by

GOOD LUCK.

this time had risen, and everything seemed cheerful, and as we were seated around the table, eating flapjacks and maple syrup and drinking tea, we were wishing that some of our loved ones at home could happen in and see us and take tea.

Oct. 7.—When breakfast was over we packed our basket and bag and were soon on our way back to the dead water, where we had seen the moose the day before. We had provisions enough for two days. We arrived at the stream at 3 o'clock and there pitched a temporary lean-to made of a rubber blanket. At 5 o'clock we pushed off from the shore on an all-night hunt. We paddled the dead water until dark and then called. We could hear in the distance a cow call and a calf moose would answer her, but we did not get an answer and we still waited. We then paddled up stream again and saw two cow moose standing in the stream, but they scented us and made off in the woods. At 11 o'clock we turned our way toward camp, and when we were nearly to the end of the stream Joe called again and we immediately heard an answer, and by the grunt we knew that it was not a very large bull. He was wading up the stream, and was coming

right toward us, although he was a good way off yet. He continued to come, and when he was just in sight and we could see his form in the moonlight we heard some one fire a shot, and then followed more shooting in quick succession. The shots were fired in another stream over a mile away and this frightened our moose, and he quickly turned into the wood and we could not see nor hear anything of him, so we concluded to go to camp and get warm and just at daylight to return to this spot and try and call him out again.

We reached the lean-to at 2:30 A. M. and boiled some tea and at 3:30 started back to the spot which we had left. Before we again reached the place where he had left the water we heard him wading in the stream, and rounding the bend we could see that it was the moose in the stream, but he was a small one and I would not shoot him. We splashed with the paddle as if it was a cow wading, but no inducement could get him to come toward us. At last he started to come down toward us, but the wind was blowing directly toward him and he got scent of us and made back into the woods and was soon lost to sight and hearing. We then gave up the hunt and, leaving the canoe, traveled back to camp by the light of the lantern, for the moon had hid itself under a cloud, and it looked very much like rain.

By this time I was tired and sleepy, having been up all night and sitting twelve hours in the canoe. As soon as it was daylight Joe went down to our home camp on Harrington Lake and I wrapped myself in my sleeping bag and slept until 10 o'clock. I then began to feel hungry, so I opened a can of beans and boiled some. While I was sitting there eating a partridge flew up in a tree just near me and carefully eyed me, but did not seem to be much alarmed at my presence, and I then thought that I would try and photograph it, so getting my camera pointed upward toward the clump of trees, I photographed the partridge in the tree.

Joe had just returned with a good load of provisions, and it had now commenced to rain. We concluded that we had better return to our home camp again, as it looked as if it would rain for a week, and as our lean-to was not water-proof, we thought it best to move to home camp. We piled all the things under the lean-to, and shouldering our blankets started back to camp on Harrington Lake. We were soaking wet when we reached the tent, but it did not take long to dry before the blazing campfire.

[TO BE CONCLUDED.]

Natural History.

LABRADOR SKETCHES.

VIII.—Seals and Seal Hunting.

[Written for FOREST AND STREAM by Count H. de Puyjalon, and translated by Crawford Lindsay.]

THE seals found in the waters of the Gulf of St. Lawrence along the Labrador coast are the following:

The common or harbor seal (*Phoca vitulina*); the harp seal (*Phoca groenlandica*, Fabricius); the bristled seal (probably the *Phoca lagura* of Lacépède); the crested or hooded seal (*Stemmatopus cristatus*, Cuvier); the square flipper or bearded seal (*Phoca barbata*, Fabricius); the yellow seal (probably the *Phoca foetida*, Fabricius); the horsehead seal (*Phoca hispida*, Fabricius).

The harbor seal is very seldom killed far from land. It is chiefly found on the shore, on the rocks and in the deep bays which indent our shores. It sometimes ascends as far as the most distant falls in the rivers and remains there for the greater part of the summer. It is not unusual to see herds of twenty-five, thirty and even forty individuals disporting in some of the bays, but this is purely accidental, as, contrary to the habits of most other seals, such for instance as the square flipper, bearded seals, etc., which seem to be guided by the orders of a leader or to be governed by some common law, each harbor seal acts independently of the other members of the tribe.

Its length does not exceed 5ft. and its weight is under 200lbs. Its skin, a dirty yellowish white in color, is often marked with black spots close together, especially on the back, and its value is in proportion to the number of spots. It sells for from $1 to $1.50. The blubber, which is either melted slowly in the sun or tried out in a cauldron, yields from two to six gallons, according to its size, each gallon being worth from 25 to 30 cents.

The harbor seal is polygamous. The female brings forth at the end of June one, or, very rarely, two young, which she suckles for about a fortnight and afterward abandons, apparently without the slightest regret. The young seals at first seem in great distress at being abandoned; they swim about here and there, whining and approaching everything afloat with a temerity which frequently costs them their lives. I have often caught them right alongside of my boat, against which they pressed, their wailing cries sounding like the weeping of children. When thus abandoned they get very thin, but get accustomed to being alone and to providing for themselves, and shortly become as wary as their parents—especially if they have been shot at and missed by unskillful hunters.

Harbor seals are shot from boats when the water is calm. They are also caught in nets spread near the banks and rocks to which they usually resort, landing with the flood tide and remaining high and dry when the tide ebbs. They always choose rocks from which they can easily slide into the water when disturbed. As they cannot walk, they would be unable to escape if they had to go over a solid surface for any distance.

As already stated, these seals are hunted by men in boats, armed with guns. Like all other pinnipeds, they cannot remain long under water, and have to come to the surface to breathe after a quarter of an hour or twenty minutes.*

When the water is calm it is easy to see them emerge, but when it is rough it is very difficult to do so. When the animal is pursued it soon dives, the boat is then paddled slowly and as quietly as possible in the direction it has taken, and when it reappears the hunter aims at its head, the side of the head if possible, and kills it if he is not a bad shot.

Of course, it is frequently necessary to pursue a seal for some distance and compel it to dive several times before getting within range. The hunters also hide among the rocks and attract the seals by imitating their movements. Some are so skillful that they nearly always succeed in bringing the animals quite close, when they shoot them easily. The rocks selected for this purpose must be in shallow water, for otherwise the seal might be lost by sinking before it can be seized.†

The nets, called shore nets, have 6in. meshes, are from twenty to twenty-five fathoms long and from two to two and a half fathoms deep. The upper line is provided with cork floats and the lower one is weighted with lead or round stones to make the net fit close to the bottom. This net is spread around the banks or rocks on which the seals are accustomed to land and, as they swim in, they get entangled and are drowned.

These three methods of seal hunting or seal fishing are employed throughout the summer, not only for the harbor seals, but for all the other kinds which frequent the Gulf during the open season. I have often seen harp and horsehead seals caught in shore nets. Other methods have been tried, such, for instance, as stretching lines with large hooks under water around the rocks, etc., but they have all been abandoned because they were unsucessful or because they injured the skins.

The skin of the harbor seal, when well marked, is in great request for making tobacco pouches trimmed with glass beads, warm jackets which wear very well, winter caps and mitts, etc. The oil obtained from their blubber is like all other kinds of seal oil.

The hunting of the other species of seals is carried on on a much more extensive scale, as they congregate in large numbers in the spring on the ice fields or floes in the Gulf. They are the harp seal, the yellow seal, the square flipper, the hooded seal. On the ice floes are also occasionally found the bristled seal—a small and very scarce seal, which may be the *Phoca lagura* of Lacépède—and the horsehead seal, the *Phoca hispida* of Fabricius.

The latter, like the harbor seal, is seldom found on the floes, and lives in small herds of from thirty to forty individuals around rocks at some distance from the shore and well supplied with seaweed of various kinds. It prefers shallow water, and I consider it both carnivorous and herbivorous.

Occasionally other seals are found on the floes which seem to differ from the above in some features not sufficiently distinct to allow of their being classified separately.

For hunting these seals the Newfoundland hunters use steamers, while the Acadian and Canadian fishermen, who are too poor to do the same, fit out small schooners of from fifteen to thirty tons, or from 150 to 300 barrels, in the language of the coast.

These small vessels are manned by twelve, fifteen or eighteen men, according to the reputation of the captain, and the crew work on shares. Each man provides his own ammunition and provisions for the trip, which lasts about six weeks. As soon as a crew is collected and the agreement made for the cruise, all hands set to work to fit out the schooner. Strong timbers are fastened to its bows and sides to a certain height above the waterline, the masts are greased with tallow, the chain cables riveted, the sails overhauled and new bolt ropes rove if necessary, and the boats hoisted in. When everything is ready, the ice is sawn away from around the schooner and she starts on her search for ice fields. This is generally done about March 15, and nearly all the schooners from Esquaimaux Point and Natashquan set sail at the same time. When at sea each captain acts on his own experience and sails wherever he thinks best. Some go to the Straits of Belle Isle, others to the archipelago of the Magdalen Islands, and others still toward the Island of Anticosti, seeking for the ice floes on which the seals take refuge.

This navigation is not without its perils. Sometimes the schooners are caught between the floes and, unable to extricate themselves, are slowly carried out to sea. Then the sealers are obliged to feed on the scraps of meat adhering to the sealskins and blubber on board or to abandon their vessels and make their way to shore over the ice, hauling their boats with their arms and provisions. This entails great suffering and hardships, to say nothing of the danger. At other times the schooners are nipped by the ice and sink with their crews. This fortunately happens but seldom.

When the lookout gives notice that there are seals on a floe, this floe may either be a very large one without fissures—and then the seals may be clubbed—or it may be broken up and seamed by many channels of open water, and then the seals have to be shot.

In the first case the sealers select a leader, put on white clothes, provide themselves with heavy tamarack or black spruce sticks 4ft. long and about 2in. thick and get on the ice very cautiously.

The leader carefully reconnoiters the place occupied by the seals and tells off every sealer to his post. In doing so he pays special heed to the distance which separates the seals from the water and to the direction of the wind. When all his instructions have been given and thoroughly understood each man crawls to the position assigned him and awaits the leader's signal. In spite of every precaution the movements of so many persons cannot fail to cause uneasiness among the seals. They lift their heads and sniff the air, endeavoring to make out objects whose nature their eyes cannot distinguish. It is here that the skill of the leader manifests itself, for if he has been guilty of the slightest neglect in ascertaining the direction of the wind and in assigning his followers their posts the success of the hunt is endangered.

The sealers remain perfectly immovable until the seals have quieted down. The leader then lifts his club and with a loud cry rushes on the herd. A portion of the sealers follow him, while the others cut off the seals' retreat. Then follows a scene of indescribable tumult and confusion, especially if two or three crews work together. The greenhorns or awkward sealers who miss their blows curse their luck or jump aside to avoid the teeth of the partially stunned animals. The slaughter is soon ended and the work of flensing begins. The skins and blubber are taken off with incredible rapidity: a few minutes suffice for the operation, which is called sculping.

When all the skins are removed they are laced; this consists in placing three or four small skins in a large one, around whose border small holes have been made, and by means of small lines this is laced with the hair outside over the skins inclosed, and the packages are hauled over the ice to the vessel, one being considered a good load for a strong man. When the packages are on board they are unfastened and the sculps are stowed away in the hold, being laid hair to hair and blubber to blubber. The sculp of the hooded seal is sometimes so heavy that it has to be hoisted in with block and tackle.

In the second case, that is when the ice field is divided by long fissures, the sealers have to resort to their guns. These are all muzzle-loaders, single or double-barreled, carrying a very heavy charge of powder and slugs. The boats used by the sealers are very light and narrow and painted entirely in white; they are manned by two men, clad in white.

The bowman has two guns and a boat hook close to his hand; the steersman has another boat hook and a sharp knife. Sometimes the hunter in the bow puts a block of ice in front of him to hide him. The steersman must be careful to keep well in line behind the bowman and work his paddle as quietly as possible without taking it out of the water and with his lower hand dipping in it. This kind of boat work is very difficult and requires practice and strength, for in keeping to leeward the hunters have always to paddle against the wind.

When the boat gets within range of the seals the bowman noiselessly lays down his paddle and takes up his gun, and leaving his comrade to continue paddling, he fires at the seals, aiming as much as possible at the side or back of the head.

When the ice floe is too large to allow the hunters to get within range in the boat, they land and crawl, one behind the other, until they get close enough. The hunter then fires and his comrade flenses the seals that are shot. A good marksman, who knows how to take advantage of the moment when the seals lift their heads to sniff the enemy, can kill as many as four at one shot.

There is still another kind of seal fishing by means of long nets with meshes 6in. wide, made of very strong twine and lines. They are set at points and passes between the islands and the mainland and are hundreds of fathoms long. One end is attached to a capstan, the other end is carried out and by means of a long line is brought in a curved direction to a second capstan, placed at some distance from the first. When a sufficient number of seals have got within the net the free end is brought ashore as soon as possible. They are thus imprisoned between the net and the land and are then shot or clubbed. This kind of fishing is carried on in the fall.

Seals have a certain amount of intelligence, and when tamed have been taught to do various things. The seal hunters of the Gulf affirm that when they are surrounded on the large ice floes and find it impossible to reach open water, the seals select the thinnest part of the ice field and pile themselves one on top of another, until their weight breaks a hole through the ice and they escape into the sea. I have never seen this done, but it has been told me by several Acadian hunters who seemed trustworthy.

The female of the floe seal gives birth about Feb. 15 to one, sometimes two and very rarely three young. For this event she selects the center of the largest ice floes, and always keeps holes open through which she can easily pass to obtain food.

She suckles her cubs for a very short time, and when the latter are abandoned they collect on the ice floes, where the sealers kill immense numbers of them. Seal cub hunting is carried on up to the middle of April, when they leave the ice, and it always precedes the hunting of the older seals.

The males and females mate almost immediately after the latter have brought forth, and as the hunters do not find any young seals before the following year, they conclude that the period of gestation extends over eleven or twelve months.

The hooded seal brings forth at the beginning of March. In the breeding season the male loses the hood, which gives it its name, and that ornament is replaced by a blood-red appendage about the size of two fists, and which seems to issue from the mouth without going beyond the maxillaries.

Some hunters have assured me that they have killed individuals of the *Stemmatopus* tribe with three nostrils. I only mention this fact and the previous one to show how necessary it would be to make a closer study of these animals, of which but little is as yet known, whatever may be said to the contrary. There is beyond a doubt some truth in the assertions respecting the transformation of the hood or crest in the breeding season and the abnormal enlargement of the nostrils. I am not in a position to say how far the same may be true, and I am sure that the most learned naturalists are not much better informed than I am and I deeply regret it.

The large seals are heaviest after the middle of March; they weigh about 400lbs. and yield fifteen or sixteen gallons of oil.

The hooded seals sometimes attain a weight of 2,000lbs., but they yield comparatively less oil than the harp or yellow seals.

The bristled and horsehead seals also yield a comparatively smaller quantity of oil.

The sealing schooners nearly all return to port at the beginning of May. The pelts are at once landed, the blubber is separated from the skins; the latter are salted and the former is tried out in large cauldrons and barreled. The skins are worth from 3 to 3½ cents a pound, fetching about $4 as a rule; a very fine seal will bring $12.

In good seasons the schooners take from 1,500 to 2,000 seals each, but it very often happens that the catch amounts to only 150 or 200, which barely suffices to pay expenses.

H. DE PUYJALON.

* Some seal hunters affirm that the seal can remain under water for an indefinite time without coming to the surface to breathe. It would be interesting to ascertain what truth there may be in this statement, which I have heard made in perfect good faith by hunters whose veracity seemed beyond a doubt.

† At certain times, when the seal is not very fat, it sinks at once, especially when killed outright. When shot at a long distance, it disappears before the hunter can get close enough to seize or harpoon it

"STING SNAKE" AND RATTLER.

MISSISSIPPI, Aug, 16.—*Editor Forest and Stream:* In the description of my "stinging" snake your typo made havoc of the colors by a little error in punctuation. I wrote: "His body is of uniform color, not quite black, but dark, with a tinge of wine color; underneath, the ground color is scarlet," etc. The types made it read: "a tinge of wine color underneath," etc., which made some confusion in the description. I kept "McKinley," as I called him, for about six weeks. I frequently gave him a bath in a tub of water, when he invariably went to the bottom, crawled around with some show of animation, and acted as if he wished to burrow into the bottom and sides of the tub. I gave him frogs and grasshoppers while in the water, but he paid no attention to them, and ate nothing during the whole time that he formed a part of my family circle. He generally filled up on water, though, when in the tub.

A few days ago I carried McKinley on my arm down to the Sunflower River, a quarter of a mile away, and liberated him. While on the way I encountered a citizen who exclaimed in great excitement, "Why, man, that is a stinging snake! the most dangerous snake in the world! Look out! if he pops his sting into you he'll kill you?" It was with some difficulty that I convinced this gentleman by ocular demonstration that the snake was harmless, when he finally remarked, in a tone of disappointment, "Well, the stinging snake is a myth then, along with all the other myths." When I released McKinley at the river he immediately burrowed down into the mud and wriggled himself away through the soft mud, which leads me to believe that mud is his habitat and feeding ground.

About two weeks ago I secured a fine specimen of *Crotalus horridus*, or in plain English a rattlesnake, something over 4ft. long, with ten rattles. He was a vigorous specimen, noisy and disputatious, by name Bryan. I turned Bryan and McKinley loose together in a spare room with two rather small chickens for a whole afternoon. The snakes paid attention neither to one another nor to the chickens, which latter exhibited a mild curiosity when Bryan crawled by them, but no fear.

Bryan was domiciled in a box about 2½ft. long, one side being of glass and with auger holes bored through the other sides. A few days after he came to live with me I left him on the porch in the afternoon, where the sun reached him, and when I returned in the evening Mr. Bryan was stretched out in his box, stone dead.

I had supposed that rattlesnakes could stand a high temperature, but do not know any cause of this one's demise except the heat of the afternoon sun on the glass side of his box. COAHOMA.

BLACK DUCK BREEDING GROUNDS.

MR. THOMAS JOHNSON writes from Edmonton, North-West Territories, under date of Aug. 8:

I have found out the breeding grounds of black ducks. We have no black ducks in Manitoba, and when Mr. Hough was a guest of my friend, W. B. Wells, their shooting was principally of black ducks—that is, at their club preserve at Mitchell's Bay. It was a puzzle to Mr. Wells and myself to know their breeding grounds, but I found it at Lake St. Anne, about forty-five miles west of here. They are in thousands, and a peculiarity they have during the breeding season is similar to that of the coot, or water hen, viz.: they won't fly, but dive or swim out of danger. Another lake, named Lac la Biche, is also a great breeding ground for black ducks. This lake is 160 miles north of here.

Buffalo and Furs.

I saw to-day two of the largest buffalo robes I ever saw, and I have seen tens of thousands. The buffalo were killed in March last, north of here. I measured one and it was 8ft. 6in. wide and 9ft. 8in. long, the skin measuring only from the shoulder, as the Indians who killed them are very superstitious about the heads of buffalo. I met to-day on my way in from Big Lake Mr. Frank Hardisty, going to the Yellow Head Pass with two young Englishmen on a mountain sheep and goat hunt. He told me that he had offered the Indians $25—or its equivalent—to tell him where he could find the heads of the buffalo, but they would not under any circumstances give him the information. It is what they term "bad medicine" to do so.

You could hardly credit the number of furs brought here. I send you a clipping from to-day's Edmonton *Bulletin*, showing the quantity of one trader. When I tell you that near $250,000 worth have already been brought in this season it will give you a fair idea of the immense number:

"Colin Fraser's fur consisted of 2,962 marten, 570 mink, 35 fisher, 71 otter, 110 cross fox, 185 red fox, 20 wolverine, 45lbs. castorum, 1,148 beaver, 34 silver fox, 282 lynx, 8 wolf, 3 skunk, 6,690 rats and 125 bears. Bids were offered this morning and the lot was secured by the H. B. Co. for $19,397."

A Dragon Fly Attacks a Nonpareil.

ST. AUGUSTINE, Fla., Aug. 6.—The following is, I take it, a rather remarkable story, and as it comes from an entirely reliable source, I send it to FOREST AND STREAM as the best place to bring it to the notice of naturalists, to learn whether any one has known of any similar case.

As Mr. and Mrs. Heth Canfield, of this city, were sitting on the porch of their cottage a few days since, they noticed a little bird known as a nonpareil fall fluttering to to the ground from a cedar tree near by, and as the dog sprang out to catch it Mr. Canfield hastened to rescue the bird. As he stooped over it he found that a large mosquito hawk or dragon fly had fastened upon its neck.

Picking up the bird, which seemed nearly exhausted, Mr. C. shook off the insect, which flew away with the bunch of feathers plucked from the neck of the bird still in its jaws.

The bird was taken into the house, where after a while it recovered from its fright and exhaustion and flew away. The neck showed plainly where the fierce grip of the insect had taken the feathers.

I have often seen the large mosquito hawks catch butterflies and the large horse flies, but I never knew they attacked anything as large as a bird. The nonpareil, a beautiful little bird of the South, is somewhat less in size than a canary. W.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

Game Bag and Gun.

CAN IT BE STOPPED?

Editor Forest and Stream:

I have seen with much interest and satisfaction the vigor and constancy with which FOREST AND STREAM and many of its contributors uphold the stand taken to stop the sale of all kinds of wild game. That the foremost journals, devoted to the highest order of outdoor sport and recreation, and that the most intelligent and observing individuals, who are nearest and most intimate with nature and natural conditions, should advocate a cause so earnestly and unanimously, stamps the undertaking as undeniably judicious and right.

Indeed, so far as my observation goes, and it is not confined to narrow limits, I am surprised that there should be any opposition to a proposition so clearly humane, sensible and economical. If Americans consulted no other sentiment than their fundamental principle of the greatest good to the greatest number, the population of the continent should unite upon so plain and simple a method of protecting their own interests, and there should be no dissenters. The miserable pot-hunters themselves should be thankful if such a means of livelihood is denied them.

The eternal scramble for dollars and dimes, that seems to be an inseparable adjunct to civilization, is demoralizing enough under most circumstances, but let us not forever continue to encourage it to extend its blight to every nook and cranny of the continent of America. There should be some precincts sacred from the blasting touch of avaricious greed and itching palms. The protection of game, natural conditions and wildernesses may have a greater influence upon the welfare of a nation than most of those nearly concerned are aware of. There are countries where aristocrats alone can leave stone pavements and smoky, impure and choking air and find relief in their private parks. There are places where only the rich may taste of grouse and venison. There are examples enough, not only in the history of old countries, but in many parts of our own, to fix beyond question forever the judiciousness, desirability, the imperative demand that the avaricious destruction of natural and common provisions should be prevented.

About the only reasonable plea that is advanced by those who desire to kill game for money comes from pioneers—remote settlers and mountaineers. These claim, and not without reason, that they must depend upon what nature puts in their way. They must catch fish and kill deer and other game, and take it to towns and trading posts to exchange for necessities. This plea will continue as long as there is an acre of vacant forest or a timber-clad mountain, or a trout stream, open to the public.

But if the claim of this class is admitted where will restriction begin? After the pioneer comes the sawmill to denude the land of timber, the miner to drain the streams for mining, or the farmer to utilize the water, or the smelter or factory to poison it. All of these interests have their advocates and the usual result is that private or corporate greed asserts its supremacy at the expense of the conservative or helpless majority. The finale will come inevitably and within a few years. History will continue to repeat itself.

To stop the sale of game is the very wisest if not the only means to prevent its extermination, and even this is not all that must be done. The professional hunter who kills game for money is not the only one who kills it ruthlessly, although in most places he is the most destructive. There is a class of excursionists, and another of vandals, who raid the country in game districts and who seem to enjoy themselves chiefly by killing or destroying—but in continuing I am only reiterating what has so often been more vigorously stated in these columns.

One thing I have observed in many persons and places is this: the genuine backwoodsman, the true sportsman and observant lover of woods and streams is not, and never was or will be, wantonly destructive of wild life. The most experienced hunters I have known, and the oldest mountaineers and frontiersmen, have been religiously humane and the most reluctant to kill any creature wantonly. When such men shoot they always know they are aiming at seasonable game, and they kill it only to supply their needs.

In California, heavily timbered and mountainous as it is, many varieties of wild game have been exterminated. There is not now an elk within its boundaries. The grizzly bear is extinct or only a stray one occasionally heard of in its migrations. A remnant of a band of antelope was heard of a year or two ago in a northern county, and the fact was a thing to be wondered at and published from Siskiyou to San Diego. They were so well advertised they probably went off "like hot cakes."

The California Legislature finally did a good thing. It passed a law against the sale of venison and elk (the elk were long gone), and better yet, stopped the sale of deer skins. The effect is not yet noticeable, but it will be. I have seen campers return from the mountains with a wagon load of freshly killed deer skins and no meat (before the law was made) and I have known of men who employed Indians to kill deer by the hundreds—perhaps thousands—for their skins alone, an industry common enough in the West.

The sale of venison and deer pelts in this State is not profitable now—not being altogether safe—but since March, 1895, other game and fish laws languish. The Legislature in 1895 renovated the laws and made some good changes—and one bad one. They made the fines imposed go to the public coffers and did away with the provision allowing informants pay for their time and trouble. They "authorized" counties to appoint wardens. Some few of the counties appointed wardens, but most of them refused on account of "an unnecessary expense!" Then some wise judge gave it as his opinion that the appointment of wardens was unconstitutional, and many unripe journalists of the State saw in this an opportunity to denounce all game laws. Just why country newspapers enjoy obstructing game laws I can't guess, but they do it with relish, zeal and peculiar idiocy. Perhaps they do it because they like to denounce things beyond their comprehension. The next Legislature may agree with the aforesaid immature people that our game laws are all unconstitutional.

In this vast country of ours it seems that not only eternal vigilance is the price of liberty, but eternal vigilance and contention are necessary to the protection of the natural advantages of the great commonwealth.

It is, I think, proverbial that the great enemy and obstacle to progress is ignorance. This, I am inclined to think, is peculiarly obvious whenever a rural journal or grocery store orator denounces game laws. If all such obstructionists would read FOREST AND STREAM for a while, thereby nourishing their ideas—or perhaps their reasoning power—they might not only favor game preservation, but unite in the effort to stop the sale of it.

CHARLES L. PAIGE.

CALIFORNIA.

ADIRONDACK GAME NOTES.

Dead Deer.

DURING a recent trip through the Adirondacks, which began at the Fulton Chain of Lakes and ended at Westport, on the D. & H. R. R., I heard much about the number of deer that have been seen this season in the North Woods. Without a single exception deer were reported at the various camps to be on the increase, and it is safe to say that never again will the Fisheries, Game and Forest Commission be able to gather accurate statistics of the number of deer killed in one season. One man was frank enough to say to me that if he had known what use the Commission was to make of his report he would not have reported so many deer killed as were killed by a party of which he was a member. He said if the Commission was to use the number of deer killed as an argument against hounding he would not help the argument with another report of the number actually killed. At two places I was told that between twenty and thirty deer were seen at each place in or around a single lake in one day. It is evident enough that there are many deer left in the Adirondacks, but it is also evident that deer are killed illegally, and it is a most difficult thing to detect the violators of the law.

A little way down the Raquette River, after leaving Long Lake, our nostrils were saluted with a stench which incited us to look for the cause of it. In the water near the bank a dead deer was found with wounds in head and breast. The animal was not in a condition for a close examination, but circumstances seem to point to the fact that the deer had been shot by jack light, and though badly wounded had escaped the hunter, only to die in a manner to render the venison worthless when found, even if it was found by the hunter. Two other dead deer were found in the same river lower down, and a game protector had been hunting for the violators of the law without success up to the time of our visit. Miles away from the spot it was known that the deer had been killed and where the carcasses were, which was natural, for such news travels in the woods, but nothing could be learned of those who did the killing. I happen to know something of the strenuous effort made to find the guilty ones, but it is not strange that they should escape in the wilderness.

One of the State game protectors told me he had just been to Deer Pond, in St. Lawrence county, in consequence of reports that deer were being killed. Within a space of four rods square he found the carcasses of eleven deer, ten of them does. From one but a single ham had been taken, and but little more meat had been taken from the other carcasses. The protector said it was not likely that these deer had been fire-hunted, as he saw eighteen deer in or around the pond during an hour's time. The deer had been shot wantonly, and in all probability between fifteen and twenty fawns had been left to perish after their mothers had been killed, for if they did not die at once they would be so poor and weak that they would not survive the winter. There is a possibility that some of the miscreants who did the shameful work may be brought to justice.

Breeding of Deer.

In a deer park at Loon Lake, Mr. Ferd. Chase, the proprietor of the hotel, has a number of deer which have been captured at various times during the open hunting season and turned into the park, where their habits may be studied, instead of turning them into venison in the ordinary way. The conditions existing in the park are not unlike those to which the deer have been accustomed in a wild state, except that their quarters are circumscribed. Two years ago a female fawn was born in the park, and this year that fawn is the mother of a fawn. Her fawn was born when she was about one year old, and this was to me brand new information concerning the natural history of the Virginia deer, as it was to Col. Wm. F. Fox, Superintendent of Forests of the Fisheries, Game and Forest Commission, and it is possible that it may be unusual in the breeding habits of the deer, and I note it to obtain light on the subject from those who have deer in confinement and under observation.

Does vs. Bucks.

Last autumn during the deer hunting season I heard from two sections of the Adirondacks that more dry does were killed than in many years before, and it was accounted for by the fact that it had become the rule in those sections to kill only the bucks and spare the does During my journey through the woods the matter of dry does was brought up at a number of stopping places or hunting centers, and while it was admitted that such was the case, I heard it charged to hounding during the breeding season; that the dogs so harried the deer and separated them that the increase in the deer herd was less than it otherwise would be. This theory was combated, it is true, but it seemed to be as reasonable as the other, for really more does were killed last season than bucks, the proportion being 2,207 bucks to 2,693 does.

Adirondack Moose.

The last moose to be killed in the Adirondacks was killed in the 60s, I think. I have heard Alva Dunning credited with killing the last moose, and also heard Mitchell Sebatis credited with the same act. Be that as it may, I think the last moose was killed near Long Lake.

A few days ago the register of the Threehouse Hotel in Glens Falls, N. Y., for the years 1843 and '44 was brought to light in the village, and a newspaper man has been looking over it. The register has been kept in a private family as a sort of scrap book, as it was in the day of it more than a register of the arrival of guests. Under date of Oct. 10, 1844, is recorded the arrival of two men, with this legend, "Returned from Long Lake. Killed two moose, three bears, five deer (one big one), one

panther and a polecat." There is no comment entered regarding the moose, and it would appear to be the regular thing for two hunters to kill two moose. At least it occasioned less remark than the killing of a big deer. One of the men, Mr. Ordway, was from Glens Falls, where his relatives now reside, but the other man I know nothing of except what the register tells me. I think Col. William F. Fox has the date of the killing of the last moose in the State of New York. A. N. C.

CHICAGO AND THE WEST.

The Chicken Crop.

CHICAGO, Ill., Aug. 15.—From every indication there will be a better crop of chickens and wildfowl in the Northwest this fall than has been the case for years. The season has been wet enough and not too wet. A great many of the Dakota lakes that were dried up entirely are this year again full of water, and the same is true for parts of Minnesota and upper Iowa. In Minnesota the shooters will have the best chicken shooting they have known for a long time. In Illinois there will be a good crop also. Illinois has for five years been one of the best of the chicken States, though the fact has not been generally believed; the shooters preferring to press on to "newer" fields, not believing it possible that these latter could have been so soon and thoroughly depleted. In Wisconsin also there are more prairie chickens than is known by the average shooter of this section. Waukesha county will show quite a number, and a bit further north, around Berlin, Portage, Fox Lake and the edges of the big Horicon and Poygan marshes, there will be a lot of birds killed on the opening or before the opening of the season. Illegal shooting has been flourishing royally for some weeks in Illinois, and no doubt the other States as well, for it is almost impossible to keep shooters of a certain class from beginning to kill chickens as early as they can flap up out of the grass. Nowadays when a man has a good chicken pocket he keeps quiet about it. Many inquiries come to me for chicken country. I know of no surer place than the upper county of Minnesota, in the northwest corner of the State, or in the northeast county of North Dakota. This is not the only place where there will be birds, but it is about as sure as any I know of. Look up the laws before going, and stick to them. I don't know of anybody who is any better than anybody else when it comes to breaking the laws of a State, and one's personal preference for himself may not extend into the beliefs of the officers and courts. It seems to me that if shooters ought to have compassion on any bird on earth it should be for the prairie chicken, for a more helpless, defenseless bird never flew. When I hear shooters boast of the big killings they have made of these birds it occurs to me that they are advertising their own lack of quality as shooters. It is against the law to send or take these birds out of Dakota or Minnesota. Sportsmen will not wish to violate this law, others must not.

Woodcock.

Local woodcock shooters have been killing a few birds, not in numbers to amount to much. This bird enters less into the calculations of the Western shooters than it does into those of the East. Early woodcock shooting has little of fascination to it, and in fact the month of August seems too early for one to take his gun afield for any sort of game. There are good woodcock grounds along the Kankakee, the Yellow River, and others of the marshy upper waters of Indiana. There is also good ground below White Pigeon, Mich. Along the timbered *mottes* which outlie the great St. Clair marshes above Detroit there is fine woodcock shooting in season, but all that country is watched pretty closely by eagle-eyed sportsmen, who find out each nesting before it is hatched and wait eagerly for the law to lapse.

About Missoula.

Mr. R. E. Miller, of Elmira, N. Y., wants to know what Montana town he can go to for a few months' life on a ranch near deer and other game, and inquires about Missoula more especially. Missoula has a good winter climate and there is big game near by, and some small game also. Mr. Will Cave, of that town, can be more specific, if he should please.

From the Piegan Reservation in Montana come two or three letters from members of the FOREST AND STREAM Indian party who made the feature of the Sportsmen's Exposition at New York last spring. Bear Chief is well and apparently prosperous. He wants me to pick him out a good wagon here in Chicago, of a kind that will be useful on his mountain farm. Bear Chief says he has fifty acres of oats ready to harvest, though a good many are not so well off. "Those who might have had a good crop," he says, "went and spent a week at the Medicine Lodge, and while they were away the crop suffered. I did not go. Prayers will not feed cattle in the winter."

Billy Jackson says that Natoka and the little footlight favorite, Natoye, the Indian baby, are well, and are the envy of the tribe, all of whom want to come East to the white man's country. Billy says that very few hunting parties are coming West this season, and he lays this to the presidential campaign. He is going hunting for a few weeks himself, but though he says he can get lots of game, he gives it up about ever seeing another bighorn equal to the one whose head he gave to the FOREST AND STREAM office here. I can assure him that the head receives a great deal of admiration, and is prized very highly indeed.

The Grayling.

Mr. W. B. Mershon, of Saginaw, E. S., Mich., writes me in regard to recent mention of the decreasing grayling supply in Michigan, confirming the doubts I have expressed. He says: "What you say about the disappearance of the fish is all too true. I have taken only three small ones this year in Kinne Creek, the preserved waters of the Père Marquette Club, but I hear that Mr. B. B. Mitchell, of the Fontinalis Club, and some of his fellow-members had very good grayling fishing last year somewhere on the Pigeon."

A Double-Header.

It is perhaps pardonable that one should wish to have himself photographed in connection with an exceptionally large bag of game, though there are many photographs of that sort now in existence the originals of which may later wish they had never had made, for the tendency of opinion to-day is quite against extremely large bags of any sort of game. However this may be, there are always men who long to be pictured as the slayers of a lot of game. Recently the vaulting ambition of one of these men o'erleaped itself, or rather it o'erleaped the shrewdness of a Chicago publication devoted to pet dogs, guns and loads. The mighty hunter in question had been out with a party in the South, and they had killed a respectable lot of deer and a bear or so, which had been hung on a long pole for the purpose of photographing. The picture showed about 30ft. of game hanging up, with a nice picture of the mighty man well posed in front in the act of watching for some imaginary foe which was supposed to be threatening the camera from behind, and whose assault was to be repelled by rifle if need be. It required little study to discern that the string of game was divided into two equal and similar parts, though the human figures were not the same. In fact, the picture was a double one, made by pasting two pictures together. The photograph was made of the game twice, the men posing in different positions the second time. This gave the idea of twice as much game as there really was. I adduce this as the most elaborate evidence at hand of the ambition of certain men to achieve reputation as game hogs in the most labor-saving way.

I am pained to see that a Kansas paper is spreading the report of a Fort Scott tame drake which has developed a fondness for young spring chickens. This unnatural fowl eats the chickens alive, and if it experiences difficulty in swallowing one it dips it in the water and lubricates it until it can swallow it. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A STILL-HUNTER'S CALIBER EXPERIENCE.

Editor Forest and Stream:

The mornings are getting cooler and the air is beginning to have a decided autumnal whiff at certain times at least up in this northern country. This state of things reminds me that I ought to have my say about those calibers for hunting rifles and some other things.

Now a few years ago I took a three months' trip up in the upper Michigan peninsula. My camp was located somewhere in the woods twenty-five miles from Ironwood, and the nearest railroad station was Beechwood, a town of a couple of log cabins and a frame "hotel" the inside of which consisted of a long row of bottles and a bar! The repeating rifle is or was then the favorite in that section and I had one, a .45-85 repeater with a cartridge 3 or 4in. long. This cannon weighed about 10lbs. early in the morning, but had a habit of weighing in the vicinity of 50lbs. at night, and that's a bad enough habit in a gun, not to mention its kicking ability. It kicked some, but withal was a good shooter, worked nice, and gave satisfaction in a general way. But the agony of lugging this elephant gun around did not compensate for seeing your game "drop in its tracks," and as I could not eat up more than one or two deer at the best, and my appetite is good, I came to do considerable thinking evenings when the gun was heavy and six or eight miles lay between myself and camp. Then, too, any man will get tired of venison steak after awhile, and the squirrels and pheasants looked good to eat, but how could I shoot any of them with that thing? Any one who has tried it knows why not. Still there was the chance of running across bears and—tell it softly—moose. Only I never run across bears and moose when I have a gun along. So to sum up the whole thing I carried for three long months every day in the week 10lbs. of iron to kill the two little bucks, which were all I needed and all I killed on that trip, and for their sake had to forego many a squirrel stew, pheasant roast, etc. As said before, I did considerable thinking on the caliber question

Only once during that trip did I have a chance at anything unusual, and that was the first evening in camp. I had made camp and got all "slicked up" about an hour before sundown. I resolved to go out for a stroll and get the lay of the land and look for sign in a small oak opening which was visible from camp. Sauntering along slowly, I suddenly observed some sort of an object dodge behind a fallen log. I stood motionless for fifteen or twenty minutes, when there slowly appeared in sight above the top of the log a few tufts of hair. It might have been a woodchuck for all I then knew, but I fired. There was tremendous snarling and kicking behind that log, and on cautiously stepping up I observed a large Canada lynx in the throes of death. Another shot finished him, and he was one of the finest specimens of lynx I have ever seen, but his fur was not yet "ripe," although it was then the first week in October; still I managed to save his skin in fairly good shape. Under the circumstances a .22 would have answered almost as well as the .45 to kill the beast; if I had had the first size there would be more of the scalp left on top of the head—the .45-85 lifted his brain cap clean off.

Well, the trip ended Christmas day of the same year, and it did sort of seem good to be among friends again. The .45-85 was disposed of, however, and I invested in a .38-55 Marlin a short time afterward. That gun suits me to a T when going into the woods for a short stay of a week or so, and when the main object of that trip is deer. It's plenty large enough for the toughest buck, it's light and handy—the ideal deer gun. As for moose hunting I cannot say. I never hunt them, and have long since learned not to expect to come across them accidentally. It seems difficult how so many hunters—and mostly amateur hunters—come unexpectedly across moose and bears. My own experiences have been that these animals but very rarely are taken unawares in our much frequented American woods. If going out after such game, I go prepared for it; if not, I am not lugging around 3 or 4lbs. of iron and ammunition on the chances of coming across them. I am not dealing in chances, they do that better in the wilds of Wall street, where the bears are more plentiful and not so shy.

Now, this year I shall take another trip of a couple of months or so. My weapon will be a .32-20 Marlin; that's what I have decided upon. If the trip would last only a couple of weeks the .38-55 would be about right, but as it's going to be a long stay I prefer the .32-20. Now, whenever I take an extended trip I do considerable loafing and loitering around in the woods; maybe I have a dozen or so of No. 2 Newhouse traps scattered in the vicinity of camp. To me there's more fun in trapping a few of the sly fur-bearing animals than there is in shooting deer—unless they are still-hunted. Now, I dearly love to putter around among these traps, and perhaps try my hand at building deadfalls for mink and sable (pine marten). Then there is the fun of shooting partridges' necks, a squirrel still-hunt, and perhaps a chance shot at bunny by the way; all this I can enjoy with my .32-20. Of course, my chances for deer are smaller, but what's the odds? In a trip of this kind a good hunter usually has a number of chances at deer, and if the first deer does not give me a fair chance for a dead shot in a vital part, I wait for the next, that's all. The rifle is short, light, accurate, and the ammunition can be had in any country store—a weighty fact. So I will take my chances on the .32 this trip and venture to say will have no more cripples lost than you, Mr. .50-110. MATTERHORN.

IN COLORADO MOUNTAINS.

As told by the Junior of the Party.

EVER since the beginning of the vacation my father and I had been planning to take a hunting trip together somewhere, but we had not fully decided where, until one day my father received a letter from his old college chum, Mr. C., who at the time was engaged in some business at Denver, and who said he had heard of a very good hunting ground, and that if we would come West and join him for a short trip he would make the necessary arrangements. As he promised us shots at deer and elk and a chance at bears and mountain lions, with all the trout fishing we wanted, we of course jumped at the idea.

The place he referred to was Marvine Lodge, in the White River region of Colorado. This lodge was established by the Marvine Rod and Gun Club, and is leased to Wells & Patterson, two experienced guides and hunters who fit out hunting parties with horses, guides, provisions, dogs, etc. The lodge is fifty-five miles by stage from Newcastle, the nearest station on the Denver & Rio Grande Railroad.

We reached Denver about 8:30 on the morning of Aug. 30, and spent the day there seeing the city and getting some necessary articles for our trip. That night we all took the sleeping car on the Denver & Rio Grande Railroad for Glenwood Springs, a point thirteen miles this side of Newcastle, and arrived there on the morning of Aug. 31. Glenwood Springs is a beautiful place situated in the heart of the Rocky Mountains. It is named from the hot sulphur springs which are found there, and which have been led into a large artificial basin about 100ft. long, and from 3 to 6ft. deep. The water is very warm (about 90°), and to one accustomed to seashore bathing is a little too much so. Invalids go there for rheumatism and catarrhal affections. We took a swim in the pool before dinner, and on coming out were cooled off by a shower bath, which felt very grateful after the warm water of the pool.

After supper we took a carriage, and drove by moonlight thirteen miles down the cañon of the Eagle River to Newcastle. It was a beautiful ride and a very exciting one. We drove at the Western breakneck pace whether we were on level ground or where we could look down from the side of the carriage 100ft. to the rocks in the cañon below. It was nearly full moon, and the moonlight shone beautifully on the rocks and trees around and above us, and on the foaming, tumbling water below.

Every time we struck a rock in the road I expected the wagon with us in it to go over the cliff; but it didn't, and we arrived safely at Newcastle, where we stayed for the night.

Next morning we were up bright and early and ready for our start, which we made about 7 o'clock in a four-horse open stage, which carried our party of three, the driver and our baggage, guns and fishing rods. All that morning we climbed up and up on the divide between the Eagle and White rivers to an elevation nearly 5,000ft. higher than Newcastle. We reached the top about noon, and made the remaining twelve miles to the dinner station in two hours, arriving there about 2 P. M. We had a very good appetite for our dinner, as we had had nothing to eat since 6 o'clock but a few squaw berries picked on the way and spring water. Jim Shaw, who keeps the dinner station, is one of the queerest specimens of humanity we met during the whole trip. He lives there in a tent all alone through the summer, and takes care of the horses for the stage relay at that point, doing also a little ranching. He furnishes meals for passengers, cooked by himself, for which he charges "50 cents a head, sir," and very good meals they are. I heard some gentlemen who had been camping in the vicinity telling Jim what a hard time they had getting a dead buck out of some timber near by. Jim's only comment was, "That place rough? Why, I hauled rye out of there," which he repeated at least twenty-five times during dinner.

Nothing happened to interrupt our journey until we were five miles or so from the dinner station, when, happening to look up, I saw a good-sized buck walking across a little open park toward a bunch of quaking asp. It took me just about ten seconds to get a cartridge into my rifle and get out of the wagon. By this time the deer, which had not observed us, had walked slowly into a bunch of timber. I tried to head him off, but did not succeed in getting a shot. This was the first deer we saw. It was a six-point buck, three points on each antler, not a large deer.

We were descending the slope now toward the White River, and could make fairly good time, and on reaching the White River bottom we made still better time on the comparatively level roads up the White River to Marvine Creek. I killed three blue grouse, and shot at some ducks on the way. We arrived at the lodge at 8 o'clock in the evening and received a warm welcome from Mr. William Wells, who was to go out with us, and his brother, Mr. Frank Wells. We were ready for bed after our fifty-five-mile ride and were soon sound asleep.

We had not arranged to start on our hunting trip until Sept. 3, so we decided by Mr. C.'s advice to spend the second trout fishing in Marvine Lake. We started early on our seven-mile ride on horseback to the lake and spent the day fly-fishing from the shore. We all filled our baskets, Mr. C. getting the most. I had my rifle with me in case we should see a deer. I was riding in the lead on the way home when my horse jumped violently, and I saw three deer start up not 20ft. away; they were a doe and two fawns, and therefore not fair game, as no sportsmen shoot does or fawns in Colorado. Soon after this I killed a grouse with my father's shotgun, and we arrived at the lodge without further adventure in good time to prepare for our start into the wilds next day.

Tommy, Cream, Baldy, White Man, Deceiver, Ghost, Crowfoot, Speckles, Dawn, Mac, Nelly, Fly, Honey, Buckskin Tex, Roaney, Teddy, Brook, Kitchen Dick

Gents and Okey, these are the names of the horses with which our party started. Of these six were saddle horses and the remainder were pack horses to carry provisions and camp outfit. Our guides were William Wells and John Goff. Charley Lea went as superintendent of the coffee-pot and biscuit oven. We had three dogs, Hector and Ajax, who were trained in lion and bear hunting and in tracking wounded deer and elk, and Brigham, a young hound, who, though he had little experience in hunting, had a good nose, as will hereafter appear. We also took a bear trap, as we thought we might have use for it. I rode Tommy, my father rode Cream, and Mr. C. rode Baldy. We followed Marvine Creek to White River and went up the river one mile to Lost Creek. We then went up Lost Creek, and crossing Lost Park camped on the West William's Fork of the Bear River at about 3 P. M., making a distance of sixteen miles. On the way up I saw a good-sized buck at the edge of some timber, but before I could get ready to shoot he had turned, and with a few bounds disappeared. We had also seen two or three does, and as Wells said we were camped in a very good deer country we decided to take a short hunt with him before sundown, while the deer were out feeding in the open parks. It took some time to get the horses unpacked, and it was 4:30 before we got started on our hunt. We rode across the little knoll on which we were camped and down through a deep ravine with steep banks up to the next ridge. Just as we were nearing the top a doe jumped up out of the weeds and Ajax, the younger dog, made after her. The dogs are taught to follow no deer trail but a bloody one, so Wells promptly stopped him with a shot from his sling-shot, which he carries to punish pack horses that get out of the trail. This struck me as a practical and useful application of the sling-shot.

On reaching the top of the hill we came out into a large park, and to my great excitement we saw a big buck feeding about 100yds. away on one side. But he saw us as soon as we saw him, and before any of us could get a shot he ran around behind a clump of trees and disappeared. Wells then led the way in the direction in which the buck had gone, and we started up a grouse. After riding about 200yds. further along the edge of the hill, Wells, who was in advance, saw the buck down the hillside to our left, and motioned to me to come on with him, and to Mr. C. and my father to stay back. After trotting forward under cover of some timber about 100yds., we quickly dismounted and stole forward on foot. After going 25yds. or so Wells touched my shoulder and pointed to the end of the park where this big buck and two smaller ones were coming out of the edge of the timber across the park. I shot at the big buck just as they were entering a clump of timber, and as he was going fast I shot behind him. At the shot they all stopped, and he offered me a beautiful broadside shot at about 125yds. I missed that shot and then another. I suppose I was rattled, and probably my using my heavy .40-82 Winchester, with which I had so far shot very little, instead of my .38-40 Marlin, with which I had practiced a great deal in the past and was a fairly good shot, helped me to miss him. The two largest bucks by this time thought they had acted as targets about long enough, so they bounded off into the woods; but the smallest one, a yearling or spike buck, stood there and let me have another shot. I didn't care much whether I hit him or not, now that I had lost the big ones, so I suppose my nerve came back, and I killed him at the first shot, the ball passing through the base of his neck, breaking the bone. While Wells was cleaning him, and Mr. C. and my father were scouting around, looking for the big bucks, another good-sized buck ran across the park in front of us and stopped on the opposite side. I could see nothing but his head and horns, and shot where I thought his body ought to be, but did not hit him, the ball going high. I mention this to show how plentiful the deer were. We packed the dead deer on Wells's saddle horse and returned to camp. On the way back, in the ravine of which I spoke, two cow elk passed us at full speed, but we, of course, did not shoot, as the same rule applies to them as to does.

Next day, after breakfasting on deer liver and other camp delicacies, we started for our permanent camp on Beaver Creek, reaching there early in the afternoon, lunching on the way on Pagoda Creek, where we got our first view of Pagoda Peak, so named by Hayden, because its top resembles that of a Chinese pagoda. Its summit is 11,577ft. above sea level.

On reaching camp Mr. C. and I decided to try to get a mess of trout for supper out of Beaver Creek, while my father took his gun and sauntered off into the woods near by in the hope of getting a shot at a buck. The guides stayed in camp to fix up things generally. The trout did not bite. We were fishing with flies only and it was probably too late in the season at so high an altitude.

On my way home I heard my father calling to Wells, who was picketing the horses, and saw Wells ride into the woods. They soon after appeared in camp with a fine spike buck hung over Speckles's saddle, shot by my father, thus assuring us of plenty of meat at the outset—a very necessary consideration in camp where you are largely dependent on your gun for food. To have venison good it must be hung up several days after killing before being eaten. Fresh-killed venison or elk meat is apt to make you sick. I suffered from eating it last year when hunting in Wyoming.

The next day—Sept. 5—was a memorable one for me. We stayed in camp all morning helping the guides to gather spruce branches for our beds, make a camp table, and "fix up" generally around camp. In the afternoon Johnny and I and my father started in one direction, and Wells and Mr. C. in another, to look out for bear signs and locate a good place to set our bear trap, and also to try to kill a big buck.

Mr. C. nearly got his deer. He creased a large buck and knocked it down. It fell over a log and lay with its feet up, but before they could reach it it recovered and got off. If a deer, elk or bear is hit, or rather grazed with a bullet on the top of the neck, the shock stuns him for an instant, so that he rolls over as if dead, but in thirty or forty seconds he recovers his senses and strength. This is called creasing. Mr. C. wounded another deer, but it also got away, though followed by the dogs some distance.

My father, Johnny and I rode two or three miles without seeing any bucks. Then we began to get into the buck country. After catching glimpses of two very big ones, we decided to get off our horses and still-hunt afoot. After going about a mile, Johnny suggested we go on alone, while he went back to bring up the horses, appointing a rendezvous with us in a bunch of quaking asp trees in the distance. We got there without seeing anything but several does and fawns, and were sitting on a log waiting for Johnny, when I saw a small buck. Just as I was showing him to my father, two great big bucks and one small one appeared near him, running toward the thick spruce timber. We each took a snap shot at about 150yds. as they were disappearing in the woods, but without effect. Soon after this Johnny came along with the horses, and we mounted and rode up to the top of the ridge and along it for a mile or more. We had seen nothing on this ridge except a solitary doe, when all at once a good-sized buck got up about 300yds. off in the fallen timber. I jumped off my horse and shot. The ball knocked up the dust in striking, so as to show it passed about 3in. above his back. The shooting started another buck. My father then jumped off his horse, and we both shot at once as this buck stopped on the top of the hill. We miscalculated the distance and over-shot. The shooting turned him and he came down by us, jumping beautifully over the fallen logs, and ran down hill toward the valley. By this time I had the range of my rifle, and when he stopped at a point fully 350yds. away I took a good steady aim and pulled the trigger. There was a stiff breeze blowing, and as the smoke blew away I saw him plunge forward and tumble all in a heap against a big log. Maybe I wasn't happy! We had seen when he ran by us that he was an extraordinarily large buck with very fine antlers. I was afraid that I might have only creased him, so I ran on down ahead, leaving my father and Johnny to bring up the horses. I scrambled over logs and through bushes until I was about where I thought he had fallen, but Johnny still motioned to me to go on. When I had gone 100yds. further I stopped again on a fallen tree, and there I saw him, not 20ft. away, lying stone dead against a log. He measured 6ft. 3in. from the tip of his nose to the end of his tail and 48in. around his chest, and the fat on his rump was 1¾in. thick. My first thought was to count the points on his antlers. I found he had twenty-four, twelve on each side, an extraordinarily fine head. It was all that three of us could do after he had been cleaned to lift him on Kitchen Dick's back, and Dick had a very heavy load to carry home. Johnny walked and led him all the way, watching carefully that the precious antlers were not broken by catching on trees.

The next morning after breakfast we skinned his head and cut away the flesh from his skull so that the head should keep until it reached the hands of the taxidermist. This took until almost noon. We then, after getting a bite to eat, saddled our horses and started on an elk hunt, my father and I and Johnny going together again. We hunted all day without getting anything. My father missed a large buck soon after we started, and I cut a piece off the horn of another during the afternoon from about 150yds.

We stopped for lunch in the thick pine timber, and soon afterward found something that greatly pleased and excited us—the track of an enormous grizzly bear in a deer trail which we were following at the time. We could see it was the track of a grizzly bear, both from its large size and from the impression made by its claws, which in a grizzly grow much longer than in a black bear. We followed his tracks through the woods for some distance, but did not run across him. Thence the deer trail led through a beautiful meadowy park. Near the middle of this park were several large trees, and as we neared these we saw two blue grouse sitting on a log between the trees. I jumped off my horse and began to throw stones at them, not wishing to shoot, for fear of alarming the larger game. No sooner did they fly than two more appeared in their places, and then others, until I had driven away eight from the same spot. I was a little out of practice, so the grouse all took their base on balls and escaped.

[TO BE CONCLUDED.]

IN THE SANDHILLS.

OMAHA, Nebraska.—The season of the year which awakens the ardor of the sportsman, even as spring is wont to revive the rhythmical flow of fancy in the poet, had come and I was forced to surrender to a great longing for the companionship of my dog and gun and the unpolluted air of the boundless prairie; so, with three congenial spirits, I determined to explore a portion of our State, of which, up to that time, I had been in complete ignorance. True, the Sandhills were words familiar enough to all of us, but there had been nothing in them suggestive of the rod and gun, nor of the numberless lakes teeming with water fowl; but nevertheless rumor had it that the latter did exist, and we concluded to gratify our curiosity at any rate, and find as wild a country within the confines of our own State as possible.

A complete camp outfit was gotten together, and a ride of 400 miles by rail brought us to Gordon, a point from which we planned to continue our way by team. At Gordon we were apparently equally anxious to get away from human habitations, and it was but a short time before we had secured the services of a guide, loaded our outfit into a wagon behind a stout pair of bronchos and were leaving the little burg behind us.

For about fifteen miles we drove over rolling prairie, with nothing more interesting to watch than the thousands of bunches of tumbleweed, which, as they went rolling along in the distance before a stiff breeze, forcibly reminded us of the enormous herds of buffalo that roamed the prairie but a few years ago. Reaching the edge of the Sandhills, our road for the remainder of the way lay among veritable mountains of sand, into which the wheels of our heavily loaded wagon sunk nearly to the hubs. Not a spear of grass was to be seen, or a tree or a bush, but only drifting hills of sand, with spots of alkali here and there like scattered ash heaps. It was certainly wonderful how any one could discover anything in the nature of a trail through these hills, especially with the sand beating into one's eyes like the driven particles of ice in a Western blizzard, and still more wonderful how there could be lakes in such an apparently moisture-forsaken territory.

However, as the day drew to its close, and we reached the top of a particularly high roll of land, there stretched out before us a sight which was greeted by a cheer that startled from their resting places numerous flocks of ducks, and sent them hurrying across the water to a point where could be seen a number of emerald-like spots nestling among the hills, indicating that we had found water to our hearts' content. We watched the feathered forms grow dusky and then disappear in the distance, then started down a gentle declivity to the nearest lake. What a refreshing sight that was, after our long and dusty drive! Below us Round Lake; to our left, and where the sun's last rays were just bidding farewell to the dancing waves, and causing them to sparkle and then grow dark, like the smile of a maiden at the parting kiss of her true love and the following shade of sadness at the thought of separation, rested the Twins, only separated by a narrow strip of land, and lying there side by side no one knows for how many years, but perhaps supremely happy even in the midst of this desert of sand, with one another for company. Away to the north could be seen Big Alkali, and tucked away in an adjoining valley Clear Lake, and to the right of this Horseshoe. Big Alkali is perhaps two miles long and a mile wide, and Horseshoe about three miles from one point of the shoe to the other, and the smaller lakes from one-half to three-quarters of a mile across. There is apparently no inlet or outlet to any of them, and the water is so strong of alkali that none but the lower animals can drink it without decidedly injurious effect, and we were consequently compelled to haul all of the water for camp use from the nearest ranch, a distance of about four miles.

The first game was brought to bag while we were on our way to a sheltered spot on the north shore of Round Lake, when with a startling whir of wings a grouse burst from the shelter of a bunch of grass close by, and before he could get out of range a charge of 6s caught him and he made a very acceptable addition to our evening meal.

Early next morning we started on an investigating tour of the lakes to find a point for our camp where we would be as near as possible to the center of the shooting. We drove past Twin Lakes and around Big Alkali without finding a spot that exactly suited us. We finally came upon a small pond which sets back into the hills at the south end of Horseshoe, when a jack rabbit darted across the road, and one of the boys, hungry for a shot at something, let drive at him. The jack's long legs were evidently taking him over the ground faster than it seemed, for the shot only caused a puff of dust to rise at his heels and his speed to be increased, but at the report of the gun hundreds of ducks arose from out the rushes of the pond with a roar of wings that made our blood tingle. There were more birds here by far than we had seen anywhere, and it seemed an ideal place for water fowl, with its long stretches of rushes and clear patches of water; so, without firing another shot, we turned and made with all possible haste for camp, and before the haze of returning night had fallen upon us we had our tent pitched and "all the comforts of home" ready at hand.

As soon as we had our camp in shape we lost no time in getting into our mackintoshes and selecting likely stands for the evening shooting. Even before we were able to reach places where we would have a reasonable chance of finding the birds after they were knocked down the shooting began on all sides. I took two or three shots that were too tempting to resist, but finding that I was surrounded by altogether too heavy cover to have any success picking up dead birds I let my gun remain empty and made my way out into the pond to the edge of an open place, where I stood in the water nearly to my armpits, and only shot at those birds that came over the open water. The shooting for a few moments was perfect, as the ducks came to my stand much faster than I could take care of them, but it was soon too dark to shoot with any degree of accuracy, and after dropping two or three birds in the rushes instead of the open water I stopped shooting, made the rounds of the open, picked up all the ducks I could find and worked my way to the shore. I was soon joined by my comrades, each with a nice bag of ducks and in glorious spirits, more at the prospect before us of some of the finest shooting any of us had ever had than on account of the result of our first shoot. We proceeded back to camp and shortly had a fine pair of mallards roasting and everything in shape for solid comfort. After we had stuffed ourselves with roast duck, and pipes had been smoked and a few of the brilliant shots of the evening dwelt upon, we turned in, preparatory to an early start the next day.

The sky was cloudless the next morning, and the quiet breeze from the south was more suggestive of June than of October, and it was far from an ideal day for duck shooting. However, it depends on one's characteristics as to what constitutes a satisfactory day's shooting. With some it is necessary that a great many more birds be bagged than with others, but with the true sportsman it is only necessary that he should have plenty of opportunity to exercise his knowledge of the habits of the game and the methods of getting within range under unfavorable circumstances, and we therefore tried to be content with the prospect of a small bag of ducks and consoled ourselves that in so doing we were "true sportsmen." The ducks all went out of the lake at the first shot that was fired, and although we waited several hours there was no sign of their return.

In the afternoon we drove over to Horseshoe and found that lake fairly alive with ducks, but out in the open water, where it was impossible to get within range. During our wanderings about this lake we discovered what appeared to be a perfect feeding place for mallards, not over a quarter of a mile north of Horseshoe, and the ground between this slough and the lake was from that time to the end of our stay our most successful shooting point.

About the middle of the afternoon we noticed a flock of mallards leave the lake and take a straight course north to this slough, and soon after another flock and then another. Without losing any time we ensconced ourselves in the tall patches of weeds between the two points, and the shooting we had for the next two or three hours was such that none of us will be likely to forget in some years. "There's a beautiful bunch of mallards coming right toward us, and flying low," I hear my friend exclaim in an excited whisper from the patch of tall grass to the right of me a short distance, and almost immediately two puffs of smoke issued from his cover and two sharp reports rang out, and a feathered form dropped almost into his blind and another took a gradually lowering course in my direction, and just as I was glancing along the barrels of my gun at him plunged downward into the grass. The rest of the flock, after a few feet of rapid climbing up into the air at the first shot, sheered off to me enough to present a perfect shot, and at the double report of my gun two more hand-

some old greenheads came to grass. Until about dark there were ducks in sight constantly—big flocks and little flocks, pairs and singles, mallards, canvasbacks, teal and widgeon—coming sometimes from all directions at once, and some apparently straight down from the clouds; one could not tell where to expect them next.

As far as I was concerned, I never had so much shooting and got so few birds in such a short space of time before; but when they got to coming so fast that there were a dozen or more flocks at the same time presenting tempting shots, I have to confess to becoming so excited that my aim was decidedly uncertain at times, and those that I finally did give the preference I generally missed "slick and clean," and I think the other fellows must have had similar experiences; for while we had ducks enough to supply our camp for several days, and sent quite a number to town the next day to be expressed to friends at home, still when we thought of the number of ducks we had seen and shot at, it seemed as if we should have had a wagonload.

We spent eight days among these entrancing lakes, enjoying ourselves, we all had to admit, as we had never done before on a trip of the kind; and then, just when the "honk" of the wild geese was beginning to be heard at evening and the gray and white forms of the "Canadas" were appearing to offer an additional incentive for us to prolong our stay, one morning when the weather seemed to be just a little nearer perfection than ever, and when the "quack" of the ducks and the "scape" of the jacksnipe sounded just a little more alluring than it had before, we were compelled to pull up stakes and start for home. Vacation was up and we had to leave behind us for a period the Sandhill lakes, their myriads of water fowl and curious subterranean waters. BURT SEARLE.

A SPORTSMAN'S GLOSSARY.

BRIDGEPORT, Conn.—*Editor Forest and Stream:* So far as I know, there never has been a glossary of sportsmen's terms prepared to fill a crying modern want. The following gives a full and complete technical explanation of the terms most in common use and which have received the approval of our best sportsmen:

"SQUARE MEAL"—One which makes a round stomach. "Done justice to a square meal" is when one man eats enough for two, with the necessary sighs, grunts and wheezes which betoken accompanying appreciation and satisfaction.

"A CLOUD OF FEATHERS"—About four feathers or less.

"ONE HUNDRED YARDS"—Fifty half paces, with a few thrown in for make-weight.

"TAKING A FENCE" is when the sportsman is camped near a fence and is short of firewood.

"SPECKLED BEAUTY"—A trout caught by a gentleman dressed in fine outing clothes and equipped with a fairy rod and reel. Or it may refer to a pretty girl with freckles. Sometimes it is used to denote quail.

"GENTLER SEX"—Conceded by courtesy as being truthful.

"THE WINGS OF THE WIND" is meaningless. The wheels of the wind is better. See bicycle tires.

"THE INNER MAN"—Stomach.

"TRUE SPORT"—The manner in which I fish or hunt.

"UNSPORTSMANLIKE"—The manner in which the other fellow fishes or hunts. Also, in the East, blowing out the gas.

"GAME HOG"—The fellow who kills more birds or catches more fish than I do. If he catches them in my favorite resorts he is a deeper dyed hog than if he captured his game elsewhere.

"A GOOD DAY'S SPORT" is when I catch or kill more than any of my friends do.

"A FIELD TRIAL" is where sportsmen harvest grievances for the twelve months following thereafter.

"A FLY-CASTING CLUB" is a school in which veracity is in adversity.

"THE BRIGHT AURORA GILDING THE EASTERN HEMISPHERE" means sunrise with a poetic wheel in the writer's head.

"THE GOD OF DAY DISAPPEARING BEYOND THE WESTERN HILLS" means sunset with a wheel as above mentioned.

"AN UNACCOUNTABLE MISS" is when the shooter is wholly at fault. A lady learning to ride a bicycle.

"MY BARK IS O'ER THE SEA," means that he left his dog in England.

"AN AMATEUR" is a man in trap-shooting who thinks he should have a share of the prize money whether he hits anything or not.

"DOG FANCIER"—Sometimes a man who loves a dog. It often denotes a man who fancies the dog for the reality of money.

"A PROFESSIONAL" is one who has exhausted subterfuges and can no longer wear a lamb's skin. An enemy of the amateur. A man much disliked for being able to do to a certainty what others will do if they can. A man who colligates first prizes.

"KICKER"—A man who had high hopes of winning a prize and failed to do so. One who dislikes rules. Sometimes one who is ill-tempered, selfish and ignorant.

"A GOOD FELLOW"—One who buys freely. One who will not refuse an invitation. One who doesn't object to being fleeced.

"MAD DOG"—A pretext for excitement and disorder. A cheap manner for a policeman to display heroism.

"THE LOVE OF NATURE"—A fad of people who can neither shoot nor fish. There is as much that is cruel and painful in nature as there is that is pleasurable and beautiful.

"I DONE IT"—A popular expression east of San Francisco.

"A BROTHER SPORTSMAN"—One who will tell where the best fishing and shooting can be obtained, and who will lend his dog and gun on occasion. If he will not tell he is likely to be classed as a hog.

"A CRANK"—A man with a runaway fad.

"DUCK EGGS"—Things eagerly sought by the Alaskan Indian to present to his pale-faced brother in the States.

"A LONG SHOT"—Five hundred to one.

"A RED-LETTER DAY"—One in which the sportsman had a square meal, a good bag of meadow larks, blackbirds, quail and squirrels, with a free feed in a watermelon patch where the owner was absent, and a long shot or two.

THE DOG BROKE HIS BACK"—This, strange as it may seem, hurts the owner more than it does the dog.

DICK OF CONNECTICUT.

New York Grouse Season.

ITHACA, N. Y.—The anxiously looked for Aug. 16 occurred on Sunday this year, and the gentlemen with the polished breechloaders, fearing that it was not legal to go gunning the Saturday preceding, quietly folded up their anxiety and awaited the first blush of the 17th. But I dare say it was not an altogether satisfactory opening day. A pretty strong wind prevailed during the early part of the day, the dogs were all more or less afflicted with "wire edge," and many of "the boys," owing to lack of practice, were not up to standard shooting form. I learned of several fair bags of woodcock; the scores on ruffed grouse, however, were below the average, as they should have been. I saw young grouse on Monday last which were no larger than a September woodcock. The law in respect to ruffed grouse, as was pointed out in the columns of FOREST AND STREAM last year, is a ruinous and destructive statute. It is an outrage, or a close approach to one, to legalize the killing of these young and undeveloped birds. A couple of gunners out for a big score and nothing more, and aided by a good dog, often find the almost, if not quite, total annihilation of an entire brood of these young grouse a comparatively easy matter. This provision of the game code should be amended speedily. Sept. 15 is soon enough to permit grouse shooting in New York. It finds the birds larger, stronger of wing, and the conditions for shooting in every way more nearly correspond to the true sportsman's idea of a day afield in quest of grouse.

Mr. Bert Hartranft, of Cortland, told me yesterday that he was over near to the source of Fall Creek on the 18th and bagged eight grouse. He furthermore assured me that had he been in first-rate shooting form he could have killed a backload of them. Every shooting man I have interviewed on the subject has been frank and outspoken in condemning this premature shooting of ruffed grouse. At the same time, it is argued that as nine out of every ten shooting men afield are doing simply what the law permits them to do, what visible benefits are derived from the tenth man holding aloof from the slaughter? It is a case where persuasion and example availeth naught; where selfish instincts and mistrust of man's obedience to a law more beneficent in its general results than that which often finds a place in legal enactments reign supreme; where, in a word, men combine to get the very best individual share of an easy thing, meaning a "soft snap," which the elected wisdom of the Empire State annually sets before them.

Later on the writer will take pleasure in indicating some points in this section of the State from which members of the FOREST AND STREAM family, if they wish, may operate in getting some satisfactory grouse shooting.

About Peruville, Freeville, Caroline, along through Ellis Hollow, at North Lansing, West Danby, and in the vicinity of South Danby, some good woodcock grounds should be encountered. At all events, these places indicate the locality wherein reliable grounds have heretofore existed. And all the conditions are present for their continued existence. M. CHILL.

Does Not Snare Foxes.

PRINCE EDWARD'S ISLAND, Aug. 17.—*Editor Forest and Stream:* With reference to my letter in your esteemed paper of July 11 last, and your remarks thereon about the snaring of foxes, I beg to state that my friend and I do not make a "practice" of snaring foxes. I do not even know how to set a snare, and admit that it is not a sport to snare foxes. When we ran that fox to his den we considered the sport over and that the fox was our property, and that being the case we had the right to get him the most convenient way possible.

I make a business of breeding black foxes, and when I wish to capture some of them in the corral and thought that snaring them was the most convenient I would not consider it a breach of sport to get them in that way.

There is no law against snaring on this island, but still I am against the practice of it, to capture game running at large. CHAS. DALTON.

Game in Shannon County, Missouri.

OAKSIDE, Mo., Aug. 20.—Game as a general thing this year is very plentiful. Deer are in goodly numbers. Turkeys are plentiful all over the woods, some 100 to 200 in a gang; they are very tame, but no bags have been made to speak of. Quail are abundant; everybody has three, four and five flocks, with all the way from twenty to fifty in a flock; they are nearly grown and make fine sport. Squirrels are coming in in small numbers. Coons, opossums, ground hogs, rabbits and pheasants are very plentiful. Ducks are coming in in large numbers. Wildfowl shooting is very good owing to the numerous small ponds and swampy places. Fishing is very good, as we have a swift stream with large, deep holes in it, with swirls and riffles for bass, trout and other fish.

L. S.

Deer in Sullivan County, N. Y.

THE *Game Laws in Brief* gives Sec. 40 relative to deer as forbidding killing deer in Sullivan county for five years from 1895; and Sec. 44 as permitting the killing of deer by hounding in Sullivan county (in the townships of Highland, Cumberland, Tusten, Cochecton and Bethel) from Oct. 1 to 15 inclusive. This last provision was enacted in 1896, and since there is a conflict between Sec. 40, protecting the game at all times, and Sec. 44, permitting its chase for fifteen days, Chief Protector Pond advises us that the provision of Sec. 44 is to be construed as amending that of Sec. 40. In Sullivan county in the towns named deer hunting with dogs will be lawful this year.

The New Hampshire Ruffed Grouse Outlook.

BRISTOL, N. H., Aug. 15.—*Editor Forest and Stream:* This is my first visit here since last fall, and I have been deeply interested in the welfare of the birds I knew were left in this vicinity after last season's shooting. Yesterday I took a stroll through the old familiar covers, and the result was surprising. I knew many birds were left over, and I also realized that the past winter had been a very favorable one; but I was hardly prepared for what I saw. My tramp occupied about four hours, and in that time I flushed no less than seven distinct broods of grouse. They ranged all the way from the nearly full-grown bird to the chick scarcely feathered. The pastures bordering the covers are full of blackberries; in many places the black luscious fruit bends the bushes to the ground, and in almost every instance the birds were flushed from these feeding places. But I heard ominous sounds which bode no good to the birds. A half dozen gun shots in the woods at this time mean that the work of destruction has already commenced, and it is not the city sportsman who is doing it either. J. W. B.

The Still-Hunter's Dog.

ANOTHER point which many still-hunters are doubtful about is the question of a suitable dog companion to take with you on a hunt. I have expended much thought and some money on this subject. For a long time I have tried to train spaniels to be docile enough to follow at heel, and not get excited when game is winded. So far all my efforts have been a flat failure, and I am convinced that the spaniel is not the still-hunter's dog. But I want a dog, for besides being a good companion he saves a heap of trouble and labor in finding wounded game. A large dog is of no use, as he eats so much—and this counts where all the grub has to be lugged on one's back—besides he's apt to upset the dugout or canoe. A small dog that will follow at heel, and a dog that will take any scent on which he is placed and don't get excited, that's what I am looking for and want information about. A friend advised me to try a beagle, but as he sells beagles I am a little doubtful about taking his advice. However, I am open to conviction on the dog question. MATTERHORN.

Another Plank Suggested.

BOSTON, Aug. 24.—*Editor Forest and Stream:* With the account of the shooting of guide Charles Porter in the Maine woods last Saturday before me, I would suggest that FOREST AND STREAM add another plank to its platform, not only for the preservation of game, but human life as well, viz.: No rifles or shotguns allowed in the woods during "close season," under penalty of $50.

If such a good wholesome law could be enacted in every State, the woods would be full of game and we should hear of very few such terrible tragedies as this one at Grindstone. I put in a few days this season at a camp in Maine where a youth just entering his teens was allowed (by a doting parent) a .44 Winchester for indiscriminate use. Nothing that the good God had clothed with fur or feathers was safe from his murderous onslaughts. I have thought of it many times since and I wonder how all the people escaped. Now will some one please tell me what business man or boy has with a gun or rifle in the woods during "close season?" If they haven't any, stop it!

J. W. B.

Connecticut Rail.

ONANOKE, Conn., Aug. 23.—*Editor Forest and Stream:* The rail season opened on the 20th inst., and a number of boats have been up to the rail grounds on the Housatonic. As yet the only birds to be found here are those which have been bred in the marshes, and these, which are only just full grown, are neither plenty nor fat.

Besides, the tides have been low and it has not been practicable to get into the best parts of the meadows. The best tides are at the moon's perigee, and these when helped by an easterly wind enable the boats to shove all over these grounds, so that many rail are killed and the rest driven ashore.

There will not be many birds here until one or two sharp frosts in the north shall have started the birds there to migrating. These northern birds when they come will be fat and delicious, but we cannot expect them to be very numerous. It is years since there has been good rail shooting in Connecticut. XER.

Sea and River Fishing.

A RECORD JEWFISH.

PASADENA, Cal., Aug. 4.—After a year and a half of happy experiences, in which the grand old Sierra Madre Mountains have unfolded many a hidden cañon and forest-clad slope, it seems like deserting an old friend to turn one's back and seek pleasure elsewhere, and I confess to a feeling of remorse as I stepped aboard the steamer at San Pedro, leaving behind not only the "mother mountains," but the beautiful valley besides.

Twenty-eight miles of channel lie between the harbor of San Pedro and Santa Catalina Island, requiring two and three-quarter hours in its transit.

These are famous waters, where flying fish glisten as they emerge from the dark blue waves and sail off in the sunshine.

On quiet days, when the sea shines like a mirror, the surface here and there takes on a darker hue, the water churns and boils, and as the steamer dashes by one sees myriads of small fry leaping to escape the savage tuna, barracuda and yellow-tail, only to be pitilessly pursued by the gulls above. These patches, sometimes an acre or two in extent, are passed every few minutes, and give one, long before he reaches the fishing grounds proper, somewhat of an idea what the wondrous resources of these waters are.

At this season of the year scarcely a trip is made without one to half a dozen whales being seen. On July 21 the Hermosa ran over one as it dove under the bow, and upon the next trip, when we returned to the mainland, one threw its tail high in the air as it "sounded" 100ft. away, near enough to attract a babe in arms, who threw its tiny hand out and cooed; imagine a babe cooing at a whale! Then two great fellows came to the surface near by and spouted in unison, captivating their limited audience on the Hermosa as completely as any political spouter ever did that of a convention.

Gradually the feeling comes over one that the half has not been told regarding this little corner of Uncle Sam's domain.

At Avalon one gets a still nearer view of the wonderful variety, for here, where the Catalina Ananias Club holds full sway, are brought all the enormous catches for verification. Great racks stand upon the beach, upon which a returning party hang the day's catch for admiration and photographing.

It's an early bird at Avalon that catches a glimpse of the first preparation for a day's sport, and 5 o'clock is none too early to meet the fishermen who come in with ine as it slowly came in, and caught the first glimpse of

the seine and a boat load of fish and small fry. There are sure to be a number of fishing parties preparing for an early start, and a representative of each is on hand to secure some particular kind of bait suitable for the day' sport.

Flying fish a foot long have a standard value of 5 cents each, and the half a dozen usually brought in are greedily taken by the first comers as they are later by the savage tuna, whose especial bait they are.

A 2 or 3lbs. mackerel makes a dainty bait, and if put on the hook alive when fishing with rod and reel makes a pretty good fight right along, until some 30 or 40lbs. yellow-tail appears and leaves the impression that Mr. Mackerel has been struck by a comet.

Even when planning a raid upon some special variety of fish it is well to take a hatful of small-fry bait along ready for any emergency which may arise, for the possibilities of these waters are full of surprises.

One must be a laggard indeed to watch these preparations and resist the temptation to do likewise, and, although no bait was obtainable so late as 8 o'clock in the morning, it did not take long to induce Dr. Roscoe C. Thomas and C. D. Daggett, of Pasadena, and Stanley Christopher, of Kansas City, to combine our luck.

The only available craft left was the little power launch Catalina, which we engaged for the morning. Hardly had the wheel commenced to turn when trolling lines and large hooks with white bone-covered shanks in rude imitation of a minnow were put out, one on each side over the stern, and two more from the ends of oars sticking out like wings amidships. From these last a short lanyard is attached and drawn in a few inches, which telegraphs instantly any strike made upon the main line, when it can be hauled within reach and the fish hauled in.

Long before reaching Seal Rock at the east end of the island the question of bait had been settled, for every school of barracuda which we passed through contributed freely to our store, often three out of the four lines having a fish 3ft. long struggling at the same time. The Doctor generally set the gait by a sudden show of activity, quickly followed by one or two of the others, and the race to see which brought in the fish the quickest furnished an animated picture.

Great numbers of yellow-tail were seen near the surface, but were not biting to any extent, and the only one taken afforded Mr. C. D. Daggett as pretty a fight as one cares to see.

Tuna, destined to attract much attention in the future from advanced rod-and-reel fishermen who have become satiated with tarpon, lashed the spray about us as they rushed to the surface after their prey, but we saved our lines by not hooking one.

A Mr. Morehouse, of Pasadena, I am told, has the honor of catching the first and only tuna ever caught with rod and reel, and he still haunts Avalon in the hopes that some other fisherman may land one and give him pointers how he (Morehouse) did it, as the whole affair savored somewhat like catching a tiger by the tail, leaving the impressions wound up in a cloud of dust—or rather spray in this instance.

After twenty-five barracuda and the yellow-tail had been hauled over the rail some one asked the captain how much time we had, and he thought we had just time enough to try for a jewfish.

The little launch was headed toward the shore about a mile beyond Church Rock, where we anchored at the edge of the kelp in 50ft. of water, where the roar of the surf drowned that of the sea lions on the rocks beyond. While one of the party prepared rod and reel for rock bass, two lines were prepared for its heavier cousin.

The Doctor put down his line, its great hook protected by a length of copper wire firmly imbedded in a section cut from the middle of a barracuda—just such a chunk as a boardinghouse keeper might buy for a dozen hungry boarders. Before the second line, which was more elaborate and had a shark hook and chain, and above it another with copper wire attachment, could be prepared, the Doctor began to show visible signs of agitation. As the line began to run out we gave evidence of the same symptoms. It proved to be a small one, however, of less than 100lbs., and after circling about on the bottom awhile was drawn to the surface two or three times and finally hauled aboard.

This was a nice sample of what we might expect, so the double-baited line was dropped down by the writer, with the firm belief that if 8lbs. of bait produced nearly 100lbs. return, 16lbs. should return 200lbs. Possibly fifteen minutes were spent in like cogitations and another fifteen minutes in watching the great swells, as they lifted us high and dropped us low, until one gets that peculiar feeling that prompts him to watch other members of the party in hope that some one of them will insist upon pulling out for home before you have to. We had, however, been very generous with our bait, and old Neptune in this case did not force further tribute, thanks to a gentle strain upon the line, not exactly a bite, but a steady pull, as if a strong current was dragging the line away. This moment of doubt is always a critical one, for there is almost irresistible tendency to pull back to see if it is really a fish, with the result that your jewfish, who has simply taken the bait in his mouth to mumble and suck, as he gives his tail a swish of satisfaction, carrying out a dozen or 20ft. of line, instantly disgorges it and the opportunity of a lifetime is gone. If the movement is facilitated by paying out the line, suspicion is allayed and you soon have the hook planted where it will do the most good, and about that time all thoughts of seasickness will leave you.

The line flies through your hands until it heats to the bone, and you glance at the rapidly disappearing coil at your feet, wondering what the result would be if one of your feet should be accidentally encircled by a loop, and what had better be done when the end of the line comes, for your best efforts cannot check him. Before this contingency arises there is a sudden slack and you pull in 5, 15, 20ft., and just as you turn with a woeful look toward the Doctor and a disgusted "lost him," the line swishes, the fingers burn and the Doctor denies the statement in full chorus with the others most emphatically.

The big fellow does not strike right out like a yoke of runaway oxen, snapping the line when he reaches the end, but instead makes angry circles, often coming back to the starting point. After three such runs, each a little more vicious than the other, a steady pull brought him up some 15ft., when down he plunged again, this time heading under the boat, with the line dragging across the keel. The party gathered at the opposite side and watched the its great head and eyes just as it gave a lurch and went to the bottom with a rush. Then comes the work of hauling him up to the surface, each time a little nearer, only to let the line fly back as he plunges down to sulk at the bottom. Finally he lies on his side, we supposed utterly whipped, and a sheath knife is deftly slipped toward the gills, but at the first prick of its point no baby whale ever "sounded" with greater vigor, deluging us all with water. Everybody yelled, "Let him go!" but what was there to hinder? That fish had the privilege of going where he pleased.

The next time we had him alongside the Doctor planted a gaff back of the head and held bravely on until dragged to the stern, where a tremendous plunge and twist broke the handle square off above the socket and gave us another shower bath.

After another steady pull he lay alongside again. We held a council of war and decided that it would be a pity to lose such a monster at this stage of the game. The hook had already enlarged the hole and might come out at any plunge, but the second hook hung over the nose, its bait slipped far up the line. C. D. Daggett cautiously placed this against the lower jaw, firmly planting it, but did not escape the deluge which promptly followed.

We now felt fairly certain of our fish and soon had him where his efforts failed to take him much below the surface, gradually getting him to a point where we could hold him there, completely whipped, so that he gave but a feeble splash when the knife was applied to his gills. We rested and admired this enormous fish while his blood poured out, discoloring the water for quite a space. Then came another tug of war and we almost gave it up several times, but by taking a turn around a little mast

MR. DAGGETT'S BIG JEWFISH.

in the stern we raised him an inch at a time until he lay across the fan-tail with his tail in the water on one side and his head far over the edge on the other, and thus he rode as we slid into the bay at Avalon at 12:15 noon, where the captain pried him overboard and a small boy had the honor of towing him ashore in the face of a great crowd gathered to see the "biggest one yet." A little later, just as the weight—405lbs., length 7½ft.—had been called out, I felt a pull at my sleeve, followed with "Say, mister, ain't yer going to give me a fish for towing that big un ashore?" He was told to help himself to the best fish on the rack, and he disappeared up the gravelly beach dragging a fish nearly as long as himself.

The jewfish were turned over to the local fisherman after extracting a few scales as souvenirs, and they are said to appear later as very excellent "boneless codfish," while the campers soon carried off the rest.

The first half of the week, commencing July 20, proved to be a banner jewfish period, and some enormous catches of other fish were made as well.

A San Francisco party held the record up to the 20th with a jewfish weighing 350lbs., and the 405lb. one above described is the heaviest caught in three years.

The Stewart party came in Monday with a 305lb. jewfish and 109 barracuda, besides three yellow-tail and a great halibut.

Then the Beck party made a phenomenal catch of 113 barracuda and one yellow-tail.

Tuesday the Matthiessen party, who came along just as our party started for home with the 405lb. fish, concluded to try their luck at the same spot, and returned later with a fish which looked much like ours in size, but all the coaxing would not make it pull down over 395lbs. Another of 300lbs. helped to balance it at the other end of the rack. Besides these they had many barracuda and yellow-tail.

It seems a pity that so many fish must go to waste during the season when they are biting so freely and so many are enjoying the sport. It is a fact that tons are wasted every year. Great catches are brought in, exhibited upon the racks, photographed; many are used; but this is repeated often each day during the season, and the result is that many a load of the finest fish on earth are carried out beyond the bay and dumped as food for sharks and prowlers of the deep.

It has been suggested that a fund be established and the fish packed in ice and turned over to the associated charities, a method which would be very satisfactory to the many who comment upon the present wasteful methods.

FRANK S. DAGGETT.

MEN I HAVE FISHED WITH.

IX.—The Brockway Boys.

THERE seemed to be no end to them. The woods were literally full of them—of Brockway boys, I mean. Boys, and girls also, from babies to grown men and women, they were everywhere I went. This ceased to be surprising after my uncle, Erastus Brockway, had driven mother and me from Monroe to his home at East Ogden, in Lenawee county, Mich., and after crossing the county line pointed out each house for miles as being owned by one of his numerous kinsmen until it seemed to my boyish fancy that all Michigan must be peopled by Brockways.

The fact is that mother's two brothers, older than she, had emigrated to Michigan in the early thirties, while it was yet a territory; each had a large family and at this time they had grandsons older than I, for their many sons had followed the parental example in the matter of replenishing the earth. It is probable that these boys all had names, and that I knew their different cognomens at the time, but that was long ago, either the year before or the year after the events recorded in No. VII. of this series. Probably it was after that time, as there remains no recollection of bragging about the killing of the deer, so truthfully narrated week before last.

Mother was an invalid and the journey from Albany to Buffalo was made by canal, and from the latter place to Monroe by steamer. The packets, which carried passengers on the canal, had been about killed off by the railroad and we had good quarters in a large freight boat, the captain giving up his cabin to us and a woman with two boys. It was an ideal trip. In 1875 I had frequent occasion to go from Lynchburg to Lexington, Va., up the James River and Kenawha Canal, and it is my mature opinion that traveling by canal is the very poetry of traveling. It is the ideal mode of getting about. This statement is often met with ridicule, "it is too slow." My friend, listen. You who say this know little of the pleasure of travel, for itself. You wish to annihilate space in a businesslike way. You want to go from New York to Chicago and consult the time tables for the train which will land you there an hour sooner than another, and you take a "sleeper," that abomination rendered necessary by merciless business, and you go that way even on your wedding trip! Go to! The mad American train-catching spirit has possessed you and, like my friend Col. Raymond, of my last sketch, you "can fish if they bite fast." The pleasures of that week on the Erie Canal often arise as I whirl over the route in late years. Little Falls! There we boys jumped ashore and stole apples and caught the boat at the locks. Weedsport, here we got off on the "heel-path" side and ran into the outlying edge of Montezuma Swamp and had to swim the canal, when I was the only good swimmer, and after carrying all the clothes across and safely landing the smallest boy, was forced to lick the older one in the water to keep him from drowning me. His story to his mother conflicted with mine; his blackened eyes and swollen nose seemed to prove his claim to have been beaten without provocation, but mothers will be mothers, you know, and there was a drop in the social mercury.

Pardon me, the canal took me off into the swamp, miles away from the Brock-way. I will try to get back to the Brockway boys, as I knew my cousins and sons of cousins away back in Michigan in the long ago.

Jim was a big boy, nearly a man. He could not only smoke a cigar, but could also empty a clay pipe without any visible protest from his stomach. He was big and strong, and could beat us all at jumping, and was one of the younger sons of the oldest of the brothers, Eusebius, or Uncle Sebe, as he was called—a man who at sixty-nine years of age was entered for a foot race the day I first saw him. Martin and Oliver were smaller boys, sons of Erastus, who by the way was many years younger than his brother, physically much weaker, but intellectually stronger. Jim could throw me by sheer weight and strength. Martin or the others of his age could not, for wrestling and boxing had been my study as well as play. This put me on a good square footing with my backwoods cousins, who had little respect for my soft hands and city ways. They had small facilities for schooling, but great opportunities for clearing land for the plow, chopping trees that had been deadened by the girdle, piling great logs for burning that a few years later would have been worth more than the land originally cost. Harvesting the hard-earned crops had given them a rude strength that made it seem incomprehensible how a city boy, who couldn't pitch a fork full of hay into the mow, could lay them on their backs. From a subject for ridicule this city boy became to be respected, especially when they found that he could turn a back somersault from the floor and alight on his feet. They had seen pictures of such things, but to find an ordinary boy outside a circus turn a flip-flap was a thing that made him a hero. My city manners and fine fishing tackle were all forgotten, and the Brockway boys from far and near were invited to come and see their cousin, who in a few hours had overcome all prejudice and was voted to be a really decent fellow.

Said Jim: "Let's go a-fishin'; what yer say? We'll take a team and wagon and go over to the River Raisin and have a good time; yes?" And we went, about six of us. There was William, about forty years old, a hunter of deer and turkeys, who owned a rifle that became mine some years later; Jim, Martin, Oliver and others whose names are forgotten, but all brothers, cousins or uncles to each other, and a jolly party they were. Harvest was over, and threshing, corn husking and such work had not begun—just the time for a fishing trip. An early start and a drive of about ten miles behind a good team brought us to the house of another relative, for, as before said, the woods were full of Brockways; the team was cared for, and a walk of half an hour brought us to the river. They cut poles and rigged up their lines with float and sinker and with worms for bait. They had said that the river contained pickerel, and I tied on some very small hooks and with a little switch caught several minnows while they were taking a few catfish, sunfish and others. Grins went around and Martin asked: "Is that the kind o' fishin' you do down in York State?"

"Yes, sometimes."

"It 'pears like small kind o' fishin'," said Jim, "don't ye ever ketch bigger fish 'n that when you go a-fishin' 'bout Albany?"

"Yes, sometimes."

'Mighty small eatin', them things," said another, "guess you've got to get yer specs on to see 'em when

they're cooked. I wouldn't take 'em home if you'd gi' me a cart load. Here, take my pole an' fish for fish that's worth having."

By this time there were half a dozen live minnows in the little water hole scooped in the bank, and reaching for my pole I bent on about 20ft. of line a fair-sized hook with a gimp snell—another new thing to the boys—and hooking a minnow through the lips I cast and skittered it, a trick learned from old Port Tyler on the Popskinnay in the spring before. All except William, the oldest "boy," haw-hawed out loud. He simply watched the curious performance. Cast after cast was made, when a gar fish took the lure and was landed—a strange fish to me, but no stranger to the others, who with one accord voted him "no good." They had all stopped to watch this way of fishing, which now was proved capable of taking a gar at least, but when a pickerel of about 18in. long came in it was my moment of triumph. If this—to them—crazy mode of fishing had not been a success that morning, ridicule would have been my portion. I had known that from the remarks at the beginning, so, turning around, I said: "Yes, Jim, we often catch bigger fish than that when we go a-fishin' about Albany;" and William, who had said nothing, borrowed a hook on gimp and arranged to skitter, while Martin and Jim went catching minnows for the same purpose. When you beat a man, or boy, at a game he thinks peculiarly his own, he suddenly develops a respect for your abilities—perhaps beyond their real deserts. Once while hatching shad at Holyoke, Mass., the net was badly torn in several places. It belonged to the fishermen, and one named Benway was awkwardly tying up the holes. Picking up a needleful of twine, I began to cut a hole into proper shape for mending, when Benway became alarmed at its increasing size and protested. He became violently profane until the knitting began, then he watched; and when the hole was knit full, good as new, he thought me a great man. "I've hearn tell o' men knittin' in a hole, so't was jess same as before, but I never b'l'eved it," said he, "but there it is, I swan!" It appeared that none of that gang of fishermen had ever seen a net properly mended. I had beaten them in a matter of fisherman's work, and after that my opinions on fish and fishing ranked high in that camp.

William, and others, took some good fish by skittering, and altogether we had a fine lot, something like 200lbs. of fish, many strange kinds to me, including pickerel (pike we call them now), suckers, a strange green sunfish, a strange catfish, as well as the familiar bullhead, and the common yellow perch. There was also a "dog fish," strange in that day, and stranger still this last-named fish and the gars were said to be uneatable. I had supposed that all fresh-water fishes were eatable, even the suckers in winter, only like the beer story, "some's better'n others." We were all learning. When the whole catch was collected it was divided into as many parts as there were houses to be passed on the road home, some fifteen or twenty, and strings arranged to be left at each, with a special one containing choice kinds for a widow, and we rattled home in short time, under a full moon.

Going among people whose whole life, training and mode of thought is different from my own has not been an uncommon thing, but this first experience was new, and at times annoying. I felt as a dime museum freak must feel, if he does feel. Interest in such things as changing autumn foliage, the form of a passing flock of wild geese or the strange appearance of clouds, seemed to my backwoods cousins to be silly; these things had never occurred to them as worthy of thought because they were every-day affairs, and to-day I know that a boy who has to turn out at 5 o'clock in the morning, milk the cows, feed the horses and pigs, and get ready to hoe corn after breakfast, has no eye for the beauty of a sunrise any more than he has for a glorious sunset after a hard day's plowing, when the horses have to be cared for, and all those things which a farmer calls "chores," not "work" by any means, have to be done before he eats his supper and crawls to bed, only to be awakened before nature tells him that he has slept enough. Yes, to-day it is plain why the city boy was a "freak." He had no "chores' to do at home. He could breakfast at 8, go to school at 9, and after 4 o'clock he had leisure to observe the change of foliage, the flight of wild geese and the colors of the sky at sunset. On Saturdays he could shoot and fish, and there was a six-weeks' vacation when the only things he had to obey were his instincts. School time to many boys was time begrudged by some parents as lost from work; to my parents school seemed to be the whole end and aim of a boy's life. To me school was a bore, schoolmasters were tyrants whose sole object seemed to be to prevent boys from having any fun. I hated schoolmasters, at least all but poor crippled Prof. Anthony, who played ball with us as well as he could, and somehow seemed as if he had some sympathy with boys.

Lenawee county was marshy in many places. It was the source of water flowing east into Lake Erie, west into Lake Michigan and south into Ohio. The country was heavily timbered, and the phlebotomizing mosquito was abroad in the land. We boys slept in the barn to avoid them. Boys came from nearby houses for the frolic in the hay, old boys and young boys, sometimes a dozen or more. Uncle Erastus did not object to their sleeping there, but did forbid card playing; whether he objected to cards at all times or only to the lights necessary to their use among his hay we did not know. One day, after a little talk leading that way as we sat in the house, he said: "I suppose the boys have a game of cards once in a while in the barn;" this in an inquiring sort of way.

"They couldn't play cards in the dark," I answered; "they'd have to have lights for that. There! What was that big bird that passed the window?" and I ran out to see.

The next day mother said: "Fred, did you find out what kind of a bird it was passed the window when your uncle asked you about playing cards in the barn?"

"No ma'am, it was gone—"

"Yes, it was probably gone before you saw it, but I'm glad that you did not tell on the boys nor lie to your uncle. Do they play cards there nights?"

"Yes'm, but William said not to tell uncle, and Jim threatened to lick me if I did, and I hope he won't ask me any more. I'll lie to him if he does."

"No, you mustn't lie to anyone, and I am glad you told the truth to me. I knew they played cards and had candles there, for I saw the light through a crack that their blankets did not cover, as I walked out last evening."

Oliver had heard this and said afterward: "Golly! But you got out of that scrape nicely, if you had told your mother the boys didn't play cards in the barn she'd 'a' had you, sure."

"Well, Oliver, I was in a corner, but I never tell mother a thing that is not so, nor father either, and I try to be truthful all the time, but it's hard work sometimes. There was no other way to dodge your father than to see a big bird and run out, but before that I fear that what I said was almost a fib, but I wouldn't tell on the boys."

"That's all right. Martin wants to know when you want to go after the blind snipe we started the other day. What was it you called 'em?"

"Woodcock; say to-morrow."

"O K; there's a spaniel over at Uncle Sebe's that William trees pa'tridges with, don't know how he'll do on these birds, nobody shoots 'em here. I never saw more'n three or four in my life, and never thought they were plenty."

The spaniel was not a promising dog for the work, but we started. In the talk about woodcock shooting something was said about shooting them on the wing, and Martin almost shouted: "What! You don't mean to say you shoot 'em a-flyin'?" And here again was a surprise; but the success of skittering for pickerel was in mind, and there was no ridicule, but an amount of curiosity to see the thing done. Such a thing had never been heard of, and on a small scale it resembled the experience of Col. Raymond in an adjoining county a year or two later. I had William's light double gun, and Martin carried a single one, while Oliver was to look after the dog. When we reached the bog where we had kicked up a bird before when crossing it, Oliver started with the dog to try and quarter the ground somehow, as I had explained to him; but it was queer work, for Dick had no idea of woodcock, and being used to ranging out of sight for ruffed grouse and barking to call his master when he found one, we had hard work to keep him in sight. Martin kicked up a bird, and I fired and missed it; but as it dropped behind some bushes he insisted that it dropped dead. He had a long cord in his pocket, and proposed to tie Dick and keep him with us, and as Oliver was bringing the dog he flushed one that came our way and I killed it. The boys thought this wonderful and the bird the strangest they had ever seen.

"What's his eyes doin' in the back of his head?" asked Oliver.

"That's so's to see who's a-comin' after him when he's feedin'," explained Martin, "and he can see good too, and don't scare up till he thinks you're going to step on him. Say! I'll tell what let's do. Let's all three and the dog walk abreast an' kick 'em up. What d'ye say?"

This seemed to be a good proposition, for the dog was of no use, and we tried it with better result than I expected, for we succeeded in putting up eleven birds that morning, of which I killed five, Oliver retrieving them almost as soon as they were down, with the help of Dick, for the dog soon learned what we were after and was a fair retriever. The boys told of that morning's work with great pride, never failing to add: "An' he killed 'em all a-flyin'."

On the way home one of the boys shot a big blue heron which was standing in meditation by a marshy brook, and wing-tipped it. Oliver proposed to capture it alive and we surrounded the bird, which had no idea of allowing us to catch it. Standing with head drawn for a stroke and with defiance in its eye, now ablaze with fight and facing the one who came nearest, it was a most heroic figure, worthy of study by an artist. The spaniel essayed a hand in the fight, and then tried four spry legs on the home stretch after the heron stuck his spear-like bill in the dog's back.

"You make a dive for him," said Oliver to us, "and while he is facing you, I'll get him by the legs and neck." He tried it and the bird wheeled like a flash, and struck the boy a blow on the back of the hand that rendered it useless for months. Martin then tried to stun him by a blow on the head with a stick, but the heron met him with a jump and a stroke at his face that luckily missed, or he might have been killed or lost an eye. We learned something of the fighting qualities of a blue heron that was new to us all. I had not been as rash as the others, for Port Tyler had told me how one had made a dent in the stock of his gun, and after seeing what Oliver and the dog got I had great respect far a wounded heron, which, by the way, the boys called a "crane," as they took him to the house dead.

We made several trips to the river and each time had fine sport. Martin once had a big turtle on his hook, which fortunately was strong, and the turtle was landed. But it was a singular beast. In the last story it is related how the collecting of turtles was a fad of early boyhood, and I thought I knew them all, yet here was one with a soft flat shell which felt like wet sole leather, a snout like a pig's, and a temper as savage as that of a snapping turtle. Verily Michigan had singular fishes and turtles, but no unfamiliar bird had been seen so far; but that was to come, and in a way to be remembered.

"Ever shoot a wild turkey?" asked Jim.

"No, never saw one; we don't have 'em about Albany."

"I'll get you a shot at one if you'll come over to my house," said he, "and you won't have to go far for it. I know where it feeds every day."

If I had known the whole story, or how it was going to turn out, perhaps the turkey might have lived longer; but Jim had an idea of getting some fun out of either me, the turkey or some other thing. It happened that a neighbor of his had a flock of white turkeys which ranged the woods, and a stray young wild turkey fed with the tame birds, meeting them in the morning and leaving them in the evening, when they went home. A boy about Jim's age, whose people owned the flock of white turkeys, knew of this wild one and had marked it for his meat later on. Jim went with me and posted me behind a fallen log, and I killed the turkey and started for the road to find Jim, when a big boy appeared and claimed the bird. Now the killing of that turkey had not a bit of sportsmanship in it and was nothing to be proud of, but it was a wild turkey and mine. I refused to give up my game.

"This is not one of your turkeys; yours are white."

"I say it's mine, and I'm going to have it. That sneakin' Jim Brockway sot you up to kill my turkey, he dassen't kill it himself, but I'll have it."

"You won't get it. Jim Brockway is down in the road yonder, an' if you call him a sneak he'll lick you."

"Jim Brockway can't lick one side o' me, nur you an. him together. Gi' me that turkey," and he pushed me. I set the gun back against a log and tossed the turkey behind it. He was bigger and stronger than I, but lessons from Shel. Hitchcock, Albany's teacher of sparring, gave me confidence, if he could be kept from a "catch as catch can" hold. He struck an awkward swinging blow and got a stinger on the ear. He was astonished, but made a rush which was avoided and took one on the nose, which, as Professor Sheldon Hitchcock would have said, "brought the claret." So far I was unharmed except for my right hand, which has never been equal to the biceps which drove it, and I had only learned to use the left as a guard. He gathered himself and struck straight this time, but I dodged and upper-cut him on the jaw, and, in the language of the Professor, "he grassed." By this time Jim appeared. He had seen it all, but affected surprise.

"Hello!" said he, "what's this all about?"

The fellow picked himself up and said: "You know what it's all about, Jim Brockway, and I'll get square on you for it some day, you mind."

"Why don't you get square with this boy?" said Jim, in a tantalizing manner, "you seem to have had some trouble with him. I don't know what it's about."

"I'll tell you, Jim," said I, "I killed a turkey and he claims it; there it is, a wild one, and everybody knows that all the tame turkeys about here are white, so't they can tell 'em from wild ones. Come on, Jim, he don't want that turkey now, 'cause he said he was goin' to take it, but he didn't."

On returning to the house of Uncle Erastus with the turkey, which was doubly mine now, first by right of having reduced it to possession and again by the gauge of battle, mother at once saw the condition of my hand, now painfully swollen, and, mother-like, wanted to know what had happened. I answered: "Mother, if I should try to tell you just how I injured my hand in shooting a wild turkey the story might get twisted, and I was excited so much that I might be mistaken. Jim will be over to-night. He was there and knows all about it; let him tell it." This must have made her curiosity almost boil over, for there was a mystery, but she was one of those stoical people whose faces never give an indication of either curiosity, pleasure or pain, so she said, "Very well," and waited. After hearing Jim's version of the turkey hunt she never referred to it afterward. She may have detailed the whole affair to father, but when I said, one day after getting home, "Father, I killed a wild turkey out in Michigan," he only asked, "How much did it weigh?"

Before returning to Albany there came a rumor that the whole city had been destroyed by fire. "Mother, let's go home," said I, in despair.

"My boy, we have no home to go to, if the whole city has been burned," replied this extremely sensitive but outwardly impassive woman, whose great, kind heart it was her constant struggle to conceal, and I must, perforce, accept her philosophical view of the situation. Newspapers came slowly in that backwoods, but the truth came with them. The greatest fire that Albany had known had swept lower Broadway, I forget the exact boundaries; but while father's office had been burned, none of his barges were lost, and the burns which he had received while warping a barge across the basin were only slight ones on the face, neck and hands, so he put it, and we went home.

About the boys? Oh, yes. Jim went home from Antietam with a leg off, Martin was killed at Gettysburg and Oliver died at Andersonville. Good boys and fine men, all of them. No, I can't say what became of the fellow who claimed the turkey. I do not remember his name. He did not get the turkey. FRED MATHER.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

Not for many seasons have I received so many letters of inquiry from American anglers for the best localities for fall fishing in northern Canada as have reached me within the past few days. Notwithstanding that I have endeavored to cover all this information very fully in "The Book of the Ouananiche and its Canadian Environment," especially in the chapters on "Angling for Ouananiche" and "Other Fish and Game," you will perhaps afford me the hospitality of your columns to indicate a few facts that may prove useful to American sportsmen about to visit Canada, and to apologize for my inability to reply personally on the subject at length to all who have written me for information and advice.

Of course every owner of *Game Laws in Brief*—which ought to be equivalent to saying "every sportsman"—knows that the close season for ouananiche commences on Sept. 15; so that anglers who would try their luck this year with this plucky game fish of the North have not very long to do it in. A party of New England fishermen is about to visit the Fifth Falls of the Mistassini, one of the most picturesque of the many pretty camping grounds in the Lake St. John country. Usually at this period of the year ouananiche are plentiful there. A surer locality in September is the lower part of the Metabetchouan River. About this date the fish are in the mouth of the river. Toward the end of the first week in September they may be found in what is known as the Island Pool, an illustration of which appears in the book above referred to. In Dr. Van Dyke's "Little Rivers" is a description of a somewhat difficult route by which he reached this pool, driving by buckboard for nine miles from St. Jerome over an exceedingly rough and hilly road, and then scrambling down a steep hillside 500ft. high. But for those who do not object to rather rough portages there is a much shorter route to this fishing ground. For a mile and a quarter from the mouth of the Metabetchouan there is calm water which may be paddled, and then a portage of a mile and a half brings the angler to the lower pool, where ouananiche are plentiful in the early part of September, and where Col. Andrew Haggard had the remarkably successful fishing that he describes in his introduction to "The Ouananiche and its Canadian Environment." Another portage of a mile leads to the second pool, and the upper or island pool is exactly another mile higher up the stream, necessitating another portage.

In both Lake Tschatagama and Lac-á-Jim there should also be good sport at present, and the fisherman's creel should at both these resorts contain both trout and ouananiche. Fly-fishing is always good in September at the foot of the various falls in the lower fifteen or twenty

miles of both the Aleck and Little Peribonca rivers, both tributaries of the Grand Peribonca. Ouananiche may often be had here, and trout are abundant. For those who seek for trout alone I would strongly urge at this season of the year the attractions of the Lac de la Belle Riviere, of Lake Kenogami, of the headwaters of the Ouiatchouaniche—a few miles behind Roberval—and the waters of the various club limits between Quebec and Lake St. John for those who are entitled to fish them. Particularly on the Triton Tract, in and about Lake Batiscan and the Lightning River, and in the Jeannotte, the outlet of Lake Edward, may large trout be looked for next month. E. T. D. CHAMBERS.

QUEBEC, Aug. 21.

STE. MARGUERITE SALMON.

BOSTON, Aug. 12.—*Editor Forest and Stream:* Inclosed find a clipping from to-day's *Globe*, the record of a catch which, in my judgment, is of such exceeding merit and taken in such a sportsmanlike manner that I thought you might find room in your columns for a reproduction of the article. Observing the table, you will find an enormous total in pounds; but considering the length of time fished, I think these gentlemen showed great compassion for the salmon. There are few days in which they took more than one large fish, and some days none at all. I have seen larger scores, yet none more creditable, and I pronounce it the greatest catch I ever heard of.

Though the fishermen are unknown to the writer, he would be proud to lift his hat to those gentlemen, two only of a great sect which has made Boston famous as "the City of Culture." A. WOODLE.

There are pools in the upper northeastern branch of the Ste. Marguerite, which empties into the Saugenay, in the Province of Quebec, teeming with salmon that may be induced to look at a lure if it be properly presented. The upper part of this splendid salmon water belongs to David H. Blanchard, of this city, who is widely known as an enthusiastic devotee of the rod and gun. Mr. Blanchard bought the upper part of this river a good many years ago from a Dominion magnate by the name of Price. It contains five likely pools, which each spring and autumn are filled with fresh-run salmon that come up the St. Lawrence, the Saugenay and the Ste. Marguerite to the wood-embowered preserve, where Mr. Blanchard sometimes takes his friends.

It is one of the very best salmon waters in the Province, and quite as productive of good sport as the Restigouche and its far-famed feeders, the Matapedia, the Patapedia, the Upsalquitch and the Tom Kedgewick, where the nobles of England and the high muck-a-mucks of Canada wet their lines.

Mr. Blanchard has a well-appointed camp on his preserve, and all of the well-tenanted pools are within half a dozen miles of his boat moorings. One of these pools is called the Prince of Wales Pool, that jolly sportsman having at one time whipped up its waters with some gaudy lures.

Mr. Blanchard has just returned from the Ste. Marquerite, where he has spent some very happy "salmon" days with his young friend, Mr. "Dick" Harding. "Dick" did nothing for weeks before the start but dream of arrowy rushes, prodigious leaps and 4ft. 40-pounders with glistening sides of silver and blue. Besides Mr. Harding there were in the party Mr. Blanchard's daughter, Mrs. Poor, and her two children.

Camp was reached on June 26, and on the 27th, which, by the way, was a day sacred to great clouds and good fishing, the first line was wet. The party remained on the Ste. Marguerite until Aug. 6, and in that time they had twenty-five days' fishing. Only one man fished at a time.

When Mr. Blanchard was out offering his mimic insects to the king of fish Mr. Harding remained in camp. Thirty-eight salmon were taken, averaging 21½lbs., the largest weighing 34½lbs. This was killed by Mr. Harding on July 29.

Mr. Blanchard gave his guest a close call on weight, and he did it too on June 30, the third day out. Mr. Blanchard's record that day was one fish weighing 33½lbs. He had, on the two previous fishing days, taken a 22-pounder on the 27th and a 25-pounder on the 29th.

The 33½-pounder landed by Mr. Blanchard gave him a battle royal for upward of three-quarters of an hour. No one who ever felt the quick, sturdy rush of a 30lb. salmon when struck with the barbed steel will wonder at the length of time required to subdue one of these lordly aristocrats.

Mr. Blanchard is an adroit handler of light fishing tackle, but his 33½lb. fish gave him plenty to do, while his boatman's skill was put to the test in following the fierce rushes and steadying the boat when the big fish stopped to sulk.

On that occasion the music of Mr. Blanchard's reel was sweeter to his ear than the most entrancing strains of the symphony orchestra. His whole frame thrilled as his line stretched and twanged like a banjo string. The fish indulged in the most prodigious leaps, vexed the water with acrobatic flip-flaps, and then, after tugs and jumps and head-shakings failed to dislodge the hook, he would bore straight down and curve the rod into beauty lines that would make an artist blue with envy.

When at last he was brought within gaffing distance Mr. Blanchard was content to lay back in the boat and reel in, unjoint and go to camp. One such fish in a day's casting is enough for any one, while the exertion of playing and landing is sufficient to remind an old college man of line bucking and wedge breaking on the football field.

On the 30th of July Mr. Harding got into very close companionship with a 26lb. salmon. He hooked him by the tail. The big fish rose leisurely to the lure, but changed his mind and turned quickly to go under. His tail broke the water like the clip of a screw wheel when the stern of the boat is high. In some way unknown to Mr. Harding the hook was fastened deep into the salmon's tail, and the fun was on right away.

The rushes made by this fellow were terrific, and at times the taut line whined like a jewsharp.

The best part of two hours were consumed in subduing this fellow, and as Mr. Harding had landed his 34½-pounder the day before, he quit fishing and returned to camp. Dick admits that a feeling of "goneness" passed through his frame when the 34½-pounder came up with open jaws and bulging eyes and shook his head at him. "I felt,' said Dick, "when he first broke water after I struck, as if I was looking at a ghost, and his size made me feel a little uneasy regarding my tackle. The sport in playing that fellow was the best I ever enjoyed, and had I not caught another fish I would have been perfectly satisfied."

The St. Marguerite is indeed a delectable piece of salmon water, and on moonlight nights the dwellers in Mr. Blanchard's camp are often delightfully entertained by the great silvery beauties breaking water and jumping about on the surface. The noise is enough to drive an out-and-out angler to distraction, and make him pray devoutly for the quick approach of morning.

The following table will show that both Mr. Blanchard and Mr. Harding have built up something for winter rumination. The star is used to designate the fish caught by Mr. Harding:

	Pounds.		Pounds.
June 27	22	July 17	12½
June 29	25	July 20	20
June 30	33½	July 22	16½
July 1	23½	July 23	22½
July 2	25	July 23	21
July 2	21½	July 23	22½
July 2	17½	July 24	22½
July 2	23½	July 25	*16½
July 3	19	July 27	20
July 4	22½	July 28	*20½
July 6	24	July 28	24½
July 10	24½	July 29	*34½
July 11	19½	July 30	*26
July 13	31½	Aug 1	*16½
July 14	14	Aug. 1	12½

July 15	26½	Aug. 6	*13
July 16	17	Aug. 6	27
Total			38
Average weight			21½

FLY-FISHING

On the North Shore of Lake Superior.

[*Continued from page 150.*]

THE dawn opened in the east with rosy evidence of magnificent weather for the day, while a southwest wind, always an angler's delight, blew from the crimson woods with an air of gentle intoxication. Miniature showers of silver gleamed on the waves as they rose and sang the praise of the tropic breeze; the forest warblers were out in joyous melody and the sky a romance in violet and orange. The savage shoreland that gave severity to the scene displayed its piles of detached and defaced rocks draped with lichen and moss and generously touched with gold from the glowing orb. A fragile bell flower here and there and a dipping sea gull made diversity as well as delight.

We turn our thoughts to Blind River, as the Mussulman turns toward Mecca, for we knew that a gravelly and shady pool, margined in part by grasses and shrubs that wave in the wind like light plumes, was there to be found, and in which poised and played the loveliest of spangled spoils.

At last breakfast is over and we are again on the open lake, passing the great ramparts of aged stone that are blazing with a silvery glare as the effulgent sun pours down upon them, while the cedar and birch and balsam that closely crowd to the shore are glistening in a luster of green that goes far toward destroying the charm of wildness.

On reaching the mouth of the little stream we pushed over its shallow mouth and were soon at the desired pool. The choice seat in the boat again fell to Ned, and as he was the first to reach the preserve, he without delay had his red-headed terror, the "dusting brush," sailing through the air like a lurid comet. It struck the water with anything but downy lightness, but it nevertheless aroused a poising trout that went with savage fury for his dropper, a silver-doctor. Ned was on the *qui vive* for the response and gave him the cold steel in a most admirable manner. The angler at once realized that he had no Sand River babe to deal with, and after the boat had backed away from the pool and the snags that lined the shore he had an open field for the battle and started in to win the laurels. Being out of the reach of the basin, I of course watched the struggle with deep interest. Not a word was spoken during the strife and the only murmur was in the soughing waters, the rustling branches and the lisping birds. Ned was remarkably cool and alert, and when the leap into the sunshine was made the startling proportions of the jeweled beauty were made manifest.

"Big one," said Kenosh in a low voice, and then deep silence again prevailed and the battle went on with savage fury. The royal beauty at last weakened and then the happy angler forced the fighting, and in a moment or two he was drawn to the boat and netted and held aloft for inspection, with his ruby-tinted robe gleaming in the bright sun.

"Weigh that scarlet darling," says Ned. Kenosh at once secured the indicator, and hooking him through his red-lined jaw drew the steel point to the 5lb. notch, the largest trout we had yet caught. He, however, had disdained the "dusting brush," and that gave us all much pleasure in humorsome diatribe at the fortunate angler's expense. Ned took it all good-naturedly, for he had captured the blue ribbon trout, and like an armor-clad warrior felt impervious to all cynical or humorous assaults. His joy was too supreme to heed the foils that were thrust at him so constantly.

The boat again being placed in position, I have a fine chance at the pool, and at the very first dropping of my flies I had a splashing response and with it came a delicious aria from the reel. Again the boat retreated from the pool and again a fierce battle, and another victim of the glittering spangles. It was a full 3-pounder and had given me much solid pleasure, the pleasure indescribable, that neither gold nor precious stones can purchase. Cautiously working back to the little preserve, Ned got in the first drop, and another courageous Hector of the scarlet robes sprang upon his silver-doctor with the impetuosity of a bounding panther and then dashed for the snaggy bottom, but the skillful angler swerved him away and compelled him to fight over the shallow and gravelly bed. Here he was soon robbed of his tenacious vitality and made another victim for his enticing foe.

The failure of Ned's red-headed terror to attract the trout was a picnic for us, for we lampooned him right and left, advising him to take the "dusting brush" out of the water and retire it for the season. It was simply in evidence that the vagaries of the trout are beyond the ken of the human family. One day the attractive fly is somber, the next bright, then again red, violet, yellow, brown, gray, and so on to the end. I frequently, in selecting my flies for the leader, have a strong contrast in color. If one is repellent the other is doubtless attractive, but it is always best when trout are hard to tempt to make frequent changes, not only in color, but in size.

The little frolic with the fiery fly being over, we ventured once more to the lovely pool, and as soon as luck favored me with a fine command of the pool I got the drop on Ned and snatched the next radiant trout from the translucent waters, and then there came a cry of enough, and the shady pool was not again disturbed by falling flies. We were loath to leave the transports of the charming stream, where the air is balmy and sweet and blue-eyed violets peep o'er the bending grasses, while the waters, so like a mirror, reflect the loveliness of a painted sky. We hoist the sail on reaching the great lake, and little rolls of snowy beads drop from the bow of the speeding boat as we pass shores of gloomy jagged rocks, so savagely and anomalously sculptured as to excite your most fervent admiration. Groves of pine and cedar pushing their way to the mighty waters are ever in view, while dismantled and wave-washed blocks of flinty granite, which have toppled down from the ragged cliffs above and whose tops are streaked in silver and gold and gray, add commanding interest to the picturesque coast line that reveals itself as a standard show of nature's great workshop.

The next morning being favorable for our departure, we were up early to breakfast, and made all haste to break camp and sail for Aguawa Harbor. We managed to get off by 6 o'clock with a spanking breeze, and then it was

> "Hurrah! my lads, we're homeward bound,
> We're homeward bound for freedom's ground;
> Up with the sail, and off goes she,
> Hurrah! my lads, hurrah! hurrah!"

The waves were running quite high, and every crest was shaking its snowy plumes. The run, which was only ten miles, was made in about an hour and a half. In another hour we had the camp perfected, and then eagerly went in search of the tinted and tattooed tribe. Our outing gave us three handsome trophies, but each of them was bravely earned, and that is more satisfying than making big catches from a preserve or a mill pond.

We did no fishing at all in the afternoon, being fearful of glutting the larder, and therefore passed much of the time in luxuriant idleness, with cards and reading coming in as part and parcel of our diversion. Ned in the intervals did a little work in making another flaming fly and tying a few leaders. The half-breeds busied themselves in mending their clothes and gathering an amplitude of firewood, which they found strewn along the shore. We had a charming place for a camp-fire, it being well protected from the lake breeze, and many an hour did we pass there in infinite and comfortable enjoyment. After supper that night we had a regular carnival of fun around the blazing pile. Ned was at his best, and told many a humorous story and gave us some charming bits of melody, while Kenosh gave us much interesting information about his early days on the Great Lake and along these bold and craggy shorelands. His tales of hunting and trout fishing at that period were marvelous. He could then catch all the trout he wanted at the "Soo," and as for game, the woods were full of it. Partridges you could knock down with a pole, rabbits were overabundant, ducks were found in great numbers in all the inland lakes and streams, and bears turned up in unexpected places. Indian had good time then, he said, as his trapping season was always highly profitable. Now the Indians are compelled to leave the shores of the lake for their game, and settlements are being made nearer the Canadian Pacific Railroad. Nine-tenths of the Indians and half-breeds have left these rock-bound shores. This has been our observation, as also of others, during the last six years. Aguawa has been entirely deserted. Bachawaunau Bay is almost in the same condition, and Maimaise Point the same. No fish, no game, no nothing, and so Mr. Lo, who has assisted in all this decimation, has to seek other quarters for his dollars and his hash. It is fast becoming an equivalent of the Western prairies, with their disappeared buffalo.

A gentle northwest wind, bright skies and an exhilarating atmosphere were the trinity of attraction that was introduced to us the next morning when we arose and vacated our tent. Immediately after breakfast we started along the east shore, casting our flies in every place that we thought a trout would lurk. We went fully two miles along the shore without a rise; but just as we struck a mass of fragmented rocks, and when we were on the point of returning, the carnival commenced. Here Ned, who had the choice seat in the bow, had a double strike, and I almost simultaneously a single. There was a little excitement in the boat when both organs were playing. Ned being so exceedingly anxious to save his battling pair, I told the boys to pay no heed to me till the twain were captured. After the fierce struggle had about exhausted them, the question arose as to safety in landing them. I suggested to the half-breeds that each take a net, and when the pair were exposing their crimson-fretted sides to the blazing sun for each to dip in unison. The opportunity presenting itself, they were both skillfully netted, and then there was an overjoyed angler in the boat. Jo now turned his attention to my wearied trout, which was about ready for the net. A run or two more and he gives the signal of surrender, and then the wide-awake half-breed slipped the net under him and carefully deposited him in the boat. He was an ounce or two over 3lbs., while Ned's peerless pair were fully 4lbs. each.

"That like old time," said Kenosh, when he saw the three glittering fish lying side by side.

"So is this," said Ned, who had just hooked another on his first cast. "And this also," I added, as I sunk the cold steel into the iron jaws of another scarlet Hyperion.

We will not further detail the account of that morning; suffice it to say we caught ten, the largest being 5lbs. and the smallest but a shade under 4. We were so much excited with the sport that not till we asked Kenosh the sum total of the catch did we know, and then we threw up our hands in surprise and discontinued the war.

"Some waste here," said I to Ned when I looked down upon the pile of gleaming beauties.

"No, I salt 'em," spoke up Kenosh.

"What for?"

"For myself, for home."

"They will make a small display."

"Oh no, I got some already."

"Where did you get them?"

"Saved 'em, so they no spoil."
"You said nothing about it."
"You no like it if I speak it out."
"Why do you tell it now?"
"We go home now, and you no care."
"How many have you salted?"
"Heap, keg nearly full."

And so the wily half-breed had all along had an eye single to some of the spoils and had quietly been putting away all he could eliminate from our catch. We had frequently asked him about the amount on hand and he would always say, "Not much." Ned and I wondered at the immense number of trout we thought we were eating, when in fact they were going into the brine.

Occasionally he would ask for the loan of a trout rod when we did not desire to angle, and then the two would take the boat and fish along the rocks very industriously. Sometimes he would report his catch, and again it was "no good." I don't think either of them were dishonest, and did not suppose that by their salting a few of our trout they thought they were doing anything wrong. Kenosh in further explanation stated that if we had too many trout on hand we would not fish, and as we loved the sport they wanted us to enjoy it all we desired and hence the salting down. It was a blessing in disguise that gave us rare sport and the half-breeds a big part of the spoils.

We were late in leaving the harbor, not getting off before 10 o'clock, owing to the rather mixed condition of affairs in the elements. One minute it blew from the north, and the next it came from the south. We were as badly undecided as the weather, and finally let Kenosh determine the matter of our leaving. After the restless half-breed had taken a careful observation of the leaden sky, where "mare's tails" were streaming out and gray islands of clouds moving to the east, he said in a very hesitating manner, "We go anyhow."

Then the camp was very hastily dismantled, the boat hurriedly loaded and away we went in the threatening weather, with the sails fairly humming as we sped along over the tossing seas with the white caps riding on every rolling ridge.

We held well down into the big "horseshoe" and had not gone more than three or four miles when the wind suddenly changed and gave emphatic evidence of a very turbulent sea.

"What are we to do now?" asked Ned when he saw the combers toppling over.

"We go to Montreal Island," answered Kenosh.

And so she was headed for it, with the dancing sea making lively work for us. It took us over an hour to reach the deeply wooded island. On landing Kenosh ran over to a long spit of sand on the inside coast line in order to see what progress the blow was making, and if it would be advisable to try and make the Montreal River. We in the meantime gathered a few branches to fight off the attacking mosquitoes. They were not at all like the nipping insects along the mainland, but regular fighters and stingers on sight. "Big were they?" Like hummingbirds, and they came in such droves that it was impossible to fight them all off. Their sting had the vigor of a wasp and the swelling from it was as large as a hickory nut. They had grown and fattened in the swamp lands of the island till they were warriors bold, and nothing could resist their sanguinary charge, which came from all sides.

"For heaven's sake," said Ned, when a swallow-headed insect or two tormented his proboscis with their sharp lances, "let us get out of here."

Kenosh at this period of Ned's suffering said he thought he could make the six-mile stretch to the river.

"We'll have to make it. Drowning is preferable to this inferno."

At this manifesto we quickly jump aboard, and in a moment the sails are taut and we are flying o'er the curling waves that roar on the rock-bound shore and crash into the dark and damp ravines of the massive walls that confronted us.

When we are well away from the lee of the island, the sea tosses and foams as if old Neptune had been chiding it for its summery indolence. It was a beam wind that sent the old Mackinac "heeling" over and we all without prompting endeavored to even up matters by sitting high up on the windward side. The wild waves made ugly surges at us and time and again was the vigorous breeze "spilled" out of the sheets.

It was ugly sailing, and to hear the moan of wind and wave as it sped along on its cruel mission drove all the sunshine out of the entire party, who only could see the bright side of the picture on the distant shore, where the trees were tossing their branches in wild delight. The boat had to be held up stiffly to the breeze to make the river, and this gave us some very damp clothes. Ned said that he liked it better than a cloud of gigantic mosquitoes, and in fact would rather swim to the mainland than remain on that insect-infested island.

When we were within a mile or two of shore we had the protection in a measure of the aspiring mountains, which tempered the breeze considerably. We, however, were driven a short distance above the mouth, but a resort to the oars soon brought us to the river and the desired camping quarters on the beach.

The boys took the boat up the river a short distance and there unloaded her. Our tent as a preventive against the little trumpeters was put up on the gravelly beach, where the breeze from the lake drove them away.

It was a bad place in a hard blow, but as the wind was fast subsiding we thought it safe for the night.

Everybody was terribly hungry, for it was now near 2 o'clock and not a bite had we taken since 6 o'clock in the morning. After our ravenous appetites were fully satisfied we had some idle hours on hand, and as an auxiliary time-killer we put our rods together to try for trout in the big river. Ned gave his rod to Kenosh, who went up to the pool, while I tried the mouth of the stream.

After careful and earnest efforts of over an hour or more the sport was abandoned, with profitless results. We have never caught any trout here and I never saw one that ever did, although there are reports of some having been taken from the river. The afterooon was a gloomy one, and before evening the lake became as smooth as a mirror. The wind even failed to stir as much as a small flutter among the leaves, and the impressive stillness of the place was such that it seemed as if the voice of God had spoken.

While we were seated at the edge of the lake, taking in the vistas of the immediate landscape, a young loon came swimming along within a few feet of us, picking up shad flies that were floating on the surface and diving occasionally, to see what tribute the bottom of the lake would add to appease its hunger. It took no notice whatever of us, and finally entered the river and ascended it, feeding as it went. It had doubtless wandered away from its parental head.

After supper foreboding clouds filled the heavens, and soon after retiring the rain fell, and to its gentle patter we fell asleep.

ALEX. STARBUCK.

[TO BE CONTINUED.]

SAN FRANCISCO BAY FISHING.

SAN FRANCISCO, Aug. 10.—As the season for rock cod fishing has just commenced, a few words relative to the sport may be of more or less timely interest. Smelt fishing is probably the most common angling pastime of this bay, but as the fish are only caught when a school is running, and are then taken on the pot-hunter plan, they do not interest me to any extent. The rock cod, or, more properly speaking, rockfish, as they bear no semblance of a cod, furnish an entirely different form of sport, though of a very mild kind, as indeed are all field and marine sports in the vicinity of a metropolis. "Outside the heads," as it is called, that is, in and beyond the Golden Gate, on the fishing banks, a cod is taken in thirty to fifty fathoms' depth of water which weighs from 5 to 15lbs., but this is hardly a typical fishing of San Francisco Bay. On the other hand, within the bay along rocky shores and in any depth down to fifteen fathoms, a smaller fish, though precisely similar in appearance, is taken running from 2oz. to 2lbs., and it is of these latter that I am about to write.

We were Jack, Jim, Joe and Jerry; and on Saturday night we went to Tiburon, and there at a country hotel we spat upon the midnight embers, swapping fish yarns and buzzing the natives as to early season catches. Four A. M. found us in a Whitehall well out on the Raccoon Strait, headed for Angel Island. Arrived there, Joe and Jack started the fire, Jim went for water at a spring in a nearby cañon, and Jerry, unable to make himself use-

HENRY C. FORD.

ful, dropped a line off the wharf at Chinese Camp. Twenty minutes after landing on the island coffee was poured out and Jerry dropped four ½lb. rock cod on the frying pan. And, by the way, I herewith challenge any man to suggest a more soul-satisfying nectar than black coffee served in camp at 4:30 A. M. Well, breakfast over, we rowed down shore to a likely looking spot and dropped lines. A few fish were hooked during the first hour, but owing to the early time of year they were few and far between in the later hours. The standard tackle consists of a heavy cotton line, 1½lb. sinker, and three or four No. 0 3 Carlisle hooks. For diversion Jack rigged a 2oz. sinker and hooks on a light trout line, and then the fun commenced when a fish took that line and tangled it up with the others, each man having two lines down, and all in an 18ft. boat. Jack's light tackle had been down but a few minutes when there came a magnetic tap on the line, then two or three more, followed by such jerking as though telegraphing for a fire department.

"Look out for your lines, I've got a shark."

"Ha-ha-ha! Look at that sardine," said Jerry, as Jack pulled in a ½lb. rock cod. But Jack said that size didn't count, it was the tackle that made the sport, and so were we all convinced before the day was over that the lumbersome lines of the other fishers were a fraud. Several fish, and one of 1½lbs. in particular, would swim around with that 2oz. sinker and mix up our eight lines in direful confusion. At last, getting no more nibbles, we had lunch on the beach, and at noontime steered homeward with very few fish, but enough of healthy recreation to satisfy us until the season was better advanced for good catches.

D. B. C.

Adirondacks.

ITHACA, N. Y.—Levi Kenney and Dr. A. H. Fowler, veteran anglers both, of this city, have returned from a few weeks' stay at Dart's Camp, in the Adirondacks, where they enjoyed some capital trout fishing. Both speak in high praise of the fighting qualities of the trout found in the vicinity of the above-named camp.

Jno. H. Selkreg, another veteran, has lately returned from a successful trip to Redwoods. "And such fishing," saith John. "Ah, well, life has few finer things."

M. CHILL.

Lake Winnebago Bass.

OSHKOSH, Wis., Aug. 14.—The *Times* of to-day reports: "On Wednesday a party composed of Adolph Mehlmann, H. Lindner, Otto Noss, Robert Voss, Will Wilkinson, and several others, chartered the steam yacht Cora and went to the east shore of Lake Winnebago, where they spent the day fishing. One hundred and thirty black bass, weighing about 400lbs., were caught, besides a number of pike and other varieties. About 200 sheepshead were taken and thrown away."

TARPON ON THE FLORIDA EAST COAST.

PENNSYLVANIA, Aug. 21.—*Editor Forest and Stream:* I cut the inclosed dispatch from a copy of one of our daily papers: "St. Lucie, Fla., Aug. 18.—The largest tarpon ever caught at St. Lucie was landed last evening by Senator Quay, of Pennsylvania. It weighed 263lbs. After an exciting struggle, in which the craft was nearly swamped, the Senator landed his fish safely in the boat. While struggling with the fish Senator Quay was struck on the leg below the knee, but was not seriously hurt. The boatman also had a narrow escape."

So many tarpon and such large ones are caught nowadays that this particular one might not be worth special comment save for the way in which it was caught and the place. The catching of tarpon on the east coast of Florida is an altogether different affair from catching them on the west coast or at Aransas Pass. The fish are only caught in the inlets of the Indian River. That at St. Lucie has a fringe of breakers extending entirely across its mouth. The open water within the inlet is not of very large extent, as it is soon divided up into numerous cuts among the mangrove tracts. There is therefore no chance for the tarpon to drag the boat after being hooked. On the contrary, the boat must be securely anchored. The fish do not swallow the bait either, and must be securely hooked in the mouth to hold them against the great strain that ensues as soon as the fight is fairly on. It takes usually a good many trials before a fish is finally "hung," for the lips are soft and the hook easily tears out, while the roof of the mouth is very hard and bony, and it is difficult to imbed a hook firmly in it. Sharks too abound, and you will usually catch half a dozen sharks to one tarpon. The fish are scarce at any time at St. Lucie, but you can easily see that to catch, land and kill a tarpon weighing 263lbs. from a small anchored boat is a feat of which any fisherman can be justly proud. A 30ft. cotton line is used for snell, as it stands the wear and tear better than metal links.

I had rather an amusing incident with a shark while down there fishing. We were on the beach and there were plenty of sharks in sight, but the beach was very shallow and it was difficult to throw the big iron hook with half a sheepshead on it far enough out for the shark to reach, and when they did get it they did not take hold very well. I finally left my friend K. and Gorsie, the boatman, casting for shark, while I went a little further along to try for channel bass, when I heard a shout from the others. They had at length secured a fish and were hauling him up on the beach. They had got him perhaps halfway up from where the waves ended to where the thin water came when the hook pulled out of his mouth. K. started at once for my Marlin .38, which I had left on the beach about 200ft. on the other side of them from where I was. The shark in the meantime finding itself free swung round and made for the water. This was too much for Gorsie. He could not stand by and see that fish that had cost him so much trouble to get, escape in that fashion, so he rushed after it, grabbed it by its thick tail and commenced pulling it back up the beach. I shouted with laughter at this novel mode of shark fishing. K. stopped to see how Gorsie would make out. The shark finding himself thus attacked in his rear swung round to meet his new assailant. Gorsie prudently dropped his tail and beat a retreat. K. started once more for the rifle. Then the shark started seaward once more, and once more Gorsie's courage rose, and he grabbed him by the tail, determined to have that shark or perish in the attempt. I encouraged both combatants impartially. Go it, Gorsie! Go it, shark! But Gorsie won; he succeeded in dragging the shark upon dry sand, and K. sent a bullet through its head. It was about 6ft. long, and weighed, we judged, about 150lbs. We caught another that afternoon, a female, and on cutting her open found five young sharks, all attached to her by the umbilical cord, so that settled the question of sharks spawning, about which there was quite a question down there.

J. H. FISHER.

NEW JERSEY COAST FISHING.

ASBURY PARK, N. J., Aug. 21.—There is a marked improvement in surf fishing along the entire ocean front. From all points there is encouraging news, so that once again the surf tackle is brought into play. Kingfish are being taken pretty freely, and an occasional weakfish to enliven the sport. When the surf will admit, parties go out in what are locally termed bank skiffs—full, round bottom boats, and hard to capsize—in quest of bluefish. I wonder how many FOREST AND STREAM readers have ever taken bluefish with rod and reel, either churning or trolling from a boat in the open sea. They are difficult enough to handle when standing on *terra firma*, but when in a pitching boat the matter assumes a different form entirely—especially when they are of the 7 to 10lb. variety.

We of the Middle States know nothing of the glorious powers of the salmon or the speed of the muscalonge, but we do have battles royal with the striped bass and bluefish. I am strongly of the opinion that were the bluefish to be had under the same conditions as the salmon he would soon prove a strong rival in point of piscatorial favor; but the conditions under which he is only to be had make the use of light tackle an impossibility; besides, he could never be taken on gut leaders—his terrific strike precludes that possibility; so we are content to fight it out with him with heavy casting tackle, and consider ourselves fortunate if we are best man at the finish.

Thanks to the splendid activity of the fish wardens, Barnegat Bay is having a protection never before experienced. Last week two more of the rash spirits were arrested and fined and their nets and boats confiscated for seine fishing. In consequence of this protection, as I have before written, the bay is literally swarming with fish life. Within the past few years there has been a literal reversal of opinion in relation to the edible qualities of the bonito. I have seen in years past tons of them used for compost, whereas now they are highly esteemed and justly so; large quantities of them are now sold in the city markets for Spanish mackerel, which fish they somewhat resemble; and they may easily be foisted upon a person not well posted; and it is perhaps but just to say that the imposition is not a serious one, as there is but little difference in their respective table qualities. As a fish for the angler they are superb when it is possible to reach them, as they are always taken either in the open sea or in the inlets of our large bays. Their feeding habits are identical with those of the bluefish, and their voracity is as great. There is perhaps no fish capable of

greater speed or more determined resistance when hooked; their contour and fin equipment suggest at a glance the idea that speed is one of their qualifications. Taking it altogether the bonito is a fish with a future for the table and for the angler. LEONARD HULIT.

BARNEGAT INLET, N. J., Aug. 24.—The fishing in our locality is almost unprecedented, large catches being reported from all points along the bay. The night fishing being especially fine, from 150 to 200 bluefish to a boat being a common occurrence.

Last Monday Messrs. Brouwer and Bunnell, of Forked River, caught nearly 1,000lbs. of large bluefish by using the squid from the shore on North Point of Beach.

All captains unite in saying the run of bluefish at present is the greatest of the season, nearly every boat having fine sport.

Large catches of weakfish, kingfish and sea bass are reported in the vicinity of the inlet.

An event which will interest sportsmen who visit Barnegat Bay during the gunning season is the opening of the Great Sedge Islands for the accommodation of sportsmen. Previously this was the private shooting and fishing property of Dr. L. W. Warner, of New York. It has been leased by two New York gentlemen, who will conduct it as a first-class gunning and fishing resort. In 1895 large quantities of geese, brant and ducks were killed from its shooting points.

The prospect for wildfowl for the fall of 1896 was never better, owing to the extraordinary growth of wild duck grass and other food. The law permits gunning for wildfowl Sept. 15. SEA DOG.

Salt-Water Fishing Near New York.

BROOKLYN, N. Y., Aug. 24.—Bluefishing in the vicinity of New York is practically at a standstill. Not a bluefish has been caught by the Sheepshead Bay or Canarsie boats during the past week. Two weeks ago bluefishing was at its best, but the fish have suddenly disappeared and refuse positively to be caught.

Because of this state of affairs the captains of the fishing boats have confined themselves to fluke fishing, with only fair success. Capt. Bob Greenwood, of Sheepshead Bay, and a party on board the Annie C. brought in fifty-six fluke last Monday and a smaller mess the following Sunday. Nat Wilson, sailing the Pacific, had eighty on Sunday, and on the same day Capt. Will Cowdrick, of the Cricket, and his party captured seventy-six, one of which weighed fully 10lbs., so the captain avers. These fish are caught by drifting in the vicinity of Sandy Hook.

A rumor to the effect that a large number of the small bluefish, weighing 2 to 3lbs , and commonly called snappers, had been captured off Manhattan Beach went the rounds of Sheepshead Bay last week. On the strength of this report Will Fox and myself spent last Saturday chumming for them from Will's speedy little Hope. We neither saw nor caught a fish of any kind, although we covered all the ground possible for a fast boat to cover.

The smaller snappers, which are caught in the bays and creeks, have not come in yet. Everybody is anxiously awaiting their arrival.

Sand porgies, usually so numerous in the month of August as to be considered a nuisance, are not caught in large numbers this year.

To sum up, salt-water fishing in this vicinity is about as bad as it ever has been, and old fishermen attribute this condition to the stormy weather of the past month.

G. F. DIEHL.

Susquehanna Notes.

THURSDAY, Aug. 13, we called on the genial corresponding secretary, James A. Dale, of the Pennsylvania State Fish Commission, at York, Pa., and from him learned of the serious illness of the late Henry C. Ford, president of the Commission. Mr. Ford, for a number of years the head and to a considerable extent the soul of the Pennsylvania Commission, served the State well; his loss will be deeply felt and his place will be hard to fill. Under him in fishcultural matters the State has taken first rank; to him angling was the chief of recreations, and the fraternity has lost one of its most honored members.

The bass fishing in the Susquehanna had been fair before the July run of bad water, and during the week ending Aug. 15 the fish were biting all along the river.

There is usually very good trolling for pike perch (salmon) in deep water from October to Christmas, even when the slush ice is running. Complaints have been made of salmon being caught in fish pots in the lower part of the river. Favorite resorts are found along the river from Bainbridge to Fites Eddy. At the latter place Capt. Dannar looks out for the fishing, welfare and comfort of many guests. BART.

Bass Near Philadelphia.

PHILADELPHIA, Pa., Aug. 24.—I have just returned from a very pleasant ten days' fishing trip at Blackwood Lake, Blackwood, N. J., where I found black bass, pike, large catfish and perch abound. Was out fishing every day, and landed all the fish that were wanted for our table. The largest bass caught was 4½lbs.

The last half day I succeeded in landing one bass 3½lbs., one 2½lbs., and one 1lb., which was returned to the water; also twenty-eight large catfish and one yellow Ned. Not so bad for a half day's sport.

The lake is a very fine body of water close to our city and only about 100yds. from Blackwood Station. There are also boats to hire at a nominal price, and live bait is furnished by Mr. E. L. Wilcox. Any one wanting a day's outing and pleasure could not do better than go there and cast his luck. V. V. D.

The Giant and the Beetle.

Editor Forest and Stream:

I wish to thank Mr. Stewart for his correction of my misquotation. It came from pure carelessness in not looking the matter up, for a volume of Shakespeare is always on my desk to be picked up at an odd minute, opened and read at any accidental page, and when Mr. Stewart's note was read I opened the volume at Measure for Measure, and read Isabella's words in Act III., Scene 1. Of course one can't tell why he did such a thing. I knew where that quotation could be found, and will try not to offend in this manner again.

FRED MATHER.

Round Mountain Lake.

BOSTON, Aug. 17.—There is still some fly-fishing for trout in the more distant and less frequented lakes and ponds in Maine. Mr. L. M. Crane is back from Round Mountain Lake, and though going with many misgivings and expectations of "no luck at all," he is most happily disappointed. He says that they caught trout, with the fly only, nearly every morning and evening; taking all the camp could possibly use. The trout are small, to be sure, from ¼lb. to 1½lbs., but he says that the lake is full of them. On his way home, leaving his son and wife at the camps, he met Dr. Creardo, with his son, at Rangeley. They were hunting for a spot where they could take trout on the fly with some sort of success. Round Mountain Lake was recommended by Mr. Crane and they went there. A letter Thursday from the younger Mr. Crane says that they are having great fishing. The Doctor is much pleased and is taking all the trout he cares to catch. They fish mornings and evenings and take thirty or forty at a trip, the smaller of which are returned to the lake, all, in fact, that are not wanted for the camp table. They also speak in high terms of the fare they get at the camps. SPECIAL.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 1 to 4.—Kingston Kennel Club's bench show. H. C. Bates, Cor. Sec'y, Kingston, Ont.

Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

Sept. 8 to 11.—Binghampton Industrial Exhibition's sixth annual bench show. C. H. Barrett, Supt.

Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.

Sept. 15-18.—Orange County bench show, Newburgh, N. Y. Robt. Johnston, Sec'y.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee. Louis Steffen, Sec'y.

Sept. 22 to 25.—Queens County Agricultural Society's bench show, Mineola, L. I. J. Mortimer, Manager, Hempstead, L. I.

Sept. 23 to 26.—Stockton Fair Association's bench show, Stockton, Cal. D. J. Sinclair, Sec'y.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 1 to 4.—City of the Straits Kennel Club's local show, Detroit, Mich. R. H. Roberts, Sec'y.

Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS

Sept. —.—Winnipeg, Man.—Manitoba Dog Owners' Association's inaugural trials for amateurs, R. J. Gallaugher, Sec'y.

THE HAULING DOG IN CANADA.

[*Concluded from page 152.*]

THE hauling dog is not confined to barbarism or semi-civilization. He is used as a draft animal in many places, but in the vicinity of Quebec he is an institution, although of late years he is not so commonly used. In my young days, children drove dogs as they now drive a pony or a goat, but somewhere about 1860 a law was passed prohibiting the driving of dogs in the streets of the city and it was confined to the suburbs, especially in that of St. Sauveur. Large mongrels were bred and it is really wonderful what loads they could draw. The Newfoundland was the favorite owing to its size and weight, but when mastiffs or St. Bernards came in it was found that by crossing them with greyhounds a fine hauling dog was the result, especially when it retained the short hair of the greyhound, as, in such case, it was better for the deep snow in winter. There was one dog, a cross between a mastiff and a brindled greyhound, which retained the color and shape of the latter, but on a more massive scale, which had quite a record for its hauling powers.

These dogs, whose harness is made like that of a pony, minus the bridle, and which are driven in shafts, are used for hauling wood and water; beggars use them to drive to their stations. At the present moment there is a cripple at the Island of Orleans who has a fine pair of Newfoundland dogs which he harnesses either abreast or tandem to a cart, and drives down to the park where he begs.

This custom of driving dogs seems to have been followed in this country from the first settlement of the colony, and no doubt came from France, in the northern section of which, as in Belgium, dogs are still used as draft animals. The Swedish naturalist Kalm, who came to Canada in 1749 and published a very interesting account of his travels in North America, which has been translated into English, has the following on the subject:

"In many places here they use their dogs to fetch water out of the river. I saw two great dogs to-day put before a little cart, one before the other. They had neat harness like horses and bits in their mouths. In the cart was a barrel. The dogs are directed by a boy who runs behind the cart, and as soon as they come to the river they jump in of their own accord. When the barrel is filled the dogs draw their burden up the hill again to the house they belong to. I have frequently seen dogs employed in this manner during my stay at Quebec. Sometimes they put one dog before the water carts, which are made small on purpose. The dogs are not very great, hardly of the size of our common farmers' dogs. I have seen them fetch not only water, but likewise wood and other things. In winter it is customary in Canada for travelers to put dogs before little sledges, made on purpose to hold their clothes, provisions, etc. Poor people commonly employ them on their winter journeys and go on foot themselves. Almost all the wood which the poorer people in this country fetch out of the woods in winter is carried by dogs, which have therefore got the name of horses of the poor people. They commonly place a pair of dogs before each load of wood. I have likewise seen some neat little sledges for ladies to ride in in winter, which are drawn by a pair of dogs, and go faster on a good road than one would think they could. A middle-sized dog is sufficient to draw a single person when the roads are good. I have been told by old people that in their youth horses were very scarce here, and almost all the land carriage was then effected by dogs. Several Frenchmen, who have been among the Esquimaux on Terra Labrador, have assured me that they not only make use of dogs for drawing drays with their provisions and other necessaries, but are likewise drawn themselves in little sledges."

The Indians at Lorette, the last remnant of the great Huron nation, and who are in much demand as guides for fishing and hunting, for they are expert canoemen and hunters, and understand English, use dogs to haul water from the river and firewood from their reserve. These same dogs are used to haul tents and hunting equipment on winter hunting expeditions, as one of these dogs, following on the track beaten by snowshoes, will haul more than a man can carry and of course it is much easier for the man.

A friend of mine, whose rifle has brought down many a moose and caribou, and who has landed many a fine salmon, once became the happy owner of a Newfoundland dog called Rover, which was a splendid hauler and which he always took with him to haul his own personal baggage. Once when proceeding on a hunting expedition north of Quebec with Lorette Indian guides he was accompanied by Rover, while the Indians had two other dogs. On their way they had to stop at one of the camps or log-houses erected by the Quebec Government at certain distances along the colonization road used by settlers proceeding to Lake St. John before the railway was built. Now the keeper of the post, where my friend and party had to pass the night, owned a huge cross-eyed yellow dog which had a great reputation far and wide. He was supposed to be able not only to whip his weight in wild cats, but also to beat any number of dogs as well. There was a certain amount of anxiety among the party as to what would be the result of their dogs coming into contact with the yellow dog, and the Indians especially were uneasy, for if a dog was disabled it meant so much more for his master to carry. When they arrived the canine terror happened to be away, so there was a little respite, but just as the dogs were about to partake of their meal of shorts, oatmeal and biscuit with some of the pea soup, he turned up and announced his intention of having a meal at their expense. The Indian dogs at once recognized his superiority, but Rover was too hungry to lose his dinner, so he made up his mind to fight for it, and although generally a peaceful animal, he completely conquered the other dog, which acknowledged him as his master. The night was cold and my friend took Rover to bed with him on the top bunk. Early in the morning he awoke, and looking down he saw the Indians with their dogs lying on the floor, besides some settlers, also with dogs, as there were not enough bunks for all. My friend, who is a prominent member of the legal profession and professionally as serious as a judge, is a regular schoolboy when out on an expedition of this kind, and his spirit of mischief inspired him with the idea of having some fun. Seizing Rover, he threw him on the floor on top of the sleeping men and dogs, and in an instant there was the biggest of dog fights on hand, in which dogs, Indians and settlers were all mixed up, and the air was blue with polyglot profanity, while Rover's master was choking with laughter under his blankets. After a while order was restored, the dogs were separated, and their owners, who had been drawn into the scrimmage, were repairing damages, and anxious to find out how the row had begun. No one seemed to suspect except the head guide, who knew my friend's propensity of old, but was too loyal to betray him.

I used to drive a dog myself harnessed to a little sleigh with miniature sleigh robes, silver bells, etc., when I was eight or ten years old, but I have had only one experience of driving a dog in the woods and I do not like it. My friend above mentioned, two others and myself, with Indian guides, were going into the bush for a fortnight's caribou hunting and we had two dogs with us, one being driven by the cook and the other by one of the guides. After walking for some time, as we got near the lake on which we were to camp, the head guide went ahead to reconnoiter and soon returned, saying that there were caribou on the ice. Of course all wanted to go, but that was impossible, because, as all the guides were wanted, some one had to remain with the cook to drive the other dog, for the day was getting on and if we did not hurry we would have to camp in the dark, an unpleasant job at any time, but especially in a snowstorm such as was then raging and which is ideal weather for caribou hunting, as it is easier to stalk them then. The lot fell to me, so I made the best of a bad bargain; for, in addition to driving the dog, I had to carry my own pack, which was not heavy, but still confined my shoulders by the pack strap. The cook was ahead with his dog Boule (pronounced Bool, a French variation of Bull; nearly every big dog here is called Boule by the French-Canadians) and my dog fol-

lowed pretty well for a while. He evidently soon found out that dog-driving was not in my line, for he sat down very often and looked at me. I coaxed him and, I am sorry to say, swore at him in English and French and, not knowing Huron, I called him "bad dog" in Latin and Greek; but it was of no use. Finally he lay down just as we were going around a hill about 10 or 12ft. above the level. At last, out of patience, I placed the muzzle of my rifle against the back of the sleigh and pushed with my shoulder against the butt of the piece. The result exceeded my expectations, for the dog made a spring forward, I lost my balance and fell over the side of the hill head first into a snowdrift, from which I could not extricate myself owing to my pack being twisted round my neck. Fortunately the cook, not seeing me behind him, came to look for me and got me out all right, but with any amount of snow down my back, which was far from comfortable. The cook then talked to the dog; I don't know what he said, but it evidently produced an impression, for I walked in front of the two dogs, while the cook followed behind the last, and we got on very well.

CRAWFORD LINDSAY.

A. K. C. Advisory Committee.

AT the meeting of the advisory committee held at 55 Liberty street, New York, in August, Vice-President Edward Brooks in the chair, there were present: Messrs. E. M. Oldham, A. C. Wilmerding, J. Watson, F. S. Webster, H. F. Schellhass. Absent: A. Belmont, H. H. Hunnewell, Jr.

The following business was acted upon: A. K. C. vs. H. M. Griffin, in the matter of charges by him of unfairness on the part of the A. K. C. in respect to a pedigree. On Mr. Griffin's expression of regret the charges were dismissed.

Seattle Club vs. L. J. Birdsall, the latter an exhibitor at the Seattle Club's late show, who removed two of his dogs from said show without the consent of the officials. Under Rule XVII. Mr. Birdsall was disqualified for one year.

A. K. C. vs. City of the Straits Kennel Club. The club chose suspension of sixty days instead of a fine of $25, said suspension to begin June 21, 1896.

A. K. C. vs. John Moorhead, Jr., *re* appeal from suspension. The appeal states that he is an officer of the Bull Terrier Club of America, but took no part in the proceedings of said club in its resolutions attacking certain A. K. C. delegates, and was in ignorance of what was done at said meeting or what was said by the A. K. C. as to the course then taken. He plead innocence of all breach of rules or ungentlemanly conduct, and therefore asked for reinstatement. Appeal refused, as it was clearly the duty of said officers to have called a meeting of the Bull Terrier Club, for the purpose of taking some action in the matter; and therefore the suspension must continue until such time as they have shown a disposition to conform to the demands of the A. K. C., either collectively or individually.

In the matter of the A. K. C. vs. Pacific Kennel Club, *re* violation of Rule XII., the deposit of $25 made by the club was declared forfeited.

St. Louis Kennel Club vs. Fred Kirby, who was charged with fraudulently substituting one dog for another, the charge was dismissed.

Pacific Advisory Committee *re* Rules of Procedure the matter was referred to the committee on constitution and rules to put into form. The committee recommended that a provision be made in the A. K. C. constitution for the recognition in it of the Pacific advisory committee.

The following named clubs were admitted to membership: American Bedlington Terrier Club, Baltimore Kennel Association, Central Beagle Club, Erie County Society for the Prevention of Cruelty to Animals, Poodle Club of America, Queens County Agricultural Society.

The following names and prefixes were granted: Blackhawk, Mr. Frank Sturges *et al;* Bonnie, C. A. Sumner; Nubian, A. T. Knowlson *et al;* Oregon, Thos. Howe; Smallwood, J. A. Caldwell; Thornelo, A. L. Laukota; Windermere, Misses Lee and De Koppet; Windelblough, A. S. and E. W. Allen.

National Beagle Club of America.

A FIELD trial committee meeting of the National Beagle Club of America was held at the rooms of the American Kennel Club, 55 Liberty street, Wednesday, Aug. 19. The members present were Messrs. J. W. Appleton, chairman; Hermann F. Schellhass, George B. Post, Jr., John Bateman and George W. Rogers. The committee on grounds selected Hempstead, L. I., where the club will hold their seventh annual field trials, on the property owned by Mr. Joshua Barnum and Mr. Thomas H. Terry. Messrs. Bradford S. Turpin, of Roxbury, Mass., and Charles Quynn, of Frederick, Md., will officiate as judges.

The committee on premium list and classes submitted the following, which were accepted:

Open Class A.—For dogs and bitches, all ages, 15in. and under, that have not been placed first in any open class at any recognized field trials held in America.

Open Class B.—For dogs and bitches, all ages, 13in. and under, that have not been placed first in any open class at any recognized field trials held in America.

Derby Class C.—For dogs and bitches, 15in. and under, whelped on or after Jan. 1, 1895.

Class D.—Futurity Stakes. For dogs and bitches 15in. and under, whelped on or after Jan. 1, 1895.

Champion Class E.—For dogs and bitches, all ages, 15in. and under, having been placed first in any open class, except Derby and Futurity stakes, at any recognized field trials held in America.

Champion Class F.—For dogs and bitches, all ages, 13in. and under, having been placed first in any open class, except Derby and Futurity stakes, at any recognized field trials held in America.

Class G.—Brace stakes. For dogs and bitches, 15in. or under, the *bona fide* property of party making entry at time of entering and starting class.

Class H.—Pack stakes. For four dogs and bitches, 15in. or under, the *bona fide* property of party making entry at time of entering and starting class.

The conditions are: Class A.—Entries close Oct. 5; fee to start, $10, of which amount $4 forfeit must accompany entry and balance be paid prior to starting the class. First prize, $45; second prize, $30; third prize, $20; fourth prize, $10.

Class B.—Entries close Oct. 5; fee to start, $7, of which $3 forfeit must accompany entry and the balance be paid prior to starting class. First prize, $25; second prize, $15.

Class C.—Entries close Oct. 5; fee to start, $5, of which $2 forfeit must accompany entry and balance to be paid prior to starting class. First prize, $20; second prize, $10.

Class D—Futurity Stakes.—Entries close March 15; total fee to start, $10, payable as stated in conditions of stake. First prize, 40 per cent.; second prize, 25 per cent.; third prize, 15 per cent.; to breeder of winner, 10 per cent.

Class E.—Entries close immediately before starting of class; fee to start, $10, which must be paid in full before class is started. First prize, 60 per cent.; second prize, 30 per cent.

Class F.—Same conditions as Class E.

Class G.—Entries close immediately before starting the class. Total fee to start, $5. First prize, 60 per cent.; second prize, 30 per cent.

Class H.—Same conditions as Class G.

NOTE.—It shall be understood and agreed that no class shall be started unless two or more entries are made and filled. In event of any class being declared off money will be refunded.

In addition to regular prizes, the club will present a rosette or silk ribbon, properly inscribed, to the owner of each prize-winning dog.

Trials will begin on Oct. 26 and continue until all classes have been run off.

GEO. W. ROGERS, Sec'y.

Queens County Agricultural Society.

SECRETARY MORTIMER writes us that the following additional specials are offered: $5 from H. H. Hunnewell, Jr., for the best curly poodle in the open classes. The Gordon Setter Club of America offers $5 each for the best Gordon setter dog and bitch in open classes, competition open to members of the club only. The Bedlington Terrier Club has donated $10 for the breed, but has not as yet sent the conditions to govern the award. The American Dachshund Club offers the Venlo challenge cup, value $100, for the best dachshund the property of a member of the club. Also the Klein breeders' trophy, value $50, for the best dachshund puppy bred and exhibited by a member. These prizes have to be won three times before becoming the absolute property of the winner, but the club will donate a very handsome certificate to each winner in commemoration of the event. The Dachshund Club also offers $5 each for the best American-bred dog and bitch. The Bulldog Club of America offers a silver club medal for the best American-bred bulldog, the property of a member.

The society have adopted the American Spaniel Club's classification No. 3, with additional classes for Irish water, Clumber and cocker spaniels, and in accordance with it have made an extra class, to be known as Class 47½, for challenge spaniels, all breeds, over 28lbs., dogs and bitches. They have also open a challenge class for Black and Tan terrier bitches, to be known as Class 108½. A novice class will be opened for any breed providing there be not less than three entries. This also applies to puppy classes, as already published on page 13 of the premium list.

The English Bloodhound Club of America offers a gold medal for the best bloodhound in the show owned and exhibited by a member of the club. The Bull Dog Club of America has added another silver club medal, so that there will be a silver medal each for the best American-bred bull dog of either sex.

The Poodle Club of America offers two silver cups, one each for the best French (curly-coated) poodle dog and bitch in the open classes.

The American Spaniel Club offers the "Bell Paintings" for the best brace of cocker spaniels under one year; to be won four times; open to members of the Spaniel Club only. Also $5 for the best brace of spaniels over 28lbs., and $5 for the best brace of cocker spaniels.

JAS. MORTIMER, Sec'y and Supt.

Manitoba Field Trials Club.

MANITOU, Man., Aug. 21.—*Editor Forest and Stream:* I send you the following list of entries for the club's All-Aged Stake. I am sorry it is not longer, and thankful for what we have received. I think we can depend on about twelve starters, which will make good trials. Last year with fifty-two entries we only had sixteen starters. Amateur stake has no entries.

All-Aged Stake.

Thirteen English setters, two pointers:

ENGLISH SETTERS.

JOHN WOOTTON.

Toronto Show.

TORONTO, Aug. 21.—The prospects were never so bright for the coming International Dog Show of the Industrial Exhibition, to be held at the city of Toronto, Sept. 7 to 11.

Secretary Stone is receiving applications for prize lists from all over the United States and Canada, some of them as far South as Baltimore, and West as Des Moines.

The Industrial will offer a special cash prize of $10 for the best kennel of Scottish terriers owned by one exhibitor or kennel. Word has been received that E. W. Barker will bring on a large string of Siamese, Abyssinian and Australian cats. Mr. Burland will exhibit his fine Persian cats, but not for competition, one of which cost $1,000 to import. The Cat Show will be held in the same building as the dogs, the upper portion of the building being devoted to the cats.

A special prize of $10 cash will be offered for the best kennel of toy spaniels.

Mr. Watson's letters to the FOREST AND STREAM and the *American Field* differ somewhat. In the *Field* he states that the Collie Club only offered two medals at Toronto, and they conditionally, while in the FOREST AND STREAM he states that two were given for members, and one conditionally; while his letters in my hands distinctly state four: two for members, and two conditionally.

C. H. STONE, Sec'y.

POINTS AND FLUSHES.

Mr. A. P. Fish, secretary bench show department of the Binghamton show, under date of Aug. 19 writes us that John Brett, Closter, N. J., will judge the following classes: St. Bernards, mastiffs, Great Danes, Russian wolfhounds, all setters, Irish water and Clumber spaniels, collies, Old English sheep dogs, poodles, bull dogs, bull and Boston terriers, dachshunde, beagles, Basset hounds, fox, Irish and Black and Tan terriers, White English, Bedlington and toy terriers other than Yorkshire, King Charles, Blenheim, ruby and Japanese spaniels, pugs, schipperkes and Italian greyhounds.

J. Otis Fellows will judge all other classes. He mentions also that the prospects are very encouraging for a large entry and a good show.

The judges at the Newburgh Dog Show will be George Thomas, Salem, Mass.; John Brett, Closter, N. J.; R. K. Armstrong, Highland Falls, N. Y.; Charles Purroy, New York.

It is of special importance to exhibitors who will show at the forthcoming fall shows that they bear in mind that the strictest observance of the rules governing entries be observed, if the exhibitors wish to avoid trouble with the A. K. C. Entries made by agents should be made with great care, so as to avoid infringing the rules, as has been done frequently in times past.

The premium list of the bench show of the Binghamton Industrial Exposition can be obtained of the secretary, Mr. A. P. Fish. Entrance fee $1.50. All entrance fees to be pooled; 50 per cent. to winners of first, 25 per cent. to second.

The noted trainer, Mr. Wm. Tallman, of No. 101 West Fifty-fifth street, New York, will spend the fall and winter in North Carolina. He desires a few more dogs to train.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

NOTES OF AN AFTERNOON.

NEW YORK, Aug. 20.—The other afternoon at 3 o'clock I left my home in the upper part of New York city, on my wheel, and after a short ride reached the old Fort Lee ferry from West 130th street. There were a number of other wheelmen there waiting for the boat to arrive, and among them one who interested me particularly because he had a rifle strapped to his bicycle. His method of carrying it was extremely simple. The gun was in its canvas cover, which was provided with the usual shoulder strap. This strap the wheelman had thrown over the seat and handle bar posts, and drawn it tight, and the job was done.

The gun hung upside down just below and parallel to the upper tube, and did not oblige the rider to straddle uncomfortably when he got on his wheel. The canvas cover prevented its scratching the enamel, and by unfastening a single buckle the gun could be drawn from the case ready for instant service.

After crossing the ferry I lost sight of the man with the gun. No doubt he was on the lookout for some secluded spot to test its shooting qualities or adjust the sights; or possibly he was going over to the Hackensack marshes to try conclusions with the hawks and crows. In any case the bicycle provided him with an admirable means of transportation, and had the effect of bringing a sparsely settled country, where it was possible to use a rifle, within easy distance of the swarming center of three million human beings.

Following up the Hudson by the road against whose lower stones lap the waters of the river, I passed a canoe encampment, and near by turned bottom side up were a number of seine boats, 30ft. long, used by the shad fishermen in the spring.

A good percentage of the people who live along the road from the ferry to Fort Lee hill seem to be fishermen, and, though New York is only a mile away, the place has the primitive atmosphere of all such communities. The bicycle, however, is fast bringing in a new element, and the refreshment booths from Fort Lee, which are overlapping on this road, bid fair soon to transplant the Bowery there.

The Fort Lee hill is a bad one to climb on a bicycle. It is 300ft. high and attains this elevation in about half a mile by the road. This road climbs up the valley, where a stream once tore its way down through the rocky embrace of the lower Palisades, and in places its grades are steep enough for waterfalls, were the brook to resume its course. Some riders manage to climb the hill, but all sensible ones walk.

At the top the first road to the right runs north through woodland almost without a break for fifteen miles. It is never any great distance from the top of the Palisades, and at frequent intervals lanes run across, so that the wheelman can ride to the very edge without dismounting. About eight miles above Fort Lee the greatest elevation is attained, and there the Palisades are over 500ft. in height. The road, though bad in places in the spring, is in very good condition at present, and one may ride its whole length, and to Piermont and Nyack beyond, at a twelve-miles-an-hour gait.

About 4 o'clock, or a little over an hour after leaving New York, I turned down a leafy road running back from the river, as I wanted to get an idea as to the breadth of the belt of woodland at this point. I satisfied myself that it was more than a mile in width, and found

that it contained a considerable amount of good-sized timber, including oak and chestnut. There were no houses, and the few clearings had been made for the wood, and were growing up again with brush, making a good cover for rabbits and possibly a few birds.

While riding through one of the patches of large timber I noticed a hickory nut in the road. I dismounted and picked it up. It was of the new crop and still in its green casing, but what interested me about it was the tooth marks of a squirrel that had begun to bite off the pod. Scarcely 20ft. away stood the tree from which it had fallen, and going over to its base I parted the undergrowth and looked down. In plain sight were the chippings of several seasons—the hard nut shells cut into small fragments, as a gray always does the job—and there could be no doubt that this was a favorite locality. A little distance beyond I found an 1896 nest, and the trunk of the chestnut that bore it was liberally marked with the claws of the grays, who used it for a staircase.

Back on the main road is a picturesque old stone bridge covered with vines, which spans a little stream that tumbles down the face of the Palisades. There is big timber near by, as well as swampy land, and when I reached this spot I thought of coons. I had looked under that bridge several times before for tracks without success, but this did not deter me from trying again. So I pushed my wheel through the weeds at the side of the road and leaned it up against the vine-clad wall, and then clambered down the escarpment to the water. The heavy rain which fell twenty-four hours previously had raised the brook temporarily, and subsiding again had left a nice smooth deposit of mud on the rocks and stream bed—an unblotted page ready for the denizens of the forest to write upon.

Before I had taken all this in I saw that two autographs were recorded there. One was made by a large coon, and the other by a wheelman who had evidently come down for a drink. The wheelman's criss-crossed footprints did not interest me, but the coon's did, and I wished for a camera to reproduce them. The long slender feet, with each toe outlined like a monkey's hand, yet in general effect resembling those of a bear, and even the creases of the skin were plainly recorded in the plastic substance. There could be no forging of that signature. "Old Zip Coon," it said, "a sly old vagabond."

I ate my supper at 7 in New York. Thanks to the bicycle, the four hours at my disposal had been utilized to as good advantage as a day under other conditions. The distance traveled was about twenty miles, but only a little more than half the time was occupied in riding. I had lounged on the rocks that mark the top of the Palisades and taken my fill of the view the noble river afforded from various points of vantage; for a limited time I had become part of the woods and been privileged to see a trifle of the life of its creatures, and the experience had been sufficient to drive away the blues. What more could you ask? J. B. B.

NOTES.

THERE are times when a man who knows how to ride cannot ride, and times when a man who does not know how to ride can ride. This is one of the anomalies of the bicycle. A man who has taken a little too much liquor, even if he can walk all right, cannot manage the captious wheel; and a man (or woman either) who doesn't know the first rudiments of the thing can ride when the bicycle is a tandem.

At the Syracuse *Herald* tournament recently the bicycle made its debut in trap-shooting. One of the events in the programme was a match in which the shooter sat in the front seat of a tandem bicycle and fired at targets thrown into the air by a boy who ran ahead. Ten targets were thrown going in one direction and then the course was reversed and ten more thrown on the home stretch. The winner broke eighteen out of twenty, and strangely enough he was one of the few entries who couldn't ride a bicycle.

Most people know enough to come in when it rains, but it takes a philosopher to stop riding when tired.

It is a good thing to have a private mark on your bicycle which will serve to identify it as your property in case it is stolen. An effective way is to scrape the enamel from some inconspicuous part of the frame, such as the under side of the lower brace tube, and having coated the steel with wax to write your name or private mark on this, using for a pen some sharp-pointed implement that will scratch through to the inner surface. Pour some nitric acid over the place so that it will flow into all the markings, and the result will be the name or mark nicely etched in the steel tubing. The spot may then be reenameled or painted to conceal the mark from a possible thief, and the owner of the wheel will never be at a loss to prove his property in case of emergency.

The inner tube of a double tube tire is said to make a very good life preserver, and to be an invaluable aid to persons learning to swim. Fully inflated and wound around the body just under the arms, it will support the most inexperienced bather. Then as confidence is gained the amount of air in the tube is decreased, till finally the learner is able to dispense with its use altogether.

A great many people become welded to a certain gear, simply because it is difficult or impossible to attach any other to their wheels. If the bicycle happens to be of the type where the front sprocket wheel is detachable, it generally necessitates a new chain if the gear is altered. A change can be more easily effected in the wheels where the rear sprocket is detachable, for as the diameter of this sprocket wheel is considerably less than the other, the same chain will do for several interchangeable sprockets. Even in these bicycles, however, it is a good deal of a task to change sprockets, because with the best of them the wheel must be taken out before the sprocket can be removed.

An invention that would be of value to all bicycles is a rear sprocket made in hemispheres, which can be taken off or applied to the axle without interfering with the adjustment of the wheel.

PUBLISHERS' DEPARTMENT.

Summer Reading.

SIR EDWARD ARNOLD in one of his recent letters says: "This world we live in is becoming sadly monotonous, as it shrinks year by year to smaller and smaller apparent dimensions under the rapid movement provided by limited passenger trains and swift ocean steamships."

That the New York Central has materially aided in this shrinking process goes without saying. In all that pertains to shortening distances and increasing comfort in travel this great railroad stands today unrivaled. Its trains are the fastest in the world and its service unsurpassed.

Its name is synonymous with progress in these and other directions as well. Too much, for instance, cannot be said of the amount and character of the literature published with reference to the beauties of its route from the tourist point of view. Under the title of the "Four Track Series" a perfect library of finely illustrated books has been issued, and included in the series are a number of handsome etchings.

These have been classified, and a copy of "The Illustrated Catalogue," descriptive of the series, will be mailed to any address on receipt of one 2-cent stamp, by George H. Daniels, General Passenger Agent, New York Central & Hudson River R. R., Grand Central Station, New York.

"Health and Pleasure on 'America's Greatest Railroad'" is the title of No. 5 of the "Four Track Series." This is a book of 532 pages, which gives every conceivable detail of interest to tourists and summer vacationists.

Particulars are given as to routes, rates and points of interest in general from Maine to the Pacific coast, but especial attention naturally is paid to the country tributary to New York, including the historic Hudson and the Catskills, the lake region of central New York the Berkshires, the Thousand Islands, Adirondacks, etc.

The book is handsomely printed on good paper, and the illustrations, which are very numerous, are not by any means the least interesting part.—*Adv.*

Canoeing.

AMERICAN CANOE ASSOCIATION.

Seventeenth Annual Meet.

GRINDSTONE ISLAND—ST. LAWRENCE RIVER.

ONCE more, after ten years, the A. C. A. flag floats over Grindstone Island, the hillside is white with tents and the shores are strewn with canoes and sailing gear. The island and the river are the same; ten years has been but a moment to them; the same blue skies and green waters, the same emerald islands on every hand, the same glorious sunsets from the hilltop. Outwardly the camp is much the same as of old; the row of tents in the main camp is not quite so long, but only because so many men have sought the shade and comparative quiet of the woods on the north shore; out of the seventy-five tents in the main camp, fifty are in the grove. The number of tents, with those in Squaw Point to be added, show that this is a good-sized camp, quite as large as was to be looked for in the present condition of canoeing; and these tents are large ones, accommodating two or three, instead of the smaller single tents in use a dozen years ago. The number on the register up to Sunday night was 175, or only a dozen less than were registered during the whole meet at Grindstone on the first visit in 1884. As far as numbers go, the Association has at least held its own.

The turnout of canoes is a surprise to those who have attended the last two or three meets; the shores of Eel Bay show a very good-sized fleet, and while many are open canoes, there are more racing men and canoes present than have been seen for several years.

On first sight one might almost think that he had come back to the Grindstone of old; some of the once familiar flags and totems would be missed and some new ones would be found; and a close look at the fleet would show some strange innovations in model, fitting and rig. A very few minutes in the mess tent or about the camp-fire will serve, however, to destroy the illusion that the world has moved backward or even stood still for ten years, and that a first class ticket to Clayton could carry one back to the old friends and happy times of the early meets. As Mr. Kipling very forcibly puts it, "There ar'n't no 'busses running From the Bank to Mandelay."

The present register of the Association begins with the first Grindstone meet, 1884, and a look at its opening pages shows a long record of absent friends. Out of 190 then registered, but a dozen have thus far found their way back. Will Wockerhagen, Dr. and Mrs. Pannele and Mr. Dodd, of Hartford; E. B. Edwards, J. C. Edwards, W. P. Stephens, J. N. MacKendrick, F. S. Rathbun, R. J. Wilkin, Paul Butler and E. W. Brown. Of these, Messrs. Brown and Rathbun were in camp only for a day. Sad as it is to miss so many, there is a pleasure in the thought that out of the large number who met in the close intimacy of the three years at Grindstone, comparatively few have been taken forever from the A. C. A. Among these, however, were some who, like Major Fairtlough, of the Kingston C. C., and Lloyd Thomas, of the Mohicans, were known and loved by all in camp. Besides these two are other old canoemen whose places at the camp-fire must always be vacent: Grant Van Deusen, of Rondout; E. A. Hoffman, of New York; J. F. Newman, of Brooklyn, and Carter, of Trenton; fortunately the list is not a long one. The bow of Cupid is responsible for far more defections to the A. C. A. than the sickle of Death. The jolly young bachelors who first gave the name of "Squaw Point" to the ladies' section of an A. C. A. camp in 1884 are many of them no longer bachelors, nor are they as young, as lively or as active as in the old days. That they should be here, with wives and families, goes without saying, for where is a pleasanter spot for the renewal of old friendships to be found? But unfortunately they are not here.

The general make up of the camp is much as of old, except that the headquarters tents, after being first pitched on Nob Hill, have been shifted to the site of the old Mohican camp ground; while the mess tent is off toward Squaw Point, just where the Brockville men once camped. The wharf has been rebuilt in the same place, with a small store at its head. The transportation arrangements are all that could be asked for, both from Clayton and Gananoque; a small cabin launch makes regular trips between camp and Clayton, connecting with all trains, and there is good service by other boats to Gananoque on the Canadian side. The camp can be reached nearly as quickly, conveniently and cheaply as any on Lake Champlain.

The arrangements for the camp were made by Com. Huntington and Mr. J. R. Robertson, of the camp site committee, who were on the ground early, and whose long experience in this work has enabled them to handle it to advantage. A large tent was erected for a dining hall, with a wooden kitchen attached, the mess being managed by Mr. McElveney, of Albany, who has catered for the last two meets and whose service is very satisfactory. The ladies' camp is in the old location, not entirely a satisfactory one in its distance from the main camp and wharf, and in the ground itself.

The camp opened early, a number of members coming in on the first and second days, and the meet being well under way from the very start. The representation is very different again from that of old times. Some of the strongest clubs, the Pittsburg, Rochester, Mohican, Royal Military College and Toronto have disappeared; there are a number of Rochester men in camp, but all younger men and not all belonging to the old club; Messrs. Winne and Will Wockerhagen are in camp, but practically as individuals rather than representatives of the once powerful Mohican C. C., and though several Toronto men are present there is no such a party as was here in 1884. The Vesper B. C is represented by Messrs. Butler, Gage and Ames, and the New York C. C. has, for a wonder, half a dozen men, four sailing canoes and a club badge; such a turnout as it has not sent to a meet in years. The Knickerbocker C. C., one of the largest in the old days, has now in camp Messrs. Hand, Peebles, Berry and Shire. Of the Eastern Division the Tatassit C. C is the only one to send a good delegation; the Northern Division is by no means as well represented as it should be.

The racing fleet includes but one new canoe, a very handsome craft, built by N. Gilbert for Mr. Archbald—Mab IIII. She is a racing machine of the extreme type, the main feature of the design being the long and powerful sliding seat. A change of programme has been introduced this year in sending off some of the races in the first week. On Thursday three races were called: the Jabberwock trophy, won by Az Iz, J. R. Stewart; the ladies' paddling, won by Miss Scott, and the novice paddling, won by Mr. Moser. On Friday the Champlain cup race and Orillia cup race were sailed together, both being won by Archbald. On Saturday the novice race was won by May, of the New York C. C., and the Atlantic Division cup was won by F. C. Moore. On Monday morning the club sailing race was won by Moore after a hard fight with Butler.

With the exception of an occasional brief rain, the weather has been all that could be expected at Grindstone.

Yachting.

FIXTURES.

AUGUST.

29 Winthrop, club, Great Head, Boston Harbor.
29. Hull, club, Hull, Boston Harbor.
M 29. Cape Cod, open, Provincetown.
S 29. Huguenot, open, New Rochelle, L. I. Sound.
S 29. Huntington, open, Huntington, L. I. Sound.
S 29. Seawanhaka, special, Oyster Bay, L. I. Sound.

THE news that orders have been placed by British yachtsmen for two and possibly three racing cutters of the largest size is important at this time, when Colonia has been converted into a schooner, Defender is rusting away in inglorious idleness in New Rochelle Harbor, Vigilant and Navahoe are on the ways at City Island, and Jubilee is out of commission at Boston. In this country the 90ft. class has proved a complete failure save for the one special purpose of defending the America's Cup. As we predicted ten years ago, when Mayflower and Puritan were at the height of their fame, there are not enough yachtsmen in this country with both the means and the will to support permanently a class of 85 or 90ft. racing cutters. What was true then as applied to a yacht costing $30,000 and carrying some 7,000sq. ft. of sail is still true as applied to the latest racing machine, whose cost is $100,000 and whose sail area is upward of 13,000sq ft.

That the same class has been kept alive season after season in England, and that it is to be renewed by several new yachts for next season, is due to various causes which do not exist on this side. One of these, and a very important one, is the patronage of royalty to set the fashion; without the building and racing of Britannia by the Prince of Wales and Meteor II. by the Emperor William, the class would have fallen to pieces immediately after each international race, as has been the case on this side. Another powerful cause is the length of the racing season in British waters, with a continual round of races from May to the middle or end of August, the fleet keeping together from the first race to the last. Coupled with this is the greater depth of water available over the majority of British courses, and the amount of sea work done by the racing fleet. On this side, on the other hand, the racing is not sustained or continuous; when the owner of a large racing yacht fits her out in the spring he has no guarantee that he may not be without a competitor before the June regattas are over, and he may be certain that some of the rivals he is most anxious to meet will withdraw before the season is half at an end. On this side too, with some good deep-water courses for special great events, the regular courses of the racing clubs do not admit of the present 90-footers, and the class is useless for racing save by towing from New York to the Sandy Hook Lightship or from Marblehead out several miles to sea.

The rapidity with which the wealthier yachtsmen are going into large and costly steam craft, the vast expense, the general uselessness and the very brief racing life of the racing 90-footer, such as Defender, the history of the large single-stick class since its birth in 1885, all show beyond question the utter impossibility of making it a permanent feature of American yachting.

The question then arises, how long can this country hope to hold her superiority in the 90ft. class by building an occasional yacht to meet some emergency, while British designers and owners are able to benefit by the knowledge derived from the permanent existence and regular racing of the same class? The next season will see afloat a new racing cutter from Mr. Watson's board for the Prince of Wales, naturally an improvement on Meteor II. and the many older yachts of the class, including Britannia; a new cutter for C. D. Rose to be designed by J. M. Soper, designer of Satanita, and constructed under his direction by the firm of which he is manager; and probably an improved Ailsa, to be designed by Will Fife, Jr., for A. B. Walker, present owner of Ailsa. With two of these at least ordered in August, there is a good chance of other additions to the class before next May. With several of the old boats still in the racing, as they are likely to be, there is every indication of a strong class and good racing in 1897 in British waters.

What a different outlook is found in America. The racing this season has been confined to four classes of yachts: first, the large schooners, mainly a duel between Colonia and Emerald; second, the dozen 30-footers of the special class; third, the 15-footers, and fourth, the general fleet of sloops and catboats from 18 to 30ft. about New York and Boston While the sport has been good in the smaller classes, those of 30ft. and under, all first-class racing has practically ceased, and there is no promise of its speedy revival. By "first-class" racing we do not mean the two largest racing classes of both rigs, but all classes of cutters and schooners from the

old 40-footers upward in which new yachts are added and many races sailed each year, as was once the case in the 40ft., 53ft., 70ft. cutter classes and the 90ft. schooner class. Apart from the exigencies of Cup defense, the building of such racing yachts ceased with Wasp in 1892, Emerald in 1893 and Amorita in 1895.

If the development of American yachting is to depend on limited classes, on yachts of 15 and 30ft measurement, while British yachting supports the 90ft. class, the 54ft. b. r. class, and half a dozen smaller classes, it needs no prophet to say which will win in the end when international racing is revived, and that may be at any time, as our rivals appreciate their increasing strength and our increasing weakness.

The day has gone by when the strength of the Cup defense lay in the yacht of 80 to 90ft. waterline. Conditions have changed since the time of Mayflower and Galatea, and the guardians of the Cup cannot afford to sleep comfortably without a thought of the future. The great bar to all British challenges for the Cup—the objection to the new deed—has been swept away by Lord Dunraven. The accompanying incidents of his lordship's yachting career, unpleasant as they have been to both sides, will never stand in the way of new challenges, and one may be looked for at any time; if not this year, at least as soon as the large cutters of 1897 have been thoroughly tested and the extent of their advance over those of 1895 has been gauged.

We deem it an impossible task for America to compete with England in the permanent maintenance of the 90ft. class; in fact, we do not see now how it can be made possible to establish and maintain a much smaller class; but that is obviously the most desirable end to work for.

There is much in the fact that the leaders of American yachting, the men who have built and raced the Cup defenders of the past, the men who represent the combination of money and yachting spirit necessary to the higher ranks of racing, have this year created for their amusement a class of 30ft. waterline, with the cost limited to $3,000.

The question now is, can these men and their fellows be induced to create a new and larger class, of such size as to be suitable for international racing and the defense of the America's Cup?

Considering the deterrent causes of modern yachting, the first cost, the cost of running and racing, the rapid course of outbuilding and the natural limitations of draft, the best size of yacht for this work would be within the limit of the 70ft. racing length class, a yacht of some 65ft. l.w.l., quite as large as Queen Mab, and, with the altered form of the day, very much larger than the old 70-footers.

The creation of such a class under some restrictions, as few as possible, but calculated to give a reasonable amount of head room and accommodation, and some guarantee of a fair fighting chance for at least the second and third season to every fast boat, would give an impulse to yachting that is sorely needed just now.

The Seawanhaka Cup.

The *Yachtsman*, in its issue of Aug. 6, pays its compliments to various matters American as follows:

Although the Seawanhaka Corinthian Y. C. small boat international challenge cup has never been taken very seriously by us or the generality of English yachtsmen, the fact of its having been won this year by a member of the Royal St. Lawrence Y. C. has been the means of casting a curious light upon the working of the American mind in all matters that affect the Yankee's national vanity, be the subject never so small.

First of all, it is very well known to the Seawanhaka executive that last year both Mr. Linton Hope and Mr. J. A. Brand were anxious to race this year for the cup; for, in fact, both challenged. But Mr. Duggan had the good fortune to lodge his challenge before either of these aspirants, and therefore he became the now memorable challenger of 1896. With this knowledge, however, the Seawanhaka C. Y. C. stooped to draft a challenge from some unnamed member of its own organization to the Royal St. Lawrence Y. C. before the decisive race between El Heirie and Glencairn was actually finished, and to throw down this gauntlet to Mr. J. C. Almon, secretary of the Royal St. Lawrence Y. C. (who was at the time their guest aboard the committee steamer), the moment Glencairn had crossed the winning line. This action has characteristically been hailed with loud patriotic applause in America—and we regret to see that the Forest and Stream is content with it. But what a light it casts upon patriotism as opposed to fair play in the minds of trans-Atlantic yachting men. The cup, such as it is, is to become forever a challenge cup between the Royal St. Lawrence Y. C. and the Seawanhaka Corinthian Y. C.—that at least seems to be the logical result of this latest patriotic move. Of course it would ill become us, who abhor the idea of any future yacht racing between England and America, to draw attention to this if we consider 15-footers to be yachts. But we don't, and a glance at the illustrations given by us last week will amply bear us out in our opinion. Yet we see in the short history of the Seawanhaka cup some points that throw a wondrous tint on all American histories of the America Cup.

Mr. Brand last year protested against Ethelwynn for shipping ballast within the prohibited time before one of the races. The fact was not denied, though the protest was disallowed—we have always held that the Minima Y. C. by the letter of the law won the cup last year—but we read in the Forest and Stream that after the second race this year the two yachts were carried up on the beach in front of the boat house and carefully placed on trestles. The plan of turning on the bilge, as adopted by Ethelwynn last year, was not followed by either. This seems to indicate a feeling that Mr. Brand's protest was after all not quite so ludicrous as the club's committee affected to believe. It would, we think, be decidedly inconvenient for either the Royal St. Lawrence Y. C. or the Seawanhaka C. Y. C. to give Mr. Linton Hope the choice of seven possible challengers built by him. We fancy indeed (without any intention of disparaging Mr. Duggan's energy and talent) that El Heirie would in that case have been rather more badly beaten than she was by Glencairn. Nay, more, if Mr. J. A. Brand last year had obtained the valuable concession yielded to Mr. Duggan, we should not be able to claim the cup for the Minima Y. C. on the ground of an unfairly decided, if somewhat unusual protest.

Mr. W. P. Stephens, who may be fairly called the promoter, if not the father, of the American international 15-footers, has not indeed as yet paid any attention to these matters; but no doubt that will come in time. His disappointment at Glencairn's victory is as great as his desire for the reform of type in small yachts is new born. Here we join hands with him, for he seems to have learned a lesson which has this season been drilled into our own Y. R. A. This is the moral that he draws from the loss of the Seawanhaka cup: "If there is any one cause for regret over the result, it is the technical moral that extreme power pays in this class, a conclusion reluctantly reached by the designer of Glencairn, and that will be quite as reluctantly accepted by many designers and yachtsmen. Whether this is indeed the true and only moral of the victory of Glencairn, and if so, just what deductions are to be drawn from it, is entirely too broad a question to be discussed off-hand."

The "deductions" seem to us to resolve themselves into the fact that either the Seawanhaka rule of measurement, which Thalassa used to admire so much, is faulty, or that Mr. Duggan is a better designer than Messrs. N. Herreshoff, Stephens, etc. We are inclined to adopt the former opinion, and would recommend to the Seawanhaka C. Y. C. the adoption of our Y. R. A. rule, with such modifications as may seem desirable.

If *The Yachtsman* had not shown itself capable of discussing fairly and truthfully many issues of the day, national and international, in yachting, we should be less surprised at the attitude which it has held for nearly a year, since it took up the cause of Mr. J. A. Brand. As it has had no personal representative in this country at either of the contests, its knowledge has necessarily been at second hand; it has done us the credit of reprinting many of our accounts of the races and comments thereon, and it has drawn liberally upon Mr. Brand's store of protests, complaints and grievances. The article quoted above is a typical sample of its methods throughout, in ignoring and misstating plain facts and accepting as facts statements that are not and cannot be verified. The whole tone of its comments in the present article, as in many previous ones which we have passed unnoticed, is calculated to create a feeling against American methods of sport and especially against the Seawanhaka C. Y. C.

On the first point which it takes up, the gross impropriety of the Seawanhaka C. Y. C. challenging for the cup without asking the permission of other clubs, we confess that this view of the case had not struck us before. As far as Mr. Linton Hope is concerned, the club had offered to accept his challenge second to that of the Royal St. Lawrence Y. C. on the condition that it still held the cup; more than this it could not do. It did decline after consideration a proposal, made if we remember by Mr. Hope, for a triangular race of two challengers from different clubs against one defender, on the ground that such a contest might not settle fairly the possession of an international trophy, but outside of this it has done everything possible to give Mr. Hope a race. As to Mr. Brand, while the club has stood ready to accept a challenge from him in order, we must remind *The Yachtsman* that he has never yet challenged for 1896. All that he has done is to write an informal notice of challenge immediately after the last race in 1895, with the assurance that the formal challenge from the Minima Y. C. would follow, added to which he stated verbally to the committee and members of the club that he would not come over alone this year, but that if he could get a syndicate together to build a Spruce IIIII. he would challenge again. This is as far as the matter ever went. The Seawanhaka C. Y. C. has never received a formal challenge from the Minima Y. C. nor from Mr. Brand.

In spite of the objections of *The Yachtsman* we do not quite see yet why it was not proper for the club to challenge at once for the cup, or that in thus doing it infringed upon the laws of fair play and the rights of other possible challengers. Whatever grounds there may be for an objection to passing the notice of challenge upon the club steamer, there certainly could be no objection raised if the committee had, on reaching the club house, telegraphed to the Royal St. Lawrence Y. C. at its headquarters in Montreal, thus delaying the challenge half an hour. It is unquestionable that the club had from the circumstances a great advantage over other intending challengers, but we can see nothing unfair in its availing itself of it.

The intimation that the challenge is from an unnamed member and consequently irregular is a sample of *The Yachtsman's* methods. The published conditions distinctly state that a challenge must come from a club, and not from an individual, and there is no member, named or unnamed, behind it. In this respect the challenge is perfectly regular and proper.

We were tempted several months since, in justice to ourselves, to reply to a personal attack by *The Yachtsman* in the matter of Ethelwynn's ballast, but we did not, for the reason that American yachtsmen at least have made up their minds as to the merits of the complaints of both Lord Dunraven and Mr. J. A. Brand, and are no longer interested in their discussion. As *The Yachtsman* continues to bring up this question upon every possible occasion, regardless of its ignorance of the facts, we will give for its benefit the exact details of Ethelwynn's ballasting in all the races. We do not expect that it will be able to find space for the whole of this article, but we hope, in justice to us, that it will place this portion of it before its readers, after exploiting the other side for so long.

The rights of the two competitors as regards ballast are precisely the same under the Seawanhaka as under the Y. R. A. rules; practically the only limitations are that the yacht shall not exceed the measured length, that no ballast shall be shifted during a race, and that no ballast shall be added or removed after 9 P. M. of the day preceding the race. As a matter of custom outside the rule the British challengers for the America Cup, Thistle, Valkyrie II. and Valkyrie III., have each made important changes by the addition of ballast on the off days between races, thus establishing an unimpeachable precedent. In the first trial race Ethelwynn sailed with no ballast at all, in the second she was tried with 100lbs. of lead, four pigs of 25lbs each, stowed just abaft the fore bulkhead, two on each side of the trunk, and fastened by cleats screwed to the floor timbers and sides of trunk. Both were drifting races and the yacht apparently sailed as fast with the ballast as without; as she was a long way inside of her measurement, the ballast was retained through the series of trial races.

When she came under the measurer's tape on Aug. 19, the afternoon preceding the first race with Spruce, she was first measured with this same weight of 100lbs. in addition to the official 300lbs., her waterline being 15.14ft. She was then measured with two more pigs of 25lbs. each stowed just forward of the fore bulkhead, being laid loosely across the keel; the waterline with 150lbs. thus being 15.24ft. The allowance of sail for this would be 218sq. ft. It is plain then that at no time was she near the limit of weight and length measurement.

The extra 50lbs. was left in over Friday night by the owner, though really not necessary, and was carried on Saturday. In examining the compartment on Saturday morning just before she left the float, we noticed that the two pigs were unsecured and liable to do serious damage in a little sea. Mr. Ball crept inside the hatch and nailed a couple of cleats to secure them; but it was done in a hurry and was not entirely safe. We left the club house immediately after the stopping of the race on Saturday afternoon, and have no personal knowledge of the changes of ballast between then and Monday, but Mr. Field assures us that immediately on the return to the club house he wrote to the committee stating that he proposed to remove the extra 50lbs., and that the committee indorsed its consent on the note, the ballast being removed that same afternoon. Under the rules no such notification or consent was necessary, the committee having nothing to do with the amount of ballast carried so long as the yacht was within her measurement.

When we came through New York on the way to Oyster Bay on Monday we stopped and bought a couple of stout screw eyes to put in the keel to carry a lashing for the two pigs, as they would have gone through the bottom if left loose in a seaway. We reached Oyster Bay late that morning, and on speaking to Mr. Field just before the start he said that the screw eyes were not needed, as they had decided to carry but 100lbs. of ballast.

This time, as it happened, there was a race, Ethelwynn beating Spruce 7m. 41s. It being Monday, we were under the necessity of writing up the race on the spot in order to get it to New York in time for publication next day, and our work was done hurriedly, the maneuvers of the two requiring close attention, and it being necessary to take careful notes of one part of the race while writing a preceding part. In describing the preparation of Ethelwynn, we wrote, after describing how the boat was beached for cleaning, "Only 100lbs. of her lead was replaced, the 50lbs. carried just inside the fore bulkhead on Saturday being removed." This statement, so far as it infers that the ballast was removed on Monday, was incorrect; we had no knowledge at the time of when the ballast was removed, and gave no thought to the matter or to the 9 P. M. rule, the only thing in mind being to make a note of the alteration of ballast, of which we had just been informed by Mr. Field. Our account of the race appeared in the Forest and Stream of Sept. 28 and was on the club table after the race of Sept. 25, being examined by Mr. Brand and others on account of the long illustrated article on the English ½-rating class and the various Spruces. Mr. Brand, in common with every one else about the club house, had seen Ethelwynn turned on her side on Monday morning and her ballast laid on the beach, the four pigs in the well, they being liable to slip from under the cleats when the boat was turned on edge. He also saw the Forest and Stream and presumably the report of Monday's race and the change of ballast. No protest was made, however, and the racing continued.

After Mr. Field's withdrawal on Thursday he spoke to us about replacing the 50lbs. of lead, and we advised him to do nothing without the consent of the committee, not that it was necessary, but merely as a formality; the following letter was then sent to the committee:

Oyster Bay, N. Y., Sept 26, 1895.—*Regatta Committee, S. C. Yacht Club:*—Gentlemen: I desire to notify you that F. S. Ball will take my place as crew of the Ethelwynn. Mr. Ball and his brother can, I feel, do better in heavy weather on account of their longer experience, and I wish to do everything possible to try and hold the cup. We will also probably put back our additional ballast of 50lbs., with which we were officially measured. In event of my own absence on business during the balance of the races, Mr. B. C. Ball will be authorized to represent me as owner of boat. Yours respectfully,

C. J. Field, owner Ethelwynn.

The extra 50lbs. was placed aboard that afternoon and carried through the two deciding races, the eyebolts being screwed to the keel and the two pigs securely lashed. On Saturday morning we assisted Mr. Ball, in the absence of the owner, in beaching and turning over the yacht and rubbing her down. The forward 50lbs. was left in place, as it could not fall, but the four pigs beside the trunk were lifted out and placed on the beach, being replaced under the cleats on launching the yacht. The whole thing, as on Monday, was done openly and with the aid of a number of people, there being no thought at the time of a violation of the rule. No objection was made by Mr. Brand on either occasion to the boat being thus handled, and it was not until next day, after he was defeated by ten minutes in the final race and had had the advice of friends, that he began to search the rules for some grounds for protest; the result being as follows:

Sept. 29, 1895.—*Race Committee, Seawanhaka Corinthian Y. C.:* On behalf of the Minima Y. C. I have the honor to inform you that I have drawn the attention of your Hon. Secretary, Mr. C. A. Sherman, to the fact that Ethelwynn is not entitled to yesterday's race, as she broke Rule XXVI., Sec. 1, by discharging and taking in ballast after 9 P. M. of Friday evening, the day preceding the race; and that she broke Rule XXV., Sec. 2, by not having a serviceable life-buoy aboard during the race. I must protest against the prize being awarded to Ethelwynn on these two grounds, at any rate until I have heard from my club.

(Signed) J. Arthur Brand, owner of Spruce.

It was not until some weeks later that Mr. Brand complained further of the alteration in Ethelwynn's ballast between Saturday and Monday, basing his complaint on the statement in the Forest and Stream, as we have already quoted. We are not aware that any formal protest has ever been made to the club on this ground by Mr. Brand, and although we have heard at times of a formal presentation by the Minima Y. C. to the Seawanhaka C. Y. C. of Mr. Brand's protests and grievances, none such has been made; the club evidently having the good sense to accept the situation on its merits. Mr. Brand paid no attention at the time to the handling of Ethelwynn on the beach or the statement concerning her ballast, and in making his complaint later on he has accepted the statement in the Forest and Stream without making the slight investigation necessary to show him that it was erroneous so far as the time of removal of the ballast was concerned.

The only possible ground for protest that he has is the removal of Ethelwynn's ballast when she was beached on two occasions, though it was immediately replaced in its original position. This, we admit, was a technical violation of the rule and should not have occurred, but it in no way altered the ballast, infringed on the plain intent of the rule or did any injury to Mr. Brand. He apparently acquiesced in it at first, and only saw a possible ground for protest when he was smarting with defeat, after having the cup thrown almost into his hands, by the groundless withdrawal of Ethelwynn's owner from a race. Granting for the moment the contention of *The Yachtsman* that the cup belongs to the Minima Y. C., and that the club would be willing to accept it on such a technicality coupled with the inglorious second race, it would be perfectly fair to contend that Spruce IIII. should be disqualified in all her races, because she repeatedly violated Rule XIV., and did not carry her owner's private signal at the peak. The plain record of the races shows that Spruce IIII. was outsailed by a faster yacht, and any fair and impartial examination of the circumstances attending the races will show that the challenger had every courtesy and every privilege that he could ask willingly accorded to him by the club, the committee and the other yacht.

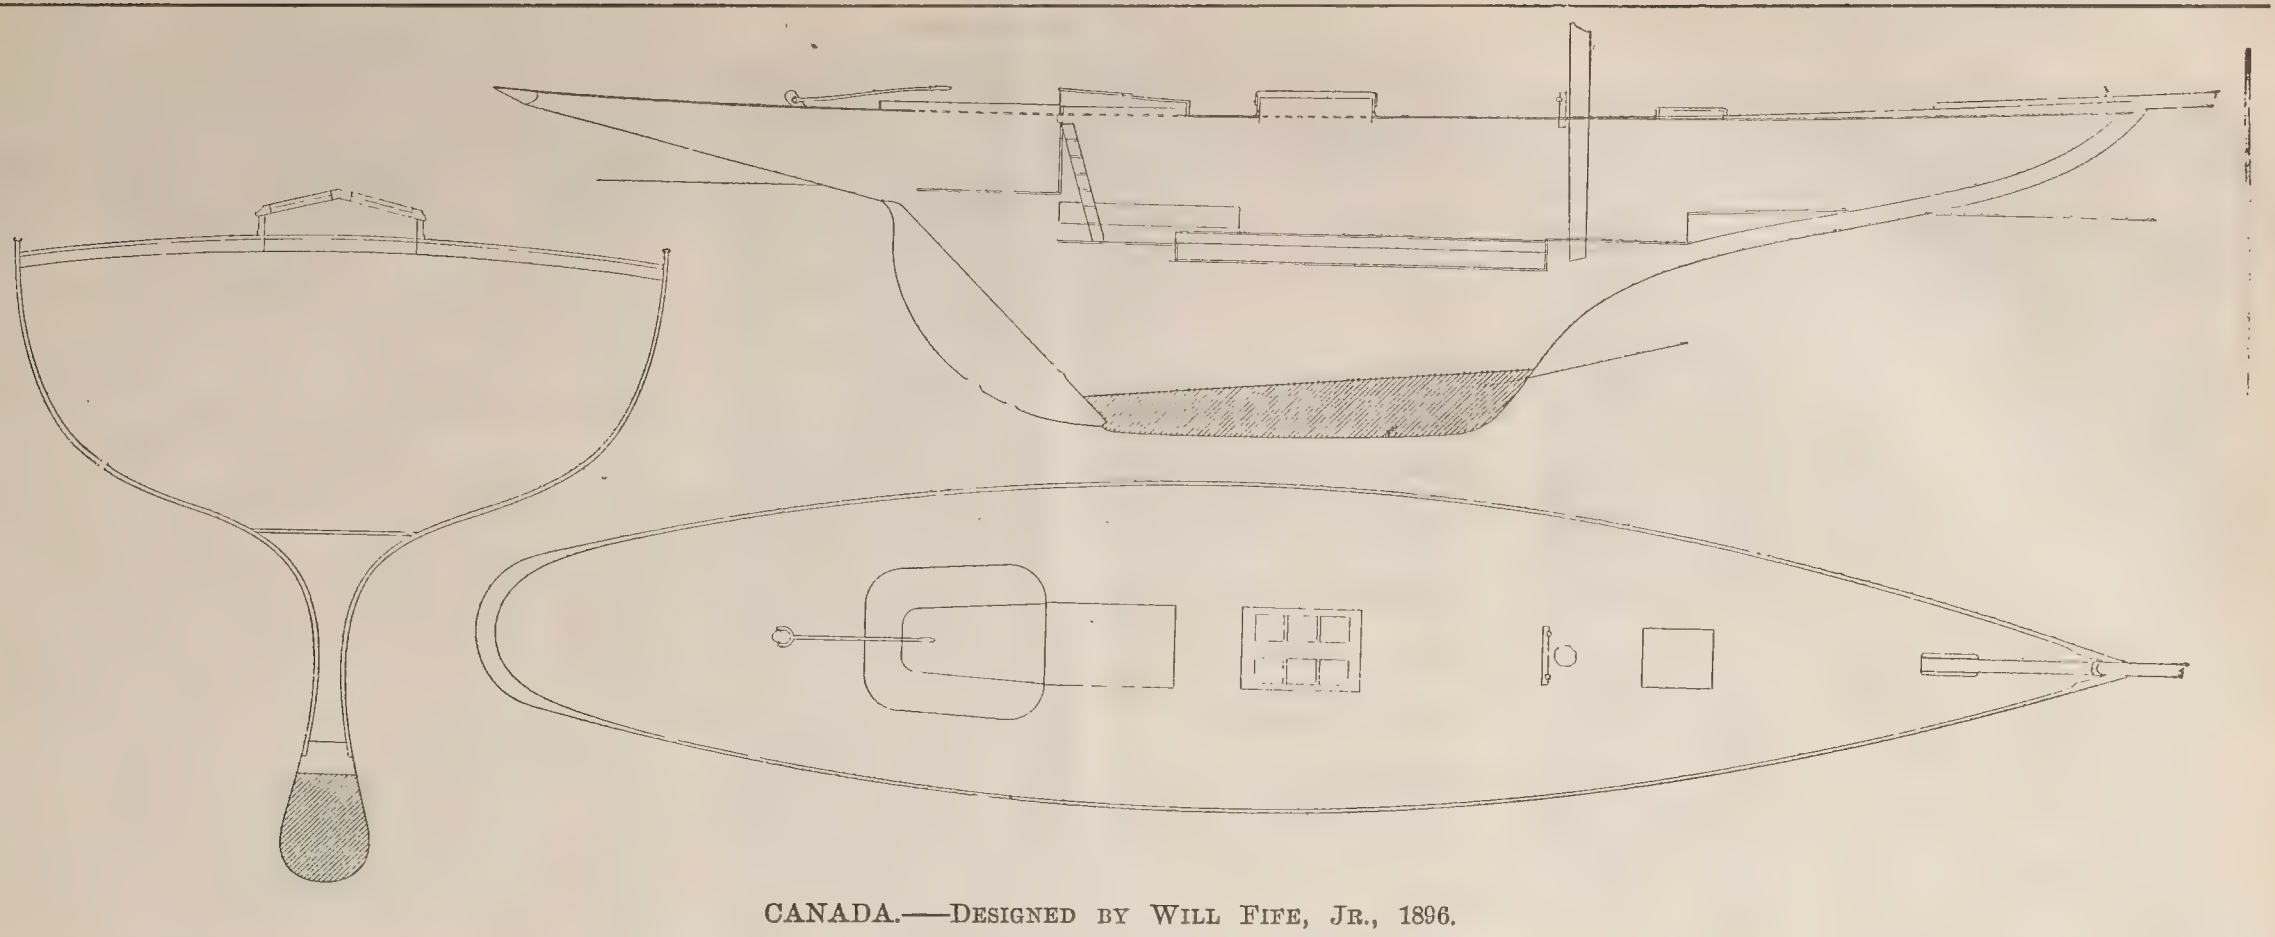
The unfair and one-sided nature of *The Yachtsman's* criticism is well shown by its remarks about the handling of the yachts in the recent races, intimating that there was something unfair in the mere turning of Ethelwynn on her side. In the trial and cup races this year the yachts were handled according to circumstances and the inclination of their owners. Ideal, Vesper, Die Hexe and others were turned on edge just as Ethelwynn was, while El Heirie and Glencairn were carried upright and rested on trestles. One good reason for the different treatment is that the latter pair were perfectly flat and sat upright of themselves, while the others, with much dead rise and V sections, would not rest upright on the trestles unless carefully shored. As neither El Heirie nor Glencairn carried a pound of ballast, we fail to see how the manner in which they were handled has any bearing whatever on the case of Ethelwynn.

The Yachtsman's remarks about a choice of challengers for Mr. Hope and concessions to Mr. Brand do it no credit, they are a misrepresentation of the case which even ignorance cannot excuse under the circumstances. In Mr. Brand's case, though he challenged specifically with a certain yacht, Spruce IIII., he was offered by the Seawanhaka C. Y. C. the privilege of substituting another yacht after his own boat promised to be a failure. As a matter of fact he actually opened negotiations with Mr. Hope for the purchase of Lotus, and these only failed because of the disagreement as to price. We can vouch for the fact that Mr. Brand secured every concession that he asked for with two exceptions; he was even allowed to bring a paid hand; though the class was intended to be, as it certainly should be, a purely Corinthian one, he had the privilege of selecting another yacht, and his wishes were consulted in every minor detail. The only requests refused him was that for a reaching course, straight out and back across the wind, something unheard of in match sailing, and that for a limitation of spinakers to 40sq. ft., an absurdity in American weather.

The conditions governing the cup have been widely published, and are probably accessible to *The Yachtsman* if it really desired to know them. Article IV. provides that neither club shall be required to name its representative yacht in advance of the races, so that Mr. Linton Hope or any other future challenger is at liberty to choose from seventy yachts instead of seven. This also disposes of the slur in the preceding number of *The Yachtsman* over the presence of Riverside at Oyster Bay on the day of the first race.

Though *The Yachtsman* seems to doubt it, we trust that we are possessed of enough of the spirit of sport to accept gracefully a defeat in such a large and goodly company and by two such craft as El Heirie and Glencairn; at the same time we plead guilty to the possession of some old-fogy prejudices in favor of what we believe to be shipshape and yachtlike. We have from the first accepted the 15-footers for what they obviously are, modern racing machines and nothing else; at the same time we have believed it possible to make a yacht fast without making her unlike a yacht and like a packing case or a coffin. That we were in the wrong in this class we are compelled to admit, both as to form and power, but we have at least used our best efforts to keep the class as near as possible to what we believed it should be, and we are not altogether sorry for it.

So far as the Seawanhaka rule in any but the two smaller classes is concerned, these races point no special moral; they indicate what we have long suspected, that no one rule of measurement can be made to cover the large yacht with deck and ballast and the small, half open, unballasted shell. As far as the Y. R. A. rule goes, we cannot see why Glencairn should not win under it even more easily than under the Seawanhaka rule.



We have devoted a good deal of space to this special article of *The Yachtsman* because it is but a part of a long-continued effort in the same direction. We do not question the right of *The Yachtsman* to oppose all international racing if it so chooses, and to use all of its influence to put an end to it, but we do object to its methods as unfair, and unworthy of a paper of its standing.

The Wrecking of Isolde.

The Cowes racing has been brought to a sudden termination by a very sad accident on Aug. 18 in which the Herreshoff 20-rater Isolde was partly wrecked and her owner, Baron von Zedtwitz, lost his life. The cable report of the disaster is as follows:

The races of the Royal Albert regatta at Southsea were interrupted to-day by an accident which caused the death of Baron von Zedtwitz, the owner of the 20-rater Isolde, and endangered the lives of the captain and crew of that vessel, all of whom were knocked overboard. The large raters started at 10 o'clock this morning to sail over the 46 miles course, and the small raters started at 11 o'clock to sail over the same course, but only once round—23 miles—the prizes being £50 and £25 for the big boats, and £15 to the winner of the race for small raters. The starters in the big race were Ailsa, Britannia, Meteor and Satanita, and in the small rater race Saint, Niagara, Samphire, Audrey, Penitent and Isolde. The big yachts had finished the first round of the course and were just starting upon the second when suddenly the boats of both classes seemed to have become jammed together. Isolde, which was sandwiched between the two yachts of the larger class, received a severe blow from Meteor, causing her mast to snap in two and fall overboard. The shock was a heavy one, causing Isolde to careen and, as she did so, all on board of her were spilled into the sea. When Meteor struck the small yacht there was a great crash, and blocks, fragments of the broken mast and other parts of Isolde were sent flying in every direction. As soon as the collision took place the other yachts stopped and put out boats to rescue the men struggling in the water. Baron von Zedtwitz, the owner of Isolde, who was on board of his yacht, was struck on the head by a block or a piece of broken mast and knocked overboard. He was taken out of the water as soon as possible and conveyed on board a steam yacht to the club house at Ryde. Baron von Zedtwitz was unconscious when picked up. He received every possible medical attention at Ryde, but he did not regain consciousness, and died soon after reaching the club house. A strong wind was blowing at the time of the accident, kicking up a bad sea, and it was raining very hard. Isolde was badly damaged and was towed to Portsmouth. The bowsprit of Meteor swept her deck and carried away all of her gear. Several members of Isolde's crew were picked up in an exhausted condition. The crew experienced some very narrow escapes, but fortunately all of them were rescued. A sailor belonging to the British gunboat Ant, which was lying at anchor near the scene of the collision, rescued one of Isolde's men in a drowning condition. He could not have survived thirty seconds longer. The accident cast a gloom over everything, and the races were abandoned for the days Capt. Gomes, the skipper of Meteor, ascribes the collision of Meteor with Isolde to the fact that Britannia did not make way for Meteor to pass Isolde. All the club houses at Spithead and Ryde are flying flag at half mast in consequence of the death of the Baron. As a yachtsman Von Zedtwitz was a good sportsman, and he was well liked in all of the English sporting centers. His wife, the Baroness von Zedtwitz, was a daughter of the late Charles Roosevelt, of New York. To-morrow's yacht races and the fireworks with which it was intended to signalize the ending of the Royal Albert Y. C. regatta at Southsea have been postponed until after the funeral. Isolde was a 20-rater yacht, constructed by the Herreshoffs at Bristol, R. I., in 1895, for Prince Leopold of Germany, who sold the boat to Baron von Zedtwitz. Meteor, which is owned by the German Emperor, is a steel cutter of 236 tons, and was built in the Henderson's yards on the Clyde in the early part of this year.

Baron von Zedtwitz was thirty-eight years old. He was a personal friend of Emperor William, and it is remarked upon as strange and sad that he should have been killed in a collision with His Majesty's yacht. The Baron had been in the German Diplomatic service, but he

CANADA.—DESIGNED BY WILL FIFE, JR., 1896.

was little known publicly. It is stated that his wife and only child, an infant, are visiting in Switzerland.

The following additional particulars appeared next day:

A coroner's inquest was held at Ryde to-day on the body of Baron von Zedtwitz, the owner of the yacht Isolde, who was killed by the collision of Meteor with Isolde off Southsea yesterday. The captains of the yachts Isolde, Britannia and Meteor were examined and the jury returned a verdict that the Baron's death was due to the purely accidental collision of the boats.

The proceedings of the inquest showed that Baron von Zedtwitz was struck by the falling rigging of Isolde, and pinned to the deck of the yacht by the broken spars. He was not thrown into the water, as was reported yesterday. Captain Carter, the commander of Britannia, in the course of his testimony said that the Meteor ought to have passed under the Britannia's lee. Captain Gomes, skipper of Meteor, denied that he had violated the sailing rules. There was plenty of room for Meteor to pass Isolde, but Saint struck Isolde and slewed the bow of that boat toward Meteor.

Mr. Jameson, representative of the Prince of Wales, who was on board Britannia, said that the whole thing was so sudden that he was unable to say whether or not there was time for Meteor to go to the lee of Britannia after the danger of collision became apparent.

The Berlin *Reichsanzeiger*, the official journal, to-day publishes a tribute to the late Baron von Zedtwitz, and testifies to the zeal displayed by him in the official positions he occupied.

The Queen has telegraphed to the Royal Albert Y. C. expressing her regrets because of the death of Baron von Zedtwitz.

The Emperor has ordered that Meteor discontinue racing, and that she shall be laid up at once.

Vencedor-Canada.

THE only important yachting event of the present week will be the meeting of the representatives of the Lincoln Park Y. C., of Chicago, and the Royal St. Lawrence Y. C., of Toronto, in the series of three matches off Toledo, Lake Erie. This event is the most important that has ever taken place on the Lakes, and it will be witnessed by many yachtsmen from both fresh and salt water. The large fleet of lake yachts, including craft from all the ports between Rochester and Chicago, that has taken part in the recent races on Lake Erie, will be in attendance.

The Chicago representative is a fin-keel cutter, very similar in dimensions and model to the 20-rater Niagara, owned by Howard Gould and now racing in English waters. Vencedor was designed by Theodore Poeckel, formerly in the employ of the Herreshoff Mfg. Co., and now designer and superintendent of the Racine Boat Co., of Racine, Wis. Her measurements have thus far been as carefully concealed as in the case of Defender last year. The Canadian representative, Canada, was designed by Will Fife, Jr., and the entire frame was got out, fitted and set up in the Fife yard at Fairlie, Scotland, being afterward taken apart and shipped to Oakville, near Toronto, where the lead keel of 8 tons was cast, the frame set up anew and the work completed by Capt. Andrews, a local yacht builder. The yacht is smaller than her competitor and by no means so extreme in type, as the accompanying plans show; she may be classed as a bulb-fin craft, with the usual construction of a wooden yacht, a built wood keel in place of a metal plate fin. Her principal dimensions are: Length over all 55ft., l.w.l. 36ft. 6in., beam 11ft., draft 8ft., least freeboard 2ft. 4in. Although her crew of ten have lived aboard of her during the past month while racing and cruising, she can boast of but moderate accommodation, the headroom being but 4ft. 6in. under the beams. The first race took place on Aug. 24. The judges were Oliver E. Cromwell, Seawanhaka Corinthian Y. C.; H. L. McLeod, Minnetonka Y. C., and E. H. Ambrose, Royal Hamilton Y. C.

Oconomowoc Y. C. Annual Regatta.

OCONOMOWOC, WIS.—LAKE LA BELLE.

Saturday, Aug. 15.

THE annual regatta of the Oconomowoc Y. C., after starting in a light breeze, was finished in a gale with heavy rain, Ethel and Florence capsizing and Yumpin Yaper and Mynone shipping so much water that they withdrew. The times were:

SLOOPS.

	Elapsed.	Corrected.
Tarpon, Com. F. W. Peck	1 49 39	1 49 39
Naiad, C. I. Peck	2 04 13	2 01 13
Friar, R. Nunnemacher	2 07 20½	1 59 15

SINGLE SAIL YACHTS.

Phyllis, H. Thompson	1 55 06	1 54 28½
Gladys, G. W. Simmons	1 58 13	1 57 31¾
Alert, W. H. Dupee	2 00 36	2 00 02¼

The judges were J. S. Field, Col. J. S. Cooper, of Chicago, and Capt. J. A. Scudder, of St. Louis.

Later in the day the race for the commodore's cup was sailed, the times being:

	Elapsed.	Corrected.
Idle Wave, L. C. Merrick	1 12 53	. .. ..
Argo, D. E. Murphy	1 02 48	1 02 14
Hope, G. D. Vandyke	0 58 21	0 54 36
Idle Hour, N. P. Hulst	1 23 00	1 27 54

Hope won easily. Bird and Skedaddle were disabled and withdrew. Gladys and Alert were in collision and filed protests which have not been decided.

New Haven Y. C. Annual Regatta.

NEW HAVEN—LONG ISLAND SOUND

Monday, Aug. 17.

THE annual regatta of the New Haven Y. C. brought out but few starters on Monday of last week, the only notable feature of the race being the sailing of the new catboat Scat, owned by F. M. Randall. In a strong N.W. wind she led the fleet of larger yachts and beat everything over her course, both larger and smaller. The times were:

CABIN SLOOPS—CLASS 7.

	Length.	Elapsed.	Corrected.
Seabelle, H. A. Seymour	35.35	3 16 02	3 16 02
Titania, M. W. Burwell	35.00	3 17 18	3 15 49

OPEN SLOOPS—CLASS 13.

Nit, John Champion	23.93	3 05 40	3 05 40
Defender, J. Smith		3 58 15	.f.. ..

Minnetonka Y. C. Championship Regatta.

LAKE MINNETONKA.

Saturday, Aug. 15.

THE Minnetonka Y. C. sailed its seventh championship regatta on Aug. 15 in a moderate and fluky wind, the times being:

CLASS A—BIG SLOOPS.

	Start.	Finish.	Corrected.
Tartar	3 03 07	5 08 52	2 04 33
Charlotte	3 02 48	5 09 30	2 06 00
Marie	3 01 45	5 12 51	2 10 17
Katrina	3 00 45	5 14 04	2 12 07
Kite	3 01 29	5 15 42	2 13 16
Alpha	3 00 22	5 17 19	2 16 08
Demon	2 02 45	5 21 50	2 17 24
Swift	3 01 00	Withdrew.	

CLASS B—MEDIUM SLOOPS.

Papoose	2 43 17	5 20 42	2 35 13

Royal St. Lawrence Y. C.

DORVAL—LAKE ST. LOUIS.

Saturday, Aug. 15.

THE Royal St. Lawrence Y. C. sailed a race for the A, 30ft. and 25ft. classes on Aug. 15 in a moderate S.E. wind, the times being:

Preparatory gun, 4:15; start, 4:20. Course A.

	Start.	Chatauquay buoy.	Finish.	Elapsed.	Corrected.
Xania	4 20 00	4 59 50	6 10 38	1 50 38	1 48 37
Chaperon	4 20 00	5 01 50	6 18 47	1 58 47	1 58 47
Valda	4 20 00	5 04 10	6 24 53	2 04 53	1 58 48

25FT. CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Valda	4 20 00	6 24 53	2 04 53	2 03 46
Marjorie	4 20 00	6 33 45	2 13 45	5 21 55
Waterwitch	4 20 00	6 37 43	2 17 43	.. .. ..
Undine	4 20 00	6 39 19	2 19 19	2 19 19

Both Xania and Valda were designed by Mr. G. H. Duggan, designer of Glencairn, the former being now owned and sailed by him.

Fox Lake Y. C.

FOX LAKE, ILL.

Saturday, Aug. 15.

THE Fox Lake Y. C. sailed a ladies' race on Aug. 15 in a rain storm and strong breeze, the times being:

Happy Days—Miss Florence Brophy, captain; Misses Jeanie and Hattie Brophy.

Lorna Doone—Miss Enola Cregier, captain; Mrs. C. J. Patterson, Mrs. Montgomery and Mrs. McPherson.

Grimalkin—Miss Marion Tooker, captain; Mrs. W. H. Lyford, Mrs. Eric Winters and Miss Irvin.

Sans Souci—Miss Johnson, captain.

	Elapsed.	Corrected.
Happy Days	0 49 08	0 48 54
Lorna Doone	0 51 22	0 50 25
Grimalkin	0 51 13	0 51 13
Sans Souci	Withdrew.	

Racing at Newport.

ON Aug. 18 the 30 footers sailed a race for the Duryea cups over the Dyer's Island course in a strong S.W. wind. Rosemary, after having her fin shifted a foot aft, did much better, finishing in the middle of the fleet after leading over a good part of the run. The times were, start 2:35:

	Finish.	Elapsed.
Asahi, Bayard Thayer	4 41 00	2 06 00
Vaquero, H. B. Duryea	4 42 20	2 07 20
Hera, R. Nellis	4 42 50	2 07 50
Puck, E. D. Morgan	4 43 32	2 08 32
Rosemary, G. Paget	4 44 20	2 09 20
Esperanza, A. Van Winkle	4 45 18	2 10 18
Wa Wa, J. A. Stillman	4 45 32	2 10 32
Musme, J. McDonough	4 46 10	2 11 10
Dorothy, H. P. Whitney	Did not finish.	

Asahi wins the first prize, Vaquero second and Hera third.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.*

CANADA.—SAIL PLAN.

Beverly Y. C.

BUZZARD'S BAY.

Saturday, Aug. 15.

THE 239th race of the Beverly Y. C was sailed on Aug. 15 at Marion at 11 A. M. This race was for the Geo. Griswold Van Rensselaer cup, which has hitherto been run by the Sippican Y C., now defunct.

It was open to all boats of 30ft. waterline and under, and the result shows how well the allowance table evens up boats of far different sizes.

The wind was a moderate whole-sail N.E. breeze, rather variable in direction, giving a great deal of close-hauled sailing. Water smooth. Allowance based on waterline. Working sails only.

Judges—David Rice, W. Lloyd Jeffries.

Boats arranged in order of actual time. Prize was given with allowance. Course 6½ miles, mostly to windward.

The 240th regatta, open race for prizes presented by gentlemen of Marion, was sailed on Aug. 15 at Marion at 1:50 P. M.

The wind was generally N.E, and a whole-sail breeze, as in the morning, but rather variable in direction and growing very light toward the end.

999, designed and built by Mr. R. Brewer, an undergraduate, did him great credit, as in the first race; she is very light, with extremely long overhangs, bamboo spars, and the lightest possible metal work aloft. Judges as in the first race. Hanley's boat not being measured, the second class sloop prize is in doubt.

Grilse showed up in her old form, three men being able to hold her down in a moderate breeze, aided by handling of the first day. Summary as follows:

Rad sailed under B. Y. C. rules and measurement.

Courses 9 3/10 miles for second and third classes, and 6⅛ miles for fourth and fifth classes, mostly to windward.

Winners of prizes: Second class cats, Linotte first, May King second; third class cats, Melro first, Nobska second; fourth class cats, Coquette first, second in doubt—No Name or Elsa; fourth class sloops, Grilse first, Sally second; fifth class sloops, 999 first, Waskete second; fifth class cats, Vif first.

Judges: David Rue, W. Lloyd Jeffries.

YACHTING NEWS NOTES.

Regina, sloop, Dr. Willard Parker, of New York, was seized on Aug. 18 while lying off South Norwalk by Deputy Collector Buckingham, of the Bridgeport Custom House, and Dr. Parker was fined $150 by Collector Goddard. The seizure was made on the ground that the yacht was used for carrying passengers for pay. Dr. Parker will appeal to the Treasury Department. The matter seems to hinge on the question whether a charter for a very short period can be construed as carrying passengers for pay.

The race between the steam yachts, Say When, W. J. White, of Cleveland, and Enquirer, W. J. Connors, of Buffalo, took place on Aug. 13 over a 30-mile course on Lake Erie. The times were:

Enquirer..... 1 34 15 Say When..... 1 34 43

The schooner yacht Hawthorne, of Chicago, recently sunk, was raised on Aug. 14, but sunk again after being dragged a short distance.

Rifle Range and Gallery.

The National Rifle Association.

WE have received the following interesting communication, dated Aug. 22, from Gen Bird W. Spencer, executive officer of the Association, in regard to the prospects for a good meeting at Sea Girt, N. J., Aug. 31-Sept. 5:

"The indications now are that we will have the largest meeting for military competitions ever held in this country. The following States will be represented by State teams: New York, Maine, Massachusetts, Connecticut, Delaware, Pennsylvania, District of Columbia, Georgia and New Jersey. The regular army will most likely be represented by regimental teams only. No less than twenty-five regimental teams will be presented, and as many more company teams.

"In the cavalry team match the following organizations have signified their intention of entering teams: Georgia Huzzars, of Savannah, Ga.; President's Horse Guards, of Washington. D. C.; Governor's Horse Guards, of Atlanta, Ga; Squadron A, of New York, and the first Troop (Essex Troop), of Newark, N. J.

"The question of who is the champion revolver shot of this country should be determined beyond a doubt, as all of the cracks will be presented Lieut. Sumner Paine, of Boston, who won the international match at Paris a few months ago; C. S. Richmond, of Savannah, Ga., champion of the last two meetings, and Theo. E. Beck, Newark's crack shot, will come together for the first time.

"The riflemen of Georgia and District of Columbia will arrive here ext week for preliminary practice."

Presque Isle Rifle Club.

ERIE, Pa., Aug. 22.—The following is the score of regular practice shoot, distance 200yds., standard American target, 7-ring black. Mr. Disque, the jeweler, has donated a fine silver water set to be shot for on Labor Day. The club will hold an all day shoot on that day, of which the above will be the principal event.

Revolver Shooting in England.

OWING to the holidays, only three men shot at the South London Rifle Club on Aug. 4. Result:

Twenty yards, stationary target:

Walter Winans	577777—40	Malsinger	235660—22
Clementi-Smith	467576—35		

Fifty yards target:

Walter Winans	756775—37	Malsinger	340434—18
Clementi-Smith	736355—29		

Clementi-Smith has won the rifle championship of the club for the second year in succession, and the Winans trophy (modeled and given by Mr. Winans) becomes his property.

At the North London Rifle Club on Aug. 5 the following scores were made at the 50yds. revolver target:

Walter Winans	776747—37	R G May	447744—30
Major Munday	556774—34	W P Thompson	524647—28
Tilbury	746656—34	Lieut. Curley	743254—27
Holmes	436767—33	Chicken	246875—27
Capt T W Heath	765476—35	Carter	736536—31
Denyer	775337—32	Lieut J Howard	545744—29
Capt Baxter	753537—30	T Knapp	734245—29
Capt Evans	367753—31	Lieut Barrett	034470—18

Rifle in Massachusetts.

LOWELL, Mass., Aug. 15.—At the Middlesex rifle range this afternoon the team of Company C, 6th Regiment, M V. M., shot another match with the Middlesex Rifle Team, with the result given in the score below. A singular coincidence was that Company C's team made the same score (413 points) that they made in the match shot July 11, when the military boys won by one point. Each team was handicapped by the absence of its captain.

Middlesex Rifle Team.		Company C Team.	
W J Burbeck	5545554444—45	Lieut Swift	5544554543—44
Hartford	4453455554—45	Corp Gannon	4444555454—44
White	5454544544—44	Pvt Robinson	4454445554—44
Sherman	4555454444—44	Pvt Hahn	5454544444—43
Dickey	4355544354—42	Pvt Roger	4545453444—43
Fisher	4444544444—41	Pvt Haines	4544444444—41
Randall	4444445544—41	Pvt Burns	4455434444—41
Coburn	5444444444—41	Pvt Crosby	4444433444—38
F A Burbeck	4543543445—41	Pvt Ahlberg	3544445423—38
Morse	3344445444—39—423	Pvt Hardy	4543343434—37—413

The shooting was off-hand, 200yds., Creedmoor target.

As each team has won one match, the tie will be shot off Sept. 12 on Company C's new range. W. H. WHEELER, Sec'y.

Calumet Heights Rifle Club.

CHICAGO, Ill., Aug. 15.—The scores made to-day by members of the Calumet Heights Rifle Club were as follows:

Class A for Gentlemen.

Conditions: 200yds., standard U. S. target, any caliber rifle:

*A C Patterson	4324445342—35	J S Houston	3240230230—19
P D Norcom	0303000240—12	C W Spalding	0244354443—33

* Patterson wins medal in class A.

Class B for Ladies.

Conditions: 100yds., standard Creedmoor target, .22cal. rifle, with rest:

*Mrs Chamberlain	4444445344—40	Miss Irvin	4444324444—37
Mrs Young	0022233223—19	Miss Walker	2434242433—33

* Mrs. Chamberlain wins medal in class B.

Columbia Club Scores.

SAN FRANCISCO, Aug. 10.—*Editor Forest and Stream:* At the regular semi-monthly shoot of the Columbia Club, held on Shell Mound Range on July 26, the following scores were made on the Columbia target:

Unfred diamond medal, 3 shots: Dr. L. O. Rodgers 4 5 1—10, J. "Unfred" 12, F. O. Young 18.

Rifle record medal, 10 shots: F. O. Young 3 8 6 4 8 4 9 8 2 4—56, Dr. L. O. Rodgers 62, F. E. Mason 65, P. Bohr 69, A. B. Dowell 70.

On the short range, 50yds., the revolver, pistol and small rifle sharps were congregated nearly all day. Many scores were shot on the Blanding pistol medal match. The scores for the three styles of arms were as follows:

Pistol, Blanding medal, 3 shots, open to all comers: A. H. Pape 1 2 1—4, J. E. Gorman 1 5 1—7, C. M. Daiss 5 1 4—10, F. O. Young 3 5 6—14.

Pocket revolver, Carr medal, 5 shots: M. J. White 5 4 10 7 8—34.

Revolver trophy, all-comers' match, 6 shots: M. J. White 10 8 14 8 7 5—52. A. H. Pape 53.

With .22cal rifle, all-comers, medal, 5 shots: E. Jacobson 2 2 1 3 2—10, Ed Hovey 1 3 2 4 1—11.

Ladies' .22cal. rifle, Glinderman trophy, 10 shots: Mrs. M. J. White 2 3 2 3 5 7 9 5 4 6—46.

Medal shoot of Aug. 9 was well attended. Scores:

Champion class, 10 shots: J. E. Gorman 3 10 2 1 2 2 7 4 2 4—37, A. H. Pape 43, F. O. Young 58.

First class, 10 shots: Dr. L. O. Rodgers 8 3 2 8 13 5 2 12 1 1—55, A. B. Dorrell 55, M. J. White 57, F. E. Mason 58, D. W. McLaughlin 61, P. Bohr 83.

Second class, 10 shots: E. Jacobson 4 3 1 16 4 8 5 3 18 3—65, J. P. Cosgrave 80, F. H. Bushnell 88, G. M. Barley 90.

Open to all comers, Blanding medal, 3 shots: C. M. Daiss 1 2 1—4, J. E. Gorman 7, A. H. Pape 10, F. H. Bushnell 10, Dr. L. O. Rodgers 8, F. O. Young 8.

Revolver trophy match, 6-shot scores: F. O. Young 44, Dr. L. O. Rodgers 64.

All-comers, .22cal. rifle, medal, 5 shots, 50yds.—Ed. Horey 1 3 2 2 1—9, P. Bohr 10, Mrs. M. J. White 18, R. W. Forrest 47.

The club's competition on the 200yd. rifle range was just as keen, and in the rifle record medal match F. O. Young broke the record with 41 in ten shots. This shows he bunched all his shots in a 4 1/10 in. circle, and made what would be 234 on a German ring target. The Columbia target count was 2, 2, 2, 7, 4, 3, 4, 7, 8, 2—41

The class medal record and the all-comers' re-entry match records Columbia target, were as follows:

For members only, champion class, ten shots: Dr. L. O. Rodgers 64, P. Bohr 67, A. H. Pape 73, F. O. Young 75, L. Barrere 97, H. H. Burfeind 116.

First class: J. E. Klein 74, F. E. Mason 86, A. B. Dorrell 93, O. A. Bremer 103.

Second class: E. Jacobsen 76, G. Barley 114, F. H. Bushnell 146.

Unfred diamond medal, open to all, 3 shots: F. O. Young 10, Wm. Glinderman 12, D. W. McLaughlin 12, Dr. L. O. Rodgers 15, H. R. Crane 16, H. H. Burfeind 18.

Military rifle, Glinkermann medal, 10 shots: F. O. Young 44, S. I. Kellogg 43, E. Jacobson 42, L. Barrere 42.

Rifle record medal, 10 shots: F. O. Young 41, D. W. McLaughlin 53, F. E. Mason 56, Dr. L. O. Rodgers 64, L. Barrere 75, H. R. Crane 76.

I am sorry to see our Boston friends trying to mutilate the Columbia target by widening the spaces outside of the black. The Columbia is almost a perfect target for rifle, pistol or revolver. Its merits grow on one with increased experience in its use. The figures on its face mean something. I believe its universal use would tend to improve marksmanship. ROBEL.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 22.—PASSAIC, N. J.—Third tournament of the New Jersey Amateur Trap-Shooters' League. Sweepstakes at 10 A. M.; team race at 2 P. M.

Aug. 25-27.—BINGHAMTON, N. Y.—Binghampton Gun Club's tournament for amateurs; two days targets, one day live birds. Money divided under the Rose system. H. W. Brown, Manager.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Aug. 26-27.—KALAMAZOO, Mich.—Tournament of the Celery City Gun Club, in connection with Michigan Trap-Shooters' League.

Aug. 31-Sept. 2.—ATLANTIC CITY, N J.—Tournament of the Atlantic City Gun Club, on Young & McShae's pier. For programmes address Harry Thurman, Germantown, Philadelphia, Pa.

Aug. 31-Sept. 2.—ST. PAUL, Minn.—Annual tournament of the St. Paul Gun Club, at State Fair Grounds. B. F. Schurmeier, Sec'y.

Sept. 1-5.—BUFFALO, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 7.—WELLINGTON, Mass.—Tournament of the Massachusetts State Shooting Association, under the auspices of the Boston Shooting Association.

Sept. 8-9.—MARION, N. J.—Tournament of the Interstate Association, under the auspices of the Endeavor Gun Club of Jersey City, N. J.; $150 added money.

Sept. 8-10.—GALT, Ont.—First annual tournament of the Ontario Rod and Gun Club; $800 to $1,000 added money.

Sept. 11.—WEST LEBANON, N. H.—All-day shoot of the West Lebanon Gun Club.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Sept. 29.-Oct. 2.—HARRISBURG, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct. 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

1897.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The result of the race between Phil Daly, Jr., and Tom Morfey, which took place on the grounds of the Hollywood, N. J., Gun Club on Wednesday, Aug. 19, was a complete surprise to the majority of trap-shooters in this part of the country. On form it looked a cinch for Morfey, and judging from the way in which he cut down the birds in the sweepstakes shot on the same day he certainly should have won. Daly did some good work and won with a score of 41 to 40. The conditions were: 50 live birds, 30yds rise, 21yds. boundary, $100 a side. Morfey shoots a match to-morrow (Wednesday, Aug. 26) on the same grounds with Edgar Murphy, each man shooting at 200 birds, same rise and boundary.

On Aug. 13 Alex. King, of Pittsburg, Pa., did some good work on targets at the grounds of the North Side Gun Club, Alleghany, Pa. In the contest for the E. C. cup he broke 94 out of his 100 targets. The cup has been shot for eight times, and there is only one more shoot to take place. The conditions are the five best scores to count, the highest aggregate for five scores taking the cup. John Shaffer has shot five scores, but King has only shot four. If Shaffer does not shoot at the next contest, or fails to make 90 or better, Alex. King has to score 90 to win the cup. The scores for each 25 of King's score were 25, 23, 22, and 24; he ran his first 47 without a miss.

We learn from Harrisburg, Pa., that the programme for the Pennsylvania State shoot, Sept. 29-Oct. 2, will soon be in the hands of the shooters of that State. The programme will be in book form and will contain matter of much interest to the members of the State organization, as well as all those who love a gun and enjoy sport in the Keystone State. The first three days of the tournament will be devoted to breaking targets; the last day live birds will be used. The team championship race on the last day will be one of the features of the four days' sport.

The great match between Rolla Heikes and Fred Gilbert for the World's championship at inanimate targets was shot on Thursday, Aug. 20, at Watson's (Burnside) Park, Ill. The holder of the trophy, Gilbert, made a gallant fight to retain the trophy and the title, scoring 130 out of the 150 targets shot at. Rolla's score was three more—133, an average of 88.6 per cent. Gilbert's average was 86.6 per cent. The conditions were: 50 targets, unknown angles; 50 targets, expert rules, one man up, the five traps down; 25 pairs.

The Terre Haute (Ind.) Gun Club will hold its first annual tournament Sept. 10-11. Everybody is invited, nobody barred. The programme issued by the club contains both target and sparrow sweepstakes. Targets will be charged for at the rate of 2 cents each, sparrows costing 10 cents each. Ten-gauge guns and black powder are barred. All purses divided on the Rose system.

The Parker Gun Club, of Meriden, Conn., will hold an all-day shoot on Labor Day, Sept. 7. The events on the programme are open to all. The club announces that several valuable merchandise prizes will be shot for, and that added money will also figure in the purses. Targets will be charged for at the rate of 2 cents each, and all purses will be divided on the Rose system.

A correspondent who signs himself 48grs. sends us a very interesting communication in regard to the Rose system at Jack Parker's tournament. His figures, so far as we have been able to verify them, seem to be entirely correct. As we have heard no reason why the system was abandoned after the first day's trial, we cannot enlighten 48grs. on that point.

The New Jersey Amateur Trap-Shooters' League is exercised in its mind as to what constitutes professionalism among trap-shooters. From the discussions which took place at its tournament at Passaic, N. J., on Saturday last, Aug. 22, it seems as if there was considerable difference among the members of the league on that point.

The Atlantic City (N. J.) Gun Club's shoot, Aug. 31-Sept. 2, will be a pleasant affair. Young & McShae's pier is a good place to hold a tournament, while the reputation of Atlantic City as a seaside resort will attract shooters. Harry Thurman, of Germantown, Philadelphia Pa., will furnish programmes on application.

Jack Halsted, of Peekskill, N Y., was in the city on Saturday last, Aug 22. He tells us that the Newburgh (N. Y) Gun Club is figuring on the programme for its annual fall tournament, Oct. 7-9. These annual gatherings of the Newburgh boys are always pleasant affairs and never fail for lack of shooters.

We hear encouraging reports from buffalo in regard to the tourna ment at Audubon Park, Sept. 1-5. B. F. Smith, who will manage the shoot, is not the man to let the grass grow under his feet. The added money which he hangs up should draw a crowd on the above dates.

Barring the championship race at Burnside Park, trap-shooting mat ters were very quiet. This week the main events in this part are the tournaments at Binghamton, N. Y., and at Burlington, Vt.

The members of the Haverhill (Mass.) Gun Club have decided to offer a bonus of $10 to game wardens for every conviction of violators of the game laws of the State of Massachusetts.

Aug. 24. EDWARD BANKS.

Heikes Wins the E. C. Cup.

CHICAGO, Ill., Aug. 20.—The city of Chicago has been especially favored the last few weeks in shooting matters—a very welcome contrast to the long season of torpor which has prevailed here. The last event of interest is the Heikes-Gilbert match to-day for the E. C. cup and the target championship. While it is possible that some of the big live-bird matches may at times have attracted a greater interest than this, it is likely that no individual match at targets has ever been awaited with more interest—certainly never in Chicago, where both men are so well and favorably known and where their skill at the game is so well appreciated. Heikes was for two years a citizen of Chicago, and Gilbert has been living here practically for some time this summer. Both men are esteemed highly as the types of skill, courage and modesty combined, and both men have a universal popularity. It has for two weeks been a common saying that it was too bad that these two men should meet in a contest where one had to be defeated, for the friends of one are the friends of the other, and, moreover, the two men themselves are warm personal friends, as much so now, moreover, as before the race.

In the matter of odds on the race, there was no disguising the fact that Heikes was the favorite by a great majority. In spite of Gilbert's fine performance before the traps during the past season, he had, in the opinion of conservative shooters, no license to beat the redoubtable man from Dayton. Even had Gilbert defeated Heikes, Heikes still would have remained, in the opinion of the shooters of America, the unapproachable target shot of the country. There has been no man like him in the history of trap-shooting. What the future may bring forward no one can tell. Gilbert may in the future prove himself year after year for ten years as good a shot as Heikes has been, but only time can establish that. It does not seem likely that we shall soon again see so brilliant and consistent a performer in the target game as Rolla Heikes. Certainly it was no disgrace for Gilbert to be beaten by such a man, and the close run which Gilbert gave the winner only serves to heighten the respect in which Gilbert is held as a master of the gun. Gilbert is thirty years of age, weighs between 155 and 160lbs. He is large-limbed and muscular, of good constitution and strictly temperate habits. What there may be inside of him in his nervous system can only be told after more time has passed. He has made a brilliant record in his short career on the circuit, though it is the opinion of certain shooters that Gilbert shoots under rather high pressure, and so will be more apt to go stale at some stage of a long tour than a man who shoots with less apparent exertion. Gilbert worked hard in this match, as he seems to work in all his shooting. Heikes shot with his customary ease and *sangfroid*, amounting at times apparently almost to carelessness. He shoots his targets perhaps 30ft. closer in than any man before the traps, and does it with such ease as to offer a most deceptive spectacle of shooting. In this regard he is of his own kind, with no one like him, unless it was Billy Wolstencroft in his best days.

There is no shooter who in the space of one year has made the reputation that Fred Gilbert has, and his reputation for modesty and courtesy is equal with his repute for skill. Gilbert cannot tell when asked of any very long runs in his shooting at tournaments, but he has won during the current circuit a great number of tournament av-

R. O. HEIKES.

erages, competing with all the cracks of the country. At Omaha last year he missed only 22 targets out of 590; at Memphis this year he missed only 3 out of 135; at Joplin this year he missed only 4 out of 160; at Cincinnati only 7 out of 170. He won first average at Cincinnati, at Joplin and at the big E. C. shoot at New York, where he carried away the E. C. championship cup. He won second average at Omaha and at Atchison, and, in short, has been in the first flight right along.

Heikes's record is a long and well-known one. He has been shooting for nearly ten years and during that time has been forced to make his own records for himself. He is the acknowledged champion of target champions and has won more averages than any three or four men together. No one but a giant of his stolid, equable temperament, of perfect digestive apparatus and nerves inherited from generations of powerful and healthy ancestors could have established the history that Heikes has made for himself. The man is a freak, like a fast horse or a fast boat. Each horse and each boat finally is beaten by age or accident, or by innovation in methods. Perhaps at some time Rolla Heikes will be beaten, but it will be no disgrace to him then, for he has done enough already, though he seems fit to do quite as much more, and never shot as well as he does now. Calm, unfretted and genial now as ever, he is as well known, as well liked and as well dreaded as any man we are apt soon to see in shooting circles. Heikes is a natural shot. The game came easy to him, and very soon after he took up the gun he was making trouble among all competitors in the haphazard tournaments of those days. He has made the longest strings of successive breaks ever known in target shooting, and done more than any living man to establish the evenness and accuracy of modern guns and ammunition. At Detroit in 1889 he ran 150 straight. At Corry in 1890 he ran 186 straight, which record it was the fortune of the writer to see and report. Again at Corry he ran 170 straight, and in the East and West team race at Corry he broke 100 straight. At South Bend, Ind., in 1890, he made the run which he himself calls his best one, 141 straight with 10 pairs in the middle of the run. He ran 175 straight at Hamilton, Canada, and 117 straight on the Eureka Club grounds of Chicago. In these different runs he used different guns and ammunition, but since he took up the Winchester repeating shotgun he has done some of his most remarkable work, and showed the efficacy of that arm to perfection. At Columbus, Ohio, he ran 100 straight. At Chattanooga last year he ran 137 straight; and at Galesburg, Ill., 133 straight. At Detroit last week he broke 98 out of 100 in a 100 bird event. Heikes has broken 500 targets in 37¼ minutes, from five traps at 16yds., loading his own guns. This he did at Dayton in February, 1894. At Indianapolis in February, 1895, using five Winchester repeaters, he broke 100 targets in 4 minutes and 20 seconds.

These being the records of the men, there was ample reason for the intense, though subdued, excitement which marked their appearance at the score before the large throng of shooters. Heikes had at Dayton, the week before his coming to Chicago, shot this same race and scored 141 in practice. On Wednesday at Watson's Park he had again gone through the race, and so had Gilbert. Charlie Grim and Harvey McMurchy on that day shot a team race with Heikes and Gilbert, conditions of the E C. cup race governing. The showing at that time was a curious commentary on shooting form. Grim was high man with 138, and the hot stayer, McMurchy, broke 137. Heikes scored 134, and Gilbert 128. All these scores, with the exception of Gilbert's, were higher than those in the championship race.

The weather to-day was perfect, without much wind, but the targets could not be called easy. It was difficult to get the traps to throw the birds according to the conditions. The straightaway bird was not a straightaway, but a long skater that curved to the right. Such wind as prevailed served to make the flight dancing and erratic. Under such conditions Gilbert certainly was not favored, but he made his shooting harder for himself. He says that he is not ashamed of his score in the singles, but admits that he was very slow in the doubles, his gun being a little straight for double shooting. Nothing but the excellence of his gun, an L. C. Smith pigeon gun, scored him some of the breaks he made far out in the field. Heikes ground his targets more sharply, closer in, and his misses came as usual through under-shooting on birds which took a sudden shoot up from the trap. Heikes's time was about the same throughout the race, increasing a little in speed toward the close. Gilbert varied more, sometimes snapping the straightaway, and sometimes dwelling a hair-raising interval on his corner birds. Heikes used a Winchester repeating gun, Leader shells and 44grs. of E. C. Gilbert used an L. C. Smith pigeon gun, Smokeless cases and 3¼drs. measured (really about 3⅛drs.) of Du Pont's Smokeless. In his doubles he used U. M. C. Green Trap shells in his left barrel.

The judges of the race were Mr. H. McMurchy, of the Hunter Arms Co., and Mr. F. P. Stannard, of Montgomery Ward & Co., Dr. Frothingham, of Chicago, acting as referee. The traps were not operated as well as they might have been, and balks were frequent. Each man accepted and broke one apiece. Gilbert was balked nine times, on two different times having to wait for a third bird. Heikes was balked seventeen times. Twice the traps broke a second bird, and twice he was obliged to wait for a fourth trial before he could shoot. With old shooters this makes little difference, and Heikes did not miss a bird after a balk, nor did Gilbert, except in the doubles. Gilbert's 148th bird was broken lightly, and one judge called it lost. The other claimed a break, and referee decided it dead. Heikes on his 23d pair missed both birds, the only "Dutch double" made by either. On his 16th pair, when Heikes was one ahead in the race, his gun failed to feed up the cartridge for the second shot. Under the rules he was given another pair, which he broke promptly. Heikes missed his 2d bird in the race and Gilbert his 16th. Gilbert seemed to grow slower throughout the race, if anything, and Heikes rather increased his speed, and finished with a slap-bang gait. At the known traps and unknown angles Heikes scored 48 and Gilbert 47. At the unknown traps and known angles Heikes scored 45 and Gilbert 44. In the doubles, where Heikes was thought to be handicapped by his gun, he again went out one bird in the lead, breaking 40 to Gilbert's 39. He thus beat Gilbert at each phase of the game, and won by a total of three birds The race was a tie at the 110th bird and again at the 120th. At the 130th Heikes was one ahead, and at the 140th he led by four, falling back one in the last 5 pairs.

The next challenger for the E. C. cup will have to go to Dayton to shoot, and it need not be said that he will receive a shooting entertainment if he wins the cup there. It is a hard matter to catch Heikes out of form, and the man who catches him in form at Dayton is going to have the hottest target race of his life. Heikes himself, usually reticent, and modest as a girl as to his own ability, quietly said to a friend not long ago, that he doubted if any man could beat him at Dayton this summer if he continued to feel as well as he did at present. The following are the scores of the race: For the E. C. cup and the individual expert target championship at 50 targets, known traps and unknown angles; 50 targets, unknown traps and known angles; 50 pairs, A. S. A. rules.

1206 BOYCE BUILDING, Chicago.

Central Gun Club, of Duluth.

DULUTH, Minn., Aug. 15.—The fourth annual tournament of the Central Gun Club, of Duluth, was held on Aug. 12-13, at its new grounds on London road. These grounds are first-class for trap-shooting, as the shooters face the lake and have a clear background. The grounds are easily reached by a line of electric cars, which pass directly by the principal hotels. On the grounds the arrangements were most complete. Five bluerock traps throwing bluerocks were in line, the electric pull being used. An electric buzzer announced to the shooter that another bird was ready after any break by the trap. The weather for the two days of the shoot was all that could be desired. The local marksmen were somewhat surprised and a great deal disappointed that none of the range town shooters, who always do such good shooting, were represented. Aside from this everything was satisfactory to all concerned. There were shooters from all parts of the country, but those who attracted particular attention were S. Glover, of Rochester, N. Y., and Catamaran, of St. Paul; these two made a very pretty race for first average. Glover would probably have won first average if it had not been for his 4yds. handicap in the last event, in which he lost two birds, while Catamaran made a straight, thus winning first average by one bird over Glover. Catamaran's general average was 89.2, Glover 88.8, while Sachem, Duluth's able representative, won third with 86.8.

Below will be found the scores of the entire two days' shoot, which, although they do not show a very large number of entries, yet show a successful shoot, financially and otherwise:

Events:	*1*	*2*	*3*	*4*	*5*	*6*	*7*	*8*	*9*	*10*	*11*	*12*	*13*	*14*	*15*	*16*

The Buffalo Programme.

WE have received a synopsis of the programme for B. F. Smith's tournament at Audubon Park, Buffalo, Sept. 1-4. Of course there will be practice shooting on Monday, Aug. 31, but no regular programme will be shot out.

On Tuesday, Sept. 1, the first day of the shoot, the programme calls for the following events:

Events.	Targets.	Angles.	Entrance.	Added.
1....	15 bluerocks.....	Unknown.....	$2.00.....	$15.
2....	20 bluerocks.....	Unknown.....	2.50.....	$20.
3*...	15 bluerocks.....	Known.....	2.00.....	500 Walsrode shells.
4....	15 bluerocks.....	Unknown.....	2.00.....	$15.
5 ...	25 bluerocks.....	Unknown.....	2.50.....	$25.
6*...	20 bluerocks.....	Unknown.....	2.50.....	$15.
7....	15 bluerocks.....	Unknown.....	2.00.....	$15.
8....	20 bluerocks.....	Unknown.....	2.50.....	$20.
9*...	15 bluerocks.....	Known.....	2.00.....	500 Du Pont shells.
10....	15 bluerocks.....	Unknown.....	2.00.....	$15.
11....	20 bluerocks.....	Unknown.....	2.50.....	$20.
12*...	20 bluerocks.....	Unknown.....	2.00.....	1 fine fishing rod.

* Events marked with an asterisk are open only to shooters who do not average better than 75 per cent. All other events are open to all.

On Wednesday, Sept. 2, the programme is the same as on the previous day, with the exception that in event No. 6 there will be 500 loaded King's Smokeless shells added to the purse. Thursday, Sept. 3, the third day of the tournament, is a live-bird day. There are two events on the programme: No. 1, 7 birds, $7; No. 2, 15 birds, $15. Birds are included in each entrance fee.

On Friday, Sept. 4, the main event of the tournament will be shot. This will be a 25 live-bird event, $25, birds included, handicap rise, $750 guaranteed; an elegant trophy will be given to the winner in addition to his share of the purse.

In all target events there will be 4 moneys, and the purses will be divided under the Rose system, with ratio points of 5, 3, 2 and 1. The purses in the live-bird events on the third day will be divided also under the same system, but only into 3 moneys, with ratio points of 5, 3 and 2. The purse in the 25-bird handicap on the last day will be divided as follows: $600 to the three high guns—$300 to the first, $200 to the second and $100 to the third; all surplus divided into 5 moneys in the proportion of 35, 30, 20, 10 and 5 per cent., and to go to the five next high guns.

Substantial average prizes are offered for the four best averages made in all open events. Jack Parker will be on hand to run the shoot, and to see that the targets and traps are kept running, and that the boys have all the shooting they want.

Wants to Trade Puffs for Powder.

OAKLAND, N. J., Aug. 18.—*Editor Forest and Stream:* Dr. Ernest L. Tiffany, formerly of Princeton, N. J., now of Guilford Center, N. Y., ordered from us last week a 1lb. can of E. C. powder, for which we sent him the bill. You will no doubt remember Dr. Tiffany as a

FRED GILBERT.

man who wrote numerous letters under the *nom de plume* of Wads etc., puffing up Walsrode powder and numerous other articles.

To-day we received a letter from Dr. Tiffany as follows: "You quite misunderstood the intent of my letter. I do not buy a 'pig in a poke,' nor do I buy any new powder until I have had opportunity to try it. As I am well known to the shooting fraternity through my articles in *American Field*, etc. (over a *nom de plume*), on tests of smokeless powders, I have been furnished free with samples—from 1 to 10lbs.—of every smokeless compound on the market, except the new Gold Dust and your E. C. No. 2, and the former I expect a sample of this week. The King Powder Co. was the last in, furnishing me with 6¼lbs. of their Smokeless shotgun and 1lb. of their Smokeless rifle powder. The manufacturer who *has a good thing loses nothing by this.* If the sample is sent free I should be glad to pay carriage and give it a fair test; otherwise I of course cannot accept it."

It seems to me that Dr. Tiffany is just the man that the papers and the manufacturers should sit on. Although well able to afford to buy what he wants, he is so mean that he tries to get it for nothing.

I can show you the original of his letter any time you wish to see it, and hope that should Dr. Tiffany send any articles in to you on the powder question, or as far as sporting goods are concerned or any other question you will see your way to refuse his articles.

THE AMERICAN E. C. POWDER CO., LTD.,
NOEL E. MONEY, Sec'y.

The three days' shoot at Marion, N. J., Sept. 7-9, will practically wind up the season so far as tournaments around New York are concerned. With the exception of the Newburgh tournament, mentioned elsewhere, we are not likely to have any excitement in that line until the Grand American Handicap of 1897 opens up the ball in the spring. For this reason, and also on account of the tournament being given by the Interstate Association, as well as for the money added to the purses by the Endeavor Gun Club, there is every likelihood of a good turnout of shooters at the Marion traps on the above dates. The first day, Sept. 7, is the annual Labor Day shoot of the Endeavor Gun Club, and may be considered as "preparation day" for the Interstate tournament on the next two days.

On Sept. 8-10 Canadians will have a good chance to enjoy themselves at the traps of the Ontario Rod and Gun Club, Galt, Ont. The club will add from $800 to $1,000 to the purses.

Three New Ideas.

Chicago, Ill., Aug. 12.—It is well known that all the good new ideas in trap-shooting have first had their exposition in the columns of Forest and Stream, and all the reforms in trap-shooting have had their birth there. Other papers have been content with servility where civility would have been better as a policy. Forest and Stream has always believed that ideas at first hand were better than those at second hand, and results would seem to indicate the wisdom of this belief. When Forest and Stream does not have ideas enough furnished by its own people it has always been willing to pay for them, that being the secret of successful journalism.

It was Forest and Stream that first invented the copyrighted graphic type for scoring a live-bird shoot. Forest and Stream first began to tabulate the vast number of trap scores which came in from week to week, thus keeping its news up to date and fresh. Forest and Stream was first to attack the evil of dropping for place in trap-shooting, and the only paper to carry on a fight which now is won. Forest and Stream has spent more money in getting trap news than all the sporting journals of the country together. It has done a lot of other things which the modesty of the journal forbids mentioning. It is enough to say that to-day Forest and Stream is the recognized journal of the trap. It is therefore very natural that new ideas should flow to it, as water runs down hill by the sheer force of gravity.

I am able to-day to offer to Forest and Stream, from the city of Chicago, three ideas in trap-shooting which I think are entitled to be called new, and one or more of which may prove to have interest and merit other than that of mere novelty, although novelty alone is enough to commend an idea to a newspaper eager to be up with the times. I would be glad to claim the discovery of some of these three ideas, but I cannot do so. They all came up at the recent Du Pont tournament here. Two of the ideas belong to Mr. Wells, the able artist who did the Forest and Stream sketches at the tournament. The third idea really belongs to Mr. S. A. Tucker, of the Parker gun, who told me about it some time ago.

The first of these ideas is what Mr. Wells prefers to call the "Forest and Stream Clover-Leaf Field," showing the arrangement that can be made of three sets of traps at a big tournament. It is too bad this idea did not come out before the Du Pont shoot instead of after, for this would have been a grand place to try it.

The second idea is one hit upon by Mr. Wells at the Duryea-Winston pigeon race at Watson's Park, last Monday, Aug. 8. I had asked Mr. Wells to make me a sketch or so of the shooters in that race, and he came out with a sketch showing not only the shooters, but every individual bird they shot at—200 different sketches in all! This rather puts in the shade Forest and Stream's graphic type idea, though of course it is not capable of general application. I venture to say that there never has been in the history of shooting a pigeon race scored as this one shown in our last issue of Forest and Stream. It is a curious and novel feature, and one which will please all shooters. The sketch of each bird was caught at the instant it took wing. Mr. Wells says, "I photographed on my mind the position of the bird just as the first barrel was fired." Nobody told Mr. Wells to do this. He just got the idea. He would be apt to have ideas if he was around a sporting paper very long, for he had two ideas in one week.

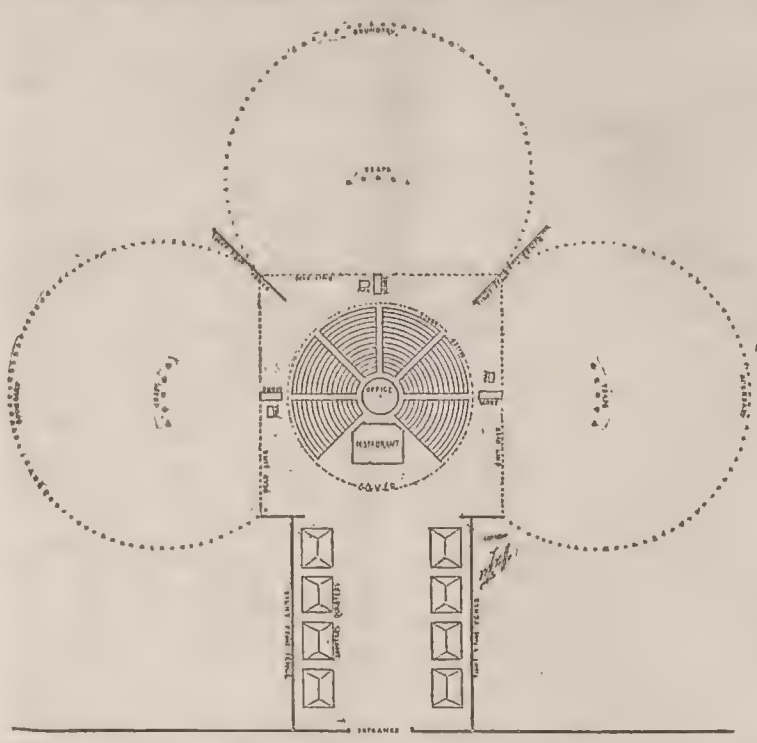
While Mr. Wells and I were playing around out at the Du Pont shoot, where of course we had nothing to do but play, one of the shooters—I think it was Dick Merrill, or maybe it was Chan. Powers—remarked that the live-bird shooting took so long that a man only got to fire a dozen shots a day. "If we had another set of traps," he said, "the management could make a barrel of money out of this crowd, for they would all be shooting targets." This, as must appear on thought, would have really been the ruin of the shoot, for a big mixed tournament on any grounds now in existence in America would be a confused and horrible affair should the number of shooters run up as it did here. But while this matter was in discussion Mr. Wells said:

"I'll show you a scheme by which you could run three sets of traps without any confusion at all, and you could shoot all live birds or part birds and part targets."

We scoffed at him, but when careful inspection has been given the plan he has put in diagram I am not sure that scoffing will be appropriate. His scheme is practical. If some shooting park will adopt it, it can hold a big shoot any day and make money at it. If the next big tournament will take it up it will save money and accommodate its patrons, no matter how many they are or how much they want to shoot, and it will do this smoothly and without as much friction as exists in running the best managed shoot.

The third idea also came up at this shoot. A gentleman present remarked that it was the best dressed crowd of shooters he ever saw. Another man said, "Why not? In my opinion the boys have been almost too careless as to how they dressed and how they acted at a shoot. Any old sweater or blouse or coat was good enough, and everybody seemed to think that at a trap-shoot a man didn't need to care how he looked. I have heard ladies, and men too, express their surprise at the generally tough look the crowd of trap-shooters at a tournament has. They wouldn't know the same crowd after dinner. But why not look a little 'slicker' while at the traps? It would all tend to raise the standard of the sport." It was then that I recalled a talk with Mr. Tucker last June on this same topic. Mr. Tucker told me that he was convinced trap-shooting would be helped if it came to have a sort of uniform or costume, something as bicycling or other sports have. He said that so impressed with this idea was he that he once even went to a sporting goods house and put before its head the design for a shooting coat, which he thought could be sold in large numbers, and which he believed would be a handsome and useful garment for any trap-shooter. The manager did not think the boys would buy enough of them, and so "turned down" the idea. This disgusted Mr. Tucker, who wasn't expecting to make any money out of it for himself, so he never took up the matter any further.

There is probably really more of practical advantage in this idea than in either of the others. There is no uniformity and not always any neatness in the garb of shooters at the trap. Some of the wealthiest of the devotees of the trap go dressed the shabbiest. Even the most careless of the careless will admit the usefulness of Mr. Tucker's idea. It was his notion that a coat, or a coat and vest, would be all that was necessary, the coat to replace the blouse or sweater, which seems now to be the nearest to trap uniform.



He thought the coat could be made of some neutral tint, gray or drab or some such shade, of velveteen or uncut corduroy, or some soft and easy material. It should be cut with overcoat sleeves, very roomy at the shoulder and armpit, and could be designed on lines snappy enough to make it a handsome and swell-looking garment. The cost would need to be somewhere between $6 to $10, and one would wear a man a lifetime. It would be cool enough to shoot in during summer, and roomy enough to wear over woollen in the winter. It would have pockets to hold the shooter's shells when he went to the score. "I want to tell you," said Mr. Tucker, "if you should see forty or fifty shooters at a tournament, the most of them dressed in that sort of coat, got up by an artistic tailor, you would be surprised to see the difference there would be from the usual crowd you see to-day. It would be a better place for a lady to go, and the result would be that more ladies would go to shooting tournaments. The whole character of the sport would thus be bettered, while it would be free from any charge of dudishness. I believe the idea is one that some tailor or sporting goods dealer should take up. He would make a lot of money at it."

A number of shooters who were consulted in regard to this idea of a trap costume were disposed to think it a useful and a coming thing. Mr. Thos. Marshall, very well known on the circuit, said: "If there had been a man on these grounds this week to take measures and orders for such a garment, he could have sold 100 of them. If the idea was once taken up, all the boys would fall into line. I believe it is a winner."

I am disposed to think myself that some enterprising house could do a good business with such a garment if it could hit upon a suitable cut and fabric. Bicycling, yachting, golf and tennis all have their costumes, the making of which constitutes a great industry. As trap-shooting becomes more and more developed, it will come in time to have a certain type in costume—not anything of a dude type, be sure, but something neat, manly, serviceable and useful.

THE CLOVER-LEAF FIELD.

Mr. Wells's "Clover-Leaf Field," to use the name happily suggested by his friend Dr. Fuller, of Chicago, is shown so well in the diagram that it needs small explanation. It asks for a circular, back-to-back arrangement of the traps, instead of one in line. The saving of space is obvious. The saving of time and of confusion would be quite as remarkable. The central space is designed to be covered by one canopy or large tent, the expense for which would be less than that of the row of smaller tents nowadays commonly put up for the comfort of the shooters. The diameter of this central space is about 165ft. The walls are left down in summer shooting. The shooters are all rounded up in one body and under one inclosure. While not shooting they can visit or watch the sport from the bank of seats back of the score. The work of the signal hustlers is simplified or done away with, for a blackboard of each score can announce in the view of all the names of the men next wanted. The distance from one score to the next around the edge of the circle is about 150ft., far enough to prevent confusion in the work of trapping, calling and shooting. A short fence separates the different shooting fields. The office is centrally located and in reach of the shooters. Access to the grounds is made easy and safe by a wide way between two high and tight fences. The direction of the firing is in each case as safe as that now practiced. Along the entrance way, or the stem of the Clover Leaf, can be placed the individual tents and headquarters. In short, this scheme, while useful in its entirety for a very large shoot or for a large permanent park, has many features to commend it for use at a big tournament. It saves room and expense, and condenses the whole affair into a nutshell of simplicity and convenience. The idea could be adopted in part in the holding of smaller shoots. The Clover-Leaf Field is a great saver of space. Watson's Park at Chi

"FOREST AND STREAM" CLOVER-LEAF.

cago could hold three sets of traps thus arranged as well as it now does two sets.

At first thought it would seem ridiculous to advance a scheme apparently so big and circus-like to hold a trap shoot. But trap shoots have grown bigger and bigger. They have cost more and more money. They have been managed with greater and greater excellence of business sagacity and business system. The idea does not imply a greater expense. It only implies a greater systematizing of the handling of a great shoot. The time may come when it will be seriously considered, not as a Jumbo freak, but as a large and admirable idea, well worked out. E. Hough.

1206 Boyce Building, Chicago.

Jack Parker's Tournament.

Buffalo, N. Y., Aug. 22.—*Editor Forest and Stream:* I was sorry to read in your report of the Detroit tournament that the Rose system was abandoned after the first day. Like many others, I am in favor of adopting this system at all tournaments, because I look upon it as the only fair and square way of dividing purses. It was quite a shock to me, then, to find that it was shelved after only a short trial. Knowing the system to be all right, I hunted around for some good reason for its being put aside in favor of the other method of dividing purses, a method which you have shown to be full of injustice. For the life of me I can find no reason.

The figures quoted are scarcely correct, if the scores in your tables are correct. Your report says: "Trimble shot 92 per cent. the first day and lost $4.50; 90 per cent. the second day and won $2; 93 per cent. the third day and lost $4." Looking at Trimble's scores I find that the percentage he made on the first day was 91.8, practically 92 per cent., as your report has it. On the second day his percentage was 88.1 for all events, but 93 3 for all events except the one at 21yds. rise, use of both barrels. On the third day his percentage was just 91, instead of 93. There being evidently something wrong with the figures on the percentages, I wanted to try and work out the purses under the Rose system and then compare them with the system generally used at present. It was not a hard matter to get one of Parker's programmes; there were plenty in the city. But it was a hard matter to work out all the purses, but it began to be quite interesting before I finished. Taking the first day's scores, I make it out that Trimble lost $3 09 under the Rose system, but would have lost $3.94 under the present system. (In explanation I may say that I have taken into strict account all the pennies.) On the last day, shooting in only five events, I find that under the present system he cleared $3.04, while under the Rose system he would only have been 58 cents ahead. The difference here is due to his 24 out of 25 in the last event, which paid him $11.47 under the present system, but only $8.50 under the Rose system.

Heikes's figures for the same two days are quite instructive. On first day, under the Rose system, he won 33 cents and a gold watch! Under the present system, on that day he would have been a watch in, but $3.48 out. On the last day he was $1.93 ahead under the present system, but under the Rose system he would have won $7.93. It must be remembered that Heikes on the last day dropped only 6 targets out of 205 shot at, averaging a fraction over 97 per cent.

Compare the two systems then: On the last day Heikes breaks over 97 per cent. out of his 205 targets, and under the present system—the one used at Detroit that day—he wins $1.93; Trimble on the same day loses 10 targets out of 105 and wins $3.04. But it is manifestly unfair to judge any system by the results of one or two shooters. One ought properly to take into consideration the results attained by all.

I suppose there are other statistical fiends among your readers besides myself, and probably they may be interested if you give some of the following figures showing how the two systems paid at Detroit: The programme says that all purses were divided into five moneys, with 8, 5, 3, 2 and 1 as the points in the Rose system, and I have figured all purses that way unless it was stated in the programme to the contrary. Dividing purses under the present system, I have made the moneys 30, 25, 20, 15 and 10 per cent.

First day: In event No. 1 the Rose system, as compared with the old system, paid to those in first money $3.28 as against $3.65; second money, $2.05 as against $1.01; third money, $1.23 as against $3 65; fourth money, 82 cents as against $1.82; fifth money, 41 cents as against 52 cents. Under the present system third money would have paid as much as first, while third and fourth would both have been better than second money.

In event No. 2 there were twelve straight scores; six men in for second money, three in for third money, seven in for fourth money, and only two in for fifth money. The comparison of the two systems shows that the Rose system paid (for $2 entrance) $2.16 for first money as against $1.05 under the present system; second money, $1.35 as against $1.75; third money, 81 cents as against $2.80; fourth money, 54 cents as against 90 cents, and fifth money, 27 cents as against $2.10. It will be seen that the 19s, 18s and 16s were all better than straight scores.

Event No. 3, a 25-target event, shows the justice (?) of dividing purses on the old percentage plan. There were six straight scores, five scores of 24, four of 23, five of 22, and two of 21; twenty-two men out of twenty-seven entries drawing money. The entrance fee was $3. Under the old system each man who had scored 25, 24, 23 or 21 would have drawn exactly the same amount, $3.03; the 22s would have drawn down $1.82 each. Under the Rose system straights paid $4.96; 24s, $3.10; 23s, $1.86; 22s, $1.24, and 21s, 62 cents. The above is a good example of how the Rose system works as against the old system.

In No. 4 under the present system straights paid $1.32, while the 12s and the solitary 11 received $2 65 and $3.54 respectively. Under the Rose system the same places would have paid $2.08 as against 52 cents and 26 cents respectively.

I could give plenty of other proofs of the equitable distribution of purses under the Rose System, but I know your space is valuable. I should, however, like to give one more example: the sixth event on the last day, 25 targets, $5 entrance, 18 entries, four moneys, 40, 30, 20 and 10 per cent. Fanning, with 25 alone, took, according to my figures, $30.60; the two 24s drew down $11.47; the five 23s received $3.06 and the five 22s took $1.52 each. Had the purse been divided into five moneys and divided under the Rose System the same parties would have received respectively $13.60, $8.50, $5.10 and $3.40, while the two 21s would have received $1.70 each. I leave it to any of your readers to say which is the fairest system.

If I may be allowed a few more words in conclusion, I would like to point out that the trouble with the crackerjacks at Detroit was that the handicap was a little too stiff for them when the capabilities of some of the other shooters are taken into consideration. They did not have it all their own way, and it looks to me as if they don't like anything that does not give them everything they ask.

For my part I vote for the Rose system first, last and all the time.

48grs.

Emerald Gun Club of New York.

New York, Aug. 18.—The Emerald Gun Club held its regular monthly shoot this afternoon at Dexter Park, L. I. The attendance was good, 29 members putting in an appearance. Of the above number three made clean scores of 10 birds: E. Dudley, R. Phister and Gus Greiff. Nine others landed with scores of 9 each. The scores, with the handicaps of yards and points, were:

Class A, 29yds., 7 points: Richard Phister 10, Gus E. Greiff 10, L. H. Schortemeier 9, Edward J. Clark 9. Class A, 28yds., 7 points: Dr. George V. Hudson 6, Thomas Short 8. Class A, 28yds., 6½ points: E. Dudley 10, Charles Stuetzle 5, Gus Nowak 9, Harry P. Fessenden 9, Edward A. Vroome 6, John H. Moore 8, George E. Loeble 9, Frank W. Place 9, William Sands 7. Class A, 28yds., 6 points: Philip Butz 5, Dr. Klein 9, Richard Regan 8, Joseph Banzer 4. Class A, 28yds., 5½ points: Bernard Amend 8, Henry Thiele 9, Max Adams 9. Class A, 28yds., 5 points: John Woelfel 8. Class B, 26yds., 5½ points: Thomas F. Cody 5. Class B, 25yds., 6 points: Nicholas Maesel 8. Class B, 25yds., 5 points: Dr. Richter 6, Emil Weiss 5, G. K. Breit 5, G. B. Hillers 7.

Calumet Heights Gun Club, of Chicago.

Chicago, Ill., Aug 15.—The regular shoot of the Calumet Heights Gun Club took place this afternoon. The trophy contest was the main event of the programme. S. M. Booth won in Class A, P. D. Norcom in Class B, and C. C. Chamberlain in Class C. There was a strong wind blowing in the face of the shooters, the wind also raising the targets, making their flight uncertain. Twenty-nine shooters were in attendance during the afternoon, about 1,000 targets being thrown. Scores in the trophy contest were:

Class A.

S M Booth	111111101111111000111111—21
Patty	011111111111011111010111—20

Nos. 1 and 6 were at unknown angles; No 2, 5 pairs, unknown traps and angles; No. 3, 5 pairs, snipe shooting, unknown traps and angles; No. 4, same as No. 3; No. 5, unknown traps and angles.

In New Jersey.

ENDEAVOR GUN CLUB.

Aug. 15.—The following sweeps were shot to-day on the grounds at Marion, this being the occasion of the third Dunellen-Endeavor team race, the score of which was given in our issue of Aug. 22. All events were at unknown angles, with the exception of No. 5, which was at known traps and angles. The best shooting was done by Louis Schortemeier, who shot consistently well during the afternoon. Scores:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, SEPTEMBER 5, 1896. | VOL. XLVII.—No. 10. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

AUDUBON BIRD PLATES.

THE most famous bird pictures in the world are those by America's great artist-ornithologist John James Audubon. Devoted as he was to the study of birds, Audubon was first of all an artist—ardent, sensitive, poetic—and it was this artistic temperament, united to the painstaking fidelity of the naturalist, which made his paintings of birds far surpass any others ever painted. The great work in which the plates are contained is now so extremely rare that, although we have all heard much of these Audubon pictures, few of us have had the privilege of seeing them. It is with decided satisfaction then that the FOREST AND STREAM announces that a series of half-tone reproductions of selected Audubon bird plates will be given in forthcoming issues. The plates have been photographed especially for this purpose from a copy of the original double elephant folio edition of this work, 1827–1835, in the possession of a member of the Forest and Stream Publishing Company, and the results will be seen during the next few months by our readers.

The birds chosen for the illustrations include several species of ducks—including the beautiful plate of the canvasback—two species of grouse and several of the waders.

SNAP SHOTS.

It is needless to say that the letter of Dr. Morris telling of the appearance of a mysterious wanderer on the Labrador coast and suggesting that his description answered to that of the Lost Man excited lively interest. That after having survived hardships almost incredible the unhappy creature should have met his end at last by tumbling from a snowed over and unsuspected house roof was quite in keeping with all that we had been told of the Lost Man's adventures. It appealed to the imagination as a fitting close of the history, because it was the last thing in the world any one would have thought of as a climax of a story of truth stranger than fiction. In reply to our inquiry, Mr. Scott, the Hudson's Bay Co.'s factor at Mingan, Quebec, tells us that the man described to Dr. Morris passed through Mingan four years ago, and was evidently of about twenty-two years of age. As the FOREST AND STREAM's Lost Man was seen in the New Brunswick wilderness by Mr. Irland in 1895, the Labrador stranger was another person; and thus in place of the original mystery solved we have a new one. The Lost Man did not end his wanderings by falling off the roof at Ford's Harbor; shall we ever solve the problem of his fate?

A meeting of Texas sportsmen will be held at Waco today to devise measures for the better protection of the fish and game of that great State. A subject of particular consideration will be the usefulness, desirability and practicability of limiting the traffic in game. Whatever may come of the conference this much will be sure, that those in attendance will have had presented to them the precedents set by other States as to the limitation of game markets, and in many instances as to the absolute prohibition of killing game for market. Texas herself must come to this eventually, and the sooner the remedy is applied the more quickly will the cure be wrought. The market hunters are barreling Texas game for the New York and Boston and other markets, and no game supply under heaven can stand that strain without extermination.

We trust that the Waco meeting may be the opening of a successful campaign of earnest and definite work. The sportsmen of Texas must understand that if their game is preserved they themselves must do the hard work. They have before them three things to accomplish: they must devise an adequate law, provide an executive warden system to make the law amount to something, and create a public sentiment which shall back up the executive agents in their execution of the law. These are three absolute essentials to an efficient game protective system, and they are in demand nowhere else to-day more urgently than in the great commonwealth of the Southwest.

Here is a man who writes from Canada to know about the FOREST AND STREAM's standing offer of a reward of $500 for a black bass of more than a certain weight; he would like to know the precise weight the bass must attain to win the $500. We have never made any such proposition. Why should we? It is not conceivable that any black bass in existence, unless it had diamond eyes, could be worth $500, not even if it weighed a ton. The big bass whose head has long been among the curiosities of this office weighed 23½lbs. He was a monster, and up to date, we believe, holds the record for weight. Our Canadian correspondent's fish would have to go above 23½lbs. to win the $500, if there were any $500 to win.

There are men who fish for the sole purpose of breaking the record in size or number. They "count that day lost whose low descending sun sees" them returning to camp or to the hotel with a lighter load of fish than some other angler brings in or has brought in. There is no question that among such fishermen more than one might be found who would very willingly give $500 and esteem it a small price to pay for the fame of having taken the record bass of the country.

But why should anyone ask for a money recompense for the biggest fish? Is not a big fish, like virtue, its own reward?

A correspondent writes from Baldwinsville, in Worcester county, Massachusetts, that several deer have been seen in the vicinity this season. This recalls the fact that the Massachusetts law omits protection of deer altogether, except in the counties of Plymouth and Barnstable. This law was permitted to lapse, we presume, because it was thought that outside of the Cape there were no deer to be benefited. Now that the game is appearing again Massachusetts should follow the example of Connecticut and provide needed legislation.

Inquiry fails to develop anything reassuring as to the results of the experiment made by the Massachusetts Fish and Game Protective Association a few years ago of importing game birds from the West. The sharp-tailed grouse have vanished, and few if any of the pinnated grouse have remained. The imported quail, however, appear to have done well in almost every case where the locality in which they were put out afforded adequate food supply. The unusual numbers of quail reported in many quarters may without question be credited to this restocking by the Association.

Read that report of what has been done by the St. Louis County Association of Minnesota. It is a record to be proud of, to arouse emulation, to demonstrate that the way to enforce the law is to enforce it.

Of late years a practice appears to have grown up in the shooting world which deserves sharp rebuke. An individual who is interested in shooting, and has much to do with shooters, writes to manufacturers of guns, shells, wads or powders and requests or demands that the manufacturer shall supply him with his product without charge. It is hinted—or openly stated—that the equivalent for this gift will be the recommendation of the product, perhaps to friends, perhaps to the members of his shooting club, or even in reports of tests made or supposed to have been made by the recipient of the goods. We are told that this practice has become very common and is on the increase. It is alleged that secretaries of gun clubs are frequent offenders in this regard, and that certain persons who write for the sporting papers obtain all their ammunition in this way; that by some persons the request for the goods is made politely and argumentatively, and by others in a very positive manner, and if denied the response contains scarcely veiled threats that the product will be decried in revenge for the refusal.

Of course such demands are mere blackmail, and should be resisted from the very start. There is no reason why writers or club secretaries or any other class or profession should be supplied with free ammunition. Manufacturers do not make their goods from pure benevolence and do not expect to part with them except for a fair price. Happily, the matter is one where the firms preyed upon have the remedy in their own hands. If they will refuse all such requests and notify their fellow manufacturers of names of persons who make such demands upon them the practice referred to will come to an immediate stop, as it should.

We of course are not uninformed of the bargains which are sometimes cheerfully entered into by manufacturer or dealer and customer, by the terms of which the seller agrees to take out a part of the purchase price in a commendatory notice which the purchaser undertakes to smuggle into his next contribution to a sportsman's journal. Then the writer, who has accumulated a new gun under these conditions, spreads himself. In his hands the wonderful arm, as he writes of it, is good for game anywhere on the horizon or above the clouds, and is altogether more of a prodigy than the fabled gun which went off of its own volition and killed the deer while the hunter slept on the runway. The buyer who bargains thus should as a rule have credit for the perfect honesty of his intention; he means to do all that the agreement calls for. That he so often fails is simply because not every editor is a fool, and the waste basket intervenes.

Dr. Geo. W. Massamore, Sec'y-Treas. of the Maryland State Game and Fish Protective Association, advises us that under the new system of a State game warden control the laws are being enforced. There have been a number of convictions, and the deputy wardens are doing good work.

Commissioner Stanley sends us an interesting note about the black bass, which is an introduced species in Maine waters. In certain lakes which were formerly stocked with trout and into which pickerel had been put, the pickerel destroyed the trout. Then bass were introduced and they destroyed the pickerel, whereupon the trout came back again, and now trout and black bass are thriving in the same waters. This should entirely reconcile those persons who have opposed the bringing of bass into Maine.

The triple victory of Canada over the States is of a sort not to be depreciated or discounted by explanations and excuses; in each case Canada has had the best boat and in each event the handling of the Canadian crews has been of the very best. In the Canada-Vencedor match the Canadians have shown from the start the best judgment in making the match, in providing a yacht and crew and in sailing the races. In the races for the Seawanhaka cup, the challenging club has shown most commendable energy in setting afloat a trial fleet under many disadvantageous conditions, and the crew of the winning yacht have shown themselves equally skillful in the three branches of designing, construction and handling. In the canoe races the Canadians were represented by a thoroughly modern canoe, of excellent model, construction and outfit, and sailed boldly and skillfully.

There is nothing to be gained by excuses, or by attributing to a solitary mischance Canada's victories afloat; they bear on the surface every evidence of sturdy and hard work on the part of all connected with them. Not many years ago Canadian yachtsmen were held in small favor in the United States, so much so that the privilege of competing for the America's Cup was taken from them by nothing less extrat ordinary than the tampering with the terms of a permanent trust deed. Though thus shut out from all competition for the great yachting trophy of the world, Canada has gone on quietly and steadily in the face of many serious obstacles; with no famous designers or building yards, with comparatively little money for such an expensive sport as yacht racing, and in many cases hampered by adverse local conditions Those who are familiar with the Lake Ontario and St. Lawrence River fleet of a dozen years back will realize the progress made in the construction of such modern yachts as Canada, Zelma and Glencairn.

We congratulate most heartily our neighbor upon the progress she has made, and we welcome her as a rival even more dangerous than England, in that she is naturally far better acquainted with those local conditions which are determining factors in most yacht races. We recognize her triple supremacy this year, not grudgingly or even regretfully, but as something that will prove to the best interests of sport on both sides of the line.

The Rod and Gun Club of Massachusetts is a new institution with headquarters in Boston. It has been organized, we are assured, strictly for business, and is now ready for work. A game and fish warden has been appointed, and is equipped with a commission from the State; other wardens will be employed as funds shall warrant. We print elsewhere the notice just sent out to members that complaints made by them will be investigated; but the work of the warden will not be confined to complaints coming from members; any person having knowledge of a violation of the fish or game laws is requested to communicate the facts to the club secretary, Mr. Henry J. Thayer, State Street Exchan Boston.

The Sportsman Tourist.

A MOOSE HUNT IN MAINE.

[*Concluded from page 164.*]

Oct. 8.—After breakfast I told Joe to go and look over the upper dead water. He said he could not do it unless he stayed all night. I told him I could keep camp alone, so, shouldering his pack and my rifle (a Winchester .45-70, model 1886), he started on an eight-mile cruise. We arranged that if it cleared off by 3 o'clock I was to go and meet him at the dam. It was still cloudy at 3 o'clock and I did not go, so this left me in camp all night alone. I cooked my supper of venison and fried potatoes, spent the evening by poking the fire and thinking where Joe was, and turned in early. It was quite lonesome, but I soon fell asleep. I awoke at 12 o'clock and looked out of the tent. The moon was shining bright and the wind had all gone down. It was a perfect night, but quite old, for when I got the pail to take a drink I found 1in. of ice in it. After breakfast I went to gather driftwood for kindlings. It was not long before I heard footsteps on the shore, and Joe came trudging up the path to the tent with a big load on his back of all the things that we both had

CAMP FREEZE-OUT.

taken over to the dead water the day before. He had seen a great many signs of moose, and had paddled up to within 15ft. of a cow and a calf moose; they were not a bit afraid of him, and simply waded to shore and there stood and looked at him. He said he would start right off again and explore the other branch of the stream, and if it was a possible thing to do we would carry the canoe and blankets in and call there for moose the next fine evening. By 10 o'clock he had started, and I was again left alone to keep camp. Joe returned the next day and said he had followed another branch of the stream and it was a good place for moose, although he had not seen any, but lots of tracks and fresh signs of moose; and he thought that we had better go in a couple of days and camp in that country.

Thursday and Friday we spent cruising around the country and enjoying camp life. Friday night was the coldest we had had; the water in the pail was frozen solid to the bottom, but we did not mind it in our sleeping bags and blankets. After breakfast we packed our luggage and enough provisions for a three days' trip, and started for the country Joe had visited a few days before. We had very heavy packs and got along very well until we came to cross the brook just below our camp. Joe had on his high rubber boots and I my hunting shoes. Joe got across the log all right, but when I got in the middle of it it commenced to slip, and in a minute I was precipitated into the muddy stream. This of course put an end to this day's trip, so we thought, but we returned to camp and I dried my clothes before the camp-fire. In a couple of hours I had the mud all scraped off, clothes changed and dried, and was again dressed and ready for business. While my trousers were drying I sat in the front of the tent wrapped in my sleeping bag, and was looking over the map of the surrounding country; Joe suddenly stopped chopping and said, "Captain, look and see how far you think it is to the next lake beyond here." I looked and said, "Compass course northeast, about five miles distant from upper dead water." "What do you say? Will we try and cut our way through the unbroken wilderness and return by the aid of axe and compass down the stream to the West Branch and home that way?" I declared that I was willing to go any place where he would go. He thought we had better start as soon as we could and camp where night overtook us, and we immediately packed our packs and again started. This time Joe carried all the duffle over the logs, and I managed to get over all right, and we were soon on our way to the unknown country. We reached the dam at 3 P. M. and paddled up the stream to the road Joe had traveled a few days before. In one hour's paddling we reached the road where we selected a camp site, and it was not long before we had up the temporary lean-to for the night. We had venison, biscuits and tea and were very much pleased with our little shanty of balsam boughs. We turned in quite early that evening and were soon sleeping before a roaring camp-fire of birch logs.

Sunday, Oct. 13, it looked very much like rain, but we returned to Home Camp for the tent and other things left behind. It commenced to rain just as we were unloading our canoe, but we got the tent pitched and a fire built before it rained hard. We then sat down to a dinner of venison, tomatoes, biscuits and coffee, and we ate until the pans were all empty, for we were hungry after our long carry and paddle. This camp I named Camp Cruise No. 1. While we were sitting in the tent I was suddenly surprised by hearing a cow moose call, a short distance back of the tent. Joe said it was quite a treat for me, as many sportsmen come into the woods and never hear a cow call or a bull grunt. I was not surprised to hear a call, for we were in a fine big game country and were to visit a still better one if it was possible to cut our way through the forest to the lake beyond. After supper we went down the stream in the canoe and called a few times, but got no answer, but saw two cow moose.

Monday, Oct. 14.—Morning came and with it showers, but it stopped raining at 8 A. M., and Joe taking the canoe and I a large pack basket full, we started on, not knowing where we would end up. It took us two hours to make the two miles carry, for we had to stop and cut tree after tree to pass over the canoe. When we reached the dam we took a short cruise up the dead water until we could go no further, but would again have to take to the road. Here we found great signs of moose. The water was still roily where a moose had just waded across, and the shore on both sides resembled a cow yard more than the heart of the wilderness. Joe thought it best for me to go back to the old logging camp and then travel back to our tent, two miles away, and fetch another load over the carry, while he went out and tried to find the lake. So we started in opposite directions and he said to me: "When you return this afternoon you sit down in the alders near the dam and you will surely see a moose before dark." He had not gone from me a minute when I heard him whistle, and I knew that it was a signal to come and fetch the rifle. As I reached the spot he pointed to a little thicket on the shore and there stood a small bull moose with small horns. He did not stand very long, although he did not see us, and I would not shoot it, as I wanted a fine head or none at all. He turned into the woods and was lost to view. We again separated and I went back to the tent and brought back a good big load of provisions.

It was nearly 2 o'clock and I thought I would go down to the stream and watch for moose, so picking up my rifle, camera, field glasses and blanket I was ready to shoot moose or take their pictures, just as it happened. I had been sitting in the clump of alders about half an hour when I saw a large bull moose push through the alders about 100yds. distant on the opposite side of the stream, so picking up my rifle and keeping perfectly quiet I waited. On and on he came, and it was a fine sight to see a bull moose coming right down the stream toward me. I first took notice of his horns, but it was a small-horned one, so putting down my rifle I took up my kodak and adjusting it waited for him to come closer to me.

On and on he came until he was within 100ft. of me, and I then thought it time to take his picture. It was very dark and cloudy, and I knew I had to take a time exposure of him. Just as I opened the shutter he moved, and I knew this picture was spoiled. I then wound on another film. While I was doing this a large cow moose came out of the alders and waded down the stream to where the bull was, so I waited and thought I would take the two together. This took a long time for them to get near enough together, but I waited, and in a few minutes they were both in the middle of the stream. I got the camera all ready, and I gave a long low moose call the best I could, and they both looked up and stood perfectly still, and I pressed the bulb and got a good time exposure.

They were not frightened at this, for they did not see or smell me yet, so they went on feeding. I did this several times, and altogether got six exposures, the last one when they were standing on the bank.

They then moved off into the woods, and I was much pleased with my afternoon's experience.

It was dusk when I reached camp. The rain was beginning and there was not a sign of a lean-to or any place to sleep. It was getting dark very fast, so I cut

THE END OF THE FIVE-MILE CARRY.

poles and rigged up the rubber blanket for a lean-to, and it was pitch dark when I began to chop wood. I then began to think of Joe, for I thought that he might be lost or darkness had overtaken him, and I was more worried about him than myself. It was now near 8 o'clock and raining, and I had just leaned the coffee-pot over the fire, when I heard the familiar whistle of Joe and knew that he would not have to lie out all night in the rain. He was very tired and had not found the lake, but had followed a northeasterly course for four miles in a very dense woods and thought he had passed the lake, and then he had taken a southeasterly course and found the stream that leads out of the lake, about a mile or two below it. He said it was a great game country. He had found two old moose horns partly eaten by squirrels and mice, and had seen a large buck deer with a fine set of horns. He said it was further to the lake than he thought, but he would try it again in the morning.

It was now raining very hard, but we managed to fry some eggs and get some supper. Our little lean-to was commencing to leak quite freely, but it was now 9 o'clock and we crawled into our blankets and let it rain. I named this camp Camp Misery, for Joe would exclaim: "All the comforts but home." Indeed it was a night of misery, for toward morning it stopped raining and turned cold, and the bottom of my blanket which protruded from the lean-to was frozen into a cake of ice.

Tuesday morning, Oct. 15.—We had for breakfast fried partridge which I had shot coming over the trail the day before. As soon as breakfast was over Joe started to find the lake, and I went back to the tent and brought over the two-mile trail a load of duffle. This left only two more loads to bring, and Joe and I would go the next day and bring all. It was 3 o'clock when I got back and I went down to the dam and watched for moose for about one hour, but the wind was blowing hard and it was cold and not very pleasant, so I returned to the lean-to. I had supper ready when Joe returned and was soon sitting listening to his day's cruise. He said he had found the lake and it was five miles from here, but we could make it in two or three days' carry.

Oct. 16 brought a light rain, but it cleared off a little and we started with our first load to the upper dead

THE MOOSE WENT ON FEEDING.

water. That day we took our entire outfit from both camps to the new location, and then when it was growing dark we paddled down stream and called for moose. We saw two cows wading and feeding in the stream, and as we did not molest them they did not leave until they were through feeding.

Thursday morning, Oct. 17.—The ground was covered with snow, and it seemed as if one had been carried while asleep from summer to winter in a single night. After breakfast Joe went back to the stream and I packed my basket, and when Joe came along with the canoe I joined him, and we started with the first load over the trail which Joe had blazed to the lake. Joe named this trail Capt. Taylor's Carry. We traveled until 11 o'clock and then turned the canoe over and placed my pack under it. We were now on top of the mountain and halfway over the five-mile carry. We then returned to our tent for dinner.

After dinner we took another load and carried this right through to the lake; then returned to camp, reaching the tent at 5:30 P. M. very tired after our twelve-mile carry. Friday morning brought rain, but we packed up the tent and took the last load through to the lake. It was a wet, slippery carry, and Joe was much ahead of me when we reached the lake at 12 o'clock. After dinner we started back to the top of the mountain, where we had left the canoe and first load, and had everything back at 3 P. M. and pitched the tent.

Our rations were getting low and we had to be sparing of them. For supper we had bread, bacon, potatoes and tea. Supper over, we sat in the tent and talked over our trip, and I turned in for the night, while Joe was building a large fire to last all night, and the whole camp ground was a blaze of light. The night was very cold and windy, but we were soon asleep.

We had slept about two hours when I heard a rush in the tent which awoke me, and I heard Joe exclaim, "By gory, Captain," and I was quickly up and getting out of my sleeping bag. I saw a very bright light outside, which I supposed was the camp fire. Joe was out first in an instant, and we discovered that our stock of provisions, although rather small, which we had placed in a pile and covered with a rubber blanket, was on fire. Joe grabbed the pail of water, and he had first to break the ice in the pail, and then threw the rest of the water on the fire and soon had it out. This was hard luck for us, for our stock of provisions was small and we had only enough to last us until we reached the West Branch again. I named this camp Hard Luck.

Saturday morning was cold and very windy. We ate breakfast of bread, bacon and tea, about all we had left. Joe said he would have to go and find a camp and try and procure some flour and other provisions, and he started out in the canoe, not knowing where to go. I stayed and baked the bread out of the flour we had tried to save from the fire, but the coffee, chocolate and flour had all mixed together, and it looked more like graham flour than wheat. Joe returned without having found any one on the lake shore, and so we decided to break camp and proceed down the stream toward home. There was a very heavy wind blowing from the north and the little lake was lashed into a white foam, and it was very dangerous to face the storm in a frail canoe; but it was sink or swim, starve or paddle, so we decided to venture out. We placed the tent and all in the canoe and pushed off from shore. The waves rolled high and it was getting worse every minute. It seemed as if our little canoe with its heavy burden could not last much longer in this heavy sea, but through the guidance of Providence and the coolness of Joe, and his ability in using the paddle, we at last rounded the point on shore and were in smooth water behind the point. It was very cold and icicles hung all along the shore on the alders. Just below the end of the lake we pitched camp, and here we had a grand view of Mount

Katahdin, covered with snow, and the peaks of the surrounding mountains glistening in the sunlight. It reminded me of my trip through the Swiss Mountains. While we were in the tent eating supper of dry bread and maple syrup, two hunters came by. Joe recognized them and they stopped for a chat. We told them of our need of grub, and one of them told us to come up to his tent in the morning and he would give us some provisions, enough to last until we reached the West Branch. After dark we paddled up the lake and there called for moose, but got no answer, although we could hear a large bull in the brush not far away. We called and called, but he would not come out; so in the early morning we left him and returned to camp. In the morning we paddled up to the point where we had called, and there we found the reason the moose would not come out of the brush. Right on the point, and near where we had called, lay the carcass of a moose; the bull had scented it and of course would not approach.

Joe went to our friends' camp and returned with a pailful of bread. We then started for the West Branch, but we knew it would take us two or three days to get there.

It was a delightful run down the swift-flowing brook and over the rapids, but the water was very low, and after a couple of miles it got so shallow that I had to go ashore and walk while Joe poled, paddled and dragged the canoe over the rocks. As I was walking down the brook I saw a little doe cross the stream; she was enjoying herself. I did not molest her, and she trotted off into the woods. We stopped to camp at 4 o'clock, pitched tent and were soon ready for night.

Sunday morning, Oct. 20, we started again down the stream. I took the road and walked, for the water had dropped a little. Joe had a hard time poling through the rocks and over the rapids. At 3 P. M. I reached a deserted lumber camp and here we pitched camp. I shot a couple of partridges for supper. This I named Camp Katahdin, for from here we had a fine view of the mountain. In the evening we sat before the fire and talked over the trip and planned for the next day's work.

Monday morning, Oct. 21, brought with it a good snowstorm. Joe took the canoe in the stream, while I traveled through the snow and met him a few miles down the stream. The bushes and trees were laden with damp snow, and as I passed several old lumber camps it was a delightful appearance of nature. I was far ahead of Joe, for he had to stop and cut log after log to get the canoe through. We decided to pitch tent just below the little falls. We had to clean the snow off the ground and let the sun dry the leaves a little, and then I gathered boughs and built the bed, while Joe gathered wood for the fire. As we had no tea or coffee, Joe made what he called "Indian tea," that is, dry bread burned in the fire and then boiled in the teapot. It serves very well when you can't get anything else to drink. Thus we had for dinner steamed bread, potatoes, Indian tea and maple syrup. After dinner we started to go up the mountain and cruise for a caribou, but just as we were ready to start a snow squall came and we did not leave the tent for an hour. At last the squall passed over and sunshine came again, and we decided to go to Little Pond and see what was there. We stayed around the pond a couple of hours, but it was very cold and the pond was skimmed over with ice. We returned to camp and prepared for a long, cold night. It proved to be the coldest one we had had on our trip. This camp I named Camp Freeze-out, our last camp. In the morning we decided to break camp and return down the West Branch to Joe's "Home Camp," just below the Debskeneak Falls. We left our tent standing, and I took all my duffle in my pack basket, and Joe taking the canoe, we started over the three-mile carry to the West Branch. In one hour and a half we reached the river and paddled down stream, carrying around Aboljackmegus Falls and Pocquackamus Falls.

Below this we reached the delightful little birch bark camp of artist Turner, of New York city, who planned and built this little cabin, covered with birch bark on the outside and furnished within in the happiest manner, known only to an artist who loves rural life. We partook of a delightful meal with our host, Mr. Turner. After lunch I took a few photographs of the exterior and interior, and a flashlight of the artist at home in the delightful corner of his cabin. The artist had been in the woods since the early spring and intended to stay all winter, and with the aid of his friend and only neighbor, Joe Francis, although three miles away, anticipated many pleasant hours hunting on the snow before the first of January. Bidding our host good-by, and hoping we would see him again, we pushed off from his little wharf and proceeded down the river to Debskeneak Falls. It was a short carry around the falls, and we were soon in the West Branch again, and our next stop was to be at the long looked for camp of Joe Francis, on the point projecting out into the Debskeneak dead water. We reached there at 5 P. M., and how happy his family were to see our safe return, for they knew we had had a hard and cold trip. How happy his little daughter Isabelle was, and his granddaughter Cora, calling "Papa's coming!" when they first spied the canoe coming around the point, just below the rapids. I stayed at Joe's Home Camp over a week, and we took many short trips around the surrounding country.

Two days after our arrival we paddled up to the Debskeneak Pond, and there leaving the canoe on shore climbed the rocky ledges in search of a caribou. We hunted for two days without success, although seeing a number of deer and lots of caribou tracks. The third day our luck changed. We traveled in another direction, we climbed the little mountain and Joe traveled the higher ledge, while I cruised the lower ones. Joe at last scared up a large herd of caribou, and as luck would have it they of course ran in the wrong direction. One happened to single out from the rest and came within 100yds. of us. We both opened fire on him, and after putting seven bullets through him succeeded in laying him low. We returned to camp and I took a picture of the return of the caribou hunters. I spent many pleasant hours at the delightful cabin of artist Turner, and he revisiting me at Camp Joe Francis. Our most delightful evening was the birthday party of Joe's daughter Josephine. We had a card party, and the writer and Josephine defeated Mrs. Dennis and artist Turner in a game of King Pete. I left Joe's camp Oct. 30 at 6:30 A. M., and we had a rough paddle of sixteen miles to Norcross, arriving there at 11:30 A. M. After dinner at the Norcross House, and expressing my deer and caribou heads to friend Crosby, the taxidermist at Bangor, I bade my kind friend and faithful guide good-by and boarded the afternoon train to Bangor, and then over the M. C. & B. & M. R. R. homeward. Altogether I can say our trip was a most delightful one, and I thank my guide, Mr. Joseph Francis, for his kindness and for the hard labor which he went through to give me a good time. We saw altogether sixteen moose, and Joe estimates the herd of caribou at sixty or seventy. We saw a great many deer, and partridges were quite plentiful. I am pleased to say that my photographs which I took on the trip are all good, and that I am, by the aid of our esteemed journal, FOREST AND STREAM, able to illustrate this sketch, so that those who are, as FOREST AND STREAM expresses it, "chained to business and can't go shooting," may see what pleasures and difficulties can be found in the pathless woods.

CAPT. JOSEPH B. TAYLOR.

GREENBUSH, N. Y.

ANOTHER LOST MAN.

COAL RIVER, Newfoundland, July 25.—*Editor Forest and Stream:* Last evening in a fisherman's cabin, while a storm was raging on the shore, the conversation turned to the subject of adventures, and some of the men present told of a man who appeared at Mingan, on the Canadian Labrador coast, winter before last, and who would give no account of himself excepting to say that he had walked there from Quebec. No one believed him, as such a feat would be practically impossible. He was clad in old, thin clothing; his torn shoes were held together with strings; he carried only a small axe; he brought no provisions and took none away, though urgently requested to do so. He would not stop but an hour or two, and then went on his way. He seemed to be a cultivated man from the few words that he uttered. In this description I recognized FOREST AND STREAM'S "Lost Man." He next appeared at Olomanosheek River, where Mr. Geo. T. McTavish, the Hudson Bay Company's factor, persuaded him to take a pair of stockings and boots.

I know the country from Mingan to Olomanosheek very well, and I doubt if any other living man has ever attempted to walk that coast. The high lands are covered so deeply with caribou moss or snow that one is quickly exhausted in walking. The valleys are filled with a snarl of dwarf tamarack and spruce that a bear could hardly penetrate. Deep arms of bays at short intervals extend for miles into the rocky coast, and there are wild rivers to cross.

This country was traversed on foot by a man who did not freeze, while thickly-clad natives were in danger. He crossed rivers and valleys where Indians cannot go. He carried no provisions, and no apparatus for obtaining fish or game. He had nothing to shelter him from the weather. Toward spring he arrived at Ford's Harbor, on North Labrador, and while walking on the snow, which was on a level with the roof of Mr. Ford's house, he fell over the front part of the house and his neck was broken. He is buried at Ford's Harbor. If you will send a copy of FOREST AND STREAM containing the picture of the Lost Man to Mr. Ford, Ford's Harbor, North Labrador; another to Mr. Nicholas Fitzgerald, Harbor Grace, Newfoundland, and another to Mr. Scott, Hudson Bay Company's factor at Mingan, Quebec, they will identify the man if he is the Lost Man. ROBT. S. MORRIS.

MR. ROBINSON'S STORIES.

AS one of FOREST AND STREAM'S numerous readers I wish to thank Mr. Robinson for continuing the story of the daily doings of our Danvis friends. From the opening chapter of "Uncle Lisha's Shop" to the last line of "Uncle Lisha's Outing" the author shows a perfect knowledge of the people and events he describes. To the man born and brought up in a large city, and to whom pavements, brick walls and the noise and bustle of such places is as the breath of life, and to whom a day spent among the forests and mountains as nature made them, is as a day lost, the simple tale of life in Danvis (told even as Mr. Robinson tells it) would not be worth the reading. There are others, however, many of them readers of FOREST AND STREAM, who, scattered far and wide over various parts of the world, look back with pleasant recollections to many a quiet old-fashioned homestead among the New England hills, and in whom Mr. Robinson will arouse a feeling somewhat akin to Uncle Lisha's when he found himself transplanted in the far West, "Way beyond the 'Hio."

The happiest hours of my life have been when hunting grouse and woodcock in my native State or when tracking larger game in the backwoods of Maine—lying at night rolled in my blankets, with no shelter other than the branches of a scrubby spruce, on the edge of some Nova Scotia barren, hoping at daybreak to successfully call a moose.

I never sit down to a Christmas dinner at home without recalling a Christmas of a few years ago—a very cold day, the thermometer way below zero, the wind blowing a gale, snow flying in all directions, my Indian and I huddling on the leeward side of a large boulder on a bleak Nova Scotia barren, vainly trying to eat our frozen lunch. I could not help thinking at the time of friends at home, perhaps sitting down to an elaborate dinner. Well, I would not have exchanged places with them. Our camp on that hunting trip was certainly rather rough. From the outside it looked like a pile of brush covered with snow. A rubber blanket formed the door, the floor the frozen ground, and no roof to speak of. Yet when we broke camp for good at the first streak of light on an extremely cold morning, every one of the party with a heavy load (we carried out the best parts of three moose), and with two days' hard snowshoeing before us before reaching a settlement, we were all very silent. After crossing a lake I turned and looked back at our forlorn-looking and desolate camp with genuine regret at leaving, and wondering would I ever see it again.

As Gran'ther Hill says, "It is good fer a man's body and soul to go a-huntin', ef he don't hunt like a cussed hawg, a-gawmin' daown ev'ything he comes tu."

In these days of gold, free silver, Populists, and the Lord knows what, a chapter from "Danvis Folks" seems (to quote Gran'ther Hill again) "like a rest to the body and a divarshion to the mind." C. M. STARK.

DUNBARTON, N. H., Aug. 26.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Natural History.

A BIT OF GENERALSHIP.

ED coiled, or rather folded, his three-story proportions into his usual cross-legged attitude, produced his pipe, and as the smoke began to coil upward said, "Say, what was that business about a coyote you was telling the kid about the other day?"

"You mean the coyote that caught the jack? The day you went to town for supplies I went over toward those breaks that run up into the hills from the river along by Ford's place there, to see if I couldn't get a few quail. I worked pretty well up the cañon among the plum and berry bushes, and jumped a covey that went on up toward the hills. I got a right and left as they rose, and then followed them and got nine before they scattered; so I couldn't find any more. Then I thought I had enough anyhow, so I cut across toward camp right over the hills. I went about a mile and run against a lot of fresh coyote tracks going my way, so I followed them, thinking I might get a shot, and not caring much whether I did or not. When I got to the top of that hill where the big rock is I saw the coyotes, two of them, trotting along the side-hill across the valley. I naturally watched them as they went along, running out to a bunch of grass or a rock sticking up in the snow, and then going side by side again. They had got a hundred yards or so from where I first saw them, when a big jack rabbit jumped out of a bunch of grass and bounced along pretty lively ahead of them.

"When he bounced out one of the coyotes lay down and the other loped along after the rabbit, not in much of a hurry, but fast enough to keep the long-eared gentleman from doing much sleeping all the same. I didn't understand that kind of a play, so I sneaked up to the rocks and thought I'd see it through. The rabbit and the other coyote ran along the side of the hill and circled up on to the table-land on top, and came back to within a few yards of the starting place. When they got back, the coyote that had been lying down jumped up and started after the jack, and the one that trotted him the first heat lay down and took a rest while his partner swung him round the circle; then the first coyote trotted him another round.

"They kept this game up for quite a little while, running 'first in and first out,' as the railroad men say, until they had the jack pretty warm and tired; then when he came around the last time the coyote that was lying down made a little quick spurt, got alongside, stuck his nose under the jack and tossed him into the air. He caught him on the fly as he came down, gave a little snap and a shake, and that was the last look the jack had. The other coyote was right alongside by that time and grabbed his share on the run, and a few jerks and pulls butchered the rabbit in a way that was satisfactory to both, and they had him stowed away in a few minutes and were ready for more.

"They fooled around a bit, smelling the snow and licking up the stray drops of blood, and then trotted on until I lost sight of them entirely." EL COMANCHO.

FIELD NOTES.

MILWAUKEE, Aug. 18.—*Editor Forest and Stream:* In June of this year I saw a number of turkey buzzards around Big St. Germaine Lake, in Vilas county, Wis. I think they breed in that vicinity. I don't remember ever seeing them so far north before. In this section I also saw fish hawks and bald-headed eagles, and found a nest of the latter. The fish hawks were continually diving with good success, and generally went in the same direction with fish, so they probably had young to feed.

Doubtless many readers of FOREST AND STREAM will remember the frame house now unoccupied and broken open on the island in Big St. Germaine Lake. In the kitchen of this house I found a chimney swallow's nest containing two white eggs. The nest was made of small twigs stuck together with a light-colored gluelike substance, and it was attached to a rough board on inside of building, about 10in. below the roof. This is the second chimney swallow's nest I have found inside of a building.

On a very rocky island in Crooked Lake I found a loon's nest containing two eggs of a dark chocolate color, with spots of a still darker brown. There was no nest at all, at least nothing had been gathered or arranged; but a soft loamy piece of ground, covered with very short grass, had been selected and worn down till the nest was on bare ground. There had been another loon's nest within a few feet of this one last year or some previous time, as the circular bare spot showed plainly; this nest was not over 10in. above and within 1ft. of the water. The arrangement gave the loon a chance to almost drop off the nest into the water and dive several hundred yards before coming to the surface at a safe distance for herself, and without giving a person any idea from where she came unless he happened to see her quietly slide into the water off the nest.

I was amused at seeing a kingbird dive into a stream nearly as deeply as a kingfisher, and saw this repeated several times. I could not see any insects it was after, and as I was within 30ft. of the bird, it appeared to me as if it was done for pleasure or for a bath. It was not a skim such as a swallow or martin makes for a drink, but more nearly like the dive of a kingfisher. I have seen kingbirds' nests on top of partly hollow cedar fence posts, in the eave trough of a railway station within a few feet of where the engine passed, and on low sweeping cedar limbs in mid-stream not 1ft. above the water. They seem almost to equal the English sparrow for adapting themselves to surroundings.

On a small island I found a very young sand snipe, a ball of down with a little dark stripe near the eye, and with a good pair of legs; it ran rapidly out on the extreme end of a bare sandpoint, and went into the water several feet from shore swimming well, and it got around me while I stood still. The old bird hovered just over it, calling out, and apparently with a broken wing; but when she saw I let the young alone and it got back on land again in the grass, her wing got better rapidly. On the other end of this island, in some brush, I found a young ground bird just out of the nest. I touched it and it partly ran and flew into water a few inches, but as soon as it felt water it got back on dry land and hurried into the

brush. In each case, although the young were just out of the nest, their instinct did not fail them at a critical time. The game bird took greater chances, but was equal to it.

Last winter I was surprised at the courage of the well-known bird commonly called the gray strike. This bird had been catching an English sparrow nearly every day during the prevailing cold spell and had a large fir tree and a thorn apple bush as his headquarters and butcher shop. Under this bush were wings, feathers and parts of many sparrows. One day, seeing him eating something that looked larger than usual, I went down to the bush and found he had one of his own kind partly eaten; the legs and tail and part of body were all that was left. If the one that was feasting did the killing it must have been an old one, a good fighter, as it showed no signs of the battle. Probably it was an up-to-date bird; in fact I think it was in its prime and I doubt if it had ever seen better days. A READER.

LABRADOR SKETCHES.

IX.—Sea Gulls.

[Written for FOREST AND STREAM by Count H. de Puyjalon, and translated by Crawford Lindsay.]

GULLS, with mosquitoes, fleas, bugs and unmentionable insects, are the pests of Labrador.

There are two principal varieties: the great black-backed gull (*Larus marinus*) and the herring gull (*Larus argentatus*). The Acadian and Canadian fishermen call the former *Anglais* or English, and the latter *Irlandais* or Irish.

The origin of the name *Anglais*, given to *Larus marinus*, is as follows: Many years ago, the dwellers on the coast relate, an English frigate was wrecked on a reef in the Gulf and all the crew were drowned. The sea cast up many bodies, and when the fishermen came to bury them they had to fight with clouds of black-backed gulls quarreling over the remains. These fishermen called them *mangeurs d'Anglais* (eaters of English) and this has gradually been shortened to *Anglais*.

I cannot say why the herring gulls are called Irish. Perhaps it may be a delicate allusion to "home rule," for they seem to have an autonomous government in the spruce-clad islets of Mingan.

All these gulls are bandits, and bandits of the worst kind. Their flight is powerful, their strength very great and they are always oppressing the weaker. Prudent almost to cowardice when in presence of a courageous or armed enemy, they are great hypocrites and excessively indiscreet. A fishing boat, a canoe, a tent exasperates them. If you endeavor to approach seals basking on the rocks, or a flock of ducks or geese swimming on the water, you must be careful of gulls, for if they see you they will at once give notice of your presence by the most varied and discordant cries, and, no matter how judicious you may be in your stalking, you will lose your time and trouble. The denizens of the sea and beach are accustomed to these warnings and immediately get out of danger. So it is no wonder that imprecations are hurled at the gulls and that they are unpopular on the coast.

I think that these birds never sleep. You can hear them all night long croaking, barking, howling, hooting and mewing, especially when they see a camp-fire. They imitate all the most inharmonious cries sometimes so accurately that it is hard not to believe that you are surrounded by cats, dogs, seals, owls or crows. It is impossible to put a stop to the infernal row they make. I have often got up at night and fired my gun right and left at these horrid birds, hoping to frighten them away and get some sleep. But it was of no use; a few minutes after the last detonation the noise would begin again as bad as ever.

Gulls are exceedingly gluttonous; they gobble up everything, whether fresh or putrid; they devour enormous quantities of crabs, sea urchins, lobsters and fish, especially eels, which they catch very expertly amidst the sea wrack, for they do not dive.

There is nothing more amusing than to see a gull catch a large lobster. Lobsters, as everyone knows, have two fore-claws of great strength, but so disposed that they cannot be brought above the thorax nor be put out sideways. They must therefore always keep their front to the enemy. That is why they hide under rocks or keep their bodies and tails in holes, leaving outside only the formidable claws with which nature has provided them as a means of defense and aggression and for seizing their prey. But the lobster, like others, has weak moments, and toward evening, especially in the love season, it leaves its retreat and comes out among the sea wrack carpeting the bottom of the coves, to seek the object of its affections. Then the truculent gull, which cares little for sentiment, comes on the scene at low tide. It alights quite close to the lobster, left almost high and dry, and seems entirely occupied in searching for retiring mollusks in the sea wrack. Then approaching gradually and noiselessly, it catches the unfortunate lobster by the tail and drags it as rapidly as possible to one of the innumerable flat rocks which crop up from among the seaweed all along the Labrador coast. Once there, it kills its victim by turning it over on its back and smashing in the shell by means of its bill, as hard as a miner's pick axe.

With sea urchins, crabs and small lobsters it follows the process we read of in the fables of our youth. It seizes them, flies up to a certain height and lets them fall on the rocks, when the shell is broken to pieces and it secures the contents.

To satisfy its ravenous hunger the gull not only eats crustacea, mollusks and fish; it also destroys a considerable quantity of small game. The young *moniacs* or eider ducks (*Somateria mollissima*) suffer greatly from its depredations; it gobbles them up unmercifully and in so furtive a manner that the unfortunate mother has barely time to notice the cruel fate of her progeny. When it finds a brood of these young birds it flops down close to them with as much noise as possible. The ducklings are frightened out of their wits, dive at once, and, according to their habit, disperse under water. The gull, which has very strong sight, observes them closely, and when the little palmipeds come up to the surface the gull catches them before they reach it, swallowing them under water and thereby concealing its crime, which it repeats as often as possible without exposing itself to an attack from the mother, which, although not very far-seeing, is very strong, and does not hesitate to attack it as soon as she perceives her loss.

The gull not only commits its depredations and satisfies its gluttony in the sea, it also finds its way to the lakes in the interior. It is one of the chief agents of the dispersion of fish in fresh waters. It transports, stuck to its feet by some special mucosity, or stored in its stomach, fish spawn, which it deposits or disgorges before it is decomposed or altered by the gastric juices. By this means many waters completely separated from all fish-producing sources have become stocked with various kinds of fish. It is thus also, in all probability, that some species which are exclusively salt-water fish, such as herring, or others which are partly salt and partly fresh-water fish, such as smelts, have become acclimatized in fresh-water lakes, where they seem to have undergone but few changes in spite of their difference of habitat and of successive reproductions.

The gull seems monogamous, but it is so vicious that I would not be surprised to learn that it is immoral. The black-backed variety builds on the bare rocks, or in the moss which covers them, a nest which does it but little credit, being a mere apology for a nest, in which the female lays three eggs, white or a dirty blue in color, with brown spots, especially at the bigger end. The herring gull, on the contrary, is more acute. It has abandoned the rocks on which it formerly nested and now builds its nests in the tops of spruce trees decapitated by the wind. The trees in the Mingan archipelago are covered with these birds, which, when seen from afar, look like lumps of snow.

Gulls' eggs, though rather reddish in color, are very good eating, especially in omelets. They are constantly being taken away by the fishermen of all nationalities who frequent the Gulf. This is not a very great misfortune, for there are always too many gulls, but the people here pay little heed to a trade which outsiders find lucrative, as those eggs command a ready sale for culinary and other purposes.

A day or two after they have come out of their shells the young black-backed gulls are strong enough to walk out of the nest and hide themselves in the crevices of the rocks at the approach of danger. If caught a few days before they can fly they are very good to eat when fried with potatoes. Their flesh is then very tender without any fishy or oily taste and is very much like chicken; later on it becomes tough and tastes abominably. The parent birds feed their young on fresh fish and shellfish; they never give them anything putrid and their own liking for that kind of food is acquired as they get older.

The male gull cares very little about defending its offspring; it contents itself with circling round at a great height, uttering piercing cries. The female is braver and sometimes attempts to fly at the despoiler. When their young are taken both male and female fly away in the most unconcerned manner.

In spite of the wholesale destruction of their eggs, they abound in the Gulf of St. Lawrence. Some islands and headlands are literally covered with them in the laying season. They are, however, very shy and wary. They can calculate with wonderful accuracy the distance between them and the fowler, and can very seldom be shot with a fowling-piece. They are large birds—the black-backs especially, whose spread of wings sometimes measures 5½ft. from tip to tip. Their wings are used for trimming hats, and I am surprised that their feathers—the white ones in particular—are not more generally used for ornamental purposes. The thigh bones make excellent pipestems.

Gulls are very good weather prophets, and can be thoroughly relied on as such. Thus, for instance, when those which are not burdened with family cares fly away in groups to some mossy rock to spend the night, you may be sure that, whatever may be the direction of the wind at the moment they pass you, the wind will next day blow in the direction in which they are flying. When they fly high and you are far from shore look out for your sails, as you will soon have to reef them; it is a sign of a high wind. When you see them alight on the water looking for caplin, lansing or sand ells and herrings exhausted and weary from being pursued by grampuses, it means fine weather. If, on the contrary, they skim along the surface without stopping, look out for rain or fog, as one or the other is not far off. H. DE PUYJALON.

Game Bag and Gun.

THE IOWA FEVER.

EVERY year at just about the same time—in fact, at almost the same hour each year—some people take the hay fever. Instantly and without previous warning the attack is on in full force. Just so the Iowa fever attacks one man that I know, but fortunately the Iowa fever puts him to no inconvenience except the endurance of an unsatisfied longing that is hard to bear, but has its compensations. The attack always comes on about August 15, and takes full control of the patient for an hour or two; then the patient forgets all about it until a recurrence of the attack, which is sure to come on in a few days. The twenty-third annual attack of this fever overtook me this evening. On the cars from Chicago to Milwaukee, after a good supper in the dining car, lounging in a comfortable seat, at peace with self and all the world, enjoying a cool breeze that was infusing new life into a body almost worn out by the humid heat of six weeks just past, this man got a smell of something which made him say, "That smells like the Iowa prairies." In one minute more the fever was on. As he lay back in the chair apparently asleep he saw, first, the rolling, breeze swept prairies of Adair county—an ocean of green grass gently waving in the breeze of a cool morning; the ocean of grass dotted with a few little islands of stubble. In the morning the sun came up out of this ocean of grass and in the evening sank out of sight in its bosom. Chickens in every stubble, chickens on every hillside, flocks of chickens in every patch of corn, and two men with two guns and two dogs owned the whole, for no others were there to disturb the chickens nor to tell the two sportsmen to "git out of that." One of these men was weak, just up from an attack of malarial fever; but as he wandered over the prairie every breath of its pure air brought strength, every meal was a feast fit for the gods, every night full of delicious sleep, and with the awakening came the feeling that it was good to be alive and that life was worth living after all. These men did not have breechloaders, but just plain guns marked "W. More." Their dogs had no pedigrees, but they were industrious, were staunch on a point, and would hunt dead birds. They pointed thousands of live ones and found hundreds of dead ones.

Three weeks of this and the scene shifts to the flat prairies of Dallas county, with their hundreds of ponds and sloughs, and many large islands of yellow stubble and thousands of acres of tall corn. Chickens in the corn and stubble, and chickens in the grass, quail calling along the edge of the brush that bordered the sides of the creeks, young mallards in the tall weeds and grass of every slough and pond, teal and other little ducks wherever there was open water, geese harrowing the sky, and sandhill cranes dancing in the pastures. Every morning and every afternoon there were whole acres of mallards in the stubbles, while thousands more were on the wing in every direction. Verily it is no wonder that the sportsmen of those days gave no thought to the possible extinction of this vast horde; but they are all gone now, mostly killed, and the rest driven away, and their former homes drained of their water, and now covered with corn and cattle.

One of these men, the one who has the fever now, brought his family and lived three years on the edge of this fowling paradise. While under the delirium of the fever this afternoon he thought it was Saturday afternoon and a pair of young mallards would be good for a Sunday dinner. Looking toward the big tract of stubble that lay east of the house, he saw a few small flocks flying about over it, so half an hour before sundown he quit work and equipped himself for getting the mallards. First a powder flask that was hung bottom upward, the cord over the shoulder just long enough to let the mouth of the flask enter his hip pocket, so it would not be swinging about and was always just ready to take hold of. Next a shot pouch arranged the same way, both flask and pouch having lever nozzles, so that when the nozzle was put in the gun muzzle a quick pressure on the lever instantly delivered the charge. Next a long nankeen coat just the color of the stubble, and a cap covered with same kind of cloth, and having a cape that hid all but the front part of his face.

Now he takes the gun from the closet, wipes off the oil, inverts the flask over the muzzles, and drops 3 drams of powder into each. From one of the many coat pockets he gets two wads that he has cut from scraps of new harness leather. Drawing the ramrod, he pushes them swiftly down the smooth tubes, pleased with their smooth movement and the sharp hiss of air from the nipples, which denotes that they are clear. From another pocket come two Ely Bros. felt wads (he paid 30 cents a box for them), and these go down on top of the others. There is a small notch cut in opposite edges of these wads for the escape of the compressed air. Tapping the wads snugly down on the powder, he withdraws the ramrod, inverts the shot pouch over the muzzles, and drops just 1oz. of No. 5 shot in each. Then tearing an Ely wad in two, he pushes a half down each barrel and puts the ramrod in the thimbles. It takes some time to tell it, but the loading was all done in less than thirty seconds.

Meanwhile Flora and Sinner, the dogs, are on the anxious seat and wanting to know if they will be in it. The man says: "Flora, you can't go." Then Flora with drooping tail goes behind the house, looking back and licking her lips as though she would like to bite somebody. A wink gives Sinner to understand that he can go, but he is an old dog and knows he is not to cut any capers about it.

After leaving the house an Ely waterproof cap is put on each of the nipples, and the man takes his way along a rail fence that divides the 200 acres of stubble into two fields. He has not gone far when a puff of smoke at the further end of the field, followed by the rising of ducks from the stubble, shows that Bert Harmon is out with the old Queen's arm, "loaded with three fingers of powder and eleven buckshot." The flocks of ducks wheel and circle over the field, and man and dog crouch close in the fence corner, but not a duck comes in range. They know that that old fence is dangerous. Presently they all leave except one hungry young mallard intent on a supper of wheat; he finally settles in the stubble 200yds. away. Lying flat in the stubble, the man begins a sneak toward the duck. Whenever the duck's head is down the man drags himself along; when the duck's head is up the man is motionless. After ten minutes of tiresome crawling the man is within 50yds. Then the duck grows suspicious and stands with head and neck stretched high, and a moment later takes wing. Too far away, but—bang! and the duck comes down with a broken wing. Old Sinner bounds from the fence corner and proudly bears the duck back to the fence.

It is now sundown and no ducks are in sight. Man and dog wait in the fence corner until dusk, but not without hope, for during the afternoon the man noted a number of flocks of brant going south to feed on the stubbles of Quaker Divide, and he knows they will return to the ponds to roost. Already several have passed by out of range, but now the gabbling of a large flock is heard, and a little later they are outlined against the sky—a disorderly mob of fifty or sixty, flying low, and talking and laughing among themselves. On they come straight toward the man until within 200yds., when there is a volcanic explosion from Harmon's old Queen's arm 300yds. to their left, and they swerve away from it, going 60 or 70yds. to one side of the man in the fence corner. Old Sinner whines and the man jumps to his feet and "lets 'em have it" with both barrels. They shoot upward 50ft. and fill the air with insane screams and gabblings—all but one, which did not spring up with the rest, but, leaving the flock, flaps laboriously away to the east and slanting downward. Sinner whines. "Be quiet!" said the man sharply, and nothing was heard but the gabbling of the now distant flock. The wounded bird had disappeared as soon as it sank below the sky line. "Listen, Sinner;" and the old dog stood with high head and pricked up ears, slowly waving his tail in long sweeps that showed the pent up excitement in his mind. "There! hear that flapping of wings against the stubble? He's down, Sinner; fetch him!" And Sinner with a suppressed whine was off into the darkness, but his course was easily traced by the swish of his rapidly moving legs through the stubble. Presently the sounds denoted uncertain movements on the part of the dog, but after a few minutes came the sound of struggling wings, and soon after Sinner laid the brant at the man's feet. "Want to carry the duck, Sinner?" The dog picked up the duck, the man took the brant, and these two friends—the man

and the dog, who had been boon companions for six years, with never a quarrel between them (for the dog would not quarrel with the man)—took their way to the house. At the gate they are met by a five-year-old, who takes the duck from the dog and asks, "What else did you get? A brant! Oh, but he's a big one! Papa, old Mr. Shekels was here to see you." "What did he want?" "Said there was a lot of young mallards in the pond in by his big cornfield, and hadn't been anybody after them, and wanted you to come up there and kill them; and there was any amount of them. Are you going to take Flora or Sinner? I want you to take Flora, 'cause Sinner goes better to my wagon. When will you get me a gun?"

"Young fellow, you are too much like your father to ever amount to anything," said the man.

"That's what ma says, but I don't b'lieve it," said the youngster.

"Supper is ready," said a loving voice at the door. When the meal was finished the same voice said: "It's a good thing that you got those two birds, so we can have something to eat to-morrow."

"Don't feel like I'd want anything more for a week," said the man.

"I should think not," replied the wife.

O. H. HAMPTON.

IN COLORADO MOUNTAINS.

As told by the Junior of the Party.

[*Concluded from page 167.*]

Mr. C. and Wells found where a small cinnamon bear had been feeding upon the carcass of a deer the night before. On talking over the chances around the camp-fire that night, we decided that it was likely that this bear would come back to feed on the remainder of the deer, and that it would pay to set the bear trap there. Accordingly, the next morning we packed the trap on Speckles and took it to the place, fixing things so as to give Bruin a warm reception if he tried to finish his meal.

Most boys' books on the subject give you an idea that you can go out in the woods, run across a grizzly bear and have a scrap with him whenever you want, and that if you come within sight, scent or hearing he will attack you. Exactly the opposite is the case. There is nothing that a grizzly is more afraid of to-day than man. He has been hunted so steadily with modern weapons of high caliber and precision that he has become the wariest of American wild beasts and it is about impossible to find him when free. He is very swift and silent on his feet, and long before you can see him he has seen or scented you and made off.

Wells, with whom we hunted, estimates that since he began hunting in Colorado, about eight years ago, he has killed nearly 100 bears, of which a large number were grizzlies; yet of them all not one was killed running free in the woods. They all were trapped. The trap commonly used is the Newhouse trap manufactured by the Oneida Community in New York. It is celebrated for the way the steel springs are tempered. The trap is simply a pair of circular jaws, which close with a snap on anything touching a trigger between them which loosens the springs. This trap is set at the entrance of an artificial pen, into which the bait is dragged. The bear, on entering the pen, steps on the trap and is generally caught by the foot. Our present attempt was a failure, for this bear did not come back.

This was the day on which my father killed his elk. In the afternoon we were riding in single file through thick spruce timber, Johnny in the lead, I next and my father third, when suddenly I saw Johnny hold up his hand and motion for us to get off and come to him. We were by him in about three seconds and luck favored my father. In these matters, whether you get your game or lose it is a matter of seconds and of instinct rather than of reason, as you have no time to consider. I happened to come forward on Johnny's right and my father on his left. Looking down a lane in the trees, my father saw a bull elk standing about 75yds. off, head on, looking right at him. It all passed in a moment. He dropped on one knee, and raising his rifle, fired. As he fired I saw a cow elk looking at me from behind a tree, but of course did not shoot at her. The bull disappeared, and leaving me with the horses, Johnny and my father plunged forward after the bull. As he shot, Johnny said to me, "He got him all right;" but ten minutes' hunting in the brush failed to locate him. They then came back and I pointed out the direction in which I saw the bull disappear. They had been following the cows, thinking they would stay with the bull, but I thought I had seen the bull and a calf start to run straight away from us. This proved to be so, for after several minutes I heard a whoop from my father and I knew they had him, and in my joy at his success I jumped over three logs and whooped until I was hoarse. The bull was found by Brigham, Johnny's hound, and when they came to him he was lying stone dead under a big spruce, shot through the heart. He had run about 100yds. from where he was shot. He was a beautiful animal, with branching antlers, and there was great joy in camp when we brought his head home that night. We ran on the elk about half-past 4, but it took us over an hour to skin the bull and get his head off, and pack it and the meat we wanted on the horses, and as our journey home was through thick spruce for a long way, we did not make camp until after dark.

My father now had killed an elk, but had not yet secured a good pair of buck antlers, so next day he started off after deer by himself, and Johnny and I went for elk. Neither hunt was successful. My father shot a buck, but it got away. I rode all day in the thick timber without getting a shot, though I saw some cow elk and had a glimpse of a bull. I climbed Pagoda Peak, however, and from there had a magnificent view of the surrounding country. It was a beautifully clear day, and from my elevation of about 11,000ft. I could see for over 100 miles into Wyoming on the north and Utah on the west. I got back to camp first and went out to meet my father, and found him returning with three grouse, which to my astonishment he said he had killed with stones; he was pitcher on his school team when a boy. Mr. C. on this day saw several bulls, but did not get a shot.

The next day Mr. C. thought he would like to try his hand at hunting deer alone, and the outcome was very remarkable and successful, for he got two large bucks, one of which had a fine pair of antlers. This proved to be one of my lucky days. I had hunted hard with Johnny for elk all day long, seeing nothing but small deer. It was 5 o'clock in the afternoon and we had still six miles to go to camp through thick timber. We were crossing a small open park in the edge of the timber, when I happened to look over to the right and saw a bull elk come rushing out of the woods into the park. I was off my horse in an instant, and was ready to shoot before he had reached the other side of the park, 150yds. away, and here a lucky thing happened for me. At the other end of the park, near where he was going to enter the timber, there was a small opening which led into another smaller park. Just as he was about to plunge into the woods three deer came running through this opening. He was so surprised and startled by their sudden appearance that he turned and ran along the edge of the park without entering the timber. This gave me a good chance to shoot. Just as I got my sights on him he turned around and started back again, and so I shot behind him. At the shot he turned and plunged into the timber. I took a quick shot at his vanishing rump. "No catchee," said Johnny. "No catchee," I repeated. "We'll go and have a look anyhow," said Johnny. "You may have hit him with that last shot, but I don't think so." "Oh, what's the use?" I answered, "I missed him clean as a whistle." But Johnny insisted, so we rode over to where we saw the last of our elk. Johnny rode in a few steps, and then said quietly: "Well, you got him all right." And there he lay in all his glory, a beautiful young spike bull as large as a heifer. This completed our collection of elk trophies. I had killed a cow elk last year in Wyoming. My father had on this trip secured a bull with a fine pair of antlers, and this spike bull completed the family group.

We cut off the hams and skinned the head, and having no pack horse that day we hung the skin of the head and the skull with the horns high up on a tree near by. The hams we wished to save for eating, so hung one on the limb of a sapling and the other on a high stump, to save them from marauding bears, and we then took our way campward, weary, but very well satisfied with our day's hunt.

I forgot to say that on the day before Johnny and I had visited my father's elk carcass, which lay less than half a mile from mine. This was on the second morning after my father killed it, but it was all absolutely gone with the exception of some gnawed ribs and leg bones—with not enough meat left on them to feed Brigham. Remember that this had been a large elk, and yet one bear (as we learned from his tracks) had done all this gormandizing. The hunters said that the tracks were certainly those of "Old Ephraim," a very large grizzly, as well known to bear hunters throughout that region as was "Haskins's coon" in Stockton's story of the coon hunters who vainly pursued that elusive coon on many successive nights. All grizzlies are known by the generic name "Old Ephraim," but this particular bear has taken title alone to the name in the White River region of Colorado. We made up our minds to get that bear, and to this end resolved to move our camp to a place within half a mile of the carcass of my elk, and to set our trap there, so next day we broke camp and on the way stopped where the carcass lay. Ephraim had been there; the carcass had been partly eaten, and had been dragged more than 50yds. through the timber. When we looked for the hams which had been so carefully hung by us, out of reach as we thought, we found they had been torn down, and they lay together undevoured, but thoroughly mauled, 100yds. away. As the hunters say in the vernacular, the bear had "gormed" them—an expressive term, if you understand it to mean that the bear had in an evident spirit of wanton destructiveness destroyed for our uses the meat he did not want for his own. As elk meat is preferable to venison, we felt very indignant at Ephraim for his double theft, and made a solemn vow to secure his hams in exchange for those he destroyed. We set the trap very carefully, and then went and made camp in a valley below Pagoda Peak.

Early next morning Johnny went up to see if we had Ephraim—but alas! he had us. He had visited the carcass, smelt out the trap, rooted it out of the ground with his nose, sprung it and walked off safe, and doubtless smiling at us. This we were told by our guides was a trick peculiar to this particular bear. He had played it a number of times on other hunters in the past. After breakfast Wells, my father and I went up and set the trap again. Wells, who was nettled at the way we had been "played," set the trap with the greatest care, making a few changes in the surroundings, and then we went hunting, but got nothing that day.

The next morning we had "a" grizzly, but not "the" grizzly. Old Ephraim had again escaped us, and this time for good. It will hardly be believed, but the evidence of the tracks and the surroundings showed unmistakably that when the other bear was caught in the trap, "Eph" had walked in, over or by him, and taking the hams we had left with the bait, had carried them out of the pen and eaten them. We found the bones near by. The bear we caught was not extraordinarily large, but he was large enough to satisfy us, weighing about 400lbs. His fur was in very good condition. When we reached the trap we found that he had been caught by the right forefoot, and such was his ferocity that by the time we arrived he had nearly freed himself by gnawing his foot off. He was furiously angry, and his snarling and roaring were terrifying to a novice. We stood around with our rifles cocked while my father took three hasty snaps at him with his kodak. At the third the indignant bear made a jump at Johnny, who had no weapon but an axe, so aiming between bruin's eyes I shot him, putting him out of pain and us out of danger. A grizzly is, however, very tenacious of life, more so than almost any other animal, and this one, although there was a hole in his skull large enough to get two of your fingers into, did not die for fifteen minutes, although he never regained consciousness. I sat down on him, so that I can now say that I have sat on a live grizzly bear in the heart of the Rocky Mountain forests.

And then we came home and I became a schoolboy again. And now I look back on the lofty mountains, the somber solitude of the mighty forests, the mountain brooks, and the waving spruces as dreams of the past, and remember "the blazing fire at night, the sweet taste of supper, the talk, the bed of hemlock boughs, and the bear skin."

H. S. D., JR.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

CHICAGO AND THE WEST.

Around Lake St. Clair.

CHICAGO, Ill., Aug. 22.—It was a large and merry party of guests that Com. Scotten took out from Detroit in his boat last week, the party being in honor of the shooters visiting Detroit at Jack Parker's shooting tournament, and comprising more than a dozen local and visiting men well known in shooting circles. The start was made early Saturday morning, and the voyage was a delightful one, with all the luxuries at hand which a well-equipped steam yacht can offer. The day passed in story telling and merriment, until the party arrived at Com. Scotten's cottage on the North Channel. Here he has an elegant cottage in course of erection, and here he keeps a vast house-boat, fitted out like an ocean liner for comfort and elegance, with over a dozen staterooms, a big dining hall, library, kitchen, observatory, etc., etc., certainly a most admirable home for a summer fishing party or a fall shooting assembly. This big boat, which is about 60ft. over all, is always the dwelling place of some of Com. Scotten's friends, and until the erection of his cottage has acted as the summer home of himself and family, the yacht Wanda making regular trips up from the city, after the half marine fashion of Detroit in the summer season. The locality is right in the heart of the best of the ducking country of the famous St. Clair marshes, and from the roof of the house-boat we could see uncounted miles of fine mallard marsh, broken up with long reaches and pools of open water. Here some fine bags of ducks are made, and there is every prospect that this fall the Commodore and his friends will have elegant sport, for the birds are reported breeding in abundance on the marsh, to say nothing of the migratory flight of deep-water fowl. There is abundance of good woodcock ground near by also. The whole region thereabout has a twang of the paddle and gun which years of fashionable settlement have not been able to eradicate, and the dwellers thereabout offer types and characters worthy of our writers who are looking for that sort of thing and not always finding it.

While our party was wandering about the grounds at the cottage and house-boat—all low "made ground," as is customary in this modern Venice—attention was called to an interesting fact. The workmen on the place had reported seeing very often a mallard hen which had her nest near the bank of a ditch close up to the house, and we were told that the nest could still be seen. We filed out over the marsh about 50yds. from the house, and there to be sure we found the nest of Mother Mallard, now, alas! deserted on account of the continual noise and frequent visits which the building of the house had occasioned. We found the nest to be merely a little gathering together of the twigs of the rushes which grew about it, the eggs being merely held above the moist earth. The reeds bent about it in a scanty circle, and the cover was slight when one came up near the nest. About half a dozen eggs remained in the nest, and some of these were broken. One of the party, Mr. Heikes, who had a camera with him, made a very interesting picture of the nest.

Our voyage over the charming St. Clair country was terminated by a run up the beautiful "Sni Carté," a rapid run down the South Channel among the ceaseless streams of shipping, a stop at historic Joe Bedore's place, and a turbulent passage across old "Lac St. Clair" in the teeth of a rattling blow which brought rain and lightning to add to the picturesqueness of a lovely locality. It seemed to a stranger that this is a very happy hunting ground for a sportsman, and of all the many lovers of the rod and gun who make the lovely city of Detroit their home, there are few who are more fortunate or more happy and hospitable than Mr. Scotten.

A Sportsmen's Luncheon.

This social side of sportsmanship seems to gather force as years go by, which is a very pretty thing to chronicle. Here at Chicago we had this week a little instance of this. At the close of the late trap-shooting contest between Mr. R. O. Heikes and Mr. Fred. Gilbert for the E. C. cup, the winner, Mr. Heikes, invited the defeated and a number of his friends to a little luncheon. This was duly had yesterday, there being present, besides the host and Mr. Gilbert, Mr. E. S. Rice, Mr. W. L. Shepard, Mr. Charles Grim, Mr. A. C. Patterson, Mr. J. H. Robbins and the writer. Mr. Heikes is as quiet and as beaming a host as ever put foot under a board, and the affair was as pleasant as any ever was. It was a graceful and pretty thing, such a luncheon, and shows that shooting is not all there is to the sport of trap-shooting.

Buffalo Skulls in Iowa.

It was this luncheon, by the way, or the preliminaries to it, that brought out what to me seems a rather curious fact, namely, the recent discovery in northwestern Iowa of numerous buffalo skulls. One would have thought these relics all picked up or rotted away long before this. Mr. Fred. Gilbert, whose home is at Spirit Lake, Ia., told me that the late droughty years have caused the entire drying up of many lakes and bodies of water in that region which for the generation past have been full of water. The skulls and bones were in each case found at the bottom of some such dried-up lake. A great many of them have been found, and Mr. Gilbert, pointing out an old skull of my collection which is in fair preservation, said that the Iowa skulls were quite as good as that—proof of the preservative effects of a long bath under mud and water. The animals were no doubt mired down or in some way killed at the water in the past. There is no doubt about the skulls and horns being those of the bison and not of domestic cattle.

Mr. Gilbert's father, John Gilbert, is still living. He came to Spirit Lake in the frontier days, in 1857, Fred thinks. Fred Gilbert has heard his father tell of killing two buffalo after his arrival at Spirit Lake, in Dickinson county, Ia., and he thinks these buffalo were killed in that county, though the hunt may have taken the men beyond the limits of that county. John Gilbert killed the only two buffalo seen, a bull and a cow, which were found cut off on a strip of unburned grass in a region which had been burned over by a prairie fire. The weapon used was a muzzleloading rifle. To-day there are flax fields growing over the lakes where John Gilbert once went goose hunting with his rifle, and Mr. E. S. Rice, who goes this week to the old Gilbert homestead, will be glad if they find plenty of prairie chickens instead of geese and buffalo and elk, as was once the case in the swift history of that sturdy prairie State.

Chickens.

The chicken season draws on apace. Illinois shooters should keep in mind such points as De Kalb, Champaign, Mason City, Amboy and Ashton. There are chickens at each of these points, in greater or less quantity and under more or less difficult environments, by reason of posted land, local prejudice, etc. Before many years we shall be valuing these birds more highly than we do even to-day.

Messrs. F. F. and Richard Merrill, of Milwaukee, have gone to Fox Lake, Wis., for a go at the chickens on the marshes thereabouts. Additional word comes from Horicon marsh that the chickens are abundant there, near the upper club house. The Merrill brothers will go to Minnesota Sept. 1 for further chicken shooting.

The license law of North Dakota will keep many Chicago shooters out of that State this fall.

There exists the old confusion of ideas as to the Illinois chicken date, some claiming Sept. 1 and some Sept. 15 as the legal opening date. There is doubt as to the legal validity of either date, so it is risky to take the earlier date. Besides it is more sportsmanlike to take the later one.

A Good Special Car Party.

There is no prettier way than that of the special hunting car when it comes to taking a trip with a party for a hunt in far away country. Not all shooters are so lucky as to go in this way. Of those who are so lucky there are some who are sportsmen and some who are not. The special car party in some instances is a synonym for good living and bad shooting—in short, of butchery and not of sport. Too large bags are carefully to be guarded against always when a number of men are hunting together in a good game country. There are other and better special cars, however, and one of that kind appears pictured at the head of a letter I have just at hand from Mr. W. B. Mershon, of Saginaw, Mich., whose letters have from year to year been read with interest by the readers of FOREST AND STREAM. This letter head bears, besides the picture of the car which carries Mr. Mershon and his friends, a lithographed title which reads: "The Forest and Stream Co., Limited"—a tribute to good sportsmanship which the paper long ago acknowledged. The members of the Forest and Stream Co. are Messrs. E. N. Briggs, president; W. B. Mershon, secretary and treasurer; Watts S. Humphrey, George B. Morley, H. T. Wickes, J. W. McGraw, R. D. Schultz, Frank B. Many, George Daniel Seib, H. P. Dain. Mr. Mershon writes that this good kind of special car will again carry the "Forest and Stream Co." to the West this fall. He adds:

"Ever since 1883 I have been somewhere in the Northwest, and only skipped one year, that time going to Indian Territory. It is our intention to start from Chicago about the end of the first week in October, going somewhere in northern Minnesota. We don't expect we will find game very plentiful, but we will have a good time. There will be room for you on the car if you want to go. You must understand that our main fun is derived from the sociability of the thing and getting away from business, and not that we expect or ever do get very big shooting. I don't like to take fellows along on this trip that are not contented unless they can bag from fifty to 100 birds a day. Once upon a time this would have been all right, but it would be downright butchery and extermination now.

"I found lots of sharp-tailed grouse in the Bad Lands feeding on the bullberries last fall. It was cold and late in the season, and when you stopped one of them there was a pile of satisfaction in it. They were about equal to our Michigan ruffed grouse. And, by the way, if you want to come up here the very last of November and take a few days' ruffed grouse shooting with me, I think I can give you some cream."

I should need a car of my own if I were to accept all the kind shooting invitations like the above. Not that one would not dearly love to accept each and every one!

At Chicago.

Mr. H. R. Wills, of Alton, Ill., and his friend Mr. Eugene Lahee drifted into the Western office of FOREST AND STREAM this week, each carrying a chip on his shoulder in regard to a certain rifle championship. They asked for the Chief-with-Two-Stomachs, and that gentleman being now in New York concluded to challenge him to a match right away. Then they wanted me to shut up the office and come shoot ten hours or so with them. We compromised by an arrangement under which we preempted a gallery and began shooting at once after dinner, keeping it up till 1 A. M. the next morning, when the gallery keeper struck. As to the scores, there would not be room in the paper to print all of them, even if all of them were fit for publication. We shot for the championship of Madison street this time, and I regret to say that those gentlemen wrested away from me about all the glory I had left as a rifle shot, and, moreover, made dire and bodeful threats against the Chief-with-Two-Stomachs, holding his name and memory in very light esteem, and recalling that time when the mask was torn from the face of that consistent bluffer, and his fatal lack of ability to make good his promises as a shooter was laid bare in all its ghastliness. If I knew anybody in the country who I thought could beat these men shooting I would hire him and keep him up my sleeve, so to speak, until they blew in here again. We need more talent than this office is carrying when it comes to tangling up with them in a rifle match.

Mr. G. Harry Marlin, of the Marlin Repeating Arms Co., spent a few days in the city this week, and is apparently enjoying his robust health. Although times are reported to be hard, it would be impossible to diagnose anything but three meals a day from Mr. Marlin's appearance.

Mr. Harvey McMurchy, of the Hunter Arms Co., a man with a million friends, was in Chicago this week, and goes West to St. Paul and Duluth. He may get a day or so with the chickens in Minnesota.

Hon. Theodore Roosevelt, of New York, is expected to arrive in Chicago to-day *en route* West to his ranch in the Bad Lands. He will take with him from this city a number of Chicago gentlemen, whom he will entertain at his ranch on an extended hunting trip. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A Maine Moose and Deer Country.

I HAVE just received a letter from A. J. Spearen, of Moro, Aroostook county, Me. He says: "I have been very busy all summer getting my camps ready, and now have comfortable camps at Spider and Musquacook lakes, and can accommodate a good many sportsmen. Shall build some small camps for still-hunting later in the season. Have just come out with a party, and we had the finest trout fishing. Game promises to be plenty. On our way to camp we saw six moose and a great many deer. C. M. S.

Maine's Great Resources.

Editor Forest and Stream:

The fish and game in Maine never were so plenty as this season, especially the deer, which can be found in nearly every town in the State. Moose are also increasing; our wardens near the boundary report seeing many cows and one and two-year-olds, which shows that they are breeding and on the increase.

There never were so many sportsmen coming to Maine as this season. Our hotels and camps are full and hundreds are camping on the shores of all our inland lakes. Many permanent camps and cottages are being built by non-residents, to which they bring their families in summer.

Many new ponds which we have stocked are now giving us good landlocked salmon fishing; also in many of them, which were once fine trout waters, but in which the pickerel killed them off, and bass have been introduced, the trout are coming back in large numbers. The bass have killed off the pickerel, but do not seem to interfere with the trout. The best fishing I have had this year was in a lake of that kind.

We have some 300,000 Sebago salmon which we are now feeding. Shall turn them out in October, putting a large share of them in new waters—making new fishing grounds and also new attractions for sportsmen.

Maine has finally found out that her fish and game interest is one of the leading ones of the State. I have been working for it for twenty-five years, or a long time, without much encouragement, but have lived to see the day that I can say I am more than satisfied with the results.

HENRY O. STANLEY.

DIXFIELD, Me.

Delaware River Rail Tides.

MESSRS. J. B. SHANNON & SONS, of Philadelphia, send out a card of rail tides for the Delaware River. It is high water at Washington Avenue Wharf, Philadelphia:

Iowa Prairie Chickens.

CHARLES CITY, Ia., Aug. 25.—Our season for prairie chickens opens Sept. 10. Other years the game and fish laws have been grossly violated; many of the merchants and even county officials have been known to shoot chickens and spear fish regardless of the none too well enforced laws. This year, however, the law-abiding hunters have organized a Floyd County Game and Fish Club of fifty or sixty members. We have a game warden with a salary of $50 and expenses per month and half the amount of all fines that he has imposed; he promises to prosecute any and all violators. Thus far two parties of two men each have been prosecuted, costing each offender $15.75.

This good work has already had its effect, and reports show that prairie chickens are more plentiful and less wild than previous years. V. V. S.

Game of Goochland County, Va.

I NOTE your inquiry about the game in this section. Our last Legislature passed a law prohibiting the hunting of quail (our partridge) for two years to come, because of their extreme scarcity, due to the bitter cold winter of '94–95. At the expiration of that time they will doubtless be plentiful in this State. Wild turkeys are rather scarce, as indeed they have been for some years past. Deer have recently appeared in this county, and are now found in fairly large numbers. Ruffed grouse are rather more plentiful than usual. Besides these we have both summer ducks and mallards, black and gray, a very few woodcock, squirrels and hares. Altogether I think our county will afford very good sport during the coming season. L.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

X.—Capt. Ira Wood.

I KNEW him better in after years, for he was only a child when he left Greenbush, and while his older brother, Reuben, oversaw the capture of my first fish, as before recorded, it was some years later before I had the pleasure of fishing with Ira. Along in the early 50s, perhaps in 1852 or '53, he came from his home in Syracuse to Albany and called on me. He was then a young man of medium height, closely knit, muscular, and the owner of a deep chest voice, which was pleasant and melodious. He had been an actor, and had an engagement in the theater at Albany to play old men's or other parts, and next week I was to go with him to the theater to his dressing room. Like many other young fellows, I had thought the stage a most desirable place to strut a brief hour, although my choice did not lay in his direction. Stars did not travel with their own companies then, but depended for support on the stock companies, and as they usually had two to three different plays each week the members of the company had to study hard, and there was always an afterpiece. But this was a rare treat for me. I knew Charley Kane, the low comedian, who also tortured the bass drum in Johnny Cooke's brass band, and Shel. Hitchcock, my sparring tutor, who raised the curtain; but this did not give me the privilege of the stage door. Ira did.

The week opened with Mr. Eddy as the star. Ira played Brabantio to his Othello, but who the Iago was is forgotten. For a boy of eighteen or nineteen Ira's make-up as the "reverend signior" was excellent, and he filled the dignified part well, as many said. Eddy was an actor of the robust school of Forrest and not unlike him in manner, and would bear nothing that would even slightly mar one of his scenes. Ira also played with Mr. Eddy in Richard III. that week and afterward with Couldock and other stars of those days. I do not remember seeing him in comedy except once and that was in "The School for Scandal," but can't name the character to-day. It was not Sir Peter Teazle, nor Charles, nor Joseph Surface. Mrs. John Drew played Mrs. Malaprop, a thing that would have been forgotten but for the fact that she plays the character to-day.

One day Ira wanted to go fishing, said he had only some four hours after the morning rehearsal and did not want to put in all his time in going and coming to the fishing grounds and back. Evidently the Popskinny* was too far on the east side of the river and the Normanskill equally so on the Albany side. Fishing off the dock for such strays as might pass had ceased to be attractive as manhood approached, and after a moment of hesitation I said: "Have you ever fished for striped bass in the river here?"

"No," said he, "the only fishing I have ever done is on the inland streams and on Onondaga Lake. I don't know what a striped bass is like. If they are near here and there is a chance to get one or two let's try it. How big are they?"

"Down in salt water they grow big. Up here they run up to ½lb. Meet me at the State street bridge at any hour you name and I will be ready with everything that we need." Naturally all these conversations in the long ago are reproduced in substance in the words that memory suggests as she recalls the facts; no stenographer was present. When Ira came he found a boat hired from old John Cassidy, who had a fleet to let, and it was provided with long ropes and anchors at each end—one of those wide, flat-bottomed scows, built like the Dutchman's wife who said: "She vas so besser built for sittin' down as for runnin'"—and we rowed out of the basin under the Hamilton street bridge, for there was a bridge to the pier in those days, and out into the river opposite the foot of Dallius street, which bears another name now. We dropped anchor just on the eastern edge of the channel; I knew the ranges well in those days before bridges over the river were built, and their piers had changed the currents and filled in the creek behind the island opposite the city, where we boys fished and swam.

After dropping one anchor, we brought the boat across the current and dropped the other. There is a tide at Albany except when great freshets come down. The water in those days at ordinary stages varied from 1 to 2ft. at high and low tides, but even on flood tides there was always a current down stream, weak or strong as the tide might be flood or ebb. Therefore we could fish from the lower side of the boat, no matter how the tide was. I opened a two-quart tin pail. "What's that stuff?" asked Ira.

"That s sturgeon spawn, for bait." He made no reply, but watched the production of some linen thread and a lot of white mosquito netting, which was cut into 4in. squares. Then I rigged him a hand line with sinker, about 2ft. above which was a hook on a 1ft. snell. Above the hook was tied 1ft. of linen thread, and, putting a quantity of sturgeon eggs in a square of netting, it was fastened about the hook by the thread and cast far out down stream. I had learned this mode of fishing from my brother Harleigh, who, with Uncle John Wilson, the ship carpenter, and John Ruyter, the tanner, were the only ones who practiced it about Albany. It was an art. The fly-fisher may curl his lip if he pleases, but I am a fly-fisher to-day, and will say that to take small striped bass by this mode is more difficult than to take a trout on an artificial fly, after the novice has learned the trick of casting.

In order to explain this mode of fishing I will tell it as I probably did to Ira, premising that the mode is obsolete because the sturgeon in the Hudson are nearly obsolete; or, if not, their eggs, instead of being thrown away, as in the "good old days," are now made into caviare, which men otherwise truthful have said was a delicacy, and the Albany angler no longer fishes in this way. Perhaps the young striped bass, which only ascended the river to feed on the spawn of the shad and the sturgeon, may also be obsolete in these waters?

* I confess to not knowing how to spell the name of this creek. I have mentioned it many times in these articles and doubt if I have spelled it twice alike. It may be an Indian name or it may be Dutch. I think I have seen it spelled Popsquinnea, but can't say truly. Have expected that Col. Teller, frequently mentioned in these articles, whose large farm lies on this once famous fishing place, would call me down on the spelling of its name.

"Now, Ira," said I, in obedience to instructions under Harleigh, "hold your line taut. When you feel the lightest touch give a twitch as though you didn't want a fish to have a taste of your bait. A bass will quickly follow the hook and you will feel it again. Keep this up, hand under hand, until you either feel them wiggle on the hook or they abandon it. In either case haul in, for the bait is gone or the fish is hooked. Don't allow a bit of nibbling or the bait is lost. Snatch it from them as if you did not want them to have it, until in despair they make a rush and take hook and all. Allow no sampling and sifting of the eggs through the netting."

After a while he got the hang of it, losing much bait in the meantime, and we took quite a number of small striped bass and a couple of eels, in the only mode of taking this fish near Albany, where they were rarely found outside the channel of the river, that I knew. Fish of ½lb. were considered big ones, but Capt. John Hitchcock, a retired river man, who fished from the steamboat landing almost daily, once caught one of 2lbs. weight. While we were fishing we saw young shad, perhaps 2 or 3in. long, rising near the boat, apparently after such loose sturgeon eggs as might escape through the netting or were dropped from the boat. With destructive man in addition to all these eaters of sturgeon eggs it is no wonder that "Albany beef" is no longer found in the markets of that city. The great fish held its own for uncounted centuries against all these enemies, the greatest of which was the eel, but man upset the balance that nature had kept and the sturgeon has nearly followed the buffalo, the wild pigeon and other beasts and birds which man has pursued for market, and has not been saved from extinction by artificial propagation, as he has saved the shad and some other fishes. We did not philosophize on these things then. We were boys and life was before us. The future of the sturgeon troubled us as little as the precession of the equinoxes or the differential calculus. Boy-like, our mental vision was bounded by the year, and a year was a long time then. It was so long from one Christmas to another! A man of thirty had lived a great while, we thought, and the disrespectful boys of Greenbush prefixed "old" to the name of every man over fifty. This reminiscence is brought up by Ira's questions.

"Does old Hogeboom let the boys go in swimmin' off the dock now?"

The man referred to was a justice of the peace, an office which he held for years, but from my earliest recollection I never heard him called anything but "old" Hogeboom. Once my mother expressed surprise that I had returned from a swimming trip in the island creek so soon. "Yes'm," said I, "we on'y just got nicely in when ole Morris came down and drove us out." She said: "Don't let me ever hear you call Mr. Morris 'old Morris;' you should have said, 'Mr. John Morris drove us out.'" Therefore I said to Ira:

"No, Squire Hogeboom," with emphasis on the Squire, "doesn't allow us to go in off the village dock, but there's good swimmin' off the rafts over there by the island."

He thought a moment and said: "There's one thing sure, I've got to quit the theater or begin a course of study that I never thought of. I must learn dancing, fencing, music and a whole mess of things if I continue in it. I thought that a little knowledge of elocution was all that was needed, and I got a little of that and went ahead. It is all up-hill work, and I think it is best to quit. Reub says that old Genet gives fencing lessons yet, if he's living; is he alive?"

With mother's lesson in mind I answered: "Yes, General Genet is alive," again with emphasis on the title for Ira's benefit, "and he is the same skillful swordsman that he always was, and as he is still going around selling building lots in Greenbush, with no buyers, the chances are that he will be glad to give you lessons." If Ira was beside me now he would be reminded of his irreverence and told, what he may have learned in after years, that his fencing master was a son of the illustrious "Citizen" Genet who figured in our Revolutionary times. In after years Ira had the reputation of being a good swordsman, and while he was learning I picked up a point or two which was of service in garrison when the neck of a champagne bottle was to be severed at a clean stroke, "but I anticipate" you may be told of this when ex-President Arthur is under the searchlight.

After all his lessons in fencing, and his studies in other directions, Ira shook the dust of the stage from his feet, left Thespis, Melpomene and other more or less reputable goddesses behind him and sought other fields. We did not meet again for many years. Boys do not care for each other as men do, if they take the trouble to care for any one except their royal selves, and we went our ways, but somehow we were thrown together again; perhaps by some occult fatalism of which we then, and I now, know nothing, for on a review of life to-day no man is recalled whose early ideas so fully accorded with my own. He never thought of accumulating wealth. A powerful physique enabled him to disregard all thoughts of health and a romantic disposition led him to seek adventure. Without consultation we both went away in the same year, he to the army and I to try a different but equally adventurous life.

Ira Wood enlisted Feb. 18, 1854, in the Engineer Corps, U. S. A., at Boston, Mass., for five years. He was under instruction at West Point for a while and was then employed on Fort Sumter, at Charleston; Fort Taylor, at Key West; and was discharged Feb. 18, 1859, at Fort Cascade, Washington Territory, by reason of expiration of his term of service as an artificer of Co. A, First Lieut. James C. Duane commanding. He had made application for examination for promotion to a lieutenantcy, but no examination was held between the time of application and his discharge.

At the call for volunteers after Fort Sumter was fired upon, and the regiments of State militia were found insufficient, Ira Wood raised the first company for the first regiment of volunteers that was organized in the State of New York, but by some delay at Albany other organizations were numbered ahead of it, and the regiment left the State as the 12th N. Y. Vol. Infantry, with Ira as First Lieutenant of Co. A. He was mustered into the United States service on May 13, 1861. During that year he participated in the battles at Blackburn's Ford, Bull Run and Upton's Hill, all in Virginia. He was promoted to captain, and mustered as such, to date Oct. 29, 1861. He was engaged in the following battles while a captain: Near Big Bethel, siege of Yorktown, Hanover Court House, Seven Days' battle, Gaines's Mills, Malvern Hill, Malvern Cliff, second Bull Run, Antietam and near Shepardstown. He was honorably discharged on tender of his resignation by special order, War Department, Oct. 14, 1862. On a semi-official list of volunteer captains his name appears in italics, denoting that he was commissioned, but not mustered in that grade. I looked this matter up, and take his record from a letter written by E. D. Townsend, Adjutant-General, U. S. A., to Hon. Frank Hiscock, M. C., May 13, 1878, which I have been permitted to see. The record of battles is from Col. Phisterer's "New York in the Rebellion," and accords with what Ira told me in later years. He resigned to become a field officer in a new regiment, but owing to the clamor of politicians for places for their favorites he did not get the appointment. While with the 12th a friend writes me: "The regiment was for a good part of the time commanded by Capt. Wood, the senior captain, and he was the only company commander who was present at every engagement up to the time he resigned. At Antietam he made a record with his color guard, when ordered to retreat, by backing off the field as much as possible, declaring that he preferred to take the bullets in front."

On leaving the army he was for a few years in the employ of the American Express Co., and while living in Buffalo became a captain in the 74th N. Y. S. National Guard. He then went back to Syracuse and for four and a half years was chief of the fire department of that city, resigning the position in October, 1881, to travel for an Eastern manufactory of fire hose. Upon his resignation as chief the board of Fire Commissioners tried to induce him to remain, and passed resolutions of regret. Steamer No. 1 and the Hook and Ladder Co. presented him with an elegant desk clock, with an inscription commending his mode of handling fires. Leading citizens and merchants presented him with a costly watch in recognition of his efficient service.

In 1867 Ira married Miss Brinckerhoff, of Albany, who with one son, Frederic K. Wood, survives him. He was born in Greenbush, N. Y., May 18, 1834, and died at Albany, N. Y., April 6, 1886, after an illness of only three days, caused by some bladder trouble. He was an enthusiastic Mason and Grand Army man. He attained the thirty-second degree of the Scottish Rite in Masonry, and was adjutant of George S. Dawson Post, G. A. R., of Albany. He was buried with services of the G. A. R. and with those of the Knights Templar, these organizations attending in uniform. It was also my privilege to witness the last sad rites over the friend of a lifetime, one of the bravest, truest and gentlest men that ever trod the earth.

CAPT. IRA WOOD.
From a photograph in 1884.

He went to Albany in 1883 as head of a branch of the house of Pierce, Butler & Pierce, of Syracuse. Long before this his fame as a fly-caster and winner of prizes at tournaments of the State Association for Protection of Game, held at Rochester, Buffalo and Syracuse, had drifted eastward, but not until the tournament of the State Association was held at Coney Island in June, 1881, when I superintended the fly-casting contests, did we clasp hands since we parted in Albany, some twenty-seven years before.

"Why, you old duffer! You have been in a flour mill! Your hair is all white! Take off your hat and I'll dust you off!"

"Yes, that'll all come off, but your head is mildewed and you'll have to bleach it in the sun to kill the mould.'

His record in that tournament was 101ft. with a two-handed salmon rod, third prize in a class of four, but he was only second to his brother Reuben, because Pritchard, who was awarded first prize for 91ft., was allowed a number of feet on account of his using a shorter rod—a mode of reckoning that was abolished later. Mr. Frank P. Denison, of Syracuse, cast 3ft. further than Prichard, yet only took fourth prize. In "Class A," single-handed fly-casting, Ira withdrew after casting 67ft. and took fourth prize. He had not got out all the line he could handle, and Frank Endicott said that, as his brother Reuben cast before Ira and took first with 75ft., he withdrew for fear of beating his brother. This was probably the fact, because I had attended a State tournament after this where the contestants were Seth Green, Reuben and Ira Wood. Seth had a wonderful reputation as a fly-caster, and they used to report his casts without strict measurements, because his only contestants up the State were Reub. and Ira, and Reub. would not beat Seth under any circumstances; nor would he allow Ira to beat Seth. Once I stood on the casting platform. Seth had cast, and Reub. had restrained himself and was restraining Ira.

"Don't you do it, Ira," said Reub., "hold it, don't beat the old man, it will break his heart. There now! That's far enough."

"Go in, Ira," said I, "go in and win," for I never loved Seth as Reub. did; "don't let Reub. hold you back; this is a fair open contest, and you should win if you can."

He didn't win, could, but wouldn't. He listened to his brother, and if the little fly-casting tournaments of the State Association had been kept up the same old farce of "don't you do it, Ira," would have continued. After the Coney Island tournament was over "The National Rod and Reel Association" was organized, with Francis Endicott as president, and yearly tournaments were held on Harlem Mere, Central Park, New York city. Here both Reuben and Ira were freed from Reuben's worship of Green, who never cared to meet Hawes, Leonard, Prichard and the other great fly-casters, and the scores of the Wood brothers are familiar to readers of FOREST AND STREAM. After these meetings, when Ira and I got to talking over old times and swapping army experiences, something always happened to interrupt, and the loss cannot be repaired.

At the tournaments in Central Park it was a common remark how Ira was always on the casting platform untangling the lines, tying on flies and helping the men who were in the contest against him; a course so opposite to that of the "mug hunters," which the lax rules of the Association encouraged to enter the lists, that it could not have passed unnoticed. Unconsciously the subject of this sketch was exposing himself and his great kind heart to the public, and, worst of all, to one who in later years chose to write him up and show him by lime-light on the great curtain of FOREST AND STREAM.

In 1885, after I had begun the stocking of the Hudson River with salmon, Ira organized the Eastern New York Fish and Game Protective Association, which still exists. Under date of Nov. 18, 1885, he wrote me: "I have set on foot a plan for forming a club or society, to be composed of the best men in this city (Albany), to care for the salmon which you have planted in the Hudson, and also to protect all other fish and game in this region."

In this imperfect sketch I have been greatly assisted by Mr. William Allen Butler, of Syracuse, N. Y., in gathering facts concerning Ira's life in that city. He tells me that Capt. Wood "came of good old New England stock, being a descendent of Dr. Samuel Wood, who came from England in 1684, and was one of the first settlers of Danbury, Conn., in 1696. His mother was a Breed, and her father, with three brothers and their father, fought in the battle of Bunker Hill on their own farm; their ancestor, Allan Breed, having emigrated from England in 1630 with Gov. Winthrop and the Puritans." As a boy, Mr. Butler was one of Ira's pupils in fly-casting, and speaks with great enthusiasm of his teacher when he relates their trips to the Adirondacks.

About a week before his death Capt. Wood opened a store in Albany, at 15 Green street, for the sale of fishing tackle and general sporting goods, with every prospect of success. Cut down by the reaper before he was fully ripe, those whose good fortune it was to know him intimately can say with Marc Antony:

> "His life was gentle; and the elements
> So mix'd in him that Nature might stand up
> And say to all the world, 'This was a man!'"

FRED MATHER.

WANTED.—Somebody who has fished with Fred Mather to write him up just as he is writing up men he has fished with. His series of articles is incomparable, but will not be complete unless he is written up and placed with the rest of them. O. H. HAMPTON.

ANGLING NOTES.

More about Texas Tarpon.

MY friend Mr. Cleveland was thoroughly inoculated with the tarpon fishing germ when he killed his first fish, and "it took." He writes me under date of July 14: "Since my first catch of tarpon I have been fishing three times, spending about three-quarters of a day each time. On the first visit after my catch of the foul-hooked fish I hooked seven tarpon, but in each instance they went into the air and got rid of my hook. One grand fellow about 7½ft. long and weighing probably 175lbs. surpassed all others in his endeavors to get rid of the hook. He not only jumped forward from me three times, with scarcely a moment between the jumps, but he concluded other tactics would be necessary to rid himself of me. His jumps were first one side, then the other, repeated four times, and in each instance jumping a little toward me, making it impossible for me to wind up the slack line. The fourth effort of this kind of springing loosened the hook and he threw it not less than 30ft. from him. His efforts reminded me of the bronchos of my boyhood days. When they failed to relieve themselves of their riders by bucking forward, they would jump first to the right, then to the left, which style of bucking was called 'laying a worm fence.' The tarpon have been in Southern waters until they have acquired the bucking habit, and it is of no use to try and save them when they have fully made up their minds to get rid of you. The second time I went out I hung three fish, but after a few minutes they got rid of me. The fourth fish I hooked about 12 o'clock and it was about an 85lb. fish. I played him for an hour and a quarter in the hot, broiling sun and had him, as I thought, so completely under control and exhausted that I concluded to take him in to the flats more rapidly than he wanted to go, and by main strength and awkwardness pulled the hook out of his mouth. On the same day I landed one of 85lbs. after less than an hour's play.

"Friday night last I went down to the Point again, but soon after arriving a great storm came up and the rain continued falling all night and until the next day at 10 o'clock. Nevertheless as soon as the rain ceased I went out. I had several gentle strikes, and at 12 o'clock hooked a tarpon of 145lbs., 6ft. 8in long, which I landed in good shape after an hour and a half of play.

"These fish are something like the ouananiche, only more so, and it is more difficult to keep the hook in their mouths after they are hooked. They have a mouth in which there are so few places that a hook can enter that it is surprising to me that I ever succeeded in placing a hook in one of these few places. The sport is grand, and I often wish for you when I am out after these fish. They remain here until September, and I expect to enjoy a great many parts of a day with them until they leave. Several friends have gone down to the Point to use my

tackle, and have lost more lines and leaders than you can imagine, besides having the rod jerked out of their hands, bending the crank of the reel and doing damage generally. They attempt to reel in the fish, and only the most expert of them can get their hand away from the crank in time, and a number of them have had smashed fingers and terribly skinned hands in consequence. The first time I hooked a fish I caught two or three heavy licks on my thumb before I could get it away from the reel handle, and it was four or five days before I could use that hand again. In fact, after I caught the first fish it was a whole week before I could get my hands into their normal condition.

"There are many amusing incidents in connection with fishing for these vicious fish, and I must tell you of one that occurred during the first few days when I was still-fishing for tarpon, and before I learned that it was necessary to troll for them. The morning of the day that I was to go down to the bay I telephoned to Mr. John Gray, the storekeeper of the place, requesting him to employ a first-class oarsman and good boat for me, and have the man procure fifteen or twenty mullet. He telephoned that everything would be in readiness and everything first-class.

"I arrived that night at 8 o'clock and asked for the oarsman. He appeared and said he had sixteen handsome mullet. I asked him if he was equal to tarpon fishing, and he said he was. Next morning at 5 o'clock I had my coffee, and before getting into the boat I looked into the well and all the mullet were dead. It is difficult to catch mullet in the daytime, but I hired two men and started them off for mullet. In two hours' time they returned with two measly little fellows, but I was anxious to fish and concluded to use them rather than wait longer, so employed two other men to look for bait and started. The boat was of hard pine, four times as thick as it should have been, and probably weighed 600lbs.

MR. CLEVELAND AND HIS TARPON.

The holes for the oarlocks were rotten, and after every other stroke on such a matter the oars would jump out. The wind was high and the current strong, and before we reached the tarpon ground I made up my mind that my man was no oarsman and knew nothing about handling a boat, and told him so. We arrived at the place to fish, and I told him to put the bow of the boat by a bulkhead and hang on to it, and as soon as a tarpon took my hook to let go, grab his oars, and pull for his life as I might direct. During the time I was sitting and waiting for a fish I continued to warn the man about being prepared to move promptly, to keep his oars at hand, and also narrated a number of accidents and sudden deaths that I had heard of while tarpon fishing; that any awkwardness on his part would not only drown me, but drown him. I did not look to see what effect my words had on the man, as I was paying strict attention to my fishing. In a short time a huge tarpon took my hook and went off at forty miles an hour. I shouted to the man to let go and pull for his life in the direction the fish was going. I must confess that I was so excited myself that I thought we were going after the fish, but soon recognized the fact that my line was leaving my reel too fast if we were moving at all. After the tarpon had taken all the line and had nearly taken the rod and reel, I gave a jerk to break the line and save my rod, and then looked around at my young man, and he was holding to the bulkhead with a death grip, and as the fish disappeared with my line for good he remarked, 'Gosh! wasn't he a big one?' You can imagine with what indignation I expressed my views of the young man as a tarpon fisherman, but his reply was such that I could only laugh. When I asked why he did not let go of the bulkhead when I told him to do so he said: 'I don't know nothin' about tarpon fishing, but I do know I ought not to have taken this job. Why, Mr. Cleveland, if I had let go of this bulkhead we would both be in the bottom of the sea by this time.' I concluded he was not the kind of oarsman for me, and packed my bag and went home.

"It excites the best of them to get hold of these big fish. I now have a sea captain to row me, a man about fifty, competent in every way to manage a boat, but he becomes so excited when rowing after a fish that he often loses his head and pulls in the wrong direction.

"I have got a fresh lot of tackle to-day and sent it down to a friend who has a cottage near the fishing ground. This gentleman, Mr. Henry Hencke, a merchant of Houston, never cared for fishing, but has been out several times with me and became so enthused that he is now the most enthusiastic fisherman I know of in this country. He goes out every day and hooks half a dozen tarpon, but as yet has not been fortunate enough to land one. He says he has become expert in using the rod and reel, but I notice he breaks every line and leader he gets, and his hand is so battered with the reel handle that he carries it in a sling most of the time. He is a man of large means and he says he will spend the balance of his life and every dollar he has until he kills a tarpon. Every time I go down and find his hand freshly battered I know he is having lots of fun, even if he gets no tarpon. He has staying qualities and will succeed in the end if he does not lose all his fingers. You will never know what real sport is until you come down here and fish for tarpon." I think the time has arrived for Mr. Cleveland to explain his mode of fishing for tarpon, as it is so unlike the style practiced in Florida. He says in this letter that he began by still-fishing before he knew it was necessary to troll for them. It seems like a waste of raw material to have half a dozen fish strike in a day and not kill one of them, and I have yet to see the objection to letting the tarpon gorge the bait and hook so that it will be hooked in the gullet below the plated mouth. A. N. CHENEY.

CHICAGO AND THE WEST.

More About the Grayling.

CHICAGO, Ill., Aug. 22.—I am advised of one grayling, a very large one, being taken on the Little Manistee River in Michigan this season, the only one I can trace to that stream this year. The Manistee seems better, for Mr. V. E. Montague, of Traverse City, writes me quite encouragingly of that water. He says:

"Reading in FOREST AND STREAM that you have lost one grayling, I hasten to put you on its spoor, but you had better be diligent or some one else will have accomplished its destruction.

"A party returned from the Manistee a few days ago and report having taken about fifty grayling in a week's time. They left one in the river for FOREST AND STREAM, and if you want him I will locate him as nearly as possible."

Mr. Montague adds the following interesting news in regard to the Boardman River, which has attained a great reputation this year as a rainbow trout stream. His opinion that the rainbow is a gamier fish than the brook trout may be founded unconsciously on the fact that they are heavier on the average, and so harder to hold. Mr. Montague states:

"Some rainbow trout of 4 and even 4½lbs. have been taken this season. They are more plenty and far more gamy than the native brook trout, and while not of quite so good flavor are good enough for the Joneses.

"I have only succeeded lately in hooking five, and all of them were when it was too dark to see to handle them successfully, consequently I lost three of them. The two I got weighed 2 and 2½lbs. respectively. Talk about sport! they can jump higher, faster and with more fury than any other fish I ever handled.

"J. A. Montague, his two sons, Prof. Gruson, Dean of Mathematics in the Lewis Institute, and Dr. Millner, of Grand Rapids, have just returned from a month's cruise to the Agawa River, Lake Superior, and report trout fishing only too good."

Among the Bass.

Mr. C. R. Gillett, of this city, has been having some very nice sport with the big-mouths at Douglas, Mich., lately. On Aug. 15 he took twenty-four, which weighed 63lbs., and the day after that he took eighteen, weighing 51lbs., certainly a very nice catch. Mr. Gillett says he takes the boat from Chicago to Saugatuck, across the lake, and goes thence to Douglas, where he gets good accommodations and, as it would seem, good fishing.

Mr. E. S. Whitaker, of Carthage, Ohio, writes me a nice letter saying he is glad to see that I once in a while go fishing with his old angling companion Mr. H. L. Stanton, of the Natchaug Silk Co. Mr. Whitaker says he has fished many a time with Mr. Stanton among the Lake Erie islands and also on the St. Lawrence. He recalls that one day when a string of boats caught the total of 277 bass, weighing 407lbs., himself and Mr. Stanton were high boat. He very rightly describes Mr. Stanton as a prince of good fellows, and wishes he could go fishing with him again once in a while as he once did.

Deep-Water Trolling Devices.

In a recent interesting article on the deep-water trolling practiced in Lake Tahoe, the writer of the same mentioned the fact that a copper fishing line was the usual thing in those waters. It may be curious information to learn that the idea of a copper line is not found alone in that region, but also much further to the East. Last week, on a trip over the St. Clair Flats in the beautiful steam yacht Wanda, belonging to Mr. Oren Scotten, a wealthy sportsman of Detroit, who had out a party of friends, I saw on board the boat some large reels of copper wire line used in deep-water trolling in the deep and swift channels of those waters. These lines were rigged for the chugs, or deep trolling devices, common in those waters, and carried a weight of lead and swivel amounting to a pound or two, besides the attached short lines which carried out the baits behind the chug, one of which baits I noted to be a phantom minnow. The method of using this deep troll is to row slowly up the stream and let the lead drag on the bottom, the current carrying out the baits, the lower of which, the phantom minnow, is called a "McGinty bait." The wire line is used because it "cuts the water better," I was told. No doubt it is less apt to snarl and snag up the ponderous and unwieldy rig to which it is attached. I could see no sport to this kind of fishing, and this was freely admitted, but it was said that this was the only way to do much with the pickerel and bass, which bite low in the swift water. The wire line was used as a hand line and no attempt was made to run it on a rod.

Singularly *apropos* of the subject of lines and rigs for deep trolling was the visit at this office the other day, soon after my return from Detroit, of a gentleman who does considerable deep trolling in the upper Wisconsin lakes for lake trout, which fish is only to be taken by such low down methods, so to speak. This gentleman is Mr. Carter, assistant engineer of the Chicago & Northwestern R. R. at Chicago, a very ardent angler and big game hunter. Mr. Carter brought up the subject himself, and told me of a certain device which he had perfected by means of which one can hook his fish deep down on a trolling chug, and afterward play him on his rod quite independently of the trolling rig. This I thought one of the most ingenious little things I have seen for many a day, and the only criticism which arises to one's mind is that it implies the use of two lines, which run down deep into the water close together and which consequently might get twisted together, in which case the device might not work very surely. In this connection it occurs to me that Mr. Carter would better take up the use of the copper line, as that would not be so apt to cling and tangle with another line.

Mr. Carter's device is that of an ordinary chugging rig, with the usual swivels for the carrying of the baited line back of the chug. This baited line, as is well known, is ordinarily attached to the chug, so that in playing a fish the whole machine, weighing 2 or 3lbs. in some cases, has to be pulled along with the fish, of course forbidding all idea of sport. Mr. Carter gets rid of this weight and plays his fish on the rod by cutting away from the chug as soon as the fish is hooked. He manages this by using no short bait line behind the chug at all, but using for that the end of his rod line. The chug is dropped down as usual, and the rod line goes down with it. At the end of the swivel where the bait line is commonly fastened he has a ring something like the standing guide on a rod, and into this he puts a little split pin with an eye in the top, which fits in loosely enough so that it can be pulled out with a sharp jerk on the rod. When the chug is dropped into the water the rod line is run through this little eyed pin, and plays freely through it. Just above the snell of the hook there is a washer fixed large enough to pass through this eyed pin. When a bite is felt the fish is allowed to go until the time for striking comes, when it is struck on the rod just as though there were no chug on at all. If the jerk on the line in doing this does not free the eyed pin, the line is tightened until the fixed washer comes up against the eye, when a pull is sure to pull the eyed pin up out of the ring which fastens it to the chug. The line is then free. The angler plays his fish as though it were struck in the usual fashion, and on netting the fish the little eyed pin of course is found resting on top of the washer, upon which it has slipped down. The pin weighs nothing, and does not interfere in the least with the sport of the rod and reel. When the bait is to be dropped again the chug is pulled up, the eyed pin again put in place and the whole is dropped down again. The pin is kept in place in the ring on the swivel by the spring of the compressed legs of the pin, but it does not take much force to free it. Mr. Carter was so much impressed with the necessity of getting rid of that chunk of lead if he was to have any fun at his fishing that he has long been experimenting with similar devices. His first idea was to free the line by means of a peculiar knot in the line, which could be freed at the swivel point by a sharp jerk, just as the eyed pin is freed, but he found that the wetting of the line sometimes tightened up the knot so it would not slip easily. This knot was in the form of a half sheep-shank, thrown over the bight of the loop through the swivel. Its tying would be difficult to describe, and it is not so efficacious as the pin and eye. The latter device is not on the market, and so far as Mr. Carter is concerned it could no doubt be made by any one who liked. It promises at least a faint amelioration of the dismal work of deep trolling.

Kingfishers Heard From.

The camp of the Kingfishers for 1896 is, as I presume Kingfisher would say, "busted for the season." That worthy angler and his friends have passed to the South on their way home. I was so unlucky as not to meet them at Chicago, either when they were going into camp or coming out. Kingfisher leaves on my desk the following brief but speaking note, which I must accept instead of the pleasure of a personal meeting:

"*Bre'r Hough:* Called to 'shake,' but found you out. Sorry I didn't see you. Sincerely, KINGFISHER.

"P. S.—Had a good time. Caught 519 bass and twenty-five maskinonge."

Arkansas Fish and Game.

Mr. Jos. Irwin, of Little Rock, Ark., writes that the quail crop of his vicinity will be the best for years, and that there will be good turkey shooting also. He has enjoyed the finest sort of dove shooting and bass fishing lately with his friend John Pemberton, on the farm of the latter along the Arkansas, and says he shall soon go out and try his new Mullins "get there" metal ducking boat on the ducks and geese. That is a very happy hunting ground, central Arkansas, and long may it remain so. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

The Canadian Salmon Season.

CAMPBELLTON, N. B., Aug. 22.—One of the most successful years for salmon angling on the Restigouche has closed. Having had a severe accident early in June, from which I have not yet recovered, I only killed twelve fish. All the lower pools panned out extra well all the month of June. The upper pools never fail in July, fish gathering and lying in them until ready to spawn. There were two reasons for this catch: salmon came in force on the first of June, and the water in the river was in prime condition and the slight rains held it up, as well as slightly coloring it. Salmon were in no hurry to go on up, but played round like kittens. Fine scores were made wherever a lay spot existed. Large fish also were in order; 36lbs. was reported fifteen times, a few of 39 and 40lbs.

I see you have Mr. Mitchell's score of twenty days in June, fifty-six salmon, average 22½lbs., in all 1,247½lbs. This I believe to be the lowest record on the river, the same pools last year only getting ten fish. It is very difficult to obtain correct scores. Restigouche Salmon Club members' scores are recorded, and they are limited to eight fish per day; riparian owners can catch as many as they choose.

The Upilquitch River fished well; over 100 fish were taken by one party. The Metapedia River also had fair fishing on it and big fish. Mr. Gould and the Restigouche Salmon Club were the only parties on it. The Cascapedia Club or syndicate soon got their complement of forty fish each, some of them returning to the Restigouche to finish the season.

I cannot say the total catch of our anglers, but the guardians all unite in saying there are thousands of fish in the river; if so, I fear the fighting and continuous turning over of the spawning beds will destroy the greater portion of the ova. There will be some three millions of ova in the hatchery here this fall. JOHN MOWAT.

FLY-FISHING

On the North Shore of Lake Superior.

[*Concluded from page 173.*]

WE arose early the next morning, taking our breakfast at 5 o'clock, as we were impatient to leave and reach waters where the lovely trout abided. There was no breeze of any consequence stirring, though what little came was dead ahead.

The half-breeds gave it no attention, for they were eager for the advance that was returning them to their home. Not a golden gleam shone out, but the sky was painted in sullen colors that foretold threatening weather of the most tempestuous character.

"All aboard," shouted Kenosh, when he had the boat loaded; "we go anyhow."

It was with the oars that we went, and for about an hour the elements were quiet enough. Then came a little breeze in our teeth and harder work for the men. We soon reach a towering headland, which gives us a little protection from the increasing wind, and where a little cove was to be found on its inner shore line, which in storm afforded a snug harbor. None of us had ever seen it, and, the spirit of investigation possessing us, we concluded to satisfy ourselves as to its existence, for some day we might desire to seek its protection. We therefore followed its course to the shore, and there we were surprised at the safety afforded by the hidden cove and the immensity of the headland. Its waterline ran up almost perpendicular, and presented the most magnificent and frowning front of sculptured defacement I have ever seen. Fanciful forms of all kinds confronted us, and you could realize almost any picture in its torn and chiseled and sun-bleached face. We felt our faith in nature's beauty strengthened, and saw more clearly that beauty is universal and immortal, above, beneath, on land and sea, mountain and plain, in heat and cold, light and darkness."

As soon as we pulled away from the massive pile we strike a breeze that has doubly increased, changing bright skies to deep mourning, and giving us savage surges that battle fiercely against the old boat. Mists begin to gather, the sea gulls pass with shrieking notes, and the forest pines in swarthy gloom bend and sadly creak.

"Shall we return to the cove?" excitedly said Ned, when he felt the full force of the northwester that was blowing his snowy locks o'er his broad shoulders.

"We go ahead. May be reach Point aux Mines," said Kenosh.

"As you like."

And then more vigor was applied to the oars, and the sea spirit in a rage rose up and buffeted us at will, deeply impressing us as to his absolute power to rule the sea. Occasionally we would seek the shelter of the little bays and headlands.

The sky grows darker and more dreary every moment, and to add to the sum total of our adverse condition a heavy fog came up and shut out the gloomy heavens and almost the entire shorelands. Now and then we got a glimpse of Maimaise Point, and that fortunately gave us our course. The wind was howling and the waves furiously lashing us, and as we saw a chance to make a mile or two with the sails, up they go, and away we speed o'er the rising sea with its passionate wail and its yearning cry.

"I wish we were out of this," said Ned.

"Here too," said I.

"Me too," murmured Kenosh.

"Will we make the Point?"

"Have to."

And the word then rang out to drop sails and take the oars, as we had made all the distance we could under canvas. In again go the oars, and it was indeed toilsome to make any headway whatever. After most exhausting work we finally dart into the little channel on a rolling comber, and the "sea spirit" feels that for once his power has been duly thwarted.

Here we have a lovely spot on the island for camping, with the woods as a shelter from the cold northwester. Every moment we were preparing camp the wind increased in violence and the waves fought the rocky ramparts with a terrible onslaught. Vaporous clouds like a mighty army of mountains came down upon us with a rapid rush, the silver-fretted sky had disappeared with its last sparkle, and like clouds of whirling snow the spray leaped up in slender columns around the resisting rocks of raggedness, while the sleep of the foliaged hills was unduly disturbed.

"It looks as if we were to be wind-bound for a couple days," says Ned.

"That about it," answers the tawny half-breed.

"A northwester, sure."

"Yes, and an ugly one," I remarked.

"And no fishing either."

"Rest assured of that."

"We can play cribbage and yarn."

"Yes," put in Kenosh, "you good at story business."

"You can tell us again about that bear you killed, from which you ran away," gleefully said Ned.

"By jing! never stop on that?"

"We must bear and forbear."

"Bear and three bear, four too much."

Ned and I laughed heartily at his misunderstanding, but did not set him aright.

For two days we remained here, but on the morning of the third ripples of sea lined in crimson joyfully greeted us, and then there was a rapid rush to leave the island for Grindstone Point, where we expected to have a day or two of infinite delight with the *fontinalis* family, and then on to the Soo with our sun-browned faces and vigorous frames like returned crusaders from the wars.

As we delightfully sailed along the rays of the burning orb shot forth on every side like blazing arrows, spreading fire and lightning up peak and summit and point. The little coves burned like altars, and in view of this crimson illumination, this apotheosis of light, this matchless morning of gladness, we felt as if we were present at the magnificent nuptials of the earth and the sun. At this period we yield to silent rapture and reflection. You think this is a marvelous fairy land, a unique spectacle, such as no king, nor anyone else, were he 100 times richer than all the Rothschilds put together, could obtain at home, and that those who wish to see it must come here, must ascend the towering hills, go away from earth and approach heaven.

Arriving at Raisaines, we saw on the pier the generalissimo and his band of tawny arabs. Coming close enough to converse, the leader sang out to us:

"I say, old man, come ashore, I'd like to have a word with you," thus repeating word for word of Ned's remark to him on the trip up.

This was monumental audacity, but it made us all smile, and then Ned replied:

"We'll settle with you next summer."

"All right, bring Polly a cracker, will you?" resounded back; and then the barefooted brigade was in high glee at the response, and their hats went up in the air as a token of triumph.

"I spank him when I catch him," said Kenosh.

"Oh, no," said Ned, "give him a cracker and let him go."

"It be whip lash cracker then."

The dusky kids were full of sportive mischief and really meant no harm nor incivility. Their raid on our cracker box, in behalf of themselves and their half-famished dogs, was simply a mere practical joke, in which they realized the largest dividends. I now smile at the amusing incident and can plainly see the roguish eye and dauntless air of the juvenile Massaniello of the North Shore.

Just before we reached Pancake Bay Kenosh advised me to try along the rocks, and as my rod was in readiness I went to the bow of the boat for casting. Ned was watching me very closely, and when he saw me raise a big trout and impale him he at once put his rod together and tried for the same game. I had a very enjoyable time with my struggling trout, giving him all the latitude he wanted. He was in no hurry, however, to surrender and fought like a Trojan for liberty. His valor availed him little, but the record he made was a noble one. At last the white and red and gold of an emblazoned side gleamed from the surface, and then drawing him to the boat the netter lifted him with profound regard from the waters. He was a full 5-pounder, and about equaled Ned's blue ribbon trout.

I was fortunate enough to secure one more, while Ned was wondering why his red-headed and big-bodied fly was not coaxing out the scarlet-hued warriors from their palace halls. After my second trout had been landed we concluded to make quarters here for the night and have further intercourse with this interesting colony that sport so lavishly in the spangled robes, and is so completely the cynosure of all.

Dinner was now our first thought, and so the boat was beached and the quarters put in good condition; but the black flies, which were in immense hordes, soon had us stamping around with a foliaged branch or two in our hands trying to decimate their ranks. To eradicate them was as much of a task as cleansing the Augean stables. It was simply impossible.

Seeking the lake soon after dinner for the continuation of the angle, it gave us immediate relief from the tormenting pests, as they never come on the water for a victim. We succeeded in deceiving two trout, and then a pelting rain set in and drove us ashore and to the flies, that fairly flayed us alive, and as a *dernier ressort* a smudge or two was started, which gave us some relief while we held to the smoke.

The next morning we realized a leaden sky with mist and fog. We however sought the "living arrows" of the stream, and on catching two concluded to return to camp and get ready for an embarkation to Grindstone Point. Although the weather was not favorable for a departure, we shoved off as soon as the boat was loaded, and had during the entire trip very disagreeable weather in consequence of dashing rains and heavy fogs, which alternated with systematic regularity. After tossing around on the lake for about three hours in our rubbers and sou'westers, we reached our desired quarters and were exceedingly glad of it.

Late in the afternoon, with the sky in a dark scowl and a damp and heavy atmosphere, we skirted along a reefy shore and were fortunate enough to return to camp with a heart of delight and six lovely trout. Kenosh said if we were willing he would salt a few of them for his keg. As we had plenty for the table we gave our consent, but I told Ned this pickling fish was not the thing, and that it should never occur again in our camp if we could prevent it, and we were sure we could.

We remained here another day, which greeted us with a southwest wind, a somber sky and a dense fog.

As soon as breakfast was served we went in search of the lurking trout, and finally succeeded in enticing four of them from their rocky lairs. After dinner we were again afloat and this time we crossed the bay and caught four more beauties, which were more than enough for our immediate wants; but as Kenosh was anxious for a few additional ones to fill his keg, we were sure there would be no waste, and as it was to be our last day's angle we were inclined to be lenient and so let him have them, but it was to be the last time that a trout was to be dipped in brine in our camp. Too much of pot-hunting in such business. Had we realized on it at first the subtle half-breed would have had a veto put upon it that would never have been set aside.

During the afternoon I had missed a response from what I thought an exceedingly heavy weight. Being anxious to secure it, I took the boat after supper, with Jo as oarsman and netter, and started out for the coveted trout. I worked with all the skill I possessed to secure that particular trout, and thrashed the waters till I was unable to see my flies, and then started for camp somewhat disappointed and wearied, for not a moment did I take for respite. My flies had fairly rained upon the water and not an inch of it remained untouched where I had made my research for the ponderous trout.

As we were nearing camp we saw Kenosh and Ned sitting on a log at the water's edge, awaiting our return, and doubtless desirous of seeing the big trout I had so proudly started to entice.

"Jo," says I, "they well have the laugh on us."

"There's trout in the boat," he significantly responded.

"Where?"

"Right under the footboard."

In a moment I had the board lifted, and there were the four trout we had caught during the afternoon. Taking the largest, a 4-pounder, I quickly slipped it over to the half-breed and then replaced the footboard. I gave him to understand that that was the trout we had gone for. He was pleased to see that I comprehended him when he spoke of the trout being aboard. When we were near the shore Ned cried out:

"Where's your big beauty?"

As Jo held him aloft said, "What do you think of that?"

"He'll do; I didn't think you would get any."

The equivocation was a decided success and saved me from one of Ned's sarcastic arrows. Kenosh, I am satisfied, saw through the trick, for I observed a little facial telegraphing between the half-breeds.

The next morning at 6 o'clock we left for Gros Cap Island, and probably the Soo, if we could make it that day. The weather signs, however, were decidedly mixed, and even Kenosh with his rheumatic bones could not say what the day would bring forth. The breeze appeared to be rising, and little wavelets were breaking on the beach. The copper tints of the sky pass into a faint pearl gray. Here and there spots appear like vanishing roses, the woods begin to darken, and up among the mountains a haze is appearing and stealing down the slopes. It is singularly significant, and I told Ned that it would not be long before the pounding waves would be at the foot of the crags. It was fully realized before we had crossed Maple Bay, but it mattered not, for the wind was behind us.

The shore was now white with foam, and the charge of the leaping crested billows as they battled against it sounded more harshly than melodiously sweet. To our dismay the wind suddenly changed and came over the bow of the plunging craft with a vigor and a stifled moan, as if the now savage sea remembered some old grief she was weeping away.

"To the oars!" cried the half-breeds, and then for four miles we tossed up and down on seas that were snowy white. Striking Goulais Bay, we enter it as a harbor of refuge, and after skirting its shore for fully a mile we at last find a place behind a fisherman's small pier that admitted of our landing. Here we pitched our tents, satisfied that we would have to remain over night.

The morning came with but little cessation of the blow, and as Kenosh declared he could cross the bay in safety, we were willing to go. Once more the camp is dismantled, and we are again ready for the homeward course. Away we went flying over the stormy waves that pant and boil and climb each dripping side of the staunch old boat, while the bright silver rolls from her plunging bow.

Just as we were congratulating ourselves on the fine speed of our craft, Jo, who had been very busy turning over things looking after something, cries out:

"An oar missing."

"How that?" inquires Kenosh.

"Must have been left ashore."

"Then we back go."

This was a grievous disappointment, for we were fully a mile on our course. There being no help for it, the boat was turned and headed for the little pier, with Kenosh fairly boiling in rage and going for his son Jo in an unmistakable language that made the poor boy fairly writhe in agony. Ned and I kept out of the strife, for we well knew that with the recovery of the oar all anger would disappear, and harmonious relations again resumed.

We were soon back, and just before the boat touched the gravelly bank Kenosh sprang overboard, taking the water as high up as his waist.

The devil was aroused in him after searching fully fifteen minutes and not finding the oar. Fortunately a young man, son of the head fisherman, on seeing Kenosh so intently looking around, asked him what he was hunting.

"An oar," he answered with frowning furrows and lips tightly clenching.

"There is one in that boat," came the response from the questioner.

"That mine," said Kenosh, as his eye fell upon it.

He soon had the oar in hand, and as he passed some fishermen, who were drying their gill nets on a big reel, he fairly made the place lurid with his emphatic denouncement of the thief that had stolen or misplaced his oar. They paid little heed to him, for they well knew that when a half-breed had his blood up it was dangerous to trifle with him. Kenosh was still in deep anger when he returned with the missing oar, and when Jo made a blunder in placing the sprit he cried out: "I break your d—m neck you do that again."

Ned and I—at the risk of having his fury spent on us—put in a good word for Jo, championing his case so strong that the fiery half-breed simmered down considerably.

When we had gone about two miles we felt the full force of the gale. Wild, sparkling crests broke around us, with the boat bounding forward like a greyhound from the slip when after flying prey. Up and down we go, from the base of the wave to the billow's crown amidst flashing and feathery foam, with the masts creaking and shaking like quivering reeds. An anxious look was on every face, with the strong arm of the helmsman holding up the flying craft on the big waves that came rushing upon us with a dull roar, as if they wished to utter to us some deep mystery. Suddenly there was a crash overhead, and on looking up the mainsail was revealed as rent from side to side, and it looked as if it would soon go into fluttering ribbons if this fierce sailing was kept up much longer.

"Ease her up," cried Ned a little excitedly.

"Me hold her where she is," responded the still maddened half-breed.

"All right, hold her for the port of perdition, if you like."

"We soon out of it."

"It don't matter whether we are soon out of it or not," came back from Ned in no pleasant tone.

Things were evidently getting exceedingly lurid aboard, though Jo and I remained serene, content to let the twain settle the sailing business or swamp the boat if they so desired.

As Kenosh said, we were soon out of it, for the towering hills in our front eased off the stiff breeze considerably, and then there was some anxiety as to whether we would make the point we had all along been striving to reach. The boat was still kept well to the wind, and soon we had the satisfaction of rounding the bay into the lake and then the wind dropped dead upon us, the gray clouds disappeared, the sun shone out in dazzling grandeur, giving us a most beautiful world, with the chasm of sky in heaven's profoundest azure, where the everlasting stars abide.

We take up the oars and pursue our way along a shore that is fairly typical of this great lake, and which I have so often described in this letter. It was only four miles to Gros Cap, our destination, but the deliciousness of the

weather, the exhilaration of the atmosphere, and the loveliness of the landscape, with the ever-varying play of light and shade, were such as to fairly enthuse and make one feel nature's love in a most passionate manner. We sat almost spellbound, watching the curving lines of the rocky formations, listening to the music of the dying waves, and anon gazing above at the rose light which gave us the floating clouds of crimson and scarlet and purple with

"the mountains piled
Heavily against the horizon of the north,
Like summer thunder-clouds."

Nearing Gros Cap we concluded to land on the main shore and there remain until our moist tents and other things were dried, and also to wash up and put on some clean linen and "city clothes," so we could make a presentable appearance at the "Soo."

The radiant orb was glowing and crimsoning everything as well as performing one of the important functions of the laundry, the drying process.

Dinner was served in a lovely grove at the noon hour, and for some time after we lazed around in the mellow sunshine, picking a few of the succulent strawberries, and then strolling into the forest, where the silence is so delightful and only broken by the melody of the sweet-throated warblers.

We hesitated to withdraw from the grand shores that had given us such great pleasure, such ruddy health, such magnificent views of tinkling brooks and mountains, and peaks and spires that burn into the very soul, never to be effaced, but to remain a memory while the vital spark remains. Then the delight of the angle, the rustle of the great forest, the gorgeous sunsets, the grand and tempestuous sea, all illustrating the fulfillment of the universal law, "That where the beauty and wisdom of the divine working are manifested, there also are manifested most clearly the terror of God's wrath and inevitableness of His power."

The word to load was at last reluctantly given, and as we stepped aboard it was our final adieu to the North Shore and its entrancements, both piscatorial and picturesque. ALEX. STARBUCK.

CINCINNATI.

Bought Him a Ticket to Get Out.

BOSTON, Aug. 29.—Dr. Criado stopped on his way out from Round Mountain Lake to visit friends in Boston on Saturday. With his son of eleven years he has made a very fine outing in Maine. He has spent two or three weeks at the above lake, and is very profuse in his praise of the lake and its surroundings, though the fishing was not fully up to his expectations, or to what he had at the same lake a year ago. He has visited very many of the fishing resorts and small lakes and ponds in northern Somerset and Franklin counties this trip, having been absent from home five or six weeks. Tim Pond and several of the Seven Ponds have been taken in. He has also been up the Carrabasset as far as the Carry Ponds, at which point he enjoyed the fishing a good deal. From Rangeley he went to Loon Lake, and then up to Kennebago. Early in the trip he visited Flagstaff Lake and the ponds in that section. Concerning the game he is really enthusiastic. Deer he found to be very abundant at almost every point. It was nothing unusual to see dozens in a day, and once five were seen in one herd. Moose he did not see, though coming upon their signs on several occasions. He is satisfied that he was close upon an old moose and her calf at Carry Ponds by the freshness of their tracks. Partridges he believes to be fairly plenty, as his party frequently came upon them in good-sized broods. On the whole the hunting and fishing in Maine is most remarkable to him.

He believes that the sportsmen of the country do not half appreciate Maine, and he is sure that the people of the State do not begin to realize what they have got. If they did they would cease ice fishing in the winter, and would try to prevent fishing for count in any of their ponds and streams. He gives an account of most ridiculous fishing for count that came under his notice. It happened at one of the ponds near Carrabasset. One man of a party fishing there went out with a meal bag to bring home his fish in. He came in at night with the bag pretty well filled. The fish were counted, and there were over 300. Some other members of the party suggested that somebody else had once beaten that record. This the proud trout butcher could not stand, and he vowed he would try again the next day. That day he directed his guide to take out two meal bags. At night they came in with both bags nearly full. Counting the fish, there were 475. Nearly all were wasted. These exploits came to the ears of some other sportsmen, and they immediately raised the money and purchased a railroad ticket for the fellow to go home on. This was presented, or about to be presented, when the fellow got wind of what was going to happen and concluded to leave that part of the country. SPECIAL.

The Old Boys Join the Young Boys.

Editor Forest and Stream:

I have been a constant reader of your paper and I believe that I have never missed reading a copy. Many of the old writers have passed away. To-day we can see the force of their advice and meaning much better than we could at the time they were given. Then some called them "cranks."

Happening in a hotel in a country town last week, I picked up a well-worn copy of FOREST AND STREAM, and opening it the first thing that struck my eye was "The Game Has Got to Go." This article I had read many times before, and without looking I knew it was Nessmuk's. This was written thirteen years ago, but how true! That is just the condition of things to-day, not only in Pennsylvania, but elsewhere.

It is pleasant to reflect that these men have lived and let us profit by their wisdom and example. Their places are taken by others.

Last Friday evening a boy called at my house, and being shown into my office he opened up (as only a boy can that is brimful of enthusiasm) with "Have you read 'Men I Have Fished With?'" "Yes." "Who is Fred Mather?" I told him as best I could. "Did you ever see him?" "Yes, met him once." "Well, I would just like to know him; he is a dandy. And, right here, I will never raise my gun on anything but a game bird. It has made me feel uncomfortable. I wish all the boys could read that. Did you read his last article on his visit up to Warrensburgh?" "Yes." "Every one I read I think the last one is the best, and I hope he will keep on writing, and if I should ever hear that he was anywhere near here I think I would get on my wheel and ride twenty miles to shake him by the hand just once."

Now then, it isn't the young boys alone that are pleased with these articles, but many of those who are on the shady side of fifty are equally well pleased, and I express the sentiment of all the readers of the FOREST AND STREAM that I know when I say that in giving us such things the FOREST AND STREAM is doing good service as a sportsman's paper. H.

HUDSON, N. Y.

Carp in Iowa.

VINTON, Ia., Aug. 10.—I inclose a piece of the skin of a fish caught in the Cedar River. It seems to be a stranger here. The fish weighed 1lb. It was shaped somewhat like a black bass. It had a sucker mouth, a row of scales on each side of its back and belly, also one or two patches of scales on either side. When first caught the scales were of a golden color. I mistrust that it belongs to the carp family. If you can name the fish and will be kind enough to do so you will oblige me very much.

MOUNT TOM.

[The skin is that of the leather carp.]

Tarpon in Georgia Waters.

Editor Forest and Stream:

Your correspondent, J. B. B., is right when he says that the tarpon was not scientifically identified thirty years ago, although it was not unfamiliar to laymen on the Southern coast from Georgia to the Gulf of Mexico. I have in my cabinet at present the scale of a tarpon, caught in a pound, which I brought from Savannah in September, 1860, thirty-six years ago. The fish was caught in Warsaw Sound, where it was known as a "grandecay" (*grand ecaille*), or big scale. CHARLES HALLOCK.

Bass in Butterfield Lake.

REDWOOD, Jefferson County, N. Y., Aug. 18.—*Editor Forest and Stream:* I desire to supplement our fishing record in Millsite Lake last week by Monday's catch in Butterfield Lake: One big-mouth black bass which tipped the scale at exactly 5½lbs.; fourteen others of same variety from 2 up to 3lbs. each, two glass-eyed pike of 3 and 4lbs. respectively, with other smaller fish. One large one was lost by parting of the line, and several others from imperfect hooking. The fishing is very fine. J. H. S.

Bass in Plymouth County, Mass.

PLYMOUTH, Mass., Aug. 22.—Mr. George A. Teele, who for the past fortnight has been camping with his family at Billington Sea, recently caught a small-mouth black bass weighing 6½lbs. Mr. Teele is a most expert fly-fisherman, and the above fish was taken with a fly tied by his daughter, a young lady who is also very fond of the sport. C. C. W.

Raritan Bay.

PERTH AMBOY, N. J., Aug. 28.—Weakfish are abundant in Raritan Bay. So are porgies. Boats and bait in great demand. Sharks less numerous. Crabs plentiful and full of meat. Snappers not beginning to snap yet. Bluefish very scarce. J. L. K.

New Jersey Fish Commission.

IN place of W. Campbell Clark, of Newark, resigned, Gov. Griggs has named John R. Kuser, of Trenton. Mr. Kuser is reported to have a sportsman's interest in the work of the Commission.

Game and Fish Protection.

ROD AND GUN CLUB OF MASSACHUSETTS.

BOSTON, Mass., Aug. 25.—*Editor Forest and Stream:* A directors' meeting of the club was held at the office of the secretary on Friday, Aug. 14. As the club has now sufficient funds and organization complete, it was voted to begin work at once, and a committee was appointed to engage a suitable person as game warden, and to accept the courteous offer of Commissioner E. A. Brackett to provide with a State Commission, as deputy, any person considered suitable by the club.

The officers are: President, Wm. Minot; Vice-Presidents, Edw. Brooks, C. P. Curtis, Jr., and John Forster, Jr.; Secretary, Henry J. Thayer; Treasurer, Wm. N. Lockwood; Membership Committee, Wm. C. Thairlwall, John P. Reynolds, Jr., and Edw. M. Weld.

The following circular letter has been sent out to the members:

DEAR SIR: As above stated, the club now enters the field and is exceptionally well equipped for good results. According to the inclosed vote a warden has been selected and he will begin work on Monday, Aug. 24.

The club pays for his services (your money) and we do not wish him to waste the money in idleness, but to make each day and dollar tell.

Please, therefore, if you know of violations of the fish and game laws, notify the secretary at once, by letter or telegraph, and tell your friends to do the same.

At the same time keep in mind that rumor is not always true, and that money and time wasted on mere suspicion means also wasted opportunity elsewhere.

The club has engaged one man; if his work is satisfactory additional help will be added as fast as you add members to pay the bills. HENRY J. THAYER, Sec'y,
53 State street, Room 948, Boston.

We append the club's organization, which reads:

This association shall be called the Rod and Gun Club of Massachusetts.

The purposes of this association shall be the protection, preservation and increase of our fish, game and useful birds, and such action as may be practicable for the enforcement of the fish and game laws of Massachusetts.

BY-LAWS.

1. The officers shall be a president, three vice-presidents, a treasurer, a secretary and a committee of three on membership, who together shall constitute a board of directors.

2. The directors shall have entire charge of the business affairs of the association, except in such matters as may be specially otherwise directed by the association; the duties of the officers shall be such as usually pertain to their respective offices.

3. The membership of the association shall consist only of such persons as have no pecuniary interest which may come in conflict with the objects of the association, and no person under eighteen years of age shall be eligible.

4. Applications for membership shall be acted upon by the committee on membership. One dissenting vote shall reject. A list of the names proposed for membership shall be mailed by the secretary to each member of the association at least ten days before the committee shall act on said names.

5. The annual dues shall be $10, payable in advance, and those delinquent at the end of the fiscal year shall cease to be members and their names shall be erased from the membership list of the association.

6. There shall be an annual meeting of the association for the election of officers on the first Thursday in December, and the fiscal year shall then commence. Officers shall be chosen by ballot at the annual meeting, and shall hold their respective offices for one year and until others are chosen in their stead. Other meetings shall be as the association or board of directors may direct, and special meetings may be called by the president, or on the written application of five members, stating the object of said meeting.

7. Nine members shall constitute a quorum of the association, and five of the board of directors.

8. No alteration or amendment to the by-laws shall be made unless the proposed alteration or amendment shall have been presented at a previous meeting of the association, and shall appear in full upon the notice of meeting at which action is to be taken.

A LIVE MINNESOTA ASSOCIATION.

DULUTH, Minn., Aug. 15.—*Editor Forest and Stream:* The annual meeting of the St. Louis County Game and Fish Protective Association was unusually well attended, and even keener interest in the matter of game protection way disclosed than has been apparent for the past two years. The meeting was held on Aug. 6, and the following officers were elected: President, E. S. Palmer; First Vice-President, Dr. J. D. Titcomb; Second Vice-President, R. J. McLeod; Third Vice-President, Thomas Gibson; Secretary, Henry S. Mahon; Treasurer, F. H. White; Directors, Ellsworth Benham, J. W. Nelson, L. D. Hall, A. P. Wilson and T. B. Hawkes.

The report of executive officer John Green showed the following excellent record of active work and seizures during the past year:

1895.

Sept. 28.—Mounted moose head, replevined, from West Superior, Wis.

Oct. 29.—209 ducks seized, at Union Depot, Duluth.

Dec. 5.—7 partridges and 4 rabbits, seized at Union Depot, Duluth.

Dec. 6.—15 prairie chickens, seized at Messick & McCaulay's.

Dec. 20.—10,000lbs. fish, 602 partridges, 6 moose heads, 2 caribou heads, 1 deer head, and 1 case of furs, seized in refrigerator car in St. Paul & Duluth R. R. Co. yards in Duluth. The shippers were indicted and paid the State Commission a fine of $500, besides suffering forfeiture of the entire shipment.

Dec. 19.—3 moose hides, 1 deer hide, and 20 partridges, seized at Union Depot, Duluth. J. McAlister arrested for having same in his possession, and fined $60 and costs.

Dec. 23.—2 moose heads, seized at Union Depot, Duluth.

1896.

Jan. 7.—74 partridges, seized in A. Booth Packing Co.'s cold storage house.

Feb. 26.—Fish trap on Beaver River destroyed.

Mar. 2—2 gill nets, each 100ft. long, seized in Duluth Bay.

Mar. 19.—2 gill nets, each 125ft. long, and 1 fike net destroyed in Duluth Bay.

Mar. 20.—2 gill nets and 1 fike net, seized in St. Louis Bay.

Apr. 25.—2 gill nets, each 125ft. long, seized in St. Louis River at New Duluth.

June 11.—177 black bass, seized at Union Depot.

June 17.—1 box of small brook trout, seized at Spalding Hotel.

This Association was organized and began its work in the fall of 1894, with Samuel F. Fullerton as its executive officer. The work done was so effective that Mr. Fullerton was, during the following winter, appointed a member of the State Game and Fish Commission, and soon afterward became its executive agent. It was feared that after his vigorous and relentless warfare against violators of the game laws there would be a reaction, but the record of the last year shows this has not been the case.

The Association is taking hold again this year in such a way as to show that there will be no flagging in its efforts to enforce the game laws equally and impartially, and it is certainly true that public sentiment is with the Association in its efforts to a greater degree than ever before.

It is believed that the work of enforcing the game laws would be rendered much easier if associations of this nature could be multiplied and methods of work compared by such as are already in existence. Cannot this be done? HENRY S. MAHON, Sec'y.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

FIXTURES.

BENCH SHOWS.

Sept. 1 to 4.—Kingston Kennel Club's bench show. H. C. Bates, Cor. Sec'y, Kingston, Ont.
Sept. 7 to 11.—Rhode Island State Fair Association's fourth annual show, Providence, R. I.
Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.
Sept. 8 to 11.—Binghampton Industrial Exhibition's sixth annual bench show. C. H. Barrett, Supt.
Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.
Sept. 15-18.—Orange County bench show, Newburgh, N. Y. Robt. Johnston, Sec'y.
Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee. Louis Steffen, Sec'y.
Sept. 22 to 25.—Queens County Agricultural Society's bench show, Mineola L. I. J. Mortimer, Manager, Hempstead, L. I.
Sept. 23 to 26.—Stockton Fair Association's bench show, Stockton, Cal. D. J. Sinclair, Sec'y.
Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.
Dec. 1 to 4.—City of the Straits Kennel Club's local show, Detroit, Mich. R. H. Roberts, Sec'y.
Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.
Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Sept. 7.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.
Oct. 19.—Brunswick Fur Club's annual hound trials, Barre, Mass. Bradford S. Turpin, Sec'y, Roxbury, Mass.
Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.
Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.
Nov. 2.—Union Field Trial Club's inaugural trials. P. T. Madison, Sec'y, Indianapolis, Ind.
Nov. 10.—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.
Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.
Nov. 10.—Greene County, Pa.—Central Beagle Club's trials. L. O. Seidel, Sec'y.
Nov. 16.—National Fox Hunting Association's third annual trials, Bardstown, Ky. F. J. Hagan, Sec'y.
Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.
Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.
Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

COURSING.

Sept. 22.—Cheyenne Valley Coursing Club's meeting, Sheldon, S. D, Dr. J. P. Aylen, Pres.
Sept. 29.—Aberdeen Coursing Club's annual meeting, Aberdeen, S. D. Dr. F. W. Haragan, Sec'y.
Oct. 6.—Mitchell Coursing Club's meeting, Mitchell, S. D. H. G. Nichols, Sec'y.
Oct. 21.—Altcar Coursing Club's meeting, Great Bend, Kan. T. W. Bartels, Sec'y.
Oct. 28.—Kenmore Coursing Club's annual meeting, Herrington, Kan. C. A. Robinson, Sec'y.
Oct. 13.—American Coursing Club's annual meeting, Huron, S. D F. B. Coyne, Sec'y.

1897.

Jan. —.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.
Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.

JOAN AND PETRINA.

ROSSVILLE, S. I.—*Editor Forest and Stream:* The readers of what I write in biophilism will be glad to know that I have a new dog; for now I will probably not have so much to say about Phlip, whose taking from me by the poisoner so affected me that for more than a year I could not bring myself to have another dog.

But I have one now—a cocker spaniel, a beauty—a present from the kennels of Dr. Francis Wilmot Kitchel, of Perth Amboy, N. J. Her name in the pedigree book is Joan—the name by which we know her too, of course; for there could not be a neater name, and who does not know that there is bad luck in changing the name of an animal? And was there ever a lover of man or beast who was not just a little superstitious?

I hope that no bad luck may come to Petrina from the fact that we had to change her name. She came to us from one of the family of R. H. Golder, M.D. She was so small when she came that the name Peter was not known to be a misfit to her sex. When this was discovered Peter was feminized into Petrina.

A day or two after I brought Joan to the house Petrina came. We soon had proof that the dog and the cat are natural enemies—a fact of animal psychology which some are disposed to question. The first thing that Joan did when she saw the kitten was to make for her. Joan was called off, as much in her own interest as in that of the cat; for Petrina stood and showed fight so energetically that there was fear for Joan's eyes. But one calling off was not enough for Joan—she had to be called off three or four times. Then she seemed to understand that she was not only to let Petrina alone, but to be friendly with her. These advances Petrina resented in the ways in which the cat shows resentment, with spittings and strikings. This was kept up for several days. Joan was not ofscouraged, from which I conclude that the dog has less di natural enmity for the cat than the cat for the dog—though, of course, it must be taken into the account that in the activity of this enmity the cat is more apt to suffer seriously than the dog, the cat being the weaker of the two. The cat may scratch out the eyes of the dog, but in the death struggle the cat is the one who is apt to be reduced to a condition for burial.

Joan persisted in her advances, and in doing so showed, as I pointed out in an article in the *World* recently, that she is highly endowed with the faculty of imitation, for in playfully returning the spiteful strokes of Petrina the action was singularly and amusingly cat-like.

The advances of Joan were seconded. I would often hear the mistress of all of us say, "Joan, Petrina has no sense! Petrina, do you not see that Joan is trying to play with you?" Whether these words had any effect I do not know, though the lower animals understand very much more of human speech than we give them credit for understanding, but the fact is that after a week or so Petrina yielded, and now she and Joan are the very best of friends, and such constant playfellows that quiet has flown from the rectory, especially apparently at the time of the after-dinner nap.

The way in which Joan does make for Petrina; the way in which Petrina sits on her haunches and strikes at Joan; the way in which they run after each other, tumble over each other, maul each other—these ways are astonishing, entertaining—as good as a show—sometimes aggravating.

Always in them is there food for psychological and biophilistic thought. As I have intimated, the intercourse of Joan and Petrina has shown that the cat and the dog are natural or at least hereditary enemies, and that that enmity is overcome by their becoming better acquainted, especially when their acquaintance is forwarded and their confidence in each other established by the taking of a little trouble by some human being who has a regard for each of them.

Again, in their intercourse there is manifestation of reason. Time and again have I seen Joan stop in their play to drop upon one hip to scratch her ear. This would necessitate the turning away of her head from Petrina. Like a flash will Petrina take advantage of the situation and leap on Joan's back. And can any one take advantage of a situation without reasoning? The other day they in their play rushed from the dining-room through the two doors which give entrance to the kitchen across the hallway of a flight of back stairs. Petrina can recover herself more quickly than can Joan. She did so, and rushed back into the dining-room. In this she had a purpose. She hid behind the dining-room door, and when Joan came through, her mouth open and her long, silken yellow ears flopping, Petrina leaped upon her, much to Joan's surprise. Whether Petrina enjoyed the laughter which followed this feat or not, she deserved the applause which she got.

In that feat did Petrina evidence the power of reason? Does Edison love children? I vaguely remember that I have somewhere noticed that he does. If so, in playing with children I have no doubt that now and then he lies in wait for them that he may jump out and take them in his arms, laughingly enjoying their surprise. In so doing, in the lower region of play—if it be the lower—does he not employ the same faculty that he employs in the higher region of mechanics when he invents such a machine as, say, the kinetograph? And in laying a plan to surprise Joan, did not Petrina employ the same faculty which Edison would employ in laying a plan to surprise a child?

I have no doubt that when looking upon children Edison thinks of children who have gone on before and hopes that in the after life he may meet them, and imagines that now they are playing in the Eternal Home as once they played in the temporal home. So when I look at Joan and Petrina at their play I think of the dogs and the cats whom I have known as the years have gone by, imagine them playing in the Eternal Home as once they played in the temporal home, and—do I hope that I may meet them in the after life? Why not?

CHARLES JOSIAH ADAMS.

The Dog and Man's Ignorance.

CALIFORNIA.—*Editor Forest and Stream:* It has given me much pleasure from time to time to read the comments and observations in FOREST AND STREAM upon natural history. FOREST AND STREAM gleans a wide realm and is rich in resource. I am especially pleased with those observations, sketches and anecdotes which discuss animal life, habits and characteristics, as well as with the logic and philosophy of many of your observant and talented contributors.

I think it is surprising to naturalists, as it is painful, to realize the far too general ignorance that prevails in regard to nearly all animals. While man is assumed (by himself) to be the highest and most intelligent of animals, the climax and boast of creation, how little does he know—or rather what an infinite deal does he not know—of his surroundings and fellow creatures!

These reflections, while not new to me nor to many of your readers, are reiterated here owing to a perusal in these columns of the disquisitions of A Posteriori, Rev. Charles Josiah Adams, and the papers on hydrophobia by the Philadelphia Anti-Vivisection Society.

Is it not astonishing—nay, is it not humiliating—that we know so little, almost nothing, of the dog? He has been man's closest companion, outside his own immediate species, since Abraham and Lot took possession of the world as property. With all his real or fancied intelligence, does man in 1896, A. D., know as much of the dog as the dog knows of man? If man knows as much, does he know more?

Here is this learned society, through talented physicians of many decades of experience, just now announcing that hydrophobia is a thing so rare as to be almost a myth. Scarcely a well authenticated case can be cited by all the able faculty! And yet in this enlightened and advanced era and country we have been intimidated from generation to generation with stories of mad dogs.

Every well regulated village and town in the country kills off a few mad dogs every summer. Newspapers tell at frequent intervals of the curdling antics, of the horrible doings of mad dogs. Many people and horses are bitten and die, and the policemen and constables have fearful struggles with mad dogs everywhere.

And now we are just finding out that mad dogs are about as scarce as moose are on Broadway. This is a severe blow to nursery legends. If we have no mad dogs, where's the use of having the mad stone where people can go and be cured after being bitten? How will the newspapers get along without this necessary adjunct? Both we and they will have to worry along without hydrophobia and mad dogs. If there were no mad men we could scarcely survive this loss.

Has the dog been as foolish in all these years? Has he gone about biting or tearing to pieces such individuals of the human species of animals as had gone mad? Perhaps he thought it too much of a contract.

But in all his career as a poor dumb brute, with no faculties but "instincts," has the dog ever made such an idiot of himself as to cherish a superstition from generation to generation for 1,000 years or so? No. It may be, as it seems, that dogs and the lower animals advance slowly, but they seem withal quite sure of their ground.

A Posteriori, Mr. Adams and others of us like to grope—that is conjecture. We would like to know now, after cherishing the dog for 2,000 years or so, something about him. But, alas! the dog, like nearly or like every other atom of creation, animate or inane, is beyond us still. We may be instrumental in propogating his species, may elevate him to ideal standards of excellence, may finally teach him to distinguish a portrait by its likeness to a personality, but from this will spring no fountain of wisdom.

The trend of everything with us inclines away from the natural to the ideal, speculative, artificial. In my poor opinion we will profit more in the study of the natural than in our efforts to revolutionize and improve many things as they exist. The idea I mean to express is, most things as they exist are imperfect or unsatisfactory to us because we do not understand them. Hence for so many years we have believed in the common prevalence of mad dogs and hydrophobia because we are ignorant and superstitious. The natural is usually right—artifice always questionable. RANSACKER.

New England Beagle Trials.

LINDEN, Mass.—*Editor Forest and Stream:* Entry blanks to the New England Beagle Club's fall field trials are now ready and will be mailed to all, but should any be overlooked I will gladly forward them on application. The trials this fall should be the best ever held by the club, and undoubtedly the several classes will be well filled. There will probably be fifteen or more starters in the Futurity Stake, which will be looked forward to with much interest, as quite a number of the most noted bench and field winning stud dogs are represented, namely, Wanderer, Frank Forest, Zeno, Spark R., Ringleader, Clyde, Diamond Forest and several others.

The trials will be held, as usual, at Oxford, Mass., and from all accounts rabbits are more plentiful than ever. The club headquarters will be at Hotel Bacon, where first-class accommodations can be had for about $1.50 a day, and it is a well-known fact, as hundreds can testify, that Mr. Bacon never allows any one to go away hungry. The accommodations for dogs this year will be first class, as the club has secured a building about five minutes' walk from the hotel, light and comfortable, which will be partitioned off so each handler can have his dogs all by themselves and under lock and key if he wishes.

Messrs. Quynn and Turpin, the judges selected, are well known to nearly every beagle breeder in America as thorough sportsmen, and it is unnecessary to state that the best dogs will be placed at the head, no matter who owns or handles them. All prize money will be paid immediately after the judges give their decision, same as last year. A long list of special prizes will be donated by the members, which will be published in the sporting press at an early date. One of the most pleasant features of the trials will be quite a delegation of the celebrated Maryland beagle breeders, who will be on hand to attend the trials for the first time, and without doubt the New England boys will give them a hearty greeting.

W. S. CLARK.

Union Field Trials Club.

INDIANAPOLIS, Ind., Aug. 23.—*Editor Forest and Stream:* Owing to the fact that the Presidential election occurs on Tuesday, Nov. 3, the Union Field Trials Club has decided to begin its trials on Monday, Oct. 26, at Carlisle, Ind. This will enable patrons, handlers and spectators to attend the trials and get back home in time to vote. It will also enable handlers to run their dogs in these trials and get to the Eastern Field Trials Club's trials in time to give their dogs several days' work on North Carolina grounds before the Eastern Derby starts.

The grounds at Carlisle have been secured free of cost, and as the officers and judges donate their services, and the cost of running in these trials is only $15, we anticipate a large entry, thus insuring prizes of sufficient size to be worth contesting for.

The trials will be judged by Mr. Royal Robinson, who is an ardent admirer of both pointers and setters, and Mr. S. H. Socwell, who does all of his shooting over a pointer; we therefore feel justified in saying that the best dog will win, regardless of breed. The entry blanks are now ready for mailing. The entries to the Derby close Sept. 15, with $5 forfeit and $10 to start. The All-Age entries will close Oct. 15, with $5 forfeit and $10 to start. The breeds will run together in both stakes.

P. T. MADISON, Sec'y-Treas.

A Rabbit Hunt.

CENTERVILLE STATION, N. Y.—*Editor Forest and Stream:* I take great pleasure in reading FOREST AND STREAM. I am a farmer and a lover of a good dog and gun. I have never read of many rabbit hunts, so I thought I would try and write of one.

We were having a real blizzard and, as I looked out of doors, I thought writing would be a good occupation to pass the time away.

Herman M. and Gus J. left New York city on the 3 P. M. train for Centerville, Sullivan county, and arrived there at 7 P. M., where I met them with my team one evening last November. Gus brought his dog Bobbie with him. Bobbie is a son of my dog Sport, and when they get after a cottontail something is bound to happen.

The next day proved to be one of those beautiful days of early November, just the kind of a day to make a man feel like going hunting, and the dogs were feeling fine. They seemed to know what we intended doing.

We started out south of the house, across the lake, to a side hill covered with blackberry briers and bushes. Bobbie started the first one and Sport joined in with him. Up over the hill they went. They ran him a half hour, when Gus and I heard Herman's gun crack and he called out, "All right!"

Gus and I started up the hill toward Herman, when out jumped a rabbit. Gus and I both scored a miss, but I rolled him over with my second barrel. We started on. The dogs having heard us shoot came running toward us, when up flew a brace of partridges, which came within gunshot of us. Gus and I both shot and down fell the pair of plump birds. Gus said this is fun and no mistake.

Herman called and wanted to know what all the shooting meant. When we got to where he was we had a little talk as to which way we should go on separating. Before we got through talking the dogs had another rabbit going, and after we shot at it three times it got into a woodchuck hole in safety. We called to the dogs, and while they were coming down the hill they started another one, which went toward Herman and fell dead when his gun cracked. About the same time a partridge flew up and Herman shot that also.

It was then 11 A. M. We hunted the rest of the hill, and when noon came we counted five rabbits and three partridges. We halted by the side of a convenient haystack and discussed the experience of the morning, eating our lunch and smoking our pipes. After spending an hour in rest we proceeded toward the east side of a small swamp to kill some more rabbits and possibly another partridge.

The dogs soon had another rabbit on the jump. It was a cunning old buck, one that fooled the dogs as well as ourselves. The leaves being dry made it hard to keep the track. We each had a shot at the old fellow, when finally he stopped to Gus's second shot, at long range through thick bushes along the edge of the swamp. When at a spring near by the dogs flushed a woodcock—a late stayer. We marked him down, and after we three hunted and hunted that woodcock and tried to raise him again we had to give him up, for the dogs had another rabbit started.

We scattered out along the edge of the swamp and Gus had the pleasure of knocking him over.

As we went on a little further we came to an old wood road, and up flew a fine old cock partridge. Our three guns spoke as one, and down came one bird. We all claimed him, neither being aware that the other had shot. After an explanation we opened our guns for proof, each showing an empty chamber. We had a good laugh and went on, for the dogs had another rabbit started. Each went on a run to get in good position to shoot it. Gus happened to start one out of the thick weeds and grass and neatly knocked him over with a well-directed shot and then went on to his position, the top of an old stump. Soon afterward we heard Herman's gun crack twice, and he called out, "All right."

It was then near 3 P. M., and the rabbits had commenced to run about to feed, and the dogs soon had another one going that took refuge in an old stone row one-fourth of a mile from where he was first started. But another one was soon started, and I soon ended his career after having to fire the second time.

It was then most 4 P. M. In the next hour we shot three more rabbits. As it was then near night we started for home, having shot twelve rabbits and four partridges.

We arrived home a half hour later and we each had a good appetite for the steaming dinner that awaited us. We spent three such days, and then my friends went home so well pleased that they were coming again before the season closes. TIMM.

Queens County Agricultural Show.

MR. MORTIMER informs us that Mr. Leslie A. Burritt, of Bayonne, New Jersey, will judge Boston terriers at the Mineola show, and Bedlington terriers will be judged by Mr. R. F. Mayhew.

The American Spaniel Club offers the Lawrence trophy for the best brace of cocker spaniels, any color. This in place of the Bell paintings, which have been withdrawn.

Entries are already being received in good numbers, and there is every indication that all classes will be well filled.

Exhibitors are again notified that puppy and novice classes will be opened for any breed where there are not less than three entries for each class, and we again remind them that entries close Sept. 8, with James Mortimer, Secretary, Hempstead, L. I. Entry fee, $2.

Dachshunde at Montreal.

BLACK LAKE, P. Q., Aug. 28.—Would you be kind enough to rectify an error in the Montreal premium list respecting dachshunde: "There will be but one challenge class for dogs and bitches together, but two open classes for dogs and bitches respectively, which, moreover, will be divided if five or more of any color or variety are entered, so that the classification is practically the same as in Kingston or Toronto." L. A. KLEIN.

Mr. J. W. Gross, Harrisburg, Pa., writes us as follows: I would like to have the pedigree of the beagle dog Rip Van Winkle, owned some time ago by Tom Buck, of the Blue Ridge Beagle Kennels. Can any reader of FOREST AND STREAM kindly furnish it?

TECHNICAL TERMS.

FOR the benefit of those who may not be completely *au fait* with all the technical expressions used in works and conversations on the subject of the dog, the following alphabetical list is appended. Such a list has already been published in Vero Shaw's "Book of the Dog;" but this list is by no means complete, and considerable additions have been made to it in the dictionary below, while certain terms, which it contains, have been omitted, as their meanings are obvious.

Apple-headed—Is a term which signifies a skull round, not flat, at the top—a feature which is seen, in its most marked form, in toy terriers.

Babbler.—A dog which is noisy, and apt to give too much tongue at work. A spaniel is often said to be a "babbler" when it gives tongue while belonging to one of the mute breeds. It is not a compliment.

Belton.—A name applied to the Laverack setter. A "blue Belton" is a setter flecked with blue; a "lemon Belton," similarly with yellow.

Blaze.—A white streak up the middle of the face of some breeds, such as the St. Bernard, collie, or fox terrier.

Blenheim-mark—Is a mark on the skull of the Blenhiem spaniel in the middle of the blaze, and of the same orange color as the body color of this breed of spaniel.

Breeching.—The hair on the backs of the thighs. Thus, a schipperke may be described as being "well breeched," or having "good breeching," signifying that it is strongly feathered on the back of the thighs. A Manchester Black and Tan terrier may be said to have no tan "breeching," or that it is black—as it should be—and not tan at this place. Sometimes a Manchester terrier may be said, briefly, to be "breeched," and this means that it has the objectionable tan behind the thighs.

Brisket.—The portion of the body in front of the chest and below the neck.

Brush.—A term signifying the tail; often used in the case of dogs having heavily-coated tails, as the collie.

Butterfly-nose.—A spotted or patched nose. The term is not used in the case of young puppies, whose noses will frequently be spotted or patchy as the color gradually changes from white to black; it is applied to adult dogs whose noses have arrived at the color they will always be. A "butterfly-nose" is most frequently seen in white dogs, such as the white English terrier, which have to be pure white for show, and the absence of color tends to produce white skin and parti-colored nose.

Button-ear—Is the term applied to that form of ear which falls forward, hiding the whole of the inside, as the ear of the fox terrier.

Cankered mouth—Signifies that one or more of the canine teeth is in a cankered or diseased condition.

Cat-footed—Means a dog with short, round feet, the knuckles being also high and well rounded. It is the opposite conformation to what is known as the "hare-foot," which will be defined in its proper place. The "cat-foot" is a much admired and desirable form of foot in a fox terrier, foxhound, and in fact most breeds. In a few breeds, such as the greyhound, setter and others, it is a matter of opinion.

Character—Is a term applied when a dog exhibits in a marked form the points and characteristics of the breed to which it belongs. Thus it may be said a dog abounds in terrier "character."

Chest.—The chest of a dog is not merely such portion of the chest as can be viewed in front, but that part of the dog which extends from brisket to belly.

Chippendale.—A bull dog is sometimes said to be "Chippendale-legged," that is, its forelegs, viewed from the front, resemble those of a Chippendale chair in shape, being far apart at the shoulders and bowed in to be much closer together at the pasterns.

Chop.—The upper lip. A good deal about the "chop" may be heard in a description of a bull dog in which the "chop" should be thick and deep, hanging over the lower jaw at the sides.

Clean-shoe.—A dog, such as the bloodhound, may be described as being able to hunt a "clean-shoe" or "clean-boot" when it is able to track a man by scent, without the aid of aniseed or other strong smelling applications to the soles.

Cobby.—A term applied to a short-backed, compact, well-ribbed-up dog, as the pug.

Collar.—A band of white around the neck of the St. Bernard, and an admired point.

Couplings.—The space between the tops of the shoulder blades and of the hip joints. Thus, a dog is said to be long or short in the couplings according as this space is one or the other.

Comb fringe.—The fringe of feather on the tail of a dog, such as the setter.

Cow-hocked.—A dog is said to be "cow-hocked" when its hocks turn in inwards—a very undesirable conformation in any breed.

Crest —The upper portion of a dog's neck.

Cushion.—A term applied to a feature in the face of the bull dog. It is a good point to be able to say a bull dog is well "cushioned-up," or possessing the necessary amount of "cushion" in the skin of the face behind the chop.

Dew-lap.—The pendulous skin under the throat of a dog. It should be absent in many breeds, as in the terrier or greyhound, but very marked in others, as in the Basset hound.

Dew-claw—Is an extra claw found on the forelegs of all breeds, but on the hindlegs of only certain breeds, such as the St. Bernard.

Dish faced—Is a term applied to a dog whose face turns up somewhat at the nose; that is, when the nose at the nasal bone is higher than at the stop. Pointers are not unfrequently "dish-faced."

Dome-skulled—Signifies when a dog's skull is dome-shaped at the top, as in the case of the bloodhound.

Dudley.—A "Dudley" is a dog with a flesh-colored nose, A dog with such a nose has often also light-colored eyes and a generally pinkish yellowish countenance, when it is called "Dudley-faced." The name originated from Dudley, in the Black Country in Worcestershire, from which neighborhood a number of Dudley-marked dogs were said to have come.

Double-nosed.—Occasionally a dog, particularly the bull dog, exhibits a split septum or nostril, giving the appearance of a double nose, hence the term.

[TO BE CONTINUED.]

A. K. C. and Suspensions.

AT the forthcoming meeting of the A. K. C. it seems that a sense of common justice should impel the delegates to reconsider the Bell case, for as it now stands it has the appearance of vindictive discrimination.

In the matter of making illegal entries, the City of the Straits Kennel Club were principals in the matter equally with Mr. Bell, the one making the entries, the other accepting them; and both, so far as the evidence shows, entering into the affair with open eyes; yet the club is given a fine of $25 or a suspension of sixty days in midsummer, when its club functions are dormant and suspension at that time has not even the dignity of an inconvenience; while Mr. Bell for the same offense is suspended for a year, and suspension to the individual is a much greater hardship than it is to the club, since it carries with it disqualification of the offender's dogs. The A. K. C. laws should not be fish for one and flesh for another. They should be just for all alike.

The goddess of justice is portrayed as being blind, thus her justice is dealt out even-handed to the rich and the poor, the strong and the weak alike; but in this special case of A. K. C. justice the goddess seems to be one-eyed and one-armed, and one-eyed justice is not of the kind to win the confidence and esteem of the dog world, or for that matter any other world.

There seems to be a regrettable absence of backbone in the A. K. C. management. The delegates lead up with much bravery and parade of knowledge to a point where decisive action is necessary and their courage fails, or expediency interposes, and what appeared to be a brave parade with a purpose ends in an inglorious fizzle. Several such cases can be recalled where much ado ended in nothing.

POINTS AND FLUSHES.

The Canadian Kennel Club will hold its annual meeting in the Board Room of the Industrial Exposition, on the grounds, Toronto, Tuesday, Sept. 8, at 3 P. M. A meeting will be held on the same date, in same place, at 1:30 P. M.

The many dog fanciers who will be at the coming Providence show may be interested to know that the club grounds, kennels, etc., of the New England Kennel Club at Braintree, near Boston, will be open to visitors. The manager, Mr. James E. Green, will be glad to show the kennels, etc. The latter now contain about sixty dogs, from St. Bernards down to the smallest kind of toy terriers. The arrangements for trap-shooting are excellent and the sport is well patronized. On Wednesday, Sept. 9, the members and their friends will meet at the club grounds and the traps will be kept very busy during the afternoon. It is the intention to have sweepstakes, and friends of members who wish to try their luck at the traps will receive a hearty welcome.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. G. G. Williamson's Ruby Girl, English setter bitch, July 13, to champion Count Gladstone IV.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

WHEELING TO FISHING WATERS.

NEW YORK, Aug. 24.—*Editor Forest and Stream:* During the summer I do a good deal of fishing in the waters about New York, and I have found the bicycle of great service in getting to and from the fishing points.

Last Sunday I took a run down on Staten Island. This is a favorite trip with me, as the roads are exceptionally good, and the treatment accorded to wheelmen by ferry and railroad is all that could be asked.

The fishing just now is good at all points on the south shore from South Beach to Tottenville, and one in search of a day's sport cannot well go astray.

South Beach is a favorite point for a great many fishermen from New York, as the trip is very inexpensive and as they can generally count on a mess of fish if they know how to catch them. There are several docks toward the Narrows end of the beach and one long pier at the other end. From this latter weakfish may be caught, and earlier in the season a great many fluke were taken. Just now the porgies and small snappers are beginning to bite here, as at other points on the south shore. Boats may be had if wanted, and such bait as clams and killies is generally obtainable. Other bait will have to be brought from the city, and this rule obtains at the other fishing points on Staten Island, though occasionally sand worms can be bought, and if one is not above it he can dig them for himself at low tide. It is always, however, the safest plan to bring one's bait from the city, and in the end it always avoids much annoyance.

Beyond South Beach are Gifford's, Huguenot, Prince's Bay and Tottenville—all good points for the salt-water fisherman. The further one goes from New York, the less he is bothered by other fishermen, and as a rule the fishing improves.

At all the places named above one will find boats, which can be hired reasonably. If the fisherman wants to make a record it is a good plan for him to be on the ground the night before, so as to insure an early start.

All these points, with the exception of Tottenville, are some distance from the Rapid Transit Railroad, but hacks connect them with the trains as a rule.

For the wheelman the route, after leaving the ferry at St. George, is to follow the shore road through Tompkinsville to Clifton until near the station, where a turn to the right is made into the Richmond road, which will carry him through to New Dorp, about six miles from the ferry. This part of the route is cut up with trolley lines and is not so good as further on.

At New Dorp turn sharp to the left, leaving the Richmond road and striking into the Tottenville turnpike,

which runs to the extreme end of the island. The road runs near the railroad the whole distance and crosses it several times. At frequent intervals are cross roads running down to the sea, and these are all ridable except in very wet weather.

Last Sunday I rode through the village of Pleasant Plains, which is about fourteen miles from the St. George ferry, and just beyond the point where the road crosses the railroad track. I took a side road running through the Mount Loretto grounds. Mount Loretto is a Roman Catholic orphan asylum, where there are reputed to be upward of 2,000 boys and girls. The buildings, including a large church, whose spire is a landmark for the surrounding country, occupy a little eminence about a mile from the village. There is a macadam road, I believe, running the entire distance from the main road to the salt water, but I did not strike this. The road I followed was well graded, and by keeping to the side paths the riding was excellent. This road passes close to some large barns, near which it forks, one branch running each side of a lighthouse built upon a promontory which rises 75 or 100ft. sheer from the water. I should have taken the right hand fork, as I found out afterward, but instead I chose the other, and soon found myself on the beach, with the waters of that part of the Lower Bay, known as Raritan Bay, lapping at my feet.

The point which I desired to reach was a dock running out from the Mount Loretto grounds, and this I could see about half a mile below. The tide was out and the walking along the beach fairly good, though too soft for wheeling. So I started down the beach around the lighthouse promontory, pushing my wheel ahead. When I had covered half the distance I came across three boats just making a landing. At this spot some blankets and pieces of canvas were laid out smoothly on the beach above high water mark, and from these and other indications I concluded that the party now putting ashore had camped on the spot the previous night to take advantage of the early fishing.

I met them as they came ashore, and found that they had more fish than they knew what to do with. These were, however, mostly sand porgies, which the fishermen reported to be biting voraciously. They had been out on the "middle banks," where a number of other boats could then be seen at a distance of about two miles from shore.

Refusing their kindly proffered offer of some fish, I pushed on to the dock, on which I could now see several men fishing. I found that they were pulling in the porgies at fairly regular intervals, though there was no sign of larger fish.

The dock or pier on which I soon found myself is the first of three which put out into the bay at close intervals. The other two are reserved for the exclusive use of the asylum, but fishermen are permitted on the first. Incidentally it may be mentioned that the fathers at the asylum are good fishermen, and almost any other day one could have seen some of them enjoying the sport from the middle pier. It was once before my privilege to fish from this pier, after an unsuccessful morning near Tottenville, in company with two of the priests, and more thorough sportsmen than these modern exponents of St. Peter would be hard to find. They took a keen pleasure in what they were doing that was good to see, and they proved their skill by hooking a fish every time their lines were baited. They had a man along with them to cut bait and attend to their lines, and if this fellow carried all the fish they caught back to the Asylum I guess he would rather have let some of the orphans go hungry.

Last Sunday I had a light split bamboo bait rod along, and though I only caught small fish the sport was interesting enough. The porgies are running large this year and are unusually plentiful already, while snappers skim along just under the surface of the water in frequent schools.

Soon after I reached the dock some of the other fishermen began catching weakfish, and one man caught four nice fellows in about an hour's time, using shedder crabs for bait.

This dock is used by the boys from the asylum as a swimming place, and during the course of the afternoon we saw a long column of them marching down, two abreast, for their daily dip. Some who could not swim stopped at the sand beach, but the majority of the boys came out on the dock, attended by a single priest. They were very orderly in undressing, and evidently had been drilled in this respect; for all disrobed in the same manner, first taking off their nether garments and then slipping on bathing trunks before discarding their shirts. One of the boys had lost an arm and another a leg, but both could swim like fish. Soon the water was full of boys, so that the slower ones had hard work finding clear places where they could jump or dive in safety; but all their kicking out and splashing did not stop the fishing at the end of the dock, and several weakfish—than which there is no shyer fish in salt water—were taken at this time.

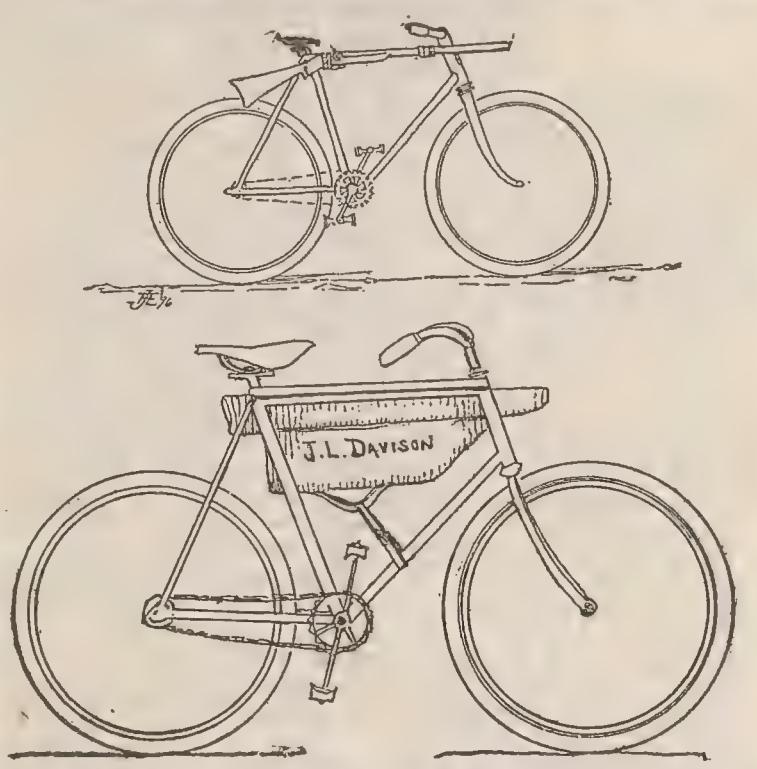
Some of the orphans begged hooks and sinkers and began fishing themselves, with good success; but others, probably newer arrivals, showed great ignorance on the subject. A little coterie of two or three boys of this class were very much excited when they saw the weakfish coming in, and debated among themselves as to whether the red spotted fellows were not sharks. Presently a whistle sounded from the beach, and the boys fell in line, and, marching back to the asylum, the wharf was again left to the fishermen.

A little before 6 I concluded I had had enough sport for the day, so I searched out a secluded spot near the lighthouse and had a dip in the cool salt water. Afterward I pedaled leisurely over to the railroad station at Pleasant Plains and took the train back to New York. My ticket cost 25 cents and the wheel was carried free.

J. A. C.

A recent issue of the Mattawa, Canada, *Tribune and Nippissing Register* carries a curious advertisement, that of the Hudson's Bay Co., which sets forth the excellence of a certain make of bicycle. It says: "The bicycle is no longer a luxury, but a necessity." It would seem so when the very type and synonym of Arctic traffic is to be supplemented by the flying safety express. One does not at first think of the upper Canadian country as the natural home of the wheel, but it seems the latter is to know no geographical limit. And the advertisement of the Hudson's Bay Co. always bears the suggestive headline after its title: "Incorporated 1075."

HOW TO CARRY A GUN.



LOCKPORT, N. Y., Aug. 22.—*Editor Forest and Stream:* I notice in your Wheeling notes that you ask the best way to carry a gun on a bicycle, and I inclose cut showing my way of doing it. Had I thought that such information was wanted I should have been more explicit in describing my method of doing it in my plover shooting notes, published several weeks ago. I know that some sportsmen carry their guns across their shoulders, with and without case, but I prefer to strap mine on the wheel, with the barrels of the gun along the upper frame tube and with strap at each end around the saddle and handle bar tube. I also fasten a strap from the carrying handle of the case to the lower frame tube to keep the gun from swinging against my leg. In going from one field to another along the road I remove shells from the gun and carry the gun in my right hand, guiding the wheel with my left hand; but for a longer distance, when I wish to ride faster, I prefer to have the gun in its case strapped to wheel.

J. L. DAVISON.

BOSTON, Aug. 20.—*Editor Forest and Stream:* In your issue of Aug. 22 I see you ask the question, "Which is the best way to carry a gun on a bicycle?" The inclosed sketch is my method. I have strapped a .32-40 Winchester on one side and a 12-gauge shotgun on the other, and ridden thirty-three miles, with no inconvenience whatever, except, perhaps, two bright bands on the bar where the enamel was worn off by the slipping of the straps.

S. POKES.

HOLLAND, Mich., Aug. 21.—*Editor Forest and Stream:* It has been somewhat of a question to me how to carry a gun on a bicycle. A shotgun is too heavy to comfortably carry slung from the shoulder, and if strapped to the frame the gun case wears off the enamel, and the gun is in such a position as to chafe the person and makes pedaling awkward and disagreeable. A few weeks ago I was

The lower figure illustrates Mr. Davison's method, the upper one that described by our Boston correspondent.

shown an attachment called the "snapsocket," manufactured by Foster, Stevens & Co., Grand Rapids, Mich. It consists of a snap clamped to the handle bar, and a socket attached to the fork. The gun is held in a nearly perpendicular position, muzzle down, and can be instantly removed by pushing it forward. This method of carrying the gun has the advantage of the others in that the gun can be carried loaded (or can be loaded very quickly) when wheeling in places where shots at game are had from the road. The sockets are made in different shapes to carry double or single-barreled guns; your fishing rod or umbrella can also be carried in it.

I carry my Winchester .22 very readily in it, and frequently ride along the streets in the outskirts of the city, and shoot English sparrows from the electric light and telephone wires. The sparrow has not yet learned to fear a man on a wheel, for one can ride up to them, dismount, remove the gun from the snap and shoot, before they know what is up.

ARTHUR G. BAUMGARTEL.

HOW THE OLD BIRD WAS OUTWITTED.

FITCHBURG, Mass.—*Editor Forest and Stream:* I had been located in a small village in Connecticut about a year before I got the bicycle fever, and I don't know as I should even then have owned a wheel if I hadn't thought it would bring the hunting grounds nearer my door. My time for gunning was limited to morning and evening hours and Saturday afternoons, and I lost much precious time in getting to and from the "good places." So I bought a wheel and soon learned to ride. Every morning, with gun swung across my back and the best dog on earth trotting on behind, I went wheeling out of town for an hour or so with the birds.

About a mile out of town the road ran between two small pieces of woodland, crossed a little brook and turned a sharp corner down a hill, at the foot of which was a small swamp. In this piece of woodland there lived an old partridge, full of years and cunning. One fine morning as I was wheeling along this road I made his acquaintance. My first impression of him as he ran across the road in front of me was that he was a mighty fine bird, and just as Geeth drew up stiff as a stake at the roadside, where he disappeared, I tumbled off the wheel only to hear a whir and roar of wings as the old fellow left for other fields and pastures new. I knew in about what direction the bird had gone, and after about a five minutes' walk got another point in the swamp at the foot of the hill; but the place was too thick, and I only heard that awful roar of wings as my friend said good-bye again. By this time it was the hour for me to get back again to my work, and so I wheeled into town, resolved on getting that partridge next morning. Daybreak found me on the road, and our performance of the day before was repeated, and I became convinced that I had a very cunning bird to deal with, for when the dog made his point each time the old bird would run until the edge of the woods was reached, when it would get up with a mighty whir of wings, fly back through the thick woods and dive into the swamp at the foot of the hill. I dubbed the bird Old Noisy, and for two weeks each morning I tried in every way to get a shot until Geeth and I were about disgusted.

One night, after I had gone to bed, I planned our morning excursion, and hit upon a scheme that meant sure death to Old Noisy. I had noticed that almost invariably the bird would dive into the swamp at the foot of the hill at one particular spot, and to reach which he had to fly across the brow of the hill possibly 50ft. in the open. On reaching the ground next morning, I called Geeth to heel, while I arranged my wheel for a quick mount, and without taking my gun from my back sent in the dog. Everything worked like a charm. Geeth hadn't gone 20ft. from the road into the brush before I saw him stop and make a grand old point. Making a quick rush for the wheel, I put up my feet on the coasters and went flying down the hill. The bottom reached, I tumbled off; jumped the fence at the roadside just in time to see Old Noisy set his wings and come sailing over the hill. I knew then that he was coming to his death, and at the crack of the smokeless cartridge I saw him fold up those noisy wings and come bouncing on the grass at my feet. Geeth too heard the gun, the first shot I had ever fired at the bird, and he came barking his congratulations, while I stood cap in hand all unstrung by the exciting ride and successful shot. I am sorry to say I ate Old Noisy—a poor ending to so cunning an old bird—and I have wished many times he was back at his old tricks, while I might have the fun all over again. My wheel, my dog and my gun became inseparable companions; they used to ask me to go with them on their excursions many times that year, but we never got any birds that seemed to quite so well fill our game bag as Old Noisy.

E. W.

NOTES.

The sportsmen of all ranks and walks are taking to the wheel. The famous target champion, Rolla Heikes, is an ardent admirer of the wheel for sport or exercise, and attributes much of his present good form to his season's exercise on wheelback. After his late winning in a hard race at Chicago Mr. Heikes took a day off for a long ride west of Chicago. Gilbert, Budd and other well-known trap-shooters also ride, and like the exercise.

It is a well-known fact that wild animals and birds will frequently permit the close approach of a man on horseback or in a wagon, at times when easily alarmed by the sight of a man on foot. Mr. Baumgartel in his note on carrying a gun points out that this unconcern, at least as regards English sparrows, applies to the bicycle as well as other vehicles. All of which goes to show that the advantages of the bicycle from the sportsman's point of view are not easily exhausted.

Packing on the bicycle is a question of interest to men who camp out. If a gun may be carried into the woods, why not supplies and a tent? A well-constructed case fitting the frame will serve for a great many articles whose dimensions in one direction are not over 4 or 5in., and the handle bars and rear fork offer other opportunities for packing. A rider weighing 150lbs. should be able to carry 40 or 50lbs. of dead weight on his bicycle, without danger to himself or the wheel.

Of course the cooking outfit would have to be condensed into the smallest limits, and everything including the tent be made with a special view to lightness and portability. Then too the bicycle itself would have to be humored over rough roads, and where the rider had to get off and walk he would probably find it no easy task to push it with its load, as those who have taught other persons to ride will understand.

Such a trip could most profitably be made by two or more sportsmen in company. Blankets and tent and outfit in general would then do double duty, and individual loads would be reduced. Possibly an arrangement for clamping two bicycles together side by side could be used to advantage on the return for bringing out the trophies of the hunt.

Lieut. Moss, of the regular army, in making his three days' scouting trip from Fort Missoula, Montana, demonstrated to a remarkable degree the packing capacity of the bicycle and its ability to stand rough usage. His party numbered seven, and the avarage weight of riders and packed wheels was 232lbs. Assuming that the stripped bicycles weighed 23lbs. apiece, they carried more than nine times their own weight over one of the roughest countries on the continent without breakdown or serious mishap.

The Boston *Herald*, which has come to hand since writing the above, has the following note on the subject of camping trips:

A traveler lately returned from the West reports that cyclists of that region are just now taking extended camping trips. Wisconsin and Michigan, he says, are full of them, roving around with their outfits strapped to their wheels. The regular triangular case to fit into the diamond frame is used, and if there are a number in the party the camp implements are distributed among them and carried with ease. Some also carry light knapsacks, and what seems a difficult way of transporting camp outfits becomes in reality efficient and labor-saving. Small tents of light gossamer or silk, which fold up into an exceedingly small package, are used. The cyclists are also provided with rubber capes, which completely protect them from the rain when riding. Fishing tackle is easily carried, and the wheelmen on that account make fishing their favorite sport, though some of the more daring are seen with shotguns strapped to their wheels. It is astonishing into what regions of poor roads, but good camping, these novel tourists have penetrated. No one has ever seen them cross an unbridged river, but they undoubtedly have some way as clever as their other methods. They often take their wheels to the nearest railroad and ship them to some point where they meet them by boat, for canoeing is by no means impossible for camping cyclists. The movements of these wheelmen show that camping has been reduced to a science to be enjoyed by all classes of sportsmen.

Judge Thompson, of Louisville, Ky., recently rendered the following decision in the case of a wheelman arrested for riding on the sidewalk where the street was in bad condition. He said:

"In these cases the burden is on the defendants to prove that the road is actually in such condition as to render it unsafe for his bicycle to pass; this is not in justification, but in mitigation of the offense, for even where such condition exists it gives him no legal right to ride on the sidewalk except by rule of necessity, which must be justified in each case by the fact, and then it does not authorize him to ride at all if the sidewalk is occupied by pedestrians; he should dismount and pass the obstruction on foot wherever the sidewalk is frequented by pedestrians. In the business part of the city—crowded thoroughfares—he has no right whatever to ride on the sidewalk at any time, nor for any purpose.

"Women and children, and old and infirm persons, have a right to pass along the sidewalks not only free from danger of collision with bicycles, but free from apprehension from such danger.

"The proof, I think, shows conclusively in these cases that the roadway was in an unsafe condition for bicycles to pass, by reason of its being out of repair and being deluged with water so as to render it dangerous, even impassable, to this vehicle, and that the neighboring streets were in no better condition, and it does not appear at what rate of speed the defendants were riding, nor whether the sidewalk was or was not occupied by pedestrians; under these circumstances I think it would be unjust to assess a fine in this case, and they are dismissed.

"I think it the duty of the city to regulate the sprinkling of the streets so as to keep them reasonably safe for the passage of this vehicle, as well as others."

WHEEL ON THE BRAIN.

"Mr. Starr," said the manager, "you positively must quit letting your mind dwell so much on your wheel."

"Eh? Why?" asked the tragedian.

"Perhaps you are not aware of it, but in the third act, where you should have cried, 'Ye gods, I am stabbed!' you shouted, 'I am punctured.'"—*Cincinnati Enquirer.*

THE FAIR SCORCHER.

A willowy form,
A steed of steel,
A firm control
Of the whirling wheel.

A glint of ribbons,
Of hose, of lace,
A healthy glow on
A pretty face.

A graceful movement,
A bewitching smile—
And the girl is down
The road—a mile.

A NEW CLASS OF SAILING CRAFT.

THE steam or power craft is displacing the sailing yacht more rapidly each year, and it is hard to say where the injury to yacht sailing is the most felt, in the abandonment in favor of steam yachts of 500 to 1,500 tons of a comparatively limited number of large yachts, such as the schooners Intrepid and Lasca, or in the rapidly increasing use by yachtsmen of limited means of small power craft such as the naphtha, the alcohol and the kerosene driven launches and even cabin yachts. In the case of the very large craft there is a certain compensation, small, it is true, but still better than nothing, in the prevailing fashion of carrying a fleet of small sailing craft at the davits; the large English steam yachts are all thus equipped, and the fashion is likely to become popular in this country as well. It is a good thing in that it at least keeps up a love of sailing and adds to the racing fleet in the smaller classes. Several yachts of this type have been seen here in the last two years, notably the Payne ½-rater Sagamore, carried by the yacht of that name; the 1-rater Wave, carried at the davits of Sapphire, and the 1-rater May, both built by Sibbick, that swung from the davits of White Ladye last year.

The Spalding-St. Lawrence Boat Co. have now nearly completed a sailing yacht that will have her moorings at the davits of the steam yacht Intrepid as soon as her owner, Mr Lloyd Phoenix, returns for his Mediterranean cruise. The yacht, which was designed by W. P. Stephens, is intended for afternoon sailing, fishing, etc, when the steam yacht is at anchor, and will not be raced, but the dimensions are fitted for the 20ft. racing length class. She is 19ft. on the waterline, with 3ft. overhang forward, giving a handsome stem of the Queen Mab style, and 4ft. aft, making 26ft. over all. The beam is 7ft. and the draft of hull 11in. The lines are round and full, but very fair throughout. At the expense of the extreme lightness considered necessary for a racing craft, the hull has been made specially strong, as it will swing from davits, the links being of necessity very near the ends; and every effort has been made to finish the yacht in a style that will fit with her larger consort. The hull is double planked, the bottom painted white above the water and green below; the plank sheer, wales, transom and deck fittings are of teak, the wales ornamented with trailboards and gold stripe. The deck is of white pine, laid after the Scotch fashion, with seams payed with marine glue. There are two watertight bulkheads, both double-skin, spaced 7ft. apart; with deck hatches to the end compartments. The frames are of oak crooks with intermediate frames of steamed rock elm. The centerboard, of the knife pattern, is of ⅝in. Tobin bronze weighing about 160lbs. and the rudder is of the same material. The yacht will be sloop rigged, with 380sq. ft. of sail, or considerably under her allowance for racing at the top of the class. A short bowsprit is carried, the inboard end secured by a handsome casting of manganese bronze, forming bitts for the anchor line and also carrying the forward lifting eye for the davit hook, all in a single piece. The spars are hollow, mast 20ft. deck to hounds, boom 21ft. 6in., gaff 13ft. 6in., bowsprit 3ft. outboard. The sails are of 5oz. cotton. The backbone of the boat consists of an edge keelson extending as far fore and aft as possible and deep enough to form the greater part of the trunk, there being a mortise through it for the centerboard. In addition the oak keel is specially stiffened in the wake of the lifting links at each end, and numerous small braces are used, from the bilge clamps to the deck beams, making a very strong hull. The rig, boom and gaff mainsail and jib, is fitted to unship and stow quickly, the mast being stepped in a tight copper tube. The builders have exerted themselves in turning out a specially fine piece of work both in general construction and finish.

Canada-Vencedor Matches.

TOLEDO, LAKE ERIE.

Aug. 24–25–26.

THRICE this year has Canada met the representatives of the States on the water, and thrice has she proved the victor. This reversal of the usual order of things in international racing between the United States and the British Empire is not only far from gratifying to the national pride, but in all three contests of the 15ft. class for the Seawanhaka cup, in which Glencairn was the Victor; in the sailing races of the A. C. A., in which the honors of the year went to the Canadian canoe Mab, and in the race of last week at Toledo between the yachts Canada and Vencedor, the superiority of Canada, either in boat, in handling or in both combined, has been so plainly manifest as to leave no grounds for cavil or complaint. Added to this, the three series of races have been carried through with the best possible feeling on both sides; there have been no protests, no fouls, the labors of the committees have been of the lightest; and there is no reason to fear that either of the three defeated contestants will next winter inflict their woes on an innocent yachting public in the form of pamphlets. So far as the principals and yachtsmen generally are concerned, the various contests have passed off without the smallest shadow of trouble. As is usual, some of the journals on both sides, both log and technical, have endeavored to provoke international ill feeling by empty boasting and groundless complaints; but thus far with no success, as they have apparently failed to waken a responsive chord in the hearts of yachtsmen.

The history of the match, which was decided last week, has been told in detail throughout the year in the FOREST AND STREAM, and need only be recapitulated here. The Racine Boat Co. is a new concern, recently started in Racine, Wis., that city of numerous but short-lived yacht building companies. The new concern has been managed with considerable energy from the start, and early in the year engaged as its superintendent and designer Theodore S. Poeckel, a German who had been in the employ of the Herreshoffs for some years. One of their first orders was from Messrs. Edward C. and Matthew Berriman, of the Lincoln Park Y. C. of Chicago, former owners of the centerboard cutter Valiant. Messrs. Berriman decided in building the first yacht of the extreme bulb-fin type on the lakes, practically a copy of Howard Gould's 20-rater Niagara. The design was made by Mr. Poeckel, the leading dimensions being 63ft. over all, 45ft. l.w.l, 12ft. beam and 10ft. draft; the hull being shallow, with a very deep fin.

After the yacht had been commenced on this basis, Com. Berriman and the Lincoln Park Y. C. opened negotiations with the Royal Canadian Y. C. of Toronto for a series of matches between Vencedor, the new Chicago yacht, and a yacht of the R. C. Y. C. fleet. The R. C. Y. C., after carefully considering the challenge, replied in substance that, while willing to race, it had in its fleet no yacht of sufficient size to meet Vencedor, and that it was not willing to build for one special match a yacht which from her size would have no class in the Lake Ontario racing, and from her draft could not be used at all on the Lake. It offered, however, to make a match with a yacht of its largest existing class, 42ft. racing length, provided the measurements of the challenging yacht were limited. The Chicago yachtsmen accepted this compromise in a very liberal spirit, and finally a meeting of the joint committee of the two clubs was held at Detroit on May 9, at which the following agreement was drawn up:

1. L. P. Y. C.'s Representative.—The Vencedor, representing the Lincoln Park Y. C., is to be the boat spoken of in the negotiations for the race, and referred to in the recital of conditions as to the size in the letter from the R. C. Y. C. to the L. P. Y. C., dated Feb. 28, 1896.

2. R. C. Y. C.'s Representative.—The boat which shall be chosen to represent the Royal Canadian Y. C. shall be either the yacht Zelma, of Hamilton, or a boat of a similar size now under construction, but not yet named, the name of the yacht selected to be communicated to the L. P. Y. C. at least one week before the race.

3. Size of Vencedor.—The Vencedor's length on l.w.l shall not be less than 43ft., and her corrected length—to be ascertained as hereinafter mentioned—shall not exceed 45ft.; but should it be ascertained on measurement that this length is exceeded, double time allowance shall be given on such excess, but in no event shall such excess exceed ½ft.

4. Size of R. C. Y. C. Representative.—The boat which shall be selected by the R. C. Y. C. and its representative shall if possible not exceed 42ft. c.l., but in no event shall it exceed 42½ft. c.l.

5. Sailing Rules.—The sailing rules and table of time allowance shall be those of the New York Y. C., 1895, except where herein otherwise specified.

6. Place and Date.—The races shall be sailed on Lake Erie, off Toledo, O., the first race to be sailed on Monday, Aug. 24, 1896.

7. Number of Races.—The match shall be decided by the winning of two out of three, or three out of five, races, as may be agreed upon, the number of races to be determined before June 1 next.

8. The races shall take place on succeeding days, Sundays excepted.

9. Courses.—First and third races, equilateral triangle. Second, to windward or leeward and return. Third, to be either triangular, or windward or leeward and return, as shall be determined by the toss of a coin, and in the event of only three races being sailed the course for the third race shall be determined in the same way, the length of the course to be logged in the presence of the scrutineers.

10. Length of Course.—The triangular races shall be twice round a 12-knot course, making 24 knots, and the windward or leeward races shall be 5 knots to windward or leeward and return, twice round, making 20 knots. The boats shall be sent round the triangular course in such a way as to give one leg to windward. All buoys to be left to starboard in the windward and leeward races.

11. Mode of Starting.—All races shall be started at 11 A. M., and the start shall be a flying one. At 10:30 A. M. a time gun shall be fired and an American ensign hoisted on the committee boat, which shall display no other flags than signals to the yachts. At 10:50 A. M. a preparatory gun shall be fired and the American ensign lowered. At this gun a blue Canadian ensign shall be hoisted in the triangular races if all buoys—including the starting buoy—are to be kept on the starboard hand, and a red Canadian ensign hoisted if all buoys are to be kept to port. In the windward or leeward races the blue Canadian ensign shall be hoisted if the first course is to windward, and the red Canadian ensign if the first course is to leeward. At the expiration of ten minutes exactly the Canadian ensign shall be hauled down and a third gun fired as a signal to start, from which gun the time of both yachts shall be taken. No time to be allowed for crossing the line. Should the gun miss fire the lowering of the flag and one lone blow of the whistle shall be the signal.

12. Recall.—A yacht crossing the line before the starting signal is made will be recalled by five short blasts of the whistle and the hoisting of her national flag.

13. Time Limits.—Any race not sailed in five and one-half hours by the winning yacht shall be resailed.

14. Racing Committee.—A racing committee of three—none of whom shall be interested in either yacht—shall be appointed on or before July 10 next, and they shall act as judges and timekeepers and settle all disputes.

15. Protests.—Protests shall be made to the racing committee in writing within six hours after the finish of the race.

16. Postponements.—The racing committee shall have power to postpone any race and may do so whenever in their judgment the demands of fair play shall make it seem right and proper.

17. In case of an accident to either vessel prior to the preparatory signal she shall immediately signal to the racing committee, who shall have the power to postpone the race if the accident is in their opinion sufficiently serious to warrant such a course, or if an accident occurs during a race she shall have sufficient time to make repairs before being required to start in the next race.

18. Scrutineers.—A scrutineer shall sail on board each yacht representing the other competing yacht, and said scrutineers must be members in good standing of some recognized Great Lake yacht club and must not exceed in weight 175lbs.

Each scrutineer shall make a declaration of the sailing of the yacht upon which he is placed within twenty-four hours of the termination of a race, which report shall be rendered to the racing committee. Scrutineers shall be chosen by the three members of the joint committee acting for each of the clubs represented.

19. Crews.—This clause to be completed not later than July 10, 1896.

20. Measurement.—The measurement of the rules for racing length to be made in the manner set forth in the rules of the Lake Yacht Racing Association for 1895-1896, these measurements to be made not more than two days before the race by the scrutineers representing the competing yachts, who shall jointly certify to the measurement of each yacht. A report of the measurement of each yacht shall be made to the racing committee at least twelve hours prior to the sailing of the first race.

21. Measurement Protest.—If through protest the measurement of any yacht be called in question, the racing committee shall remeasure such yacht, and the result as ascertained by it shall be final.

22. Charts of Course.—Charts of the course and instructions shall be given to the competing yachts not later than 7 o'clock on the morning of the race.

23. Sails.—The rule of the New York Y. C. as to sails shall not be taken to exclude clubtopsails.

24. Boats.—No boat need be carried on decks.

25. Alteration to Measurements.—If any yacht by alteration of trim or immersion by dead weight increase her load waterline length or in any way increase her spar measurements as they were taken, she must obtain a remeasurement before starting in the next race.

26. Mutual Agreement.—These conditions may be altered or amended by mutual agreement at any time.

Clause 19 was finally settled by limiting the crews to ten each, of whom eight must be Corinthians.

The racing committee as finally chosen included Messrs. Oliver E. Cromwell, of the Seawanhaka Cor. Y. C., New York; H. C. McLeod, Minnetonka Y. C., of Chicago, and E. H. Ambrose, Royal Victoria Y. C., of Hamilton. Mr. Cromwell, one of the older members and once the secretary of S. C. Y. C., has had a long experience in yachting, both in racing and in committee work; being chairman of the race committee of the club in 1895-96, which had charge of the establishment of the Seawanhaka cup and the arranging and carrying out of the races with Messrs. Brand and Duggan. It would be hard to find a better man for a position of this kind. Mr. McLeod is an old yacht sailor and racing man and a very clever amateur designer; when residing in Halifax some years ago his name was familiar to our readers through the yacht Lenore, designed and successfully raced by him. Residing now in Chicago, he has a new yacht on Lake Minnetonka, built this year by the Spalding-St. Lawrence Boat Co. from his own designs. E. H. Ambrose is a young lawyer of Hamilton, Ont., a pupil of Mr. Jarvis in the old White Wings, and for some years a hard worker on the committees of the Royal Hamilton Y. C. and of the Lake Y. R. A. The scrutineers, a Western term unknown on salt water, the representative of one yacht aboard another in a race, were for Vencedor Benjamin Carpenter, of Chicago, and for Canada George E. Evans, of the R. C. Y. C., one of Toronto's best sailor men, long time secretary of the Lake Y. R. A., and one of the founders of that organization. The timekeeper, Joseph Ruff, is an old Chicago yachtsman, who has acted in that capacity in innumerable races.

The first step of the R. C. Y. C. was to form a syndicate, which included Æmilius Jarvis, stock broker, of Toronto; George Gooderham, president of the Bank of Toronto, and head of the firm of Gooderham & Worts; George H. Gooderham, son of George Gooderham, a member of the firm of Gooderham & Worts; J. H. Plummer, general manager of the Bank of Commerce; James Ross, of Montreal; F. J. Phillips, of the Canadian Manufacturing Co. and the Consolidated Plate Glass Co.; S. F. McKinnon, wholesale merchant and an ex-president of the Toronto Board of Trade.

Mr. Jarvis has long shared with Mr. Allan Ames, of Oswego, the honor of being the best amateur skipper on Lake Ontario; in fact it is doubtful whether the Lakes from the St. Lawrence River upward can produce their equal, either professional or Corinthian. Mr. Jarvis, while a skillful helmsman and a clever hand on deck or aloft, perhaps excels as a disciplinarian and a manager of his crew, a point to which in no small degree the success of Canada is due. His races in the old Whistlewing and White Wings were won with young Corinthian crews, often against men of far greater age and experience. The latter yacht, during his ownership one of the most successful in the history of Lake Ontario yachting, was raced by a crew of young men who at the start knew next to nothing about yacht racing. Her waterline was 43ft. 6in. and she carried one paid hand as boat keeper. She was in commission as soon as the ice was out of Burlington Bay in the spring, and out for a sail every day after business hours, her mooring being within easy reach of the center of the city, Hamilton. She sailed back and forth about the Bay, her crew being drilled in reefing, setting and taking spinaker, topsails and jibtopsails, and all the maneuvers of racing until every man knew what his work was and just how to do it. By the time the Lake races began this green crew, of which Mr. Ambrose was a member, was ready to face any crew on the Lake.

No designer has been held in higher favor on Lake Ontario than Will Fife, Jr., and his work in the old Cyprus and newer yachts down to Yama, Zelma, Vox and Vedette gives good grounds for this high esteem. Very naturally Mr. Jarvis, to whom the management of the defense was almost wholly intrusted, went at once to him with an order for a racing cutter of Yama's and Zelma's class. The new yacht Canada, fully described and illustrated last week, was turned out with unusual expedition, considering the character of the work, the special racing build of hull and spars. The frame was got out at Fairlie and set up under the designer's eye, shipped to New York and then to Oakville, near Toronto, and set up anew on the lead keel, already cast and awaiting it. The work was hurried, but not at the cost of quality, and though begun long after Vencedor, Canada was ready before her. The new firm encountered the usual difficulties and delays, and as the result Vencedor was unable to sail any preparatory races, and came to Toledo an untried boat, and with a crew able enough in its individual components, but lacking the necessary training. Canada, on the other hand, sailed several trials with Zelma, an excellent trial boat, and also made the round of the Lake Erie regattas on her way to Toledo.

The crews of the two yachts were: Vencedor—Com. E. C. Berriman, Capt. I. G. Barbour, John Connors, Lewis Bernard, Ralph Hoagland, Ed. Andrews, Al. Johnson, R. D. Potter, William Miller, Henry Miller.

Capt. Barbour was last year one of the quartermasters on Defender. Mr. Potter is the owner of the fast Lake Erie yacht Sultana. Messrs. Miller hail from Rochester and own the 25-footer Nox, built by themselves from a design by Will Fife, Jr., and successfully sailed by them for several seasons. The renowned Kid Wilds and another crack sailor were originally on the crew, but were debarred as professionals under clause 19.

Canada—Com. Æmilius Jarvis, G. D. Bolton, W. H. Parsons, J. H. Fearnside, Sydney Small, W. S. Clouston, W. J. Moran, Ed. Roach, W. M. Fertile.

Mr. Clouston, owner of Chaperone, hails from the Royal St. Lawrence Y. C., of Montreal, and Mr. Fearnside from the Royal Hamilton Y. C.

The prizes for the race were a $500 cup made by Tiffany & Co. and a purse of $1,500 contributed by the citizens of Toledo. It was agreed before the race to divide the purse, the winner taking 60 per cent. and the loser 40 per cent.

After careful preparation in the dock both yachts were measured by the scrutineers on Aug. 23, the result being:

	Vencedor. *Feet.*	*Canada.* *Feet.*
Length over all	62.73	55.21
Length on waterline	43.00	37.04
Boom	46.90	42.85
Gaff	27.80	24.42
Hoist	26.30	24.55
Racing length	45.33	41.78
Allowance	Allows	4m. 45s.
Sail area (sq. ft.)	2,273	2,164

Vencedor's sail area includes her large clubtopsail.

The first race was set for Monday, Aug. 24, by which time Toledo was filled with a crowd of eager yachtsmen from New York, Chicago, Toronto, Cleveland, Detroit, Racine, Montreal and other cities on the lakes and seaboard. The steam yacht Sigma

CANADA, DESIGNED BY WILL FIFE, JR., 1896.

carried the committee and the timekeeper. The course was a triangle outside of Maumee Bay. A large fleet of steam and sailing yachts got under way early in the morning from the anchorage off Riverside Park and made for the start, six miles away, as best they could in a calm. Com. Jarvis was at the tiller of Canada and Capt. Barbour steered Vencedor. When the starting gun was fired promptly at 11 o'clock, there was no wind at all to speak of, but Vencedor trimmed down for a beat and managed to get across the line, Canada soon following, both with club and jibtopsails set. While the pair moved very slowly, Canada managed to take the lead in a very few minutes. For an hour the two did little more than drift; then the breeze gathered a little strength from the east. Canada set her balloon jibtopsail and began to draw ahead, Vencedor being almost becalmed.

At 1:13:40 Canada luffed around the first mark of the triangle, having taken 2h. 13m. to sail the four miles. Vencedor was still a mile astern, and did not round until 1:40:55. The wind had shifted enough to tempt her to set her spinaker, but she gained nothing by it. The wind was ahead on the second leg, but Canada held to her ballooner, going off on starboard tack. She made little progress, however, and at 3 o'clock, when she was about a mile from the second mark, the race was declared off.

Tuesday morning brought a breeze of about nine miles per hour from S.S.E., on the starboard quarter over the first leg of the course, the red ensign being set to signify that all marks were to be left to port. Both yachts were out early and ready before the preparatory signal was given at 10:50. There was a large attendance of sailing and steam yachts about the line, but the two racing boats were not hampered by the outside craft.

Again Vencedor led across the line at 11:00, Canada crossing at 11:01:15. Spinaker booms were down on starboard side and balloon jibtopsails set; Vencedor did not set her spinaker at the start, but Canada broke out hers as soon as she was over the line. In the light air Canada moved the faster and carried way enough to luff out and blanket Vencedor and soon to run by her to windward. The American boat was not napping, and at once luffed across Canada's stern and broke out her spinaker, but the wind was too light for her and she could not hold her more nimble rival; Canada held her course and gained steadily. The greater part of the first leg was little more than a drift. Canada opened a good lead and then Vencedor closed up a little as they neared the first mark. Canada, as in all the races, carried a balloon foresail and made excellent use of it. The first mark was timed:

	Turn.	Elapsed.	Gain.
Canada	11 56 10	0 56 10	0 01 30
Vencedor	11 57 40	0 57 40	

The second leg was started with a little more wind, Vencedor picking up, but as the wind fell Canada again ran away from her, having a long lead when the second mark was turned:

	Turn.	Elapsed.	Gain.
Canada	12 44 00	0 47 50	0 07 50
Vencedor	12 53 20	0 55 40	

Before reaching the mark Canada shifted to working forestaysail and baby jibtopsail for the beat in. She made a hitch by the mark on port tack for three minutes, and then came about for a long starboard tack, heading S.W. Vencedor held a long port tack after rounding until 1:15. The latter part of the leg was made in a fresher breeze from the south, and Vencedor gained a little, though still hopelessly astern. The end of the first round was timed:

				First Round.	
	Turn.	Elapsed.	Gain.	Elapsed.	Lead.
Canada	2 05 00	1 21 00		3 05 00	0 08 30
Vencedor	2 13 30	1 20 10	0 00 50	3 13 30	

The second round started with a moderate easterly breeze and a promise of better time. The yachts made the first mark on a reach, the times being:

	Turn.	Elapsed.	Gain.
Canada	2 39 00	0 34 00	0 00 55
Vencedor	2 48 25	0 34 55	

Canada handled her spinaker sharply and soon had it drawing to port, but Vencedor was slower; the second leg was run in slower time than on the first round, but Canada made a big gain, the times at the second mark being:

	Turn.	Elapsed.	Gain.
Canada	3 30 00	0 51 00	0 04 25
Vencedor	3 43 50	0 55 25	

The last leg, to windward, was made by Canada under a large jibtopsail, she set her baby at the turn, but soon shifted to the larger sail and footed faster, though not pointing so high. The final times were:

				Full course.		
	Finish.	Elapsed.	Gain.	Elapsed.	Lead.	Corrected.
Canada	4 19 08	0 49 08	0 04 09	5 19 08	0 17 59	5 14 23
Vencedor	4 37 07	0 53 17		5 37 07		5 37 07

The superiority of Canada in very light airs and even in ordinary racing weather was fully established by the two days' trials. The result was exactly what might have been expected from the dimensions of the two craft, assuming that each designer had done his work equally well. It was evident that at some certain strength of wind the larger hull with smaller sail plan would overpower the other, and many confidently expected that this point would be reached at a comparatively early stage of the game within the limits of a good wholesail breeze. The American contingent prayed loud and long for wind, and for once their prayer was granted. Wednesday morning brought a 20-mile breeze from S.W., with a short and ugly chop, the sky being cloudy and overcast, with rain at times. The breeze brought not only hope, but absolute confidence to the Americans, but it did not seem to worry the Canadian crew. The course was 5 miles to leeward and return, sailed twice. The start was not made until 11:30, and Vencedor again, for the third time, led over the line, Capt. Barbour making a very clever start, crossing on the gun and breaking out balloon jibtopsail and spinaker. Canada was half a minute later, and when she broke out her light sails she showed spinaker, No. 1 jibtopsail and a jib-header, while Vencedor was carrying a clubtopsail. Again Capt. Jarvis tried to blanket Vencedor, but this time in vain; the latter had her breeze and was making the most of it, gaining all the way to the first mark, where the times were:

	Turn.	Elapsed.	Gain.
Canada	12 10 20	0 40 20	0 01 20
Vencedor	12 09 00	0 39 00	

The wind had hauled a little to the west toward the end of th round, so that the way home was not dead to windward. Vencedor started with lower headsails and clubtopsail, while Canada set a baby jibtopsail and held to her jib-header. With a nasty squall of rain and more wind with it Vencedor walked off in a lively manner, carrying her sail easily; she started on the port tack, and held it for some time. Canada started on the starboard tack, and held it until nearly 1 o'clock, when she was able to fetch the mark with a short hitch. Vencedor made several tacks and when she neared the mark she was unable to distinguish it, as there were three boats together, all flying the American ensign. Uncertain as to which was the mark, Capt. Barbour after several short tacks rounded the three boats, losing both time and distance and wasting a couple of precious minutes. The weather boat of the three was not the mark boat as it proved, and Vencedor had overstood considerably. Canada profited by the error of the leader and rounded the right mark with not 1ft. to spare, making a material gain on her rival. The times were:

				1st Round.	
	Turn.	Elapsed.	Gain.	Elapsed.	Lead.
Canada	1 00 41	0 50 21		1 30 41	
Vencedor	12 59 15	0 50 15	0 00 06	1 29 15	0 01 26

The second round started with the wind still strong and more to the west, making a broad reach, both carrying balloon jibtopsails. As they went to windward the breeze increased until first Canada and then Vencedor lowered ballooner, finishing the second half of the leg without them. The weather mark was timed:

	Turn.	Elapsed.	Gain.	Lead.
Canada	1 36 10	0 35 29		
Vencedor	1 33 30	0 34 15	0 01 14	0 02 40

The last leg was no longer a beat, but a close reach, Canada setting her baby jibtopsail. Vencedor gained nearly a minute, but she fell nearly half a minute short of her allowance, Canada winning the race and the match by 26s. The full times were:

				Entire Course.		
	Finish.	Elapsed.	Gain.	Elapsed.	Lead.	Corrected.
Canada	2 14 35	0 38 25		2 44 35		2 40 28
Vencedor	2 11 04	0 37 34	0 00 51	0 41 04	0 03 31	2 41 04

The yachtsmen were tendered a reception and ball in the evening by the yachtsmen of Toledo, and the cup and money were presented.

The following challenge was issued immediately after the race, but has not yet been accepted by the R. C. Y. C.:

"ON BOARD YACHT VENCEDOR, Toledo, O., Aug. 26.—*W. T. Boswell, Commodore Royal Canadian Y. C.:* Dear Sir—On behalf of Edward C. and Matthew Berriman, and through the Lincoln Park Y. C., of Chicago, you are hereby challenged to sail a series of three matches, best two in three, on some neutral waters during the yachting season of 1897, under the New York Y. C. rules so far as they will apply, the arrangements governing such matches to be made by a committee of three representing the Lincoln Park Y. C., of Chicago, and a like number representing the Royal Canadian Y. C., of Toronto, they to choose a seventh member if necessary; the competing yachts to measure not to exceed 43ft. on the load waterline."

Beverly Y. C.

240TH RACE—MARION—AUG. 15.

MR. BREWER'S unnamed boat in fourth class cats has been measured and takes second prize, sailing at 19ft.

Mr. Hanley's unnamed boat has been ruled out for not being measured (though given the chance) for a week, and being then in very different trim from that in which she sailed on Aug. 15.

The second class sloop prize is awarded to Alma.

The 241st race, fourth championship, was sailed off the club house Aug. 22 in a good S.S.W. breeze. Courses for second and third classes 11¼ miles, fourth class 8⅓ miles, fifth class 5⅓ miles.

Judges, T. S. Edmonds, A. H. Hardy.

The start was a good one. Grilse at first seemed to have it, but made poor work of shaking out a reef and handling length, and lost a good deal by a fluke on last leg.

Elsa and Imp by winning the third leg for the pennants become the champions of their classes for 1896. Linotte gets a leg against two for Anonyma and one for Surprise. Sally does the same, as against one for Grilse and two for Heiress. Melro takes a second leg, tieing Colymbus, who has two.

Linotte, Melro, Sally, Elsa, Imp take first prizes; Bernice and Grilse second prizes.

No new boats get any allowance, and all new boats, including 999, are figured at class maximum.

Mist sprung her mast on the way to the club house.

Canoeing.

AMERICAN CANOE ASSOCIATION.

Seventeenth Annual Meet.

GRINDSTONE ISLAND, ST. LAWRENCE RIVER.

Aug. 14-28.

Now that the meet is over, it is safe to say that it has been an all-round success and in some respects a surprise. There has been no general response on the part of the old members to the announcement of a meet on Grindstone, and it has failed to bring out what we hoped for, but did not expect—a reunion of many who have not been seen at an A. C. A. meet for some years. At the same time there has been a very pleasant gathering of the older men, and the register shows the names of Whitlock, Burchard, Ford Jones, Paul Butler, Barney, E. B. and J. G. Edwards, J. N. MacKendrick, Stephens, Parmele and Mrs. Parmele, E. W. Brown, Peebles, Moore, Dodd and others of the earlier camps. Beside these are many who have attended enough meets to be known and to know others of the A. C. A., and the proportion of absolutely new and strange members is not so large as in some previous meets of recent years. The camp has been a very quiet one, both as concerns unreasonable noise and all-night riot, and reasonable noise and excitement during lawful hours; but it has been to all appearances a very pleasant and sociable one, and one that will be remembered with pleasure for its many good things and few drawbacks. There has been an absence of grumbling and complaint, dis-

VENCEDOR, DESIGNED BY THEO. POECKEL, 1896.

proving the remark so often heard that A. C. A. members, as a body, are grumblers and kickers; and proving what we have always claimed that with a reasonably good campsite, mess, transportation and general arrangements, no special luxuries or attractions are necessary, and men are ready to accept such discomforts as are clearly unavoidable. This year there has been no attempt on the part of the officers and committees to provide special attractions of the vaudeville, summer hotel or excursion order; they have confined their labors to the providing of ordinary camp conveniences, and their efforts met with a general appreciation.

The well known camp site on Grindstone is after all the best the Association has ever known; in climate the St. Lawrence River surpasses the Hudson and lakes George and Champlain, and is quite equal to Long Island Sound—in fact, to the majority of members, unused to salt water, it is far preferable. While the scenery is but second to some on Lake Champlain, he must be hard to please who asks anything better than the outlook to the west from Grindstone Hill, whether at sunrise, sunset, midday, or by moonlight; and this is but one of a thousand beautiful views within half a dozen miles. The transportation this year, both from Gananoque in Canada and Clayton in New York, has been excellent; a small local steamer runs to Gananoque, and a small cabin launch, the Pastime, has been specially chartered to run between Clayton and the camp, making reasonably close connections with all trains.

The camp ground is just the same as of old; it has some disadvantages, and it does not possess all the combined advantages of every other spot that the A. C. A. has ever visited; at the same time it is free from the many complaints so justly lodged against Croton Point, Willsborough Point, Long Island in Lake George, and other old camps. Its two important drawbacks are the absence of trees on the east hillside, facing Eel Bay, the sailing course; and the distance of the Ladies' Camp. In spite of the heat at midday, many still camp about headquarters on the east shore, where the main camp was in 1884-5-6; but those who want shade can find it in the beautiful grove along the north shore. In the event of a contingency which is perhaps remote, but which has been generally and favorably discussed during this meet, the establishment of a permanent camp, and that on Grindstone Island, it is possible that some rapid-growing trees might be planted along the east shore on the hillside, giving shade in a few years. The general arrangement of the camp would also be improved if the wharf could be removed to a position near the willow trees toward the Ladies' Camp, the mess shed, kitchen and store being located here, where in fact the former two now are, with the headquarters just north of them. In most details—nature of soil, convenient beach, absence of tide, sailing waters and winds—Grindstone offers all that can be desired or expected.

The mess this year, served at the charge of $1 per day, has been most satisfactory; the manager, Mr. McElveney, is the leading caterer of Albany, and consequently is able to avoid the great cause of failure in so many messes—an ignorance of how to cater for a camp of this kind. The bill of fare and the service, with neat young girls for waiters, is very good indeed. One source of the general satisfaction with this camp is that all hands have been well fed from the start.

The camp is a fairly large one, the register showing 201 up to Aug. 27; the main camp numbers seventy-five tents, and there are at least thirty more in Squaw Point; and, strange to say, there are over a hundred canoes along the shore. The camp began well, with a number under canvas on the first day, and up to Thursday of the second week but few had left. Quite a number came in for a day or two, but the mess tent attendance has averaged about 150 per day. The camp has depended entirely on itself, the men have gone off but little to the surrounding summer resorts, and there has been no troublesome influx of excursions, tourists or outside visitors. Many have availed themselves of the facilities offered by the numerous small steamers and have made day excursions to Kingston, Gananoque, Alexandria Bay and among the islands. All outside attractions in the form of hotel hops, hotel prizes, etc., have been absent, but not missed. The fishing is good. Mr. W. B. Wackerhagen's catch of a 35lb. muscallonge was exceptional, but many have found good sport, and fish has figured frequently and acceptably on the bill of fare. No other location has ever offered half the choice of short day cruises by canoe, and some have enjoyed them. The amusements of the camp have been of the quietest and most prosaic kind. Seavey visits the meet no more, though many had hoped that another Grindstone camp would bring back the Patriarch of the original Squaw Point, but he did not come. There have been no sea serpents, no outdoor performance of "As You Like It," no storming of Sebastopol, no Indian war dances. The camp-fires too have been in no way remarkable. Miss E. Pauline Johnson, last seen at Brophy's Point in 1893, has been again in camp, and of course has been in demand at every camp-fire; but apart from her recitations there has been nothing new. There are fewer banjoes, guitars and mandolins than usual, no new songs and no new singers. At the same time, the society in camp has been sociable and friendly, with no formality, every one disposed to enjoy as fully as possible what is pleasant and to ignore the minor discomforts, and this has made pleasant social gatherings at night. Whether it means much or little, the liberal display of broken or empty bottles witnessed several years since at Willsborough has been conspicuously absent this year. It may be only that men have profited by the serious accidents due to broken glass, or that the camp regulations are more carefully observed; but it is also the case that the noise and disorder of many previous camps have been comparatively unknown this year. Apart from one occasion which called for the exercise of authority to suppress an all-night noise, the camp has been quiet and well ordered.

The usual routine has been changed this year by the calling of several races during the first week, and as the others were run off very quickly the racing was over, with the exception of four events, by Tuesday night, something never before known.

The weather through the entire meet was good, it was very hot at first and rather too cool at times afterward, but these same conditions prevailed throughout the country; the camp was cooler in the hot spell than New York or Boston, and at no time afterward was it too cool for a fine swim. There was a little rain at times during the first week, quickly over, but early on the second Sunday it started in and rained until noon. Again on Aug. 26 a light thunderstorm about 6 P. M. turned into a steady rain that lasted until after midnight, though the next day was warm and sunny. It happened most unfortunately that this was the evening of the only excursion from the camp, a moonlight search-light run among the islands, but the glorious moonlight of the preceding night was absent and the search-light was not appreciated on the wet and sloppy decks.

To those who have watched the course of canoeing through the last three meets, the present one was a surprise, especially after the absolute failure of the racing last year. Here there were at least a hundred canoes, half of them entered for the races, the entry list including over fifty names. The result was that out of a long programme, thirty events, all but two were run off, and with considerable interest on the part of contestants and spectators. This revival of interest is not a little remarkable after the recent rapid decline, nor is it easily explained. Of new canoes there were none save the new Mab, in which Mr. Archbald succeeded in winning the sailing trophy for the second time. The sailing canoes on the entry list are all well known, and the new canoe, used by Mr. Noack in the paddling trophy race, a handsome craft, is not radically different from others of her class.

The new Mab, the only important addition to the racing fleet for some years, is a remarkably handsome craft, designed and built by N. Gilbert, of Brockville. She was begun within a month, but shows no evidence of hasty work in her design or construction. She is, of course, 16×30, with about 12in. depth amidships; the midship section has a good deal of dead rise and quite a strong bilge, a very fair and taking section, but not a powerful one. The keel is well rockered and there is no sheer, the freeboard being the same from end to end. The deckline is round and fair, and all the waterlines are round and full, giving a beautiful form. The hull is of ribband-carvel build, planked and decked with British Columbia cedar, a fine piece of planking. The main feature of the canoe is a strong deck seat, placed very high above the hull and thoroughly fastened to it, the hull being especially strengthened to carry such a seat. The seat itself is 5ft. 3in. long, and two were used, one of solid board and one a thin built box, very light and strong, though it is doubtful whether it is really strong enough for the severe work demanded of it. This seat is placed over a small shallow cockpit, draining into the centerboard trunk. The slot is made very long, in case it should prove necessary to use the ordinary form of board, but a small steel plate of the Linton Hope form was first tried, and it worked so well that it has been retained. It hoists with a line from the fore deck, as is usual is this forms of board. It is so fitted that it may be shifted aft in the trunk at a moment's notice. The rudder is a fixed steel plate, with a "Norwegian tiller" connecting it with a very long and strong thwartship tiller, pivoting about the mizzenmast tube. The rig is of the ordinary "Pecowsic" batswing with two battens, the sails of Union silk. The forward mast tube is placed close to the stem, and being rather shallow, is carried nearly 3in. above deck, and reinforced by a turned modern block about 6in. in diameter and 2½in. high. The hull itself is very handsome; but its shipshape appearance is completely spoiled by the high deck seat and this awkward turret on the bows. The bottom was in excellent condition, hard and polished, something unusual in a boat just in the water for the first time. Mr. Archbald has had to sail her with no previous trial

Two of the regatta committee, Messrs. E. B. Edwards and Butler Ames, were present, and Vice-Com. H. D. McVean was pressed into service in the absence of the third member. The usual triangle was buoyed off in Eel Bay, with the start off the main wharf. The mile and half mile paddling courses were laid off from the dock in the direction of the ladies' camp. The first race called was event No. 10, the Jabberwock trophy which was started at 3:35 on Thursday, Aug. 20, in a fresh and puffy wind, with four entries. Az Iz, J. R. Stewart, won, and as Mr. Stewart won the trophy last year in the same canoe he becomes the permanent owner. The ladies' paddling and novice paddling, events 22 and 25, were called the same afternoon, being won by Miss Lillian Scott and C. P. Moser respectively The next afternoon the race for the Champlain cup, event 8, and that for the Orillia cup, event 9, were started together, the former over three rounds of the triangle, the latter over five, it being open only to the members of the Northern Division. A very good fleet of starters; twelve in all, crossed the line. All of the older canoes were entirely outclassed by Mab, and she won easily in both events.

On Saturday morning the race for the Atlantic Division cup, event No. 30, was started at 10:35, the first two rounds making event No. 13, the novice sailing. Mr. May won the latter, and Mr. Moore the former. Mr. Dunnell sailed the old Eclipse with a small rig. Just after noon the mixed tandem, event No. 24, was called, a lady and gentleman in each canoe. Miss Stewart, of Rochester, and Mr. King, of Toronto, made up the winning crew. Then came the swimming race, won by A. A. Conger.

The first event of "race week" proper was the combined race, called at 10:35 on Monday morning in a light breeze. As the committee was unable to secure an extra launch, Mr. W. H. Post, who was present in the steam yacht Vailima, very kindly put her at the service of the committee for Monday and Tuesday. Mr. Stewart, in Az Iz, won very easily. The ladies' tandem followed at noon, won by Mrs. Plummer and Miss Smith. The club sailing, event No. 11, was started precisely at noon in a moderate breeze, fifteen canoes crossing the line Mr. Butler won easily after a good race.

The unlimited was started at 3:05 in a moderate S.W. breeze and smooth water. Mr. Moore, in Pioneer, sailed a good race, and was beaten by but 30 seconds, Mab winning. The trophy paddling was called at 5:30; by the time the men had paddled up to the start, a mile along shore, the wind was blowing very fresh against the course. This race had awakened an unusual amount of interest from the fact that there was a new man present on purpose to win it if possible. This was Mr. W. C. Noack, of Detroit, a member of the Detroit B. C. and the W. C. A. Mr. Noack has trained for canoe paddling for two years, and since last winter has been in regular training. He is of medium height and weight and light physique, but well developed. His position in paddling was a decided novelty and created much discussion as to its merits. Like the old-time American paddlers, he sat straight on the floor of his canoe; but with all this his method was entirely new. His feet were well braced against a foot rest, and he sat with a thwart of his open canoe across his thighs, so that he was braced in a way that is possible with no other position. His four rivals paddled in the kneeling position. Mr. Noack was well off at the start, swinging his arms with no body motion; he took the lead of King and opened out clear water at the half mile, finally winning easily. As far as the merits of the two positions are decided by the result of this race, it must be said that while Mr. Noack had a very fine paddling canoe, built by English, and kept her in perfect condition, he had probably trained more thoroughly and carefully than any of the others; he saved in body windage through the lower seat, and he rolled his paddles, the blades being quartered, two very important details in a race against a strong wind. The times are not reliable for a record, the course being logged and not measured: the work was done as carefully as possible, but the log is not sufficiently accurate for the laying off of short distances. The hurry-scurry race, won by Conger, finished the day.

The first race on Tuesday was the record paddling, event No. 2, won by J. W. Sparrow in Eel. The open paddling, event No. 15, was won by F. A. C. Bickerdike; the decked tandem, event No. 16, by King and MacDougal; and the open tandem, event No. 17, by Scott and R. Bickerdike. The "tail end" race, No. 27, was a novelty, it was paddled down wind with the paddler seated in the bow of his canoe; Mr. F. A. C. Bickerdike won after a very amusing race. The paddling upset was won by Mr. King.

The trophy race was called at 3:05, with 13 starters, a very good field, all things considered. Mab led over the course and won by nearly two minutes from Bug, but this gain was made mainly in the first round. The wind was moderate throughout the race, but in the first round it was lighter than in the next four, falling a little on the sixth. On the first round Mab gained 1m. 15s., on the second 19s., on the third 19s., holding her own on the next, then losing 28s., and on the last regaining all but one of them. Mab sailed very fast indeed on the reach, but Bug did the better windward work; in particular she cut the marks better except at the finish. At the end of nearly every round Mab failed to fetch the buoy and had to make an extra short tack. The race was a very pretty one, and as it was within plain view of the camp it was watched with interest by all hands. Unlike Stave Island, Long Island and Willsborough, the sailing and paddling courses this year were plainly visible from the main camp. The last race of the day was the club four, with but two crews entered; the Toronto crew winning.

Wednesday was clear, with a light wind in the morning, and the record sailing race was called, but by 10 o'clock there was a reefing breeze from S.W. Only two out of the five record men started, though all were ready at the wharf. Az Iz and Beta were both reefed when they crossed the line at 10:35, on a reach for the south buoy, the marks being left to port. They staggered along, taking some bad knockdowns, and at the end of the first round the race was called by the committee, Mr Stewart, who was a long way ahead, being declared the winner. This gave him 10 points in the record to Mr. Hale's 5, the other three not being placed.

Just before 6 P. M. a light thunderstorm passed over the camp, clearing for a time, only to be followed by an intermittent downpour that lasted well into the night. Many of the campers had arranged to go on a search-light excursion through the islands, and they took the steamer during one of the clear intervals about sunset only to be greeted by a heavy shower as soon as the boat had started. They returned to camp about 11:30, voting the expedition anything but a success, and in envy of those who had passed the evening under the tent flies with a rousing camp-fire in front.

Thursday morning was clear and sunny again, and the Dolphin trophy race was called at 10:20, with five starters in a light breeze. Az Iz was disqualified for fouling Pioneer, giving the race to the latter.

The next race, called at 2:50, was event No 12, with sail limited to 100sq. ft., won by Az Iz. With it was started a special race, in place of event No. 14, unclassified craft. As none of the latter—canoe yawls, sneakboxes, cruisers, etc.—were present, a class was made for the old-time canoes with open cockpits, Eclipse winning.

The last race at 5:30 P. M. was a special event, passenger paddling, the "passenger" being a man. Mrs. Plummer won, with Miss Swift second. The prizes were presented at the camp-fire in the evening. A notable change has been made this year in the abandonment of the silk prize flags, so long given as prizes, for a special trophy in the shape of a bronze shield of handsome design, bearing the name of the race, winner, etc., in raised letters, and mounted on an oak board. The result is a very neat and appropriate trophy of no intrinsic value, but far more durable than the flags; making a lasting record of a man's prowess as a canoeist.

The business of the meet was confined exclusively to the election of officers. The meet of 1897 going to the Northern Division necessitated the choice of a commodore from that division, and at the division meeting in camp the name of John W MacKendrick, of Galt, Ontario, was unanimously selected for presentation to the executive committee. Mr. MacKendrick, who was in camp, was reluctant to accept the office, but was urged to do so by old members from the States who have known him long in the A. C. A., as well as by those of his own division. No choice of secretary-treasurer was made, the matter being left open until Mr. MacKendrick could find some one so situated as to be able to work with him. The Northern Division at the same meeting elected the following division officers: Vice-Com., R. Easton Burns, Kingston; Rear-Com., D. H. McDougall, Toronto; Purser, W. H. Macnee, Kingston; Executive Committee, J. Lawless. The Atlantic Division elected the following officers: Vice-Com., J. E. Murray, Philadelphia, Pa.; Rear-Com., W. E. Barlow, Sing Sing, N. Y.; Purser, H. W. Fleischman, Philadelphia, Pa.; Executive Committee—Thos. Hale, Jr., J. K. Hand. The Central Division elected the following officers: Vice-Com., H. M. Stewart, Rochester, N. Y.; Rear-Com, George J. Keyes, Rochester, N. Y.; Purser, L. W. Woodward, Gouverneur, N. Y.; Executive Committee—A. T. Smith, Rochester, N. Y., H. C. Morse, Peoria, Ill.

The Eastern Division elected its officers at the division meet in June, as follows: Vice-Com., Raymond Appolonio, Winchester, Mass.; Rear-Com., L. S. Drake, Auburndale, Mass.; Purser, F. J. Burrage, Newtown, Mass.; Executive Committee: H. C. Wiggin, Boston; A. W. Dodd, Hartford; F. W. Taylor, Lowell. The Board of Governors re-elected R. J. Wilkin as chairman and C. V. Winne as secretary.

The meeting of the executive committee took place on Aug. 24, with Com. Huntington in the chair. The question of proper security for the A. C. A. trophies was discussed at unnecessary length, and a resolution passed to the effect that suitable bonds to the amount of $500 should be required of the winners. Mr. MacKendrick was nominated for commodore and unanimously elected, the selection of the secretary-treasurer being deferred. The question of camp site was informally discussed, the preference being unanimously for Grindstone Island.

The Central Division has had since 1889 the Jabberwock trophy, presented by Geo. A. Warder to the division, to be sailed for at the meets by members of the division only; and to become the permanent property of the first man who should win it for two years in succession in the same canoe. The trophy, which cost over $200, was unique in its way, a smoking set, consisting of a box about 8×10in. of burnished copper. The various compartments contained two handsome pipes, a meerschaum and briar, a cigar holder, an elegantly embroidered tobacco pouch, and other smoking appliances. The lid bore an inscription and the figure of the Jabberwock was carved or embroidered on the box and every separate article. The conditions of the trophy when it came into Mr. Stewart's hands last year spoke but little for the ideas of some previous holders of what was intrusted to them merely for temporary possession pending the final winning. Every article had disappeared, the box was not only empty, but the sides were split apart, and one of the handsome Jabberwock claws had been wrenched from a corner. The Central Division at its meeting resolved to appropriate $350 to the purchase of a permanent trophy, to be sailed for by its members at the meets.

Throughout the camp there was noticeable a general disposition to return to Grindstone next year, and it is practically settled that if satisfactory arrangements can be made with Mr. Delany the camp will be on the same site. Though not in the Northern Division by nearly a quarter of a mile, Grindstone is by far the best site for both Canadians and Americans. The Stave Island camp ground is not to be considered, as it lacks every desirable qualification for an A. C. A. camp; it faces the wrong way—to the west; the ground is rough and uneven, the wharf must be a long distance from the camp, and the sailing ground is not visible from the camp. It was a very poor spot in 1889, and with the present stage of the river, as it has been for several years, it would be much worse. Those who can get to the camp early and secure one of the several rocky points will have small reason to complain, but the great majority of campers must be less fortunate. The defects of Grindstone are now thoroughly understood, and with a re-arrangement of the camp may be partially remedied. One important matter, the mess, is likely to cause no trouble, as Mr. McElveney is willing to take it again next year at Grindstone, though he could not do so in Canadian waters.

The camp broke up, as usual, on Friday, a few remaining over. Taking it altogether, and especially as compared with the rather discouraging outlook of last year, the meet has been a success in attendance, in the number of canoes, entries and races, in the way it has been enjoyed by all in camp, and in the promise of a renewed interest in canoeing and canoe racing next year.

San Francisco Rifle Notes.

SAN FRANCISCO, Aug. 24.—Fine rifle sharpshooters and military marksmen assembled at the Shell Mound rifle range yesterday in large numbers. In fact, the targets were kept hot all day. Considering the many attractions in this line around the bay, the Columbia Pistol and Rifle Club's attendance was fairly good. Not a little interest was centered on the short range, 50yds., where the pistol and .22cal. rifle shooting was going on. Mrs. L. J. Crane made a very pretty score on the Columbia target for the Glindermann ladies' trophy. It was 5, 1, 4, 1, 4, 4, 2, 2, 5, 5—33. This shows an average of 3⅓ points.

Miss Ada M. Olofson also came to the front with a very pretty practice pistol score, which for the first effort with this firearm leads to the belief that she will not take long in becoming an expert. Her run was 4, 4, 9, 7, 12, 10, 6 5, 15, 13—85. When the ladies' auxiliary to this club is created there is no donbt but that many good shots will be developed with rifle and pistol. The scores in the 50yd. range were as follows:

Pistol, Blanding medal, 3 shots, open to all comers: F. O. Young, 3, 3, 3—9; J. E Gorman, 6, 2, 2—10; Dr. L. O. Rodgers, 7, 1, 4—12.

Glindermann ladies' trophy, 10 shots, .22cal. rifle: Mrs. L. J. Crane 33.

All-comers' medal, 5 shots, .22-caliber rifle, 50yds.: E. A. Hovey 9, 12, 13; E. Jacobson 11, 12; Mrs. J. Crane 11, 16; W. E. Brooks 24, 26.

On the 200yd. rifle range the annexed records were made in the following re-entry matches, Columbia target:

Unfred diamond medal, 3 shots: Dr. L. O. Rodgers 11, F. O. Young 12, J. Utschig 17.

Military rifle, Glindermann medal, 10 shots, Creedmoor count: F. Poulter 46, F O. Young 44.

Rifle record medal, 10 shots: J. Utschig 50, F. O. Young 50, A. B. Dorrell 84.

Most flags for centers: Dr. L. O. Rodgers 2, D. W. McLaughlin 1.

The chief public shoot of the year, lasting two days, closed yesterday. It was given by the California Schuetzen Club at their San Rafael range. The shooting was hardly up to the average in excellence owing to unfavorable weather conditions. About 150 marksmen participated. Shooting tickets to the amount of $2,000 were sold.

Some of the highest scores were:

Man target, 4 shots: 77, F. Baumgartner and L. Haake; 75, Dr. L. O. Rodgers, R. Finking and John Utschig; 74, D. B. Faktor; 73, C. Meyer, C. Thierbach; 72, D. McLaughlin, A. Strecker.

Honorary target, 3 shots: 71, W. Glindeman; Dr. L. O. Rodgers, J. Utschig and A. Pape; 70, D. McLaughlin, H. R. Brown, Faktor and Meyer; 69, N Ahrens.

Point target: Faktor 847, Schuster 827.

King target, 10 shots: L. Bendel won with 228 rings. ROEEL.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 1-5.—BUFFALO, N. Y.—Tournament at Audubon Park. Targets and live birds. B. F. Smith, Manager.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 7.—ROCHESTER, N. Y.—All-day shoot of the Riverside Rod and Gun Club. Targets. E. D. Hicks, Manager.

Sept. 8-9 —MARION, N. J.—Tournament of the Interstate Association, under the auspices of the Endeavor Gun Club of Jersey City, N. J.; $150 added money.

Sept 8-10.—GALT, Ont.—First annual tournament of the Ontario Rod and Gun Club; $800 to $1,000 added money.

Sept. 11.—WEST LEBANON, N. H.—All-day shoot of the West Lebanon Gun Club.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Sept. 19.—HACKENSACK, N. J.—Fourth tournament of the New Jersey Trap Shooters' League, under the auspices of the Bergen County Gun Club. Sweepstakes at 10 A. M.; League team race in the afternoon. C. O. Gardiner, Sec'y.

Sept. 29.-Oct. 2.—HARRISBURG, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct.6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

1897.

January.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz, etc.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

We have received from Mr. Willard L. Simpson, chairman of the executive committee of the San Antonio Gun Club, the following circular, dated Sept. 1: "Our tournament last year is now a matter of record; that we fulfilled our promises has been attested to by all the shooters who attended. Last year we were open to the world, but at our next tournament we propose to give the amateur a chance. Our tournament to be held April 15, 16 and 17, 1897, will be strictly for the amateur shooter, professionals and manufacturers' agents will be barred from regular events, although we shall be glad to see them with us, and can assure them a good time and provide them with plenty of shooting. Everybody who attends will have a fair show; nobody will get rich, but you will all have a good time. Particulars of programme will follow later, but it will be a good one, with many new and novel features, and we will give the shoot on the finest and best equipped grounds in the State of Texas, if not in the South. It was our intention to hold the tournament on Oct. 15 16 and 17, 1896, but after making a thorough canvass of the Texas shooters and securing the expression of the leading clubs of the State, the executive committee, out of deference to the wishes of the majority, decided to hold the shoot in the spring of 1897, and chose April 15, 16 and 17 as the proper time to hold it. Let us hear from you. If you have any suggestions to offer we shall be pleased to receive them; we want to try and satisfy everybody, and any points you can give us will be thankfully received A shoot for the exclusive benefit of the amateur shooters is a new departure, and we want you to understand that our shoot is for the amateur, "first, last and always," and his interest will be fully protected. Your assistance as well as that of every amateur will assure us of success, and we therefore submit the above to you and await your reply with any suggestions you may have to offer."

Mr. C. E. Brady, of Cuyahoga Falls, O., secretary of the newly organized gun club of that town, writes us regarding trap-shooting in that locality as follows: "A gun club has been organized by the younger men of this town which will be known as the Coast Pigeon Gun Club. It is composed wholly of amateurs and they will hold their shoot every Friday afternoon on their grounds in this village. There was also organized in this town a gun club which will be known as the Cuyahoga Shooting Association, which is composed not only of the sportsmen of this village, but also includes members of other gun clubs of surrounding towns, and bids fair to be one of the strongest organizations of this kind in the State. They have located and are fitting up grounds which are easily reached by the different steam and electric roads running into Cuyahoga Falls, where they will hold their shoot every Saturday afternoon, and will be pleased to entertain any visiting sportsmen that might be in this vicinity. It might be well to add that the success of this gun club is assured, as H. A. Penrose, the well-known sportsman, is one of the prime movers."

The three days' shooting next week on the grounds of the Endeavor Gun Club, at Marion, N. J., ought to be productive of some good sport. The dates are Sept. 7-9. The first day is more of a practice, or preparatory, day. No regularly advertised programme will be run off, but events to suit the shooters will be kept going; this is the annual tournament of the club. On the next two days, however, the Interstate Association will give a two days' shoot under the auspices of the Endeavor Gun Club. The programme has been referred to at length in these columns on a previous occasion, so further notice is unnecessary. From advices received to date, it looks as if this, the last tournament given by the Interstate Association during 1896, will be the best of the series.

Mr. C. O. Gardiner, secretary of the New Jersey Amateur Trap-Shooters' League, writes as follows: "The next tournament of the Amateur Trap-Shooters' League of New Jersey will be held Sept. 19 at the grounds of the Bergen County Gun Club, Hackensack, N J. This club is very conveniently located for visiting shooters, being situated within one minute's walk of the New York, Susquehanna & Western Railroad and five minutes from that of the New Jersey & New York Railroad. A number of sweeps will be shot, commencing at 10 A. M., and the Bergen County Gun Club cordially invites the members of other clubs to participate in these events."

While attending the Interstate Association's tournament at Burlington, Vt., last week, Justus von Lengerke, of the firm of Von Lengerke & Detmold, handed us the following note: "Please make mention in your paper that a Francotte gun, No 28,068, quality 3, was obtained from the firm of Von Lengerke & Antoine, Chicago, on a bogus draft tendered by a man calling himself R. J. Widner, Los Angeles, Cal."

The columns of FOREST AND STREAM are closed to challenges unaccompanied by a forfeit. Such has been and such still is our rule. The sooner this is thoroughly understood by all would-be matchmakers, the better we shall be pleased. Two communications of that nature, one of them good reading, have been laid to one side this week under that rule.

So far as we can ascertain, Edgar Gibbs Murphy's total of 188 out of 200 live birds, 21yds. boundary, is a record. If anybody knows of a higher score made under similar conditions, he will confer a favor on us and will put a stop to a lot of argument by forwarding full particulars of the same to FOREST AND STREAM.

SEPT. 1. EDWARD BANKS.

Trap-Shooting Systems.

WASHINGTON, D. C., Aug. 27.—*Editor Forest and Stream:* I have eagerly perused the different writings on the trap-shooting systems now in favor, and while I concede their merit I am convinced that but a part of the ground has been covered—an important part, it is true, yet leaving equally important neglected.

Let us refer to the old system. It never contemplated any such application as that of the present day. When it was adopted its theory and practice were that there were no ties left to be divided as they are at present. Every event was shot to a finish, leaving one or two men in the places and the moneys. That practice fitted the times of a few years ago precisely, for the trap-shoting events in entries were then relatively small, and shooting off the ties occasioned but little delay and little inconvenience. Also, there were but few men who had skill enough to be in the ties. But the interest grew steadily. The number of trap-shooters multiplied to an astonishing degree, and the number of experts was increased in a still greater ratio. Then it was found in practice that shooting off the ties obstructed the tournament, there being so many in the ties. To idle about waiting for the ties to be decided entailed an expense, an irksome delay on those who did not shoot, which practically amounted to a suspension of the tournament for the time being. For those who shot off the ties there was so much added expense thereby that it absorbed the winnings.

On account of the clamorous objection against shooting off ten ties, the managements thoughtlessly permitted events to be shot without shooting off the ties, under a system which never contemplated such stupidity, and which in such application lost all semblance to a system. It was a good enough system when the events were shot to a finish; short of that finish it was no system at all. The manner of deciding the events was changed radically when dividing the ties was introduced, but the old system remained. The old system did not meet the new conditions.

Of course, with the changed conditions many shooters were not slow to perceive the weakness of an old system, and they took advantage of the situation. Why not? It required no great thought to perceive that if twenty men tied for first and there was but one man in the second hole, it was better to divide second money with one man than to divide first with nineteen. Many, many words have been wasted on the crime of "dropping for place," or its unfairness, or whatever any one is pleased to term it. Without showing how it is a crime or wherein it is "crooked," the assumption is made that it is a crime, and the arguments have been in line accordingly. No one has seen fit to come out boldly and lay the fault where it belongs; that is, with the system itself. If we insist that a shooter must shoot honestly at his best, he on the other hand has an equal right to insist that he be furnished with an honest system, one which will not rob him because he is more skillful than his fellows and because he does his best.

In all contests from the time the world began the victor has been awarded honors and emolument, glory and reward, greater than were conceded to those he defeated, except in trap-shooting. It is an insult to a shooter's intelligence to make him shoot under a ricketty, patched-up system, with a resounding proclamation attached thereto, informing him that he must be honest to tide over the weak places of the system. What right has anyone to take such a system as a measure of any man's honesty? Who were the originators of that system who so imbued it with honesty that to violate it made a man "crooked?" Who are the interpreters of it who can find warrant from its very imperfections to brand his fellow "crooked?"

There is no honor in any event in which the ties are not shot off. In a championship or other event where there is a single victor there is honor, for then there is supremacy. In other events it is shooting for money pure and simple. A shooter has a right to expect that in a contest his winnings will be according to the skill shown by him; his reward should be in a ratio to his score. But he finds that he is shooting under a system which often enables a man to win more money with a less score than the one made by himself. And yet he is told that if he departs from shooting at his best under a rotten system he is "crooked" and will be barred. It is farcical too, for any man can miss a bird when he chooses to do so, and what man can take it upon himself to say that it was done intentionally if the shooter does not choose to say whether it was or not. Of course a man may be so unpopular as to be ruled out on any vailable pretext, be it right or wrong; but that is another matter. No man living, from his own observation, would dare to make oath that a shooter missed a bird purposely unless the shooter did it purposely to parade the fact, and surely the matter of any man's reputation is of much more value than the bare word of any other man or that of any dozen other men.

Here we shooters have been burdened for years with a rotten system, one which was never meant for the purpose as it is now applied, and our honesty is to be measured by the crazy old patchwork system which does not fit our needs and is not honest in itself, since the best scores are often of least value in winnings, although the shooter is told that he must shoot at his best to please his friends, who may shoot or who may not.

NOVICE.

Monroe Tournament.

MONROE, La., Aug. 23.—The tournament of the Monroe Gun Club, which was held on Aug. 19, 20, 21 and 22, was one of those interesting and successful tournaments that is conducive of much benefit to the sport of trap-shooting, it being strictly a gentlemen's shoot in the full sense of the term. Though one might say it was gotten up on the spur of the moment, as it was less than a month prior to the above dates that the club decided to hold a tournament, and its success speaks well for the hustling qualities of its officers and members. The workers at this tournament, and to whom much of the success of the shoot is due, are Dr. W. L. Jones, president of the club; Harry W. Stevenson, its efficient young secretary; Dr. A. A. Forsythe, Dr. T. Y. Aby, Dr. L. C. George, W. C. Williams and J. W. Wright. These worked incessantly, and carefully looked after the wants and comforts of the visiting shooters. Mr. John W. Hanna made an efficient, obliging and courteous cashier, always willing to answer questions, and one's money was ever forthcoming.

The grounds were located on the outskirts of the city, though not a great way from the hotel, and were reached by 'bus, the moderate charge of 25 cents being made for the round trip, and there were always ample conveyances for all. There were two sets of target traps (all bluerocks) and two sets of live-bird traps in position. One of the live-bird traps was the King automatic and the other some antique make, that were markers for their slowness. These, however, were little used, most of the live birds being shot from the King trap. The background was excellent, and no fault could be found on this score. Ample shelter had been provided for all, the shooters' score was decked over, and thus they were protected from the sun and weather. In the rear of the score were two large stands with plenty of benches, where one could lounge and talk when not shooting. Everything worked smoothly but the electric pulls, and they caused no little annoyance and delay. The live birds were a fine lot of good flyers, though of course not as strong as those in the winter.

In all there were about 11,000 targets thrown and 1,525 live birds trapped.

The programme announced that there would be five moneys in all of the target events, and that the purse would be divided on a basis of 30, 25, 20, 15 and 10 per cent., and in the live-bird events there would be three moneys, divided 50, 30 and 20. The evening prior to the commencement of the tournament the shooters all met, and after the writer had explained the Rose system, and demonstrated its simplicity and fairness, it was unanimously adopted. Thus FOREST AND STREAM had again advanced the cause of honest shooting at the trap. The points at first agreed upon were 6, 5, 4, 3 and 2. This was after the first five events changed to 7, 5, 4, 3 and 2, and proved very satisfactory. In the live-bird events there were three moneys, and the points in these were 6, 4 and 2. All events, with the exception of three extra events on the first day, were shot under this system. So well satisfied was the club with the system that they intend to use it at all their future tournaments, while a number of those present whose clubs contemplate holding tournaments said they would see that this system would be adopted.

First Day.

The first day of the tournament was a decidedly pleasant one, a heavy shower on the previous day having laid the dust and cooled the atmosphere to a comfortable degree. In addition to this it was hazy in the morning, and a fine breeze was blowing which continued throughout the whole of the day. This, coming after three weeks of extremely sultry weather, had a buoyant effect on everybody.

The attendance was not large, only 26 shooters participating, but most of them shot through the entire programme. Foote with his little 16-gauge Greener, carried off the honors of the day, making an average of 86.4 per cent. Will Miller was right after him with 86 per cent. In addition to the regular programme events, a 50-target sweep, with $5 entrance and 3 moneys, was shot; the purse in this being divided under the old system of 50, 30 and 20 per cent.

In this Will Miller took first on 46, Stevenson captured second on 43 and Jackson third with 42. All without a tie.

The rest is shown in the table below. The first ten events are the regular programme events at 20 targets each, and the last one is the 50-bird sweep.

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot.	Broke.	Av.
Foote	18	18	19	19	18	18	19	14	17	16	40	250	216	86.4

Second Day.

The weather to-day was again bright and clear, but the fine breeze of the previous day had abated. Old Sol therefore had things his own way and proceeded to make everyone uncomfortable. Altogether it was an extremely sultry day.

Twenty-eight shooters were present, and at the close of the day Jackson led with an average of 88 per cent., while Stevenson was second with 86 5 per cent. The following also shot in one or two events, though their names do not appear in the table below: Callender, Kennedy and J. A. Williams shot in two events, and Cooper in one, neither of whom made an average of 60 per cent.

There was also a 10 live-bird sweep shot after the target programme was finished. The scores of this are also given below:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av
Jackson	14	17	17	17	17	18	18	19	19	20	200	176	88
Stevenson	14	16	16	19	19	15	20	18	16	20	200	173	86.5
Foote	18	18	17	19	19	16	18	17	18	13	200	173	86.5
George	18	16	15	19	13	20	18	18	18	16	200	171	85.5
Will Miller	18	19	17	17	16	16	20	14	17	17	200	171	85.5

Live-Bird Days.

The third and fourth days of the tournament were devoted to live-pigeon shooting exclusively. On Friday there were four 10-bird sweeps shot, with an entrance fee of $7.50, and three moneys. Later on in the day a 25 live-bird handicap was started, which, however, was not finished until some time the second day, after which three more 10-bird sweeps were shot. This event had 14 entries at $15, and birds extra, three moneys. Faurote captured first money, scoring 24; he shot a good, steady race and won strictly on his merits. Stevens and Kennedy tied for second on 23. Nearly all of Kennedy's birds were easy ones, with the exception of the last one, and this easily beat him out; his other lost bird fell dead out of bounds. Stevenson started off rather poor; he lost his first one and then ran 23 straight, having drawn a rather uniform lot of easy ones. His 24th caused him some trouble; it proved to be quite fast and escaped the first load, but was scratched down with the second at long range, close to the boundary. His 25th was a hot one, and carried both loads out of bounds.

Three men scored 22 and divided third. Miller drew his share of fast birds and was also handicapped by shooting all kinds of loads; he lost two birds dead out of bounds. Jackson and Forsythe both shot a good race, the former lost a bird by a shell hanging in his gun. Sumpter and Ellis both looked sure of a place. Sumpter started off well, but his 9th bird lingered about the trap, and just as he lowered his gun and was in the act of saying no bird it took wing, and being a very fast one the shooter never caught up with it. His 13th bird, a very strong one, fell dead out of bounds. Then he lost his 17th, a rank easy towerer that appeared to stand still in the air; then his 18th, though hard hit, went out of bounds. This virtually put him out of the race. Ellis shot along very well until about the finish; his 23d, an easy one, put him out of the money.

Walton entered on the first day, but that night he was taken sick and was unable to finish his score, though he had a chance to make 23. Foote withdrew when he saw that he was out of the money, as did Callender and Dinkins. The others finished their scores.

The scores in the handicap are given in detail, while those made in the sweeps have been tabulated. The first four were shot before the handicap and the last three after it was finished.

The Mississippi delegation consisted of H. L. Foote and J. L. Walton, Rolling Forks; Will Miller and R. L. Pinkston, Vicksburg; H. L. Baker and Frank Arrighi, Natchez, and H. L. Dinkins, Anguilla.

Texas had Wallace Miller and J. A. Jackson, Austin; J. M. George, San Antonio; John Ellis, Galveston, and F. M. Faurote, of Dallas, present.

From Arkansas came J. E. Wells, J. T. Lloyd and M. M. Boyett, Pine Bluff, and John J. Sumpter, Jr., Hot Springs.

Then there was Tom Callender, of Nashville, Tenn., representing the W. A. powder; J. Hildreth, Jr., New Haven, Conn., representing the Winchester Arms Co.; J. A. Williams, Bonita, La., and J. L. Daniels, of Mer Rouge, La.

The Shreveport delegation was out of sight.

H. L. Foote made the best average in all target events, 86.4 per cent.; he also made longest straight run on live birds; 30 was the extent of it. Will Miller and Jackson tied for second average with 85.7 per cent.

Wallace Miller amazed the ladies as well as the natives by the dextrous manner in which he handled his Winchester; 2, 3, 4 and 5 targets tossed in the air at once were all snuffed out. The rapid manner in which he manipulated this gun was a revelation to the shooters in this section.

On the first day there were only two straight scores made in the target events. Will Miller and Faurote each got one. The second day there were six. Wallace Miller, Joe George, Jackson and Will Miller each got one, while Stevenson made two.

F. M. Faurote is a 20-bore crank, he lost but 10 pigeons out of 115 shot; he is one of the latest converts to W. A. powder.

The Rose system left no chance to drop for place. However, in the first live-bird sweep, after there had been four straights made, and only one 9, a shooter after running 9 straight turned around and inquired if this event was also shot under the Rose system; being assured that it was, he killed his last bird. Of course if the old system had been used he would have killed the bird just the same. He was only asking for information, not for a place.

Wallace Miller and Sumpter both sported their Chicago costume in addition to their Du Pont sweater; they both wore bloomers.

Tom Callender is rapidly developing into a fine pigeon shot; he scored 45 out of 50 in the sweeps, but fell out rather early in the handicap. His fine second barrel kills elicited rounds of applause.

Joe George was hardly up to his form, but this was not worrying Joe much. He was telling the boys about the Midwinter, when, as usual, he promised to show them a thing or two.

The marked improvement of J. Hildreth, Jr., the popular representative of the Winchester Arms Co., was the subject of much comment. He made no straights, but scored three 18s and a 19 during the tournament.

Dr. George showed his big brother a thing or two about shooting pigeons. Twenty-seven out of thirty was a trifle too fast for Joe.

F. M. Faurote says that there will be a big tournament at Dallas, Tex., some time during October or November, with at least $1,000 added money, open to all; but those who go up against this game will also have to accept the Rose system.

PAUL R. LITZKE.

Calumet Heights Gun Club.

CHICAGO, Ill., Aug. 23.—The trophy shoot of the Calumet Heights Gun Club was held to-day, the conditions being 25 targets, unknown angles. Lamphere won the Class A medal, Metcalf the Class B medal, and Black the medal for Class C. A high northwest wind was blowing, making the shooting conditions hard. In the rifle contest Spaulding won in Class A, 200yds. range, with score of 40. Miss Irwin won in Class B, 100yds. range, with score of 41. Scores in the trophy shoot were:

Class A.

Booth	1111011111111111011110101—21
Lamphere	1110101111111011111111111—22

Edgar Murphy in Great Form.

HOLLYWOOD, N. J., Aug. 26.—The match shot to-day on the grounds of the Hollywood Gun Club resulted in the display of splendid marksmanship on the part of both the principals. Edgar Murphy shot in such magnificent form that it is a question whether anyone could have beaten him. His score of 188 out of 200 birds is something remarkable under any conditions as to rise, boundary, etc. When it is considered that the conditions were 30yds. rise, 21yds. (actually we believe only about 18yds.) boundary, Murphy's score is phenomenal. He killed 96 out of his first 100, and 92 out of his second 100; Morfey scored 88 out of his first 100 but tied Murphy's score for the second 100, viz.: 92.

Edgar Murphy was handled by his brother, Walter Gibbs Murphy, while Neaf Apgar and Jack Brewer looked after Morfey's wants. Bland Ballard, of Louisville, Ky., was referee. There was quite a large attendance, among those present being many well-known shooters. Some of the names of the following spectators will be familiar to readers of FOREST AND STREAM: H. Godschalk, L. Finletter, Al Ivins, S. J. Held, J. L. Brewer, H. White, J. Davis, Col. Branch, L. Schortemeier, C. Livingston, G. Dunn, J. J. O'Donohue, Jr., B. W. Singer, W. R. Patten, H. T. Chanfrau, Dr. G. S. Gagnon, Fred Hoey, Joe Rothschild, H. B. Wallack, D. Johnson, J. E. Green, Tom Jolly, Phil Daly, Jr., Tom Kelliher and Dan Bradley.

The scores were as follows:

The Pennsylvania and Ohio Border League.

GREENVILLE, Pa., Aug. 28.—The fifth and final tournament of the Pennsylvania and Ohio Border Gun Club League was held at Meadville, Pa., Aug. 20. The Warren, O., team won the shoot and trophy, having won three out of the five tournaments. The other two were won by Youngstown and Greenville respectively. The score at Meadville for 25 birds was as follows:

Warren—Jones 21, Sheldon 20, Ewalt 22, Schoonover 20, Nouneman 18; 101.

Youngstown, O.—Whitesides 22, Weakland 17, Fry 23, Chapman 21, Nutt 18; 101.

Meadville, Pa.—Gundaker 15, Ehrgott 20, Smith 14, Krider 23, Johnston 18; 90.

Greenville, Pa.—Keck 17, Grauel 16, Henlein 12, Cam 20, Naylor 22; 86.

New Castle, Pa.: Alexander 15, J. Reis 16, E. Reis 16, Wm. Johnston 22, Harlan 12; 81.

In the shoot-off between Warren and Youngstown at 10 targets per man, Warren won by a score of 47 to 38. Warren was heartily cheered when this remarkable score was announced.

The new officers of the League are: President, R. W. Ewalt, Warren, O.; Vice-President, M. Henlein, Greenville, Pa.; Secretary and treasurer, G. H. Jones, Warren, O.

Next year the League will be composed of teams from Greenville, New Castle and Meadville, Pa., Warren, Youngstown and Cleveland, O. The Cleveland club will be known as the Forest City Gun Club. The team will include Paul North, Saffold, Hogan, Snow and Elliott.

Seth Clover, of Erie, one of the best-known shooters in the East, has joined the Greenville Club, but is barred from shooting on the League team, as he is a 90 per cent. man; however, he will be in it when it comes to the other tournaments which will be given this season. Pope, of Corry, Pa., has also become a member.

The Meadville Club gives a two days' tournament at the Cochranton Fair, Sept. 17 and 18, at which a number of good purses are offered. On the team shoot, open to all, a $50 trophy cup is offered. Greenville will send a first-class team and hopes to win the cup.

A 100 live-bird shoot for $250 a side has been arranged between Seth Clover, of the Greenville Club, and Sheldon, of Warren. The match will take place at Erie within two weeks.

ROBERT E. BEATTY.

Fulton Gun Club of Atlanta.

New Jersey Amateur Trap-Shooters' League.

THE third tournament of the New Jersey Amateur Trap-Shooters' League was held on Aug. 22 at Passaic, N. J., on the grounds of the Passaic City Gun Club. The weather was wet and decidedly uncomfortable for target shooting. There was a good turnout of shooters despite the unfavorable conditions, each of the five clubs composing the league being represented by a team of six men.

The team race is a handicap, the Boiling Springs Club being at scratch, its men shooting at 15 known angles and 15 unknown. The men on the teams of the Passaic City and the Endeavor Gun Clubs shoot at 15 known angles and 17 unknown angles, 32 targets in all. The Bergen County men shoot at 15 known angles and 18 unknown angles; the Oritani men at 15 known angles and 19 unknown angles. The scores were:

Endeavor Gun Club: F. S. Edwards 29, Eddie Collins 29, G. H. Piercy 27, L. Piercy 26, Gus Greiff 25, Ingram 23—159.

Bergen County Gun Club: Goesser 28, Chaffee 26, Bell 25, Griffith 24 Conklin 23, Titterington 21—147.

Boiling Springs Gun Club: Neaf Apgar 28, W. H. Huck 25, Captain Money 24, P. A. Jeanneret 23, F. Krebs 23, Noel E. Money 21—144.

Passaic City Gun Club: C. R Wise 28, C. F. Lenone 26, Furgueson 24, Kelly 21, Coman 20, B. Abbott 19—138.

Oritani Field Club: W. Ricardo 28, G. Ricardo 25, Holberton 23, J. Ricardo 21, Snyder 19, J. R. Banta 18—134.

The Riverside Rod and Gun Club, of Rochester, N. Y., will hold an all day shoot at its grounds near South Park on Labor Day. All purses will be divided on the Rose system. E. D. Hicks is manager of the club and J. N. Bates is its secretary.

Annual Shoot at Woo Sung, Ill.

WOO SUNG, Ill., Aug. 19.—The eleventh annual shoot at Smith's Farm was held to-day, and proved to be an entirely successful affair, both in point of attendance and the sport furnished. In the table of scores given below there was a variety of styles of shooting, while both live birds and targets were used. No. 1 was at 10 targets, 75 cents entrance; No. 2, 10 targets, $1; No. 3, 7 live birds, $2 50; No. 4, 4 pairs of live birds, $2.50; No 5, 10 live birds, $3.50; No. 6, 8 live birds, $2.50; No. 7, 10 targets, $1, 21yds. rise, use of both barrels; No. 8, 5 pairs of targets, $1. Scores follow:

Grand de Tour: Throop 7, Price 6, Dr. Pankhurst 5, Cushing 5—23.
Dixon No. 2: Lawrence 9, Lampkin 6, Dr. Czibulka 4, Blair 4—23.

Another event shot during the day was at 10 targets, incomers, $1 entrance. The scores were: Kolancik 3, Dr. Pankhurst 9, Dr. Morris 8, Argraves 6, Bradway 5, Dr. Czibulka 3, Davis 6, B. Smith 9, Jones 9, Miller 7, Williams 6, Cushing 2, Staley 4, J. Ripley 4, Blair 3, Forder 4, Price 7, Throop 1.

The Interstate Association at Burlington.

THE success of a tournament cannot always be measured by the number of shooters taking part in the sport, although as a rule that is certainly a capital criterion of the success or otherwise of such an undertaking. There are other matters that have to be taken into consideration. For instance: The business of the Interstate Association is to boom trap-shooting by creating a love of the sport in comparatively virgin soils; this it does by holding tournaments under the auspices of local clubs in places where such meetings are rare, and where there is a likelihood of giving an impetus to the sport by bringing the boys together and furnishing them with an object lesson of how much genuine fun and amusement can be extracted from a few hours spent in cracking targets. In such localities it is only natural that the attendance of shooters is comparatively small, and that the average number of entries appears insignificant when compared with those of the big tournaments of the circuit.

Such was the case at the tournament given by the Interstate Association at Burlington, Vt., Aug. 26-27, under the auspices of the Lake Side Rod and Gun Club, of that city. In point of numbers it does not show up very strongly, but it can safely be said that the tournament was an actual success. The missionary work of the Interstate Association will bear fruit, trap-shooting in Vermont having received a boom that will be felt in future gatherings of a similar nature in that State.

The Lake Side Rod and Gun Club when first organized had a very considerable roll of members; many persons joined it who have since fallen by the wayside, and the treasurer's books now show only about 20 paid up members. The officers of the club are: E. A. Worthen, who is, we believe, an uncle of B. H. Worthen, one of the best of the many good shots in the South, and a member of the Palmetto Gun Club, of Charleston, S. C.; Vice-President, W. L. Stone, a corking good shot in the brush; Treasurer, W. S. Phelps, the proprietor of one of the most taking sporting goods stores we have ever seen (of course it is the rendezvous for the boys who meet there nightly to swap stories); Secretary, J. S. Denning, and Captain, L. O. Harding, two of the most energetic members of the organization, both of whom worked hard all the time for the success of the shoot. The executive committee is made up as follows: E. E. Morgan, B. H. Eagan, H. E. Spear (Blue Ribbon), C. F. Reynolds and E. H. Shattuck.

In choosing its officials for running the tournament the club made no error. Mr. Wright made a thoroughly capable cashier, while we have very seldom seen less mistakes made either on the blackboard or on the score sheet; W. E. Rorke chalked up the 1s and the ciphers on the blackboard, while Secretary Denning put them down on paper; Capt. L. O. Harding proved to be a referee who could see when a target was broken, his decisions meeting with very general approval. The duty of pressing the button was intrusted to John Kelly. The reception committee was composed of the club's president, Mr. Worthen; its vice-president, Mr. Stone, and B. H. Eagan. The management of the tournament was of course in the hands of Elmer E. Shaner, the Interstate Association's manager. Mr. Shaner found on his arrival at the grounds that he had very little work to do in the way of preparing for the tournament, the appointments of the club being about all that were necessary. Five bluerock expert traps were used for the tournament, bluerock targets being thrown; Paul North's electric pull released the traps.

When we first received notice that the Interstate Association had closed with the Lake Side Rod and Gun Club for a tournament in the latter part of August, we decided that when it came off we should be there if possible. We had been to Burlington before, and it naturally followed that we wanted to go there again. The trip from New York to Burlington in the summer months is about as pleasant a trip as can be made. Leaving the city on Monday evening, Aug. 24, at 6 P. M., the trip up the Hudson on the steamer Adirondack of the People's Line was an easy matter. From Albany to Caldwell, the head of Lake George, over the Delaware & Hudson Railroad, was little more than a two hours' run. From Caldwell to Baldwin, the foot of Lake George, on the steamer Horicon; from Baldwin to Fort Ticonderoga, the head of Lake Champlain, over a short five miles of track owned by the D. & H. R. R.; thence by the steamer Vermont of the Champlain Transportation Co. to Burlington, completed one of the most picturesque trips we have ever taken. Thanks to the courtesy of the Champlain Transportation Co., through its general manager, Capt. Rushlow, and Dan Loomis, of Burlington, our trips on the Horicon and on the Vermont were made extremely pleasant.

On the trip to Burlington our party consisted of Capt. A. W. Money, of the American E. C. Powder Co; C. A. Cameron, of the Winchester Repeating Arms Co.; Guy R. Clark, etc. We arrived at Burlington at 5:10 P. M. on Tuesday evening, Aug. 25, just twenty-three hours and ten minutes from the time we left New York. The distance covered was about 310 miles or so, only about seventy miles of which were by rail. Mr. W. L. Stone and Dr. French, both of Burlington, met us and took us up to the Hotel Burlington, headquarters for shooters. After registering, there was still time for a trip to the grounds and a little practice over the traps. We found quite a delegation of the Montpelier boys there, C. O. Barrett, of that city, having made quite a record during the afternoon's practice, scoring 98 out of 100 targets.

The grounds are conveniently located, being only about ten minutes' ride by trolley cars from the center of the city. It is true that the street cars only run on a half-hour schedule, but they are always on time, and that makes quite a difference. From the end of the car line to the club house is a matter of about 300yds.

The first day opened up clear and bright, but with a strong southerly wind behind the shooter's back, causing the targets to scoot and dip, making the shooting by no means easy. The background too, for extreme right-quarterers and extreme left-quarterers, was dark, a grove of pine trees to the left of the score making targets that got off that way very hard to locate. Everything was ready for the shoot to commence on schedule time—9 A. M.—but it was quite a quarter of an hour later before referee Harding got a chance to distribute squawks of the horn and rings of the bell for broken and lost targets.

Among those present from out of the State were: Capt. A. W. Money, of the American E. C. Powder Co.; U. M. C. Thomas, of the U. M. C. Co.; Justus von Lengerke, of the firm of Von Lengerke & Detmold, the United States agents for Schultze powder; J. S. Fanning, of San Francisco, representing the United States Smokeless (Gold Dust) Powder Co.; B. H. Norton, a representative of the Hazard (Blue Ribbon) Powder Co.; S. A. Tucker and O. R. Dickey, both representatives of the Parker gun, and both of them thoroughly well able to give object lessons in breaking targets; C. A. Cameron, of the Winchester Repeating Arms Co.

The State of Vermont was represented by the following, the home delegation not being included: Montpelier—Clinton Town, Norman McLeod, J. G. Brown (Barrows No. 1), C. O. Barrett, Fred Standish, George Walton (Stub), Dr. H. A. Fiske, B. M. Shepard (Morris), and L. C. Cummings; White River—Batchelder; Kittell, of Cambridge; W. E. Denning, of Brandon; R. Ward, of St. Albans; W. Liddiard, the gamekeeper at Dr. Seward Webb's farm at Shelburne, about six miles from Burlington. The home club turned out well, the following being a partial list of those who shot in one or more events: E. E. Morgan, W. S. Phelps, Dr. J. C. French, H. Spear, Dr. H. S. Colvin, E. A. Worthen, W. L. Stone, Winchester, A. L. Barrows, J. G. Bellrose, Stratton, E. H. Shattuck, etc.

As the table of the first day's scores shows, there were thirty-eight names entered on the cashier's books. Many of these being only beginners found the targets hard to locate. It was a wise provision of the Lake Side Rod and Gun Club to insert the announcement in the programme that anybody wishing to "shoot for the birds only" could do so. This undoubtedly kept many of the boys shooting and put many a dollar for target money into the coffers of the club. It was a pleasure too to see the way in which the squads of amateurs stepped up to the score and plated away; they wanted to learn to shoot, and they will learn if they only showi n future a little of the interest they displayed before the traps on Aug. 26-27 last.

The first event on each day was practically a Hazard Powder event; that is, the Hazard Smokeless Powder Company added a 6¼lb. keg of the Blue Ribbon brand to first money, but required those who shot for the powder to use the same brand, loaded shells being donated free by Mr. Norton, the company's representative. And, by the way, Mr. Norton is a newcomer, this being, we believe, his first appearance at a tournament; although a stranger to pretty nearly everybody at the start, it was not long before he was received into the brotherhood, graduating with honors.

Scores ruled very low on both days. On the first day only 6 men made better than 80 per cent:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Dickey	175	163	93.1	Fanning	175	153	87.4
Tucker	175	159	90.8	Von Lengerke	175	150	85.7
Barrett	175	153	87.4	Edwards	175	146	83.4

The table of the first day's scores is given below:

First Day, Aug. 26.

SECOND DAY, AUG. 27.

The conditions to-day were exactly reversed from those which prevailed yesterday. The wind was from the north, blowing in the faces of the shooters and causing right-quartering targets to soar, much to the discomfort of many of those shooters who steadily undershot them. If anything, the conditions to-day were harder than on the first day, the targets having to be watched very closely, a cipher being generally the result of a failure to "pay strict attention to business."

The attendance of spectators was very good, being slightly in excess of that registered on the first day. Among the lookers-on were many men who are "A No. 1" shots in the brush, but who have not as yet been bitten with the target-shooting fever. The work of Squad No. 1 was watched with the closest attention, the applause which at times greeted the shooting of that squad showing plainly the interest taken in that work by the bystanders. One member of that squad, Jack Fanning, is responsible for one of the best stories of the shoot. Fanning was cracking his targets in great shape, grinding them to dust and shooting in quick time; of course he was wearing his blue sweater, with the badge of the Olympic Gun Club, of San Francisco, on its bosom; the badge consists of a circle and two outstretched wings. An old backwoodsman was watching him intently, and was quite taken with his shooting. His curiosity was aroused, so he asked: "Who's that ar' fellow thar' with them wings on his wes'coat?" He was told: "That's Mr. Fanning, of San Francisco." "Wall," said he, "if he shoots b'ar as well as he does them things, I reckon thar' ain't many b'ar 'round whar' he lives."

The effect of the strong wind is shown in the table of scores which is given below. As on the previous day, there were only six shooters who made over 80 per cent.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Dickey	150	137	91.3	Von Lengerke	150	133	88.6
Tucker	150	137	91.3	Fanning	150	128	85.3
Edwards	150	134	89.3	Barrett	150	126	84

The last event on the programme was a handicap event, 25 to 33 targets, $2 50 entrance, $25 added by the club. According to the terms of this event 25 was the highest possible, thus giving a scratch man a chance for his life. As a result there were four ties for first place, one of the number being Barrett, who broke his 25 straight in good form; Tucker got in for second money by breaking 24, losing his 24th target; Fanning was in third place with 23. The other men in first place were Dr. French, Dr. Colvin and Morris. Below are the scores with the handicaps:

Barrett (25) 25, Dr. Colvin (33) 27, Dr. French (31) 25, Morris (32) 25, Tucker (25) 24, Fanning (25) 23, Barrows (23) 23, Worthen (31) 22, Phelps (33) 22, Dickey (25) 21, Von Lengerke (25) 21, U. M. C. (29) 21, Standish (30) 21, Edwards (25) 20, Money (25) 20, Liddiard (32) 20, Morgan (33) 20, Blue Ribbon (32) 19, Town (33) 19, Ward (33) 18.

The Rose system was used in dividing all the purses at this tournament, and in the above event an excellent example of the beneficial effects of that system was afforded. Elmer Shaner says that using the example given in FOREST AND STREAM of July 11 and Aug. 22, it is actually easier to divide the purses under the Rose system than under the old one.

The scores in the second day's events were as follows:

Second Day, Aug. 27.

Events:	1	2	3	4	5	6	7	8	9
Targets:	15	15	20	15	20	15	15	15	20

EDWARD BANKS.

Chas. W. Tway, of Michigan City, Miss., and Mr. Drury, of Holly Springs, are booked to shoot a live-bird match some time this month.

Pennsylvania and Ohio.

MEADVILLE, Pa., Aug. 24.—*Editor Forest and Stream:* The Pennsylvania and Ohio Border Gun League held its fifth and last tournament for the season at our club grounds Thursday, Aug. 20, and there was an unusually large attendance. In addition to the regular set of expert traps in use by the club, we were reinforced by one of North's magautraps, and for one-half of the day two squads were kept moving at once, and 4,500 targets were thrown during the day. This club claims to have not only the finest and most approachable grounds in the State, but the best trap house in the country. The day seemed to have been made to order, and at 9 o'clock A. M. the first event was called. The entry fees were $1 for 10s and $1.50 for 15s. The division was made by the Rose system, modified so as to grade the points at 4, 3, 2 and 1 instead of 5, 3, 2 and 1, as Rose has it. If anyone was dissatisfied with the system he did not express it, as it would have been a confession that he desired an opportunity to drop for place. I do not think we had any of that kind of people, and I think we may congratulate ourselves on having given as nearly perfect satisfaction as can be done. This club shoots mostly for fun, and never allows a visitor to go away with the impression that he has been wronged.

The following are the scores in the sweepstake events:

Events:	1	2	3	4	5	6	7	8

THE LEAGUE CONTEST.

The League contest for the silver trophy was the most exciting event of the day. In addition to the trophy, worth $60, the contest involved an $80 grade L. C. Smith hammerless gun and the same grade Parker gun, also a set of bluerock expert traps, the guns and traps having been generously donated by the manufacturers. In the four previous contests two had been won by the Warren Club, one by the Youngstown Club and one by the Greenville Club, and the only point on the part of the Warren Club was to prevent a tie with Youngstown or Greenville. The Youngstown boys were on their mettle and fought it out with the heroic determination which almost gave them a victory. The result of the shoot at 25 was a tie between Youngstown and Warren. This tie was shot off by the two clubs at 10 targets per man, and was won on a score of 47 out of 50, the Youngstown Club having broken but 38. The Warren Club was declared the victor and took the prizes, valued at $250. The following is the score in detail:

Warren.

Jones.....1111110001111111111011111—21
Sheldon.....0111101110111010111111111—20

A meeting of the League was held in the evening after the shoot, and the following officers were elected to serve one year: President, R. H. Ewalt, Warren; Vice-President, N. Henlein, Greenville; Secretary, G. H. Jones, Warren. A list of twenty-two names to constitute the Forest City Gun Club, of Cleveland, O., was submitted, and the gentlemen named were admitted as a club into the League. There will probably be a sharp contest next year, to the great benefit of the clubs participating.

J. W. H. REISINGER, Sec'y.

Dayton Defeats Trenton.

DAYTON, N. J., Aug 27.—Twelve men representing the Dayton Gun Club shot a race to-day with twelve men from the Trenton, N. J., Gun Club on the Monmouth Junction grounds. After a very close fight, Dayton won by just two breaks, scoring 271 out of 360 against 269 made by the Trenton team. Scores:

Trenton Gun Club.

W. H. SHELDON, Sec'y.

South Side Gun Club, of Chicago.

CHICAGO, Aug. 22.—*Editor Forest and Stream:* Only a few days ago our mutual friend and shooter F. P. Stannard, formerly of Milwaukee, now of Chicago, conceived the idea that a friendly contest at the traps in a team race with the South Side Gun Club, of Milwaukee, would prove interesting as well as agreeable; hence he set about to round up, and with the assistance of Mr. De Wolf was able to start by the steamer from Chicago on Friday evening with nine men, some of whom had the company of their wives.

The greater part of the evening on the boat was spent in singing. All retired early, and awoke to find themselves on boat tied to dock in Milwaukee. The following members of the South Side Gun Club, Henry Seifert, John Burnham, Thos. Grant, Adolph Gropper and Dr. J. P. Carmichael, were on hand and relieved the boys of their guns, shells, etc., transferring them to the depot of the railroad preparatory to going to the grounds. Arrangements had previously been made for breakfast, and the party were escorted to the St. Charles Hotel, where a bountiful supper of good things was partaken of.

At 9 o'clock the team was taken for the grounds, which are located at Lake, on the C. M. & H. P. Road, seven miles south of Milwaukee. Shooting commenced immediately on arrival and continued during the day until train time in the evening; the only lull the entire day was when first call came for dinner, which was served in the spacious dining room of the main building. Here is where the straight scores were made with the utmost ease.

Among those present were the 2-men teams from Columbus, Wis., and Oconomowoc, of the Wisconsin League, who contested for the Burnham and Pfister medals.

After dinner there followed the team race between the South Side Gun Club, of Milwaukee, captained by Henry Seifert, and the Eureka, of Chicago, captained by F. P. Stannard; 9 men on each team, 50 targets, 25 known and 25 unknown.

Much interest was shown by those present on account of closeness, and was won by the Eurekas only by hard work.

On the announcement of the result, the boys of the South Side Club sent up three hearty cheers and a tiger for Chicago.

The day's sport ended with a snipe shoot of singles and doubles which created no end of merriment among the participants.

All returned to their homes well satisfied.

A return match, to be shot in Chicago, is looked forward to with great pleasure.

The following are the scores:

Sweep, 15 bluerocks:

Anderson	011101111010111—11	Jasper	111110111111111—14

PATTY.

The Binghamton Tournament.

BINGHAMTON, N. Y., Aug. 27.—Favored by fine weather, the loyal support of the home shooters and a few visitors, the tournament which closed to-day can be voted a success. The weather on the first day was perfect for target shooting, and scores ruled high considering that there were no professionals present, this being an amateur shoot. On the second day a high wind prevailed and played havoc with the totals. Rain fell that night, but it cleared toward morning, and a brisk northwest wind blowing made it an ideal day for live-bird shooting. The birds were furnished by Louis C. Kistner, of Baltimore, and were an excellent lot. George Mosher, of Syracuse, did some great shooting, scoring 63 out of his 67 birds. Kendall was also in good form and dropped only 8, Adams being 1 behind him with 58 out of 67. All shooting was at 30yds. rise.

Among the visitors were: Willard A. Adams, of Chicago; George Corning, Jr., and Knapp, of Auburn; McCormick, of Ithaca; George Mosher, of Syracuse; Ripley, of Owego; Paddleford, of Sherburne, and Brush, of Susquehanna. The Rose system was used in the division of all purses and gave perfect satisfaction. Scores of the three days follow:

The Blieman Cup at Elkwood Park.

LONG BRANCH, N. J., Aug. 27.—The Max Blieman preliminary handicap shoot, 25 live birds per man, $15 entrance, birds extra, was decided to-day at Elkwood Park. P. Daly, Jr., from the 28yds. mark, was the winner, his score being 25 straight. Four others tied with 24. These were: J. L. Brewer, L. Finletter, A. L. Ivins and Charlie Zwirlein. Bland Ballard scored 23 out of 25. Scores were as below:

P Daly, Jr (28)	2212112222222222222222222—25
L Finletter (29)	1222212022122222222221122—24

Dornin	18	20	8	22	22	J Miller	8	10	5	14	11

The Silverthorn badge was won by Dornin. F M. D.

Grimm-McMurchy versus Heikes-Gilbert.

CHICAGO, Ill., Aug. 19.—To-day, as a little practice for the championship contest between Heikes and Gilbert (which takes place to-morrow), a team race was made up a follows: Charlie Grimm and Harvey McMurchy against Rolla Heikes and Fred Gilbert. The conditions of the race were precisely the same as in the championship contest: 50 singles, unknown angles; 50 singles, expert rule; 25 pairs. The result of the race was rather a surprise, Grimm and McMurchy easily beating their opponents by a grand total of 275 to 262.

Heikes and Gilbert led by two breaks in the unknown angles; then Grimm with 46 out of 50 in the expert rule series, and McMurchy with 47 out of the same number in that series, ran away ahead with a total of 93 to 86. In the doubles Grimm did some excellent work, breaking his first 20 pairs without a miss; he finished with 47 out of the 50 targets shot at in this style.

The longest runs were: Unknown angles—Heikes 36, Gilbert 27, and McMurchy 23. Expert rule—Grimm 21 and 16, McMurchy 21 and 20, Heikes 19. Detailed scores were as below:

Unknown Angles.

Grimm	11111111111011111101111111111101111101011111111—45

T. T. C., New York.—Landlocked salmon are indigenous to some waters in Maine, and have been planted successfully in many others. Eggs have also been sent from Maine to waters in other States. The Maine law permits the transportation or exportation from the State of not more than 25lbs. of landlocked salmon when accompanied by the owner.

M. F. J. C., Manchester, N. H.—My bull dog is shedding his coat and apparently is growing very poor. What is the best diet for him to increase his weight? How will I treat him to improve the growth of a good coat of hair? Ans.—Treat for worms. Give a Weyth compound sulphur tablet twice a day. Rub all over the dog twice a week the following: Cocoanut oil, sperm oil, castor oil, kerosene, of each one part.

PUBLISHERS' DEPARTMENT.

Bass and Trout.

MR. W. B. KNISKERN, General Passenger Agent of the Chicago & Northwestern Railway, sends us the following letter from Mr. W. M. Brinkerhoff, of Auburn, N.Y., written under date of Aug. 15:

"My Dear Sir: I send you by this samples of some of the pictures I took while in the vicinity of Camp Franklin, Wisconsin. My trip from Chicago via the Northwestern to Woodruff, thence by wagon twelve miles to Camp Franklin, was thoroughly comfortable and enjoyable. I went up there this year for bass—black bass—and, like the lake trout fishing the last time I was there, I beat all previous records. There are lots of lakes in the vicinity of Camp Franklin that are filled with black bass to overflowing. I fished four days on Palette Lake (or you might call it a pond), about one mile long and a quarter of a mile wide, and caught nearly 500 black bass in that time; but I let most of them go, as I was too far away to take them out of the woods. If any of your friends are fond of that kind of fishing, and want to get at it quick and have lots of it while they are at it, send them to Camp Franklin and have them get one of the guides that I had, either Judd, Blaisdell or Alexander Gillies, and have him take them to Palette Lake, and they will forget for the time being everything except the genuine pleasure that is incidental to black bass fishing on that beautiful sheet of water. In order to be certain of securing accommodations and guides they should write in advance to Mr. C. J. Coon, Camp Franklin, Woodruff, Wisconsin."—*Adv.*

September on the Lakes.

ALLURING ATTRACTIONS HELD OUT BY NORTHERN STEAMSHIP COMPANY.

IN closing its third season before Sept. 15, the Northern Steamship Company, ever mindful of the comfort of its passengers, calls attention to the fact that September's early days are the finest of the year to spend on the water. During this season storms are practically unknown on the Great Lakes, and no trip can be made in greater comfort or safety. Added to these features low excursion rates are offered, which cannot fail to bring those who, for various reasons, have postponed their summer's outing.

Sailing schedules, card of rates and general information can be obtained by communicating with E. D. Spencer, General Agent, 375 Broadway, New York, or A. A. Heard, G. P. A., Buffalo, N. Y.—*Adv.*

September Excursions.

A TRIP over the Great Lakes is one of the finest on the continent and a duty for all patriotic Americans who wish to understand the resources of their country and to become acquainted with its beauties. The Northern Steamship Company furnishes luxurious means for accomplishing this trip, and just now it offers unusual inducements for those who have to consult their purses when traveling, making special excursion rates from Buffalo, Cleveland and Detroit to such points as Mackinac Island, Sault Ste. Marie, Duluth, St. Paul and Minneapolis. The magnificent steamers of this line are of 5,000 tonnage, and have accommodations for 500 passengers. They carry no freight, and for these special September excursions the excellence of the cuisine and high standard of the service, as well as the present fast schedule, will be maintained.

Tourists who wish to take advantage of these excursions should apply at once for particulars, as the season closes Sept. 15.—*Adv.*

Florida.

THE coming season the Florida travel have in store for them a most elegant Pullman Vestibuled Limited Service between New York and Jacksonville, St. Augustine and Tampa, via the Southern Railway, Piedmont Air, the New York and Florida Short Line. The new route since its opening two years ago has fast gained in popularity, and today offers the most superb service between New York and Florida. Double daily limited fast trains are run the year round. On account of quick and prompt service is awarded the mail service by the Government for the transportation of the United States Fast Mail. Descriptive literature on Florida or any information regarding the South are furnished upon application to General Eastern Office, 271 Broadway, New York.—*Adv.*

Harvest Excursions.

IN order to give every one an opportunity to see the grand crops in the Western States and enable the intending settler to secure a home, the Chicago, Milwaukee & St. Paul Railway has arranged to run a series of harvest excursions to South and North Dakota, and to other States in the West, Northwest and Southwest on the following dates: July 21, Aug. 4 and 18, Sept. 1, 15 and 29, and Oct. 6 and 20, at the low rate of $2 more than one fare for the round trip. Tickets will be good for return on any Tuesday or Friday within twenty-one days from date of sale. For rates, time of trains and further details apply to any coupon ticket agent in the East or South, or address Geo. H. Heafford, General Passenger Agent, Chicago, Ill.—*Adv.*

Marlin Rifles.

THE Marlin Fire Arms Co. are out with a new catalogue, which gives particulars with reference to all their various styles of arms in compact compass. Among other changes it will be noted that the company now have ready a .38-56 repeater in the model of 1895, and that the model of 1895 is now furnished in all forms and styles, including the "take down." The company is also prepared to furnish muskets in two calibers in the model of 1894 and also in .30cal.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 12, 1896.

VOL. XLVII.—No. 11. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

DR. G. BROWN GOODE.

DR. GEORGE BROWN GOODE, Assistant Secretary of the Smithsonian Institution and Curator in charge of the National Museum, died on Sunday last at his home in the suburbs of Washington. In his death these two great institutions have suffered a severe loss.

Dr. Goode came of old Colonial stock, being descended from John Goode, who, in 1675–76, fought against the Indians in the Virginia Colonial forces under Gen. Bacon, as well as from William Swaine and Hugh Calkin, who were deputies to the general court of Massachusetts in 1636 and 1650 respectively. He was born in New Albany, Indiana, in 1851, and was graduated from Wesleyan University in 1870. His interest in science was already so great that in 1871 he was placed in charge of the museum of that institution. In 1873 he was invited to Washington, and took a place in the Smithsonian Institution. From that time until the death of Prof. Baird, he was in close and intimate association with that eminent man, who selected him for many services of responsibility and trust. At the Centennial Exposition of 1876 he had charge of the natural history division. In 1877 he served the State Department as statistical expert in connection with the Halifax Fisheries Commission. In 1880 he was appointed United States Commissioner to the International Fisheries Exhibition held in Berlin, and he held the same position in London in 1883. In 1887 he was appointed United States Fish Commissioner to succeed Prof. Baird, but gave up the position because it interfered too much with his work in the National Museum. He was a member of the Government executive board for the New Orleans, Cincinnati and Louisville expositions in 1884, and represented the Smithsonian Institution at the World's Fair in Chicago in 1893. In 1895 he was a member of the board of awards at the Cotton States International Exposition at Atlanta.

Dr. Goode was an investigator and published many papers chiefly on fishery subjects and on museum administration. One of the most important of the works to which his name is attached is the Fishery Industries of the United States, a series of volumes to which any one interested in fish or fishing must constantly refer. There was no higher authority than he on all matters connected with this subject. Of late years the exigencies of his important positions in Washington had in some measure deflected Dr. Goode's energies from actual personal investigation in science to the directing of such investigation. Yet he continued to do much writing, and there is soon to be issued a book on deep-sea fishes, the joint production of Dr. Goode and Dr. Bean. Nevertheless his work became more and more administrative, but it was not on that account less effective, and it may be doubted whether in all Washington, that center of scientific work for America, there is a man who in the same time has accomplished so much for science as he.

Notwithstanding all his work on his favorite subject, it is as the planner and director of the National Museum that Dr. Goode will chiefly be remembered in Washington and throughout the scientific world. To him far more than to any one else was due the success of this great institution. To it he gave his best thought and time and work. He had many able coadjutors in the different departments, but he was the guiding spirit, the head, and while he has not lived to see all his plans carried out, yet they are so far completed that only their execution remains to make the National Museum by far the finest museum in the world. This then is Dr. Goode's monument, a memorial worthy the man, and one which is destined to secure for him and for his life work growing appreciation and livelier public gratitude as the people of the United States shall realize in fuller measure the magnitude and the excellence of their national possession in the museum.

One secret of the remarkable success achieved by Dr. Goode lay in his charming personality. Of him it may be truly said that he was universally beloved by his associates. It was equally his part to encourage men and to help them on, and to adjust differences and to smooth over bickerings, and this last he accomplished with the utmost tact and skill, finally winning over both disputants to his view of the case.

Dr. Goode's energy and his love for his work induced him to labor so hard and so continuously that he was always at the breaking-down point; so it was that when he was stricken with pneumonia a few days ago he had no recuperative power, and although not supposed to be dangerously ill, he succumbed to the disease.

Dr. Goode's contributions to the FOREST AND STREAM began more than twenty years ago and were continued over many years, and until the pressure of his work in Washington put an end to any but the most special papers. The sense of personal loss which has come into this office with the news of his death is but typical of the unaffected sorrow with which that intelligence will be received everywhere among those whose privilege it was to know and esteem him.

SNAP SHOTS.

For his breakfast, one morning in New York, Li Hung Chang was presented with a fresh Virginia shad. He was so well pleased with it that he requested his host to supply some little shad for stocking the Yang-tse-Kiang River in China. We take it that the enterprise would by no means baffle the skill and ingenuity of American fishculturists, and such an undertaking would be only one more in a long line of transplantings of the fishes of this continent to distant lands.

American black bass are now counted among the angling resources of Great Britain. Our rainbow trout is numbered among the game fishes of England and Germany, and of far-away New Zealand. The stocking of New Zealand waters with both the rainbow trout and the speckled has been a pronounced success. The current report of the Wellington (N. Z.) Acclimatization Society records that the rainbow is a species which is "well established and is giving splendid sport, proving itself to be intermediate in its habits between the salmon and the trout. It is a valuable addition to our rivers."

These international transfers of food resources are among the most interesting and impressive achievements of fish-culture. It is worthy of note that our own continent is so rich in the supply and so favored in the quality of its indigenous fishes, that while we are sending our own species for adoption by other countries, they profess to send us in return out of their own indigenous fishery resources nothing worthy to take the place of our natural supply. As to China, her carp may not for a moment be counted an equivalent in exchange for the American shad which so tickled the palate of the visiting Viceroy. Carp in some form or another must have been among the seventy courses of the banquet given to Gen. Grant by Li Hung Chang in Tientsin in 1879; but it is inconceivable that the Americans should have been so charmed with the fish as to have desired its acquisition for United States rivers; nor is it recorded that the shark's fin tid-bits prompted the guests to suggest that we should open our ports to Chinese man-eaters. But in this wonderful dinner, with its eggs preserved for forty years and other delicacies, we may be sure that some one of the Chinese pheasants was included, and it was perhaps on this occasion, then, that Judge O. N. Denny, our Consul-General and a guest at the banquet, resolved to introduce the Mongolian bird to the sportsmen of America. Through Judge Denny's offices China has contributed to the continent a new game bird; in return we might gracefully present her with the American shad, a food fish which Li Hung Chang declared to be the finest fish he had ever eaten.

That the wild turkey hunter be so expert in simulating the bird's call as to lure the game within range is not enough; he must cultivate his own ear for bird music, so that he may be able to distinguish the false note from the true, [the man turkey from the real] turkey. For it often happens that a caller who fails to deceive the birds does yelp to the undoing of a fellow man; the birds recognize the false note in the cry, but the man does not. In the same week in August that a Maine camper shot at a movement in the brush, thinking it a bear, and killed a man, a like tragedy was enacted in the wild turkey covers of Alachua, Florida. Two hunters had gone out together and had separated for turkey calling. After a while one man heard the other yelping, took him for a turkey and yelped in reply. The calls and answers came nearer and nearer together as the two men crept toward one another, until finally one hunter eagerly peering into the brush saw a movement of what he thought was the bird, shot at the mark, and rushed forward only to find that he had made a victim of his companion.

Mr. Tom Padgitt, of Waco, Texas, who is stirring up the sportsmen to do something about the desperate game situation, has given out a letter received from Mr. Horsbrugh, manager of extensive pasture tracts in western Texas, who says that all over the western counties last year quail were netted in vast numbers for export at $1 a dozen at the shipping points. If this wholesale destruction goes on, he declares, the quail supply will be exterminated before the danger has fairly been realized. Mr. Horsbrugh thinks it is time that the Legislature took up the question of quail protection in dead earnest; and to this end he would persuade the politicians to believe that "more voters would like to see the quail treated as God Almighty meant them to be than the comparatively few who net and haul them off by the thousands amount to. In the Old Testament we read that when the children of Israel were making their excursion out of the land of Egypt they struck a desert and liked to have starved for something to eat. The Lord sent them manna and quail, and they came through all right. This He did to supply their immediate wants. Had they gone to netting and hauling off the birds, instead of using them right, God would have shut down on them quick enough." If Mr. Horsbrugh has interpreted the Biblical passage aright, it would appear that the subject of quail destruction in western Texas might be taken up in earnest not only by the politicians, but by the clergy as well.

The last work of the Texas Legislature with respect to game protection was to exempt a hundred and twenty counties from the various provisions of the law. We presume that the member from each of these counties rose in his seat and demanded immunity for his constituents. No law can amount to much when one-half of the State is exempt from it and the other half pays no attention to it. If game protection is good for one county, it is good for all. Make the Texas game law cover the State of Texas.

The last twenty years have witnessed in this country a succession of game protective clubs and associations; but if we are not mistaken no single one of these has maintained its active work in the field for the entire term of that period. The average life of a game protective association is short, that is to say the active life, for very often the name and the organization remain long after their existence is of any practical account as a live force for good. The rule is that a handful of enthusiasts, sometimes a single individual, gives the impetus, others join in the movement, plans are laid out, work is begun and the outlook is full of promise. Then comes the call for individual and personal effort, which is given while enthusiasm lasts; but it does not last very long, and gradually the number of active members dwindles until only the original enthusiast is left; then he too grows weary, and only the name remains. If there are exceptions to the rule, they are few. And yet we could not fall into a more serious error than to criticise such efforts as wasted. In the aggregate they count for all that we have of game protection in this country. One individual or a single society may appear to have accomplished little, and yet the influence of each has made up that public sentiment which has grown in the years from the 70s to the 90s to be such a potent force. We may not recognize the thousand and one contributions of individual enthusiasm, but we do know the results; we can appreciate the progress insured by the united influences of them all.

Li Hung Chang's yellow jacket would protect him in the woods from being mistaken for a deer. The effect upon the game would be either to fascinate it or to drive it into the second county beyond.

The Sportsman Tourist.

IN NOVA SCOTIA.

WE recently coasted the south shore of Nova Scotia from Yarmouth to Halifax, and discovered on the way a sportsman's paradise known only to a favored few. The side-wheel steamer City of St. John, leaving Yarmouth every Friday morning, affords the only means of access to this region, so that if the tourist stops off at any of the several villages at which she touches he must perforce remain a week before resuming his journey. This is a disadvantage or not, according to one's tastes and circumstances.

A railroad has been laid out as far as Shelburne and is now building. Eventually it is to be carried on to Halifax; then this secluded corner will be as accessible as any part of the Province. But it is this inaccessibility which has made it so fine a game preserve.

With fair weather the voyage is the most delightful within reach of the traveler. The shore line of Nova Scotia is more irregular than Scotland's, being indented by deep bays and broken by bold headlands, while there are at least ten islands for every mile of coast—some of them mere gull-haunted rocks barely visible at high tide; others are many miles in area and covered with forests or with farms. Your steamer is never out of sight of land, and most of the time is threading a devious channel between green islands. The first stop is at Barrington, thirty-six miles from Yarmouth. We have run inside of Cape Sable, the most southerly point of Nova Scotia on the way, the cape lying at the extremity of a long island called Cape Sable Island, which begins nearly opposite Barrington.

During the run we had our first experience of a Cape Sable fog. This species of mist lies in strata on the water, adhering to its surface "like a face cloth to the dead," so that we sailed through alternate layers of mist and sunshine.

At one moment it would lift, revealing the steamer embayed in hundreds of bold islands with narrow, tortuous channels between; the next moment space was blotted out and a gray blankness enveloped us.

In the midst of one of these transformations we heard some one shouting dead ahead. There was a bustle in the pilot house, one bell—stop quick—rang in the engine room, the paddle wheels ceased to revolve and then whirled swiftly in the opposite direction. The next moment, under our bows, not a boat's length ahead, rose the rocky front of one of the afore-mentioned islands.

Fortunately it was a bold shore, and the steamer lost headway and was backed off before running aground. Barrington is a village of several hundred souls, divided pretty impartially between Barrington Head, Barrington Neck and Barrington Passage. With the exception of a few farmers, shopkeepers and offshore fishermen the village is tenanted in summer solely by women and children, the men being at sea or off to the Grand Banks or Labrador fishing. It is a pretty village of neat, white-painted cottages, betokening thrift and prosperity.

Walking out into the primeval forest which surrounds it, we found a party of Micmac Indians encamped—that is, seated on the ground around a fire, over which a pot was boiling. A handcart near by filled with what looked like "old clo'es" and bedding was the only suggestion of sleeping arrangements apparent. They had come from the blueberry barrens, we learned, and were bound to the Point for splints for making baskets in which the fruit was packed for market. Close by a brook brawled over a rocky bed into the sea, and we asked the man if there were trout in it.

"Yes," said he, "in spring; but the Clyde about seven miles out on the Shelburne road is best for trout and salmon." He said if I would come up in May he would show me plenty of both.

"Plenty o' moose and bear," he added, in answer to my question. "No deer, call a moose any day in season."

A big lumber box wagon rolled past piled high with crates filled with quart baskets of blueberries. The barrens, he said, began about four miles out and extended nearly to Yarmouth. In July and August hundreds of men, women and children, Indian, Caucasian and negro, flock thither to pick the blueberries, which grow in profusion upon them, and are shipped to the Boston market by hundreds of thousands of quarts.

Shelburne is the next stop, fifteen miles east, at the head of the finest harbor on the coast or on any coast. A pretty, quiet town of some 2,000 inhabitants, whose only communication with the world is by the weekly boat. Her people live in the contemplation of her past. No town in the world has had such a history. One May morning in 1783, after England had finally relinquished her hold on the thirteen American colonies, a fleet of twenty craft of all descriptions—men-of-war, square rigged ships, schooners, snows and sloops—entered Shelburne Harbor. It was crowded with American loyalists, men who had remained loyal to King George during the struggle, and who were now willing exiles from their old homes and intent on forming new ones under the old flag. They were people of wealth and distinction from the highest circles of New York, Philadelphia and Baltimore. They had had their houses built in New York before sailing and brought them with them—houses of oak, with marble mantles and mahogany stairways; they had brought slaves to put them together, and furniture of the most elegant description for their furnishing. The king's engineers had laid out the city on the most liberal scale, and in September following, when a second fleet arrived, there were 14,000 people, the *élite* of America, in its homes.

In 1784, when Gov. Parr, of Nova Scotia, visited them in royal state, they entertained him royally and changed the name of the city from New Jerusalem to Shelburne in honor of the English premier. A little later Prince Edward, the father of Queen Victoria, came and was entertained in the same princely fashion. There were fêtes and balls and banquets day after day. No one but slaves worked. The Government furnished supplies, and they had brought $3,000,000 in money. Work was beneath them, especially fishing and trading in furs, the only avocations open to them. Their neighbors, the sturdy fishermen of Lockport and Liverpool, looked on in amazement, called them "the dancing beggars," and predicted they would soon come "to the end of their rope," and so they did. The Government supplies were cut off, the $3,000,000 were soon spent, famine followed feasting and lamentation merriment. Soon they began to desert the whilom gay capital. Some returned to the States, some removed to neighboring towns. In a few years the population dwindled to 400. Palatial houses stood open to the weather for birds to nest in. Some were taken down and conveyed to Halifax and other places. Others still remained to bear witness of the ancient glory of the town. One of them, in which Prince Edward was entertained, was pointed out to us as we strolled through the pretty village. There are, too, the old pumps set in the middle of the streets, and the antiquated fire engine presented by King George to protect the settlement from fire. Shelburne is very quiet and isolated now, but the railroad is on the way, and when it reaches her she expects a new era of progress and prosperity.

At present the village is a paradise for the angler and sportsman, if all reports are true. Haunts of moose and caribou are close at hand, and there are three rivers within easy reach, all famous for salmon and trout: the Shelburne, which empties into the harbor close by the town; the Jordan, ten or twelve miles to the west; and the Clyde, the same distance on the east. These rivers abound in falls and rapids, and are fed by scores of lakes, which form chains taking one sixty or seventy miles inland to mountains. There is a local "squire" in Shelburne who has the record of twelve salmon in a single day ranging from 9 to 30lbs.

Lockport and Liverpool next beyond are pretty towns, affording equally good fishing and hunting; then comes Lunenburg, famed as the Gloucester of Nova Scotia, with a hundred sails on the Grand Banks and Labrador. Germans settled it in 1753 in answer to some glowing promises of King George's ministers, and some of the quaint old customs of the fatherland are still retained by their descendants. For instance, the oxen have no yokes, but draw by stout leathern bands wound around their horns. The country about is fully cleared and settled by thrifty farmers. There is little attraction for the sportsman here except the deep-sea fishing for cod, haddock and mackerel in their season, which indeed may be had all along the coast.

It is forty miles from this port to Halifax, the last stage of the journey. The St. John passes the mouths of Mahone and St. Margaret's bays, two beautiful island-studded sheets extending far inland; passes the cove in which the ill-fated Atlantic met her doom, rounds Sambo Head at the entrance to Halifax's beautiful harbor, and at 11 o'clock ties to her dock in the American Gibraltar, having been a little over twenty-four hours in making the distance of 240 miles.

C. B. T.

SAVED BY AN ENEMY.

JOHN GARDENER was hunting and trapping in the Adirondacks in the fall of 1868, following one pursuit for sport and the other for profit—with considerable success in both—when he met with a singular adventure.

He was living alone in an open-fronted log shanty on Otter Pond, in what was then one of the wildest parts of the region—though a smart hotel now occupies the very site of his rude shelter, and swarms of fashionable tourists have spoiled the neighborhood for one who loves the solitude of nature.

The moose, shyest denizen of the forest, had not entirely forsaken the place, for his broad footprints were yet occasionally seen in the deep moss, while the long howl of the wolf and the panther's scream were heard often enough to account for the scarcity of deer. Yet there were enough to afford Gardener the moderate sport which he desired, and a frequent over-supply of meat, for which he found a convenient outlet on the other side of the pond, where a small party of men were building a lumbering camp for the operations of the coming winter.

These were his only neighbors—two miles distant at that. His visits to them were not frequent, but welcome—especially when he brought a quarter of venison to break the monotony of salt pork and beans.

The cook of the party was something of a trapper, and therefore particularly interested in Gardener's success in fur-gathering. On his part, Gardener was glad to do his neighbors a good turn and break his isolation by an occasional touch with humanity, though with the rough side of it, and he, having the greater need in this respect and the more leisure, did most of the visiting.

Gardener's shanty was situated midway in his line of traps, which for the most part were set for the pine marten—misnamed the sable by our hunters and trappers, who go still further astray in mispronouncing the name "saple."

At intervals stronger traps were set for that notorious trap robber, the pennant's marten or fisher, and at likely places on small streams traps baited with fish were set for mink, which by a caprice of fashion had at that time become one of the most valuable fur-bearers.

The line marked by blazed trees extended so far in each direction from the shanty that only half of it could be gone over in a day, the other half the next day, an arrangement by which Gardener could attend wholly to his traps as he went out and give his attention to hunting as he returned to camp, making such detours as occasion required.

During a week of most favorable weather he had extraordinary luck with his traps, when he went over to the lumber camp with the half of a fat deer more than he could make use of.

He received a hearty welcome from his friends and as hearty congratulations on his good fortune, which he was quite free to tell them of, as none of them could in the least be considered as rivals, unless it was Murdock, the cook, who did indeed prick up his ears and look out of temper when he heard the count of mink and sable. But he soon recovered himself and made qualified congratulations.

"You've done consid'able well for a green hand at trappin'," he said, as he began cutting some slices of venison to fry with salt pork, after the barbarous fashion of backwoods cookery. "If I wa'n't so tormented busy I'd go over an' show you a trick or two that's worth knowin'. But these fellers' jaws keeps me a-hustlin' so 't I hain't time to stir a rod from camp."

"Just listen to him," cried Williams, the boss of the party. "You'd think he had to hump himself the whole time to cook for six men. Somehow he's managed to ketch half a dozen saple an' two mink since he's been here."

"You wait an' see the animals feed, an' then tell me what you think of cookin' for six," retorted Murdock, addressing Gardener. "An' them saple an' mink come right here to be ketched."

"Off tendin' his traps two three hours every day," Williams remarked; "but I don't care so long 's he gets the grub ready on time."

Murdock dropped the conversation to attend to his regular duties, and soon served up the dinner, to which Gardener was of course invited and given an opportunity to see how the company bore themselves as trencher men.

He was forced to admit that they did valiant service that made Murdock's office no sinecure, but when half an hour after dinner he left them to return to his own camp the cook seemed to have arrived at a period of leisure, though he made some show of being busy while making casual inquiries concerning Gardener's usual hours of being at home.

A few days later it so happened that Gardener returned from his traps two hours earlier than ordinary, and upon quietly approaching the shanty surprised Murdock inside rummaging among the mixed confusion of its contents. He showed some embarrassment at being detected in making himself so free, but gave as an excuse that, having come over to call on Gardener and not finding him at home, he was searching for tobacco to solace himself with a smoke while waiting for his host's return, and Gardener thought little of it at the time.

He supplied his visitor with tobacco, and the two fell to talking over their pipes of trapping and of fur and the examining of Gardener's stock, which already made a pack so large that he declared he must soon go out to the settlements or be obliged to make two trips.

Murdock offered to take it out for him, saying that he would be going in a few days to get supplies for the lumber camp. This offer was declined, but a bargain was made for the deer skins that should be delivered at the camp within a week.

Then the fur was packed in a neat bundle and deposited in a corner of the shanty, supper was cooked and eaten, and after a parting pipe the visitor departed, his host accompanying him to the shore and watching him on his way till his boat disappeared in the gathering twilight and the splash of the oars could no longer be heard.

Gardener cut the supply of night wood that he never neglected preparing, for he liked the company of a cheerful fire and its guardianship while he slept.

Then he stretched a couple of "saple" skins, the result of the last tour of the traps, and after a final comfortable smoke turned into the blankets with his good rifle close beside him.

He had not slept very long, as he judged by the condition of the fire, when he awoke with an indefinable sense of uneasiness. As he lay quite motionless, compelling his drowsy senses to gather acuteness, he became aware of footsteps moving stealthily a short distance from the shanty, parallel with its sides and moving toward the front.

The slow footfalls, making frequent stops, were evidently those of some large quadruped, which he at once conjectured to be a panther, of whose presence in the neighborhood he had seen recent signs, and which was now no doubt attracted to the camp by the half of a deer hanging on a sapling near by.

Gardener sat up in bed and got his rifle in hand without making the slightest noise, and watched intently for the animal, which if continuing its course must presently come in sight from behind the wall of his shanty.

He had not much of a mind to risk a shot at a panther in the uncertain light, but he had as little to lose the meat, on which the main part of the morrow's rations depended.

The night was cloudy, but not dark, for a full moon dispersed enough light through the veil of clouds to render near objects dimly discernible, and at times the flicker of the fire threw some into relief against the dark background of the woods.

The burning logs had so disposed themselves that Gardener sat in deep shadow, while the muzzle and bead sight of his rifle were in the light, a circumstance which gave him a desirable advantage.

The night was intensely still. No sound was heard louder than the snapping and flaring of the fire, the sudden sinking of a brand, the occasional flitter of a falling leaf, the far-off, faint echo of a wolf's howl, and among these the more regular punctuations of the yet unseen intruder's cautious footfalls.

At last it came within range of Gardener's vision, a bulky, dark object moving clumsily and slowly, and making frequent halts for reconnoissance in the direction of the camp and always keeping out of the firelight.

"Nothing but a bear after all," Gardener thought, and was further convinced when the creature arose on its haunches and gazed intently toward him.

He felt no hesitation about shooting now, and carefully drawing up one knee for a rest took a quick yet deliberate aim at the center of the breast.

His finger pressed the trigger, it was almost yielding to the touch, when there was a sudden upward spring and swish of a great hemlock bough, 20ft. from the ground, a lithe tawny form was launched from it in a swift descending curve upon the clumsy figure beneath, and in the same instant the silence of the night was rent by a yell of terror so human, and yet so unearthly that Gardener lost his nerve, and the aimless rifle blazed its ineffectual charge into the tree tops.

The unexpected and human outcry of its intended victim had a no less demoralizing effect upon the panther, for it sprang away with a prodigious leap, vanishing as suddenly as it had appeared, yet for a moment its rapidly retreating bounds could be heard as it struck on all feet at once in an exaggeration of the performance of a frightened domestic cat.

The flying figure of a man, sometimes stumbling and falling, but never stopping, vanished almost as quickly in the opposite direction.

Hastening down to the shore, Gardener heard the rapid strokes of retreating oars.

Two days later he took his deer skins over to the lumber camp, but Murdock was not there.

"He went a pokin' off one arternoon," said Williams, "an' didn't turn up till next mornin', lookin' 's if he'd been run through a thrashin' machine. He wouldn't tell what ailed him, an' cleared out, hook an' line, bob an' sinker, 'fore noon. It's almighty cur'ous."

Gardener shuddered to think how near he had come to killing the scamp who he could not believe had visited him with any worse intention than theft.

FERRISBURGH, Vermont. ROWLAND E. ROBINSON.

STORIES OF JOHN GOMEZ.

Naval Station, Port Royal, S C.—*My dear Mr. Forest and Stream:* I suppose that you think I am no longer in the land of the living. Well, you do your part anyhow; for your dear old paper comes along with great regularity, and is the joy and delight of our little community down here. I am not dead, but wilted. When a man for his sins or otherwise is a prisoner on an island, in such heat as we have wallowed through during the two months last past, and furthermore when the aforesaid man tips the scale well up toward the 300lb. mark, then with the thermometer at 100° he wilts. No other word expresses it. Now in a chronic condition of wilt how is a man to use a pen? Trickling streams run off his finger ends and wrists. Little rivulets send creeping drops to the end of his nose, whence they fall on the paper, and all the exercise of a seething brain, all the result of the working of a massive and fiery intellect, all the sentiment that would crystallize on the willing paper, become soaked, pulpy and semi-liquid, and only fit for the waste basket. So, dear brother, when I have seen the words written by the toiling and sporting brotherhood, that have caused my heart to burn within me, and have brought to my recollection many scenes that would interest the vast and genial assembly of your readers, I have felt myself helpless in the surrounding deliquescence and barely able to keep my mouth above the surface of the prevalent liquidity.

But this state of things could not last forever, and now we have a glorious change. It is a little cooler, a little dryer, a little more possible for one to exist in some sort of comfort. Therefore I desire to renew to you all the assurances, etc., and say "howdy."

We are a small community of Uncle Sam's servants down here, but every man has a gun and knows how to use it; every one smokes blessed tobacco in a wooden pipe and enjoys it, and each one has one or more accomplishments connected with a free life in God's out o' doors which give harmony and community of tastes which is very pleasing. People such as these do not quarrel, but dwell in blessed unity and peace together, and swap yarns about fish seen and caught in Alaska, about the slow and ponderous rising of the cinnamon bear from the long grass, about pheasants shot up the Yang-tse-Kiang, the Pei-Ho, and in the country around Newchang and the Great Wall of China, as well as at the mouth of the River Plata; relate wonders about the wildfowl at the Falkland Islands and the big-tailed sheep at the Cape of Good Hope. These people aforesaid steadfastly regard each narrator of tales with a fixed simplicity and an absolute reliance on his veracity, else how shall each in his appointed time be faithfully believed when his turn of narration shall come. Trouble can only arise in such a convention when some incredulous home-plodder expresses doubt or asks inconvenient questions. Such are summarily dealt with. The darkening frowns on brows that have braved the battle and the breeze in many climes should warn such doubting Thomases that "fools rush in," etc., and the end of it all is that hurricane speech or a withering sarcasm generally metaphorically wipes the floor with the doubters. Oh! when will such people learn wisdom to avoid the fate that is so richly their due?

I cannot tell you now about our spring shooting, which was abundant. Some time I hope to tell you the story, but at various times and seasons we have an irruption of the good people of Beaufort, who come down here to try to teach us something about shooting the wary and deceptive clay pigeon. Of these people I can only say that their fate is sadness and misery enough. We hope later in the season to give them a few easy lessons in the proper method of shooting rice birds, quail, plover and deer, with other incidental game thrown in, and in due course of time, if they follow directions implicitly, they will probably become fair amateur shooters.

I have recently seen mention in your paper of John Gomez, a citizen of the world, and more especially of the west coast of Florida. Long years ago, say in the summer of 1863 (that seems a long time, does it not?), I became the proprietor of John Gomez. The Commander-in-Chief of the East Gulf Blockading Squadron (there was war in those days) selected me for the command of the U. S. schooner Two Sisters, familiarly called the Two Shysters. This lofty vessel was a Baltimore "pungy" of about 40 tons, drawing about 9ft. of water aft and 4ft. forward, as some suggested, so that she could climb hills like a kangaroo. She carried under my command one 12-pounder howitzer, and was manned by twelve seamen, three petty officers, one master's mate and a pilot. When I proceeded on board to take charge of this my first command in the Government service, I found sitting on deck, smoking silently and diligently, his knees near his chin, his back rounded like a bicycle scorcher, his old straw hat covering his head from the nape of the neck to his eyebrows, John Gomez, Pilot, U. S. Navy—a man swarthy, silent, and looking like an Indian, but when once opened up, like an oyster, with considerable meat in him. John was my property actually for about six months, incidentally until the war closed. He ate and drank with me, and slept, when he did sleep, somewhere near at hand. He knew a good many things not generally known, and when he chose to talk he could be very interesting. The duty on which I was employed was of great interest and frequently very exciting—that of the inshore, shoal water cruising, and blockade of the west coast of Florida. Gomez was in his way a perfect pilot. I think he knew familiarly every shoal, rock, oyster bed, creek, inlet, mud bank, fishing ledge, roosting place for birds, deer track and channel from Key West to Pensacola. It is my impression that most of our living came from his directions about where to find fish, game, shellfish, etc., and it was a most fascinating species of yachting and hunting combined, where the game was primarily blockade runners and men generally, and secondarily everything edible that waved a wing or wiggled a fin.

John came originally from Central America—Honduras, as I remember now—or had lived there many years. His age was apparently between forty and seventy. Over that range of thirty years you could guess at will. There were no fences on the range. After he had warmed up so as to talk, he related strange stories. He had lived many years in Florida, had an intimate knowledge of the Everglades, and an acquaintance with the Indians resident there. He had apparently made his headquarters at or about Tampa. When the war broke out he was thereabouts, but a time soon came when he found it convenient to cross the lines, and also not to be too slow about it. So he "took to the bush," and found rest for his wandering feet at Key West. It will be almost impossible for me to reproduce his picturesque language, but, as far as I can, I will tell the story in John's own words. It seems that John had a family in Tampa. I do not know whether it was his own family or one that he had adopted, but it seems that one day a troubadour, returning for a brief season from the wars, had, or fancied he had, some rights in the case, so he attempted to enter the precincts of the homestead occupied by Mr. Gomez and the family aforesaid. John said, in telling the story:

"I yere talk in town, that man Willums come back. He say he kill me. One day I see Willums come 'long the road. I take my gun. I say, 'Willums, I no wanta you come in here.' He say, 'I come in. I killa you.' I say, 'Willums, don'ta you come in da gate.' Willums, he coma in da gate, I shoota him, an' he staya there. I coma 'way."

That seemed to me to be good and sufficient cause for John's hegira, and later his family joined him in Key West. He found employment as pilot on Government ships, but he did not like to serve on the steamers or larger ships. Once when employed on one of the fast steamers running up the coast for Tampa, close inshore, the night being very dark, John did not make out how to go slower, as he desired to do, and unaware that he should tell his fears to the officer of the deck, he wandered about until he found the engine room, and said to the engineer on watch: "Mista Engineer, don'ta b'ily your water too hot!" which was his idea of going slower.

To tell of the fish we caught and the game we shot under John's direction and guidance would be "another story." He was a new and unique type to us. He was a compound of Spaniard, Indian, hunter and fisherman all in one. He carried, somewhere about him, a flint and steel and a horn full of tinder, and produced fire from it to light his pipe. He was always perfectly clean and neat, but his clothing was tropical and free; I do not think he liked to wear shoes. Squatted on deck with his old pipe was his usual posture. His language was calm and slow; I rarely saw him vehement. But there was a secret, somber force about the man which savored of helpfulness and power, and I have rarely met a man whom I would tie to, for outing or danger, ashore or afloat, with more confidence than I would to John Gomez.

He told me a story once about a deer hunting expedition of his in the Everglades below Punta Rossa which has left a picture in my mind which will never leave it. He was trying to creep up to a spot where he had seen a deer. He was standing for an instant in a flat place, peering cautiously through the bushes in search of his game, when he felt something strike him gently on the inside of each leg. He cautiously looked down, moving as little as possible, and saw an enormous rattlesnake between his feet, head erect and ready to strike if he moved an inch. He was forced to stand immovable until the snake lowered its head and uncoiled its length, when a great leap took him clear of its attack. At this moment he heard a low laugh and saw an Indian in a tree, who had been an amused spectator of the scene. The rigid John, the wrathful snake and the chuckling Indian would make a picture if they could be painted or drawn. That would have been the chance of a lifetime for the camera fiend.

The last time I was in Key West I inquired for John Gomez. but could not learn his whereabouts. I am glad he is still alive. All true sportsmen would fully appreciate this son of nature. At first sight he would be passed by, but if once one could penetrate beneath the bark there was the rich yield of a life of adventure to gather sap from. The species is fast dying out. Soon there will be no more. Pioneer, hunter, sailor, fisherman, all in one, the school is closed that made them, the books are out of date from which they were taught, and the railroad shrieks where they hunted, and the bicycle whirls where once the deer paths ran. Good bye, old John; we shall cruise together no more, unless there are happy hunting grounds and smooth seas where we are both bound.

C. H. Rockwell, Commander U. S. N.

Natural History.

THE MARTHA'S VINEYARD HEATH HEN

Boston, Aug. 11.—*Editor Forest and Stream:* Will not some of your readers who know tell us about the prairie chickens on Martha's Vineyard and also whether they, as I suppose, once existed on Nantucket and the mainland of Connecticut, also Long Island and the Pine Barrens of New Jersey? During the last four or five summers I have used such opportunities as occasional brief visits to Martha's Vineyard afforded to ask about the prairie chickens. I have generally heard what seemed to me credible accounts of the existence of these birds on the island, but whether they are the original stock or a late importation from the West, or descendants of both, I cannot ascertain.

I have heard that the bird was indigenous to the island, but that at one time it was nearly, if not quite, exterminated, and that some birds from the West were liberated on the island. I am certain that there are prairie chickens there now, for friends of mine have seen them this year, but I am anxious for an authentic history of the bird on the island and feel confident that there are those living who could give one.

Mr. Manly Hardy, of Brewer, Me., the well-known ornithologist and careful student of natural history, once showed me a skin of a prairie chicken which he was fully assured was of one of the original Martha's Vineyard stock.

It was very interesting to me, as being decidedly of a more red or ruddy color than the prairie chicken of the West.

I called some years ago at a fishing hamlet near Gay Head, and on inquiry learned that prairie chickens—there known as "hethens," *i. e.*, heath hens—were well known on the island. Their habits were described to me in terms that left no doubt whatever in my mind that genuine prairie chickens were referred to. I am greatly in hope that my inquiry will bring out—through your friendly columns—full account, not only of the original prairie chicken of Martha's Vineyard and such other portions of New England as it inhabited, but also of whatever importations of Western stock may have been made.

Will not some one tell us also of the game preserve of the island of Naushon, and of the other islands of the group, all of which have such musical Indian names. As my boat swept by Nonamesit the other afternoon I heard from it the musical pipe of a quail. I have heard that the covers of Naushon are plentifully stocked with deer and many other kinds of game. The island is to me the most favored of private and princely domains, and I would gladly learn what its honored and high-minded owner has done in the way of game propogation and preservation.

C. H. Ames.

[The Forest and Stream of Sept. 25, 1890, has a two-column paper from the pen of William Brewster on the heath hen of Martha's Vineyard. The species, which is indigenous to the island, is closely allied to the pinnated grouse or prairie chicken of the West, but the two are now generally considered by ornithologists to be distinct. The Vineyard bird is identical with that once found at various points along the New England coast from Boston to Connecticut, on Long Island, and in New York, New Jersey, Pennsylvania and Virginia. The area covered by the range of the heath hen Mr. Brewster estimated as forty miles, and the probable stock of birds in the autumn of 1890 as 500.]

Another Hornless Bull Caribou.

Providence, R. I., Aug. 25.—*Editor Forest and Stream:* Among the deer at Roger Williams's Park here is a four-year-old buck caribou without antlers. He has been here since the spring of 1894, is thin and small and lacking in vigor. I notice that the deer—of which there are several in the same inclosure—seem much in fear of him. F. T.

On receipt of this letter we wrote our correspondent, asking him if possible to make a physical examination of this animal in order to determine, first, whether it was entire, and second, whether it bore on its head the horn pedicels which were to be expected. Our correspondent's report is given below:

Providence, R. I., Sept. 1.—*Editor Forest and Stream:* As suggested in your favor of the 29th ult., I have carefully examined the deer at our Roger Williams's Park.

This animal is a State of Maine bull caribou, four years old last spring. He has been here since the fall of '94, has not been castrated nor in any way injured, and has never grown any antlers. On his head are the pedicels or bases on which the antlers would grow if he had any, but these are covered with skin and hair the same as the rest of his skull. He stands 40in. high at the shoulder and measures 41in. around the body just back of the shoulders. At the time he came here his size was about the same as now, and evidently his growth has been stunted, as his weight does not exceed that of a wild yearling.

We found considerable difficulty in catching and holding him, for he is timid, though not vicious. F. T.

Audubon Plates Sold for Junk.

Boston, Sept. 4.—*Editor Forest and Stream:* I notice in your last issue you announce you propose to publish for the benefit of Forest and Stream readers some of the Audubon pictures, and it reminds me that over twenty-five years ago our house had sent them from New York six of the original copper plates of Audubon's birds as sample of the lot, which were to be sold for old metal. They were in very good condition, and by a very little retouching could have been used again. We thought it a shame to destroy them and tried to get some of our Boston publishers to purchase them for legitimate use, but failed in so doing. James R. Osgood almost was persuaded, but we finally sent them back to New York, as we would not consent to be instrumental in their final destruction. Whatever became of them eventually I never heard, or if I did have forgotten.

I remember one of the sample plates we had was the bald eagle, and I managed to take a hand rubbed copy from it. These plates were the Elephant edition. I think our correspondents in New York at that time, of which there is one still living, might remember where they went to, for the senior took the same views of our house and thought it vandalism to destroy them; but as there were several tons in all, their value then for old metal, copper being so high in price, amounted to a good sum.

Reignold.

Yearling Doe with Fawn.

It has been said, I think, that some handwriting is divine, and that there are other sorts which are devilish. My handwriting is not of the divine kind, but I am prepared to swear that if I am given sufficient time I can write the word one so it will not look like two. This evening a friend came in to see me with a smile on his face and a copy of Forest and Stream in his hand.

"What is the answer to this puzzle you have given in Forest and Stream of Aug. 29 under the heading, "Breeding of Deer?"

"That is not a puzzle. What I wrote, or think I wrote, or intended to write, was that a female fawn born in 1895 gave birth to a fawn of her own in 1896."

That is the point of the note, but when the types said, "Two years ago a female fawn was born in the park, and this year that fawn is the mother of a fawn," the point was blunted or broken off. A. N. Cheney.

Mr. W. S. Hills.

Boston, Sept. 7.—W. S. Hills, the blind fisherman, of whom the readers of Forest and Stream have heard before, is still in the land of the living, though sickness, as well as the total loss of his sight, has conspired to keep him indoors more than formerly. But his love for the rod and reel has continued, and though totally blind, he takes every opportunity to indulge in the sport. Hampered as he is, salt-water fishing affords him more satisfaction than his old love, the Maine lakes and streams. He is summering, as usual, off the Rhode Island coast. With his boatman and attendant he goes fishing whenever the weather permits. The other day, unaided, he landed 150 mackerel with hook and line. He is justly somewhat proud of the achievement. Is there another blind fisherman in the country who has done as well? Mr. Hills does not fish for a living, but for recreation and for the momentary feeling, when a fish is on, and he feels the thrill along the line and up the rod, that he has his sight again and is on the Maine waters, where trout and salmon are wont to hide. A lover of Forest and Stream and other fishing literature, he derives great comfort from being read to.

Special.

Game Bag and Gun.

IN THE CASCADE MOUNTAINS.

BUTTE CITY, Mont.—Deer stalking and trout fishing in the Cascade Mountains, Oregon, under the frowning shadows of Mount Hood, constitute the most exhilarating and exciting sport known to the average angler and hunter of the Webfoot State. We do not have to travel very far from the city of Portland on the Willamette to reach the very heart of the hunting and fishing grounds.

A pleasant journey of forty miles, due east of Portland, will bring one to this paradise of game and fish. An excellent wagon road leads over the Cascade Mountain, and the distance from Portland to the summit of the range can be easily made in a day and a half of moderate driving. But the best hunting and fishing are some distance west of the summit, along the streams Sandy, Salmon, Zig-Zag and Still Creek.

Our party was well equipped for an outing of two or three weeks. Two two-horse wagons were chartered and we had a complete camping outfit, plenty of provisions, guns, ammunition and fishing tackle.

Ten hours' brisk drive brought us to the Sandy, and from there the road led up the picturesque valley for about fifteen miles. The Sandy is a genuine mountain torrent. At its lowest stage it is a bold, turbulent stream, dashing over a rocky bed. At no time of the year are its waters clear, although it comes from pure ice and snow. For that reason it is not considered a very good fishing stream, notwithstanding it abounds in fine trout.

Salmon, the largest tributary of the Sandy, was reached late in the afternoon; it is one of the most beautiful mountain water courses. Its source is near the summit of the Cascades, from the south base of Mount Hood, not far from Government Camp. As it does not flow from glaciers, the water is as clear as crystal and cold as ice. For its entire length—about twenty-five miles—it passes over a very rocky channel and winds tortuously among lofty, timbered mountains, and through deep cañons, whose rugged and frowning walls often close in and compress the waters into a very narrow compass. At such places the pent-up flood rushes through with great force and fury, causing rapids and great swirling eddies. It is a magnificent trout stream.

There was high feasting in the camp that night. Just before sundown one of the party killed a fine, fat, young blacktail deer. Several of the most expert anglers succeeded in capturing about forty toothsome mountain trout in less than an hour. These ranged in length from 8 to 14in. They bit with great avidity and were landed very rapidly. Then followed the bivouac and the most refreshing slumber. Though in the month of August, the night air was quite cool and blankets were a comfortable adjunct.

Twelve miles further up the beautiful and picturesque valley of the Sandy brought the party the next day to the old and historic Toll House. Here it was concluded to pitch camp and remain for several days. The scenery is wild and sublime. Lofty mountains rise all round the valley to the height of thousands of feet. What added to the lonely grandeur of the scene was the fact that there was but little vegetation on the mountain sides and summits to relieve them of their ruggedness. About forty years ago a fearful forest fire swept over the Cascades for several hundred miles, destroying everything green. For many years the mountains presented nothing but a blackened and charred appearance. Millions of partially destroyed tree trunks were left standing—mute monuments of the vast holocaust. A great many of the old charred snags are still left, like so many forest sentinels. In the long lapse of years a younger growth has shot up and clothed with verdure the general desolation. On all the mountains around the Toll House there was but a sparse and straggling growth scattered here and there.

Just below the old Toll House two more streams pour into the Sandy, one the rushing Zig-Zag and the other Still Creek. The Zig-Zag, as its name implies, is a most tortuous stream, winding into all sorts of shapes, and rushing most impetuously over its bouldery channel from its source near the mountain's summit until it mingles its ice cold floods with the milky-hued Sandy. Still Creek, on the other hand, which flows parallel with the turbulent Zig-Zag for some distance, is a mild and meek little watercourse flowing softly over a bed of fine white pebbles and sand. Both streams abound in trout.

A short distance from the Toll House the party went into camp and here several days were passed. Many magnificent trout were caught, more than the party could possibly eat, and the overflow was generously distributed among some campers who were less fortunate.

Several fine blacktail deer were killed and half a dozen or more of the whitetails. There was feasting and a general good time all round. After the fatiguing and exciting chase we had voracious appetites, and when night came stealing over the lofty mountain tops, and silently wrapped the valley and streams in its drowsy embrace, all were ready to turn in. The distant sound of the rushing Zig-Zag and the more subdued murmur of Still Creek, and the sweet, fresh mountain air, all lent their gentle influences, and hunters and anglers slept at the rate of "forty miles an hour."

Elk tracks were discovered by the hunters on several occasions and followed eagerly, but they invariably led directly up from the valley toward the sides and summits of surrounding mountains, and all attempts to overtake the game were abandoned.

Two black bears were suddenly overhauled one day in the dense brush near the bank of Still Creek, and were quickly treed by dogs and shot. One was a female, and search was made at once for the cubs, and two were soon found in the nest, which was not far away under one of the rocky cliffs. They were not killed, but brought to to the city for pets. These cubs were several months old, and lively, mischievous little fellows. They were captured without difficulty, and very soon became perfectly reconciled to captivity.

Laurel Hill, some eight miles above the Toll House, was the next camping place. The tents were pitched at the base of a precipitous rocky bluff, which rose several hundred feet above the level of the valley and within a few rods of the Zig-Zag. A great many fish were caught, and as the supply greatly exceeded the demand a quantity was salted and cured by smoke.

Two of the hunters one day sighted a large elk with a magnificent pair of antlers. The animal was fully half a mile away, but through a strong field glass a splendid view was obtained of the noble game. He stood on the summit of a high bluff overlooking the valley, and as it would have been next to impossible to reach the spot without coming into full view the hunters made no effort to stalk him, though they abandoned the attempt with great reluctance.

A huge track of a bear, which must have belonged to a grizzly, was also discovered. Several of the hunters followed the imprints, which led toward the mouth of a deep, yawning cañon, the bottom of which was covered with a dense thicket. However, they could follow the tracks only a short distance, for the ground became so rocky and broken that all tracks were obliterated.

While encamped at Laurel Hill several of the party made a trip to Government Camp and the Summit House, which was located a few miles beyond. The trip, though rough and fatiguing, was enjoyed. They visited the famous Summit lakes and caught some fish from those wild, isolated and romantic little sheets of water. Government Camp is the place where the trail leading to the base of Mount Hood leaves the main road that crosses the Cascade Mountains. It is the route generally taken by all who ascend to the summit of the Snow Peak, and Government Camp is a general point of rendezvous to all tourists and Alpine climbers. Both the Summit House and Government Camp are immediately beneath the frowning shadow of that vast mountain sentinel. On a clear, bright day, the view of Mount Hood from either point is grand and awe inspiring. The colossal upheaval seems as if it would topple over and bury the beholder.

On the morning of the fifteenth day after setting out from Portland on the outing trip, we broke camp and headed for the city. All voted the mountain excursion a success. The trophies comprised deer, bears, trout and a few dozen feathered game. J. M. BALTIMORE.

IN CAROLINA QUAIL FIELDS.

How sweet are the things of the past if they make pleasant and profitable the present, like the hanging of a pretty drapery or the purchase of a precious gem. This hunt is a thing of the past, yet I recall it as a wholesome privilege.

The trunks have been packed and the long, weary journey across this big continent and back is over. The extending of the glad hand of hope and receiving the marble heart of disappointment (commercially) is happily at an end. Months have passed. The autumn leaves with all their fragrance and beauty are gone, Jennette spends much time in her kennel with her young hopefuls, sons and daughters of Mecca. Mont lies idly around, dreaming of his days afield; while staid Mecca, long wanted, but recently obtained, is trying to accustom himself to his new surroundings. The guns rest snugly in the cabinet, always a joy to see with their scars of battle well rubbed down, though handsome still in their graceful outlines. I have just left George at the club, finished a good cigar and a better chat, and he told me with splendid emotion and graceful gesticulations that our last trip to North Carolina rests and snuggles in his memory as one hunting trip that he will always look back to with much pleasure and great pride from the fact that annoyances were few and disappointments, just one. An ideal holiday he had had following his young dogs for a whole week in the hands of that excellent handler Jno. N. Lewis, he had witnessed with so much zeal their improved work from day to day. The evenings were gone over, spent so pleasantly by the big log fire in the snug log house, listening with aching sides to Lewis's by no means limited repertory of stories and the day's hunt gone over, each point well described, all good shots mentioned and bad ones forgotten, and the much needed dreamless rest.

We reached Reidsville one bright Sunday morning in early November, where Mr. Witt, with his hack and the same young gray horse and the same old black one, met us just as he had done the year before. The only change noticeable in the whole outfit was the increase in avoirdupois of Mr. Witt, and still he claims to be a temperance man. The drive to Monroeton was interspersed with stories of the changes in North Carolina of political faith by Mr. Witt and hymns sung by George.

A warm reception was accorded us. All looked as we had left them the year before. In fact, everybody and everything looked so natural, it seemed impossible we had been away a full twelve months. Our room was ready, the traps were unpacked, and then a visit to the kennel seemed in order. George is not certain to this day whether or not Donald knew him, he having been in Lewis's care over three months, and in that or less time Lewis will impress any dog with the fact that there must be but one master, and that must be Lewis. This was also true of Rab and Rush. Had I any doubts of Mont and Jennette they were soon dispelled by their glad pranks at seeing their master again. Jennette and I had had many pleasant days together after grouse only a month ago, while Mont had rested at home after a long and nearly fatal illness.

A perfect Monday morning broke to our view. Everything was white with frost, the air was clear and bracing; but it was not the morning for an early start; the birds would not be astir. However, delay at this stage of the game was wearing to the nerves. So after breakfast by Mrs. Hopkins, grace by George, a story by Lewis, the start was made, George and Lewis in one direction, Hopkins and I in another.

By the edge of an old creek corn stood in shacks awaiting the fall husking; across this in the distance a most promising stubble revealed itself. Toward it we make our way. Mont and Jennette are down and both showing a speed and quality calculated to make their master vow they are the greatest pair of dogs on earth, but pride must take a tumble. Between two of these corn rows lay a covey of quail, and Mont, who is heading Jenn by several lengths, runs into them without showing any intimation whatever that he ever scented them for a second, and they go to cover. My heart sinks within me, for this is my first hunt with him since his four months of severe sickness with infectious distemper and typhoid fever, which had left him with an emaciated head and clapping lower jaw, with his scent very much in question; and while he had been in North Carolina nearly a month, the weather had been so dry up to a day or two before our coming that Lewis said he didn't believe any dog he had could smell a "beefsteak and onions."

Now the real test had come, and I alone was to witness the outcome. I requested Hopkins to take Jennette up, while I put Mont at his old specialty, "singles." I must confess a feeling of a battle between hope and despair as I called this fine son of Antonia to me, and threatened him, but chastised him not, and started across the lowlands in the direction the birds had gone, and poor Mont, with his flag lowered, followed at heel.

Across the Cripple and I call "Get away, be confined," and again with head and tail high and back forming the letter S he plunges into the thicket. How those leaves did fly as he swung to the right, and from a full running gait stopped! So sudden was it that his tail in one of its revolutions came to a full stop at right angles. I step in and flush a bird and miss. Intensity of feeling alone would have made me miss a barn with me inside of it and the doors shut. Mont looks reproachful and Jenn pulls at her leader. We are "at it," and she insists on her share of the fun.

A little further comes another point, and my invoked dog is in his glory and prime again. This time two rise and two fall. Jenn is released and performs one of her many specialties—retrieves them and immediately proceeds to point another, with Mont backing. Now, indulgent friends, I own this pair of dogs (and others), but they are my first pair of modern field dogs; they cost me a lot of money to get them where they are (perfectly broken), besides the expense of $100 to save one of their lives. I love a good dog, and these two are to me much. Their love for their master is always apparent. Their work had few faults and many virtues. Mont's nose was no longer in doubt, and I was having a part of my yearly (well deserved, I hope) holiday. If the eyes grew moist, the nerves unstrung, and I wandered back to childhood and the delights of my "new books" with red tops, and once more played "cobs for horses" in the sand on the sunny hillside, and introduced that time into my shooting, you can understand why night found me with just ten quail and a wood duck, but never happier in my life. Before the log fire and behind some good pipes I listened to enthusiastic George relating his experiences of the day; and I force him to listen to my own, while Lewis sat by with that comprehensive smile, and I verily believe reflected, "those fellows need more training than their dogs."

This morning Lewis loans me an extra dog, a real little wonder. She is put down fresh and keen, my dogs being along on leaders as a reserve force. Birds seem scarce, so that after an hour of unproductive work I request that all the dogs be turned loose. We enter an immense stubble. At one end of the clearing is seen a high-pointed knoll. I make my way toward this elevation, where I can watch the work of the dogs, one hurrying here, another scurrying there, while Mont, with head high, his tail cutting graceful circles, passes around the base of the hill and begins working up from the further side, shortening the distance toward me with increasing strides.

This is where I saw a reproduction of Blink's celebrated painting in real life. Within 30yds. of me lay a covey of quail; the three dogs came upon them from three different directions at almost the same time, each securing the coveted scent and a full point. As I have said before, this hunt is over, 'tis a thing of the past, yet how it flavors the present. Memory serves me well. I can feel the sensation yet. Mont and Jennette are lying beside me; their worth I know; their work I remember; their talents I appreciate. I flush and kill three birds (most unusual for me), one for each dog. Jennette retrieves them all.

That night George had the floor, and his dog Donald the crown, and well he deserved it; he had done great work that day, and at night he had a fond master. Donald is of the old Gladstone type, long and racily built, with a sure nose and the endurance of steel. I look for this dog to win fame at some of our national events. I am satisfied that his last great effort of that day was told just after I had passed into total oblivion in a neighboring bed in the same room.

My first thought next morning was, how short is the night, but what a time I am having, and I must not lose any of it in slumber. George says, "Crawl out; we can sleep after we get home." After a hearty breakfast, and drawing fresh dogs from the kennel, we make our start, and return at noon with a fine string of birds. I greet George with, "Oh, I am on to 'em. Am shooting like a 'profesh.'" Lewis remarks, "If that fellow keeps on, I won't have birds enough left to train my dogs on." He suggests that I am working my dogs to death, and tells me to spell them a bit by taking his dog Ben Giles that afternoon. Should any one accuse Lewis of being foxy at times, I trust he will have the modesty not to deny it. Knowing something of B. Giles's reputation, I decided to have taken along an extra to fall back on. Wise thought! I got close enough just twice that afternoon to that dog to see him scatter to the four corners of the earth two coveys of birds, and then watched him try to drive them off the corners. Of these birds, with the assistance of my extra dog, I got just three. I had been once on this trip "too glad" to shoot. This afternoon I was "too mad." I have since my return presented our friend Hopkins with a gun. Lewis, to offset the damage he might do to the bird crop, has given him Ben Giles. There will be plenty of birds there another season, and they ought to be big, strong and healthy from the exercise Ben will give them.

Another morning, yet dark and dreary; fog and rain seemed the order of the day. It is decided that we shall go to the old Beaver Pond. If we cannot find quail we will try ducks. This journey of five miles in a North Carolina tobacco wagon was one of the features of our outing. All we needed was the broad-brimmed sombrero to resemble the pioneers of the early days wending their way westward, then the "wild and woolly West," now the great and glorious West. We divided into two parties, leaving Bob to make camp. We put a pair of dogs into the wet weeds and were off. A fog horn would have been of more service than a gun. It was a hard, unprofitable morning's work, with everything in soak, the sand soft and yielding, the tramping most fatiguing. However, upon our return to camp we could forgive all hardships. The horses were sleepily feeding from the box, the extra dogs were tugging at their chains, fairly howling their welcome. Bob was whistling the "Alabama Coon" and poking at a roaring fire, while the boiling pot

sizzled and steamed with gladness. A log had been rolled near the fire, in front of which the feast was spread. Never did a cup of coffee taste so good. Each hot drop seemed to remove a distinct and separate chill. After lunch I was requested to tell a story. I related one from Dante's Inferno. I have since regretted I didn't go higher for my text and preach a sermon. My story started Lewis, and while the clouds of steam arose from my drying boots and corduroys we were eloquently entertained.

What a change in a night. This, our last morning, proved the uncertainty of things; by noon the thermometer registered 75° and all creation seemed to be boiling and steaming; clouds of mist arose, to be absorbed by a summer sun, the dogs came in with drooping heads and tails and tongues exposed to the roots. We quit. All had done a big week's work and showed it, and in most cases felt it, but none so much as Hopkins, who had faithfully followed me six days afield. I didn't notice the change, as it had come gradual, but Lewis declared it would take him most of the winter to "pick up again." George looked tired, but the keenness of his eyes told of the great benefit he had received, and when he had slept by the yard at home he had measured it off by the mile the last few nights in North Carolina. A tired brain had been refreshed, and while he might say not, I believe a doctor's bill was saved.

The journey home was soon over. Early next day found us among scenes ever dear. As I close I find Mont, Mecca and Jennette surrounding my chair, living witnesses of those days in November; as I look into their intelligent eyes, I wonder what they are thinking.

THOMAS ELMER.

ELIZABETH.

A DAY WITH COOT AT MANOMET.

ON a cool day in November Archie, Doc and I went for a day or two with the coot at Manomet. We met Arch at good old Plymouth and drove over Manomet Hills. Did you ever take that drive? Manomet is about eight miles south of Plymouth on the shore of Cape Cod Bay, and if you have never driven there you have missed a treat. On a clear day in the fall to ride over these hills and see the changing color of the foliage, the sumac beside the road with clusters of red berries, to get the perfume of the wild grapes, and then to burst out in view of the bay with the Gurnet in the distance is a tonic for an invalid.

As we come out of the woods the old church at Manomet comes to view, and passing that we drive on the shore road to the cottage. Our house is situated on the bluff and overlooks the bay. To the north the Gurnet and Brant Rock are seen, and away to the south Sandwich, and in clear days Provincetown can be seen. We have for supper clam chowder and steak, after which Doc and I look over our case of shells and get out the guns. We find we have a good stock of No. 4 and No. 2, so everything is right in that line. Next we must look over our shooting clothes, for we start out at 4 in the morning, and it will be cold. Now for a call at the life-saving station to see the boys and get our boats. As we enter we are greeted by all. Uncle Sam employs some fine fellows in the life-saving stations, and there are none better than Capt. Sampson and his crew at Manomet. We have a little chat with Scrubby and George, and they promise to wake us in the morning when they go out on the south beat on patrol. Everything is fixed for the morning, and we pick our way back to find Arch more than busy with hooks, lines and leads. You would think by the layout that he intended to catch all the fish in the bay. He would rather fish than eat any time, and is getting into gear. Doc and I turn in.

It seemed as if we had hardly closed our eyes when we hear a stone on the roof, and Scrubby is saying, "Wake up, sleepers! Get out and kill a coot." We tumble out of bed, call him in to warm up beside the fire and then hustle into our clothes. Cold? Well, I guess. We bundle on all the coats we can carry, and take our guns and case of shells; but where is Arch? In bed and sound asleep. This won't do. He must wake up to enjoy the fun. We put a few cold stones in the bed with him, and soon he shows signs of life. "Come, get up and hear the birds sing!" "Oh, you go without me; I will come out later and fish a little." We go to the landing, put our decoys into the boats, pull them down to the water and then wait for daylight.

As we sit and talk over old times we hear the "tramp of many feet," and look up to see the gunners coming in a body. They are saying which berth they will take, and have the whole thing arranged; but we push off, and taking the oars run out to sea. We have an idea that we will make a slight change in their plans. But perhaps you do not know what I mean by berth.

The boats form a line from shore out into the bay. The first one is about 60yds. from a large rock called the Gunning Rock. The first man out has his choice, and then the others line out by him. The first boat anchors about 60yds. from the rock and is said to have the first berth, the second boat the second berth, and so on. The first and second boats are called the best, and our gunner friends had the whole thing fixed. As we row out by the rock we are hailed by a man. He says, "I am first berth. You will get two and three." Good enough. Doc takes No. 2, and I go offshore far enough to make a place for Arch between when he comes out. The boats are about 60yds. apart and that is about right for old hands, but rather near for a novice. I carry two shot in my face as a reward for violating this rule.

We get our anchors down and then curl up in the bow of our 15ft. dory and wait until we can see. The boats go past us and we have counted twenty or more. Soon one comes out and finds that he must go to the end of the line. He is not much of a sailor and it looks a good way from home out there. He thinks for a time, then runs up to Doc and resorts to strategy. He says: "You are too far apart, there is room for one between." Doc answers: "That is as near as I dare get to that fellow." Then he comes to me and asks: "Why can't you go out a little so we can go in there?" I say: "That fellow shot a man here last fall, so don't get any nearer, on your life." This settles it and he falls back and makes the first boat in the second line. By this time it is light. We place our decoys, load the guns and get ready for fun. We hear some one say "Nor'ward inshore" and we know something is coming. What is that black string close to the water coming past the Gurnet? We get as low as possible and wait. Soon the string turns into a flock of coot flying evenly and coming straight for our boats. Now they lift, see the gap and head that way. Now they see the decoys. They are undecided; part come to me and the rest go to Doc. We wait till they get as we want them, then each sits up and shoots. We get one each. Do we hear you say, "Why not get more?" Did you ever try it? Remember, you are in a little boat and the water is rough. You hold on a bird and pull. Your boat at the same time brings up on the anchor line and your gun goes off. You shoot into the air and perhaps land on your back in the boat, or if you are not careful you shoot a hole in the boat. Perhaps you kill the bird, but I find it as easy to miss as to kill. We throw over our buoy and pick up the birds; have hardly got back to our place when "Nor'ward outside" a flock of large white-wing coots are coming. They see the boats and go over. There is a puff of smoke, then another, and two are seen to fall. Then you hear the report of the guns.

Now a large flock is seen coming for the boats and every heart in the line is pounding like a hammer. There are hundreds of them in this flock and every one is saying to himself, "If that raft of birds comes over me I will cover the water with game." But the birds see the boats, rise and then turn back and go out to sea so far that they can pass the boats in safety. "Skunk heads always do that," says our neighbor. But here comes another flock so high that they look like sparrows. There are lots of them. Some one shoots and makes a laugh. Soon an old loon comes down close inshore; he gets to the first boat and then thinks he will go outside. He turns and heads out to sea. He will not change his course, so every one in the line takes a pop at him. He is not quite near enough, but many of the shot hit him and sound like shooting at a board. As he goes past the outside boat he looks back and laughs, as much as to say, "What kind of a time was that anyway?" But what was that that went by me like a bullet from a gun. Doc is laughing and says, "Why didn't you kill those old squaws?" (or as we call them, quandies.) "If they are going to fly like that I don't want any," said I, and settled down for more birds.

Now we see a bunch of sea ducks coming straight for my boat. Down I go as low as I can and wait. Soon I see their heads over the bow. I sit up and see three in line. I shoot, then hold on two more and pull again. One strikes so near that I reach out and pick him up. I throw over the buoy and row after the rest. I find that I have four out of seven. Not very bad, is it?

A pair of coots come to Doc and set their wings to light with his decoys. One shot is a fair miss; another shot and they come to me. As they cross each other I hold about a foot ahead and pull. Much to my surprise they both go down. "I can do it every time, Doc." "Yes, in your mind," says he.

While we are talking some one says, "Howard, look out!" and there are about a dozen large white wings just about to light with Doc's decoys. He takes his gun and with a quick glance along the barrels pulls, then another, and there are five of them on their backs with feet fanning the air. Doc thinks he will take a little smoke, so fills his pipe, lights up and then looks for his birds; there are only three and one of them has his head up and is looking to see what hit him. Doc throws over the buoy and the coot goes under like a flash. Now the others are up and he gives them both a charge of shot. They dive at the flash of the gun and come up again a little further away. As soon as Doc sees a bill he shoots again and this one comes up dead. But the others are making time for the Gurnet and Doc is too old a hand at the sport to chase much. He gathers in the three dead ones and goes back to his place.

Arch comes about this time with a boat full of cod lines and bait. Looks like an old salt right from the banks. Now, fishes, look out. He thinks the coots are not flying thick enough for him, so taking his marks for the fishing grounds he goes to work—and fishing is work with him. Woe to any coot that comes within a mile of him. He shoots anyway; says if he don't hit them he will make them fly. He don't want the things anyway. It is cold, but he fishes hard to keep warm. We row over to him and find that he has an assortment of cod, hake, mackerel, skate and pollock. It makes no difference to him what it is as long as it is fish. But what a looking boat! Lines and fish, gun and everything, are in a snarl, and Arch is enjoying to the fullest his short vacation. Come large or come small, it makes no difference to him, and he is perfectly happy as long as the boat is above water. Talk about Izaak Walton, he could not compare with our fisherman. He invites us to move off as we frighten the fish; and as we go we see a coot coming between our boat and Arch's. He sees him and goes after his gun. I tell Doc to look out and then go down into my boat as flat as possible, and no sooner do I get down than I hear the shot whistle over and into the boat. Don't get up yet; he has another barrel. Bang! and I hear Doc say, "Good boy; you killed the coot, and every man in the line is out of sight yet. Come up, fellows. The bird is dead." Arch says he can kill them any time if they come like that; but he has a cod on the line in his hand, and that ends the talk at once. We go back to our moorings.

The birds continue to fly until about 10 o'clock; after that time they come along one or two at a time, and do not make good shooting unless the weather is stormy, then they fly all day. The best time for this shooting is just before a storm. The coot seem to know there is a storm coming, and they are on the move. The water is also very rough at these times, and this makes it unpleasant; often it is so rough that the boats can't go out. Then the gunners sit on the bluff and swap yarns, and tell how many they could kill from each flock were they only out there. Once in a while there is a flock of brant which will come near enough to the bluff to make a fair shot. The guns go off like crackers and perhaps they get a bird, not often. I remember once being on this same bluff with the station boys. We saw a flock of coot coming, and they were going to cross back of us. I took my gun and ran to the place where I thought they would go over and got there just in time and fired. I killed two, but when they came down one went through the window of a fisherman's shanty and the other struck the roof so hard that I thought he would go through it. I can hear George and Scrubby laugh now.

But I am getting away from my story. The day of which I am writing being cool and fair, we decide it is useless to stay out any longer; so getting our anchors and decoys we row ashore. We are nearly the last ashore, and find that we are high line. I count up and find that I have thirteen. Doc has sixteen. We wait for Arch, and soon see him coming along. He has fish enough for the crowd, and some nice cod and mackerel among them, but only two coot. "Why, Arch, where are the coots?" we ask. He says: "He could not get his lamps on them."

Well, we have fish enough, and more than enough coot. So we go to the house and get breakfast, or dinner, and with keen appetites. Did you ever try a mackerel just caught broiled over a coal fire after you had been on the water for about five hours? or a broiled live lobster? We surmise that Arch will have to fish all the time to keep us going. We make it a rule to eat as much of our game as we can, and some of our game dinners are dandies. The coot are not so nice, but after you get the taste well trained you can stand even them.

After dinner we go for quail or turn in, as we feel inclined, and rest for the next day.

About guns. Doc shoots a No. 12 English gun, while I use a No. 10 Parker. We can't see why the No. 12 is not just as good as the No. 10, but I do not care to change.

We find that Saturday night comes all too soon, so with many regrets we pack up and go back to Plymouth.

I can only say to my shooting friends, if you have never tried the coot, do so as soon as possible, and I shall hope to meet you some fall in Manomet. F. E. WOODWARD.

A CARIBOU HUNT ON WOLF HILL.

ON a bright October morning—and bright mornings are few and far between in Newfoundland, that island of rain and snow—with two friends and our guide, I left our snug little camp on Big Marsh to look up a small herd of woodland caribou which one of our men had seen the previous day. We followed a much-worn deer trail across the marsh until we reached French Woman's Creek, a deep and rapid trout stream, which we forded with much difficulty. While crossing a small marsh beyond the brook I was surprised to see a two-year-old caribou stag trotting toward us. I had a few moments before mistaken this same animal for a gray rock, a mistake very easily made even by experienced hunters. He trotted up to within 50yds. of us in his effort to get our wind. Then he would rush off 100yds. or more. What a chance for a camera! These antics he kept up until finally he became satisfied we were enemies, and left us for good. I could have shot him a dozen times, but had no earthly excuse for the slaughter. After an hour's hard tramp we reached the foot of Wolf Hill and commenced our stiff climb. When near the top my guide pointed out two or three cowlike animals and whispered, "Caribou!" We started after them at a sharp run to try and head them off, but they disappeared in the bushes before we could get near enough to them for a shot. We reached the crest of the hill without further incident, and threw ourselves down on the moss to get our wind and enjoy the glorious view spread out before us. While sweeping the country with my glass I suddenly made out some moving objects on a neighboring ridge among the stunted bushes. My guide saw them at the same moment. There were five or six of them, and one was a very good stag; so we determined to stalk them at once. Crouching low, we ran back out of sight and made for the bushes toward which they were swiftly feeding. When we arrived at the point where we expected to find them they were not there, but to our astonishment and chagrin they were feeding swiftly over the crest from which we had first seen them and which we had left a few moments before. This was from no fault of ours, but is a common mishap when stalking these erratic and restless creatures.
